Selukwe Gold Mining Company.—In the twelve months to the end of March last, this Rhodesian company crushed 59,415 tons for a yield over the plates of 34,421 oz., an average of 11.58 dwts. per ton. In addition the cyanide process treated 73,245 tons, producing 17,680 oz., an average of 4.82 dwts. per ton, making a total output of 52,101 oz. The bullion from the mill realised £124,259, and that from cyanide £58,041, an aggregate of £182,300. Transfer fees brought in £169, and interest £277. Working expenses amounted to £97,481, depreciation of plant took £18,259, and development redemption £16,339, and after deducting other outgo a profit of £46,346 is shown. A balance of £96,171 was brought in, and after allowing for the dividends paid in August, 1902, and in February, 1903, 10 per cent. is recommended. This will absorb £32,100, and leave £46,717 to be carried forward. The company spent £23,829 out of capital on mine development, and after deducting the above-mentioned £16,000 odd, a further £5,937 is appropriated from share premium account. The company has no reserve fund, debtors stand at £2,043, against creditors for £13,954, cash totals £10,263, and bullion in hand is valued at £15,367.

Ferreira Company and Worcester Exploration.—A circular has been issued to the shareholders of the Ferreira Gold Mining Company announcing that a special meeting is to be held in Johannesburg on October 10 for the purpose of confirming an agreement entered into with the Worcester Exploration and Gold Mining Company for the purchase of the whole of the latter's mining property, buildings, plant, machinery, permanent works, and other assets at Johannesburg. Accordingly, it is purposed to increase the Ferreira's capital from £90,000 to £95,000, by the creation of 5,000 £1 shares. The latter are offered at £20, and the whole issue has been guaranteed at £19, on a five per cent. commission. Should the shareholders subscribe for the entire issue it will therefore bring in £100,000, but it is not stated what is to be given to the Worcester Company for its assets. The latter has been a regular dividend payer since 1888, its aggregate distribution to the end of August, 1899, having been 437½ per cent. It was known, however, when operations were suspended in the latter year, that the Rand mine could last only another 3 or 4 years, and that the Ferreira company intended to buy its assets. This property lies between the Ferreira and Robinson mines, and conjointly with the Ferreira the Worcester owns an area equal to six claims held under water-right and bewaarplaats title south of the Robinson company's ground. The Worcester, however, owns another mine at Barberton, where test crushings have been made with a ten-stamp mill. Evidently the directors intend to concentrate their energies in developing this property, but it is too early yet to dogmatise as to its permanent value. With respect to the Rand mine, now to be bought by the Ferreira, the directors said in their last report:—"Enquiry has frequently been made by shareholders concerning the life of the mine. This is a most difficult question to answer. As far as the directors are aware the South Reef, they regret to say, will not last many years longer, but, on the other hand, however, there is still an enormous quantity of Main Reef left which they hope to be able to crush to advantage for many years to come." This is indefinite and speculative. The South Reef is in the majority of the mines the richest reef, and it is only in rare instances the main reef itself has been found payable, as it is of very low grade. This can only be worked to a profit conjointly with the richer reefs of the series, or if working costs can be reduced to a low enough figure. Otherwise, most of the mines have left it untouched, pending possibilities of working it at a much lower cost. This may be one of the most powerful reasons why the magnates are so loudly clamouring for Chinese labour, with thousands of whites idle and starving in and around Johannesburg. With respect to the assets, at the end of December, 1902, the date of the last balance-sheet, claim account appeared at £71,300, machinery, plant, buildings, etc., at £43,816, there were 4,278 reserve shares, but no cash. There was gold in transit valued at £6,053, but whether it was from the Rand or the Barberton mine was not stated. The sum of £28,706 had been overdrawn at the bank, £9,999 was owing to sundry creditors, against debtors for £1,236, and there was a contra suspense account for £56,704, consisting of claims, against the late Transvaal Government, and the military authorities.

Nimrod Syndicate.—During the past account there was a tremendous fall in the price of the shares of this syndicate, no-less than 5⅝, from 7 to 1½. A director is Mr. Frederick Lowy, one of the members of the Stock Exchange, who recently failed, and probably this goes far to explain the heavy decline. At the same time disquieting rumours have been in circulation, one to the effect that the Chimbote coal, being anthracite, is unsuited for use on steamboats, and that, therefore, the market of the Coast steamboats passing the Chimbote Harbour is closed to it. The directors have issued a circular in which they say there is no foundation for this statement, "inasmuch as it appears from the analyses of the samples taken that the Chimbote coal is in the nature of a semi-anthracite and not a pure anthracite, and appears to possess all, or most of, the properties of good steam coal." Samples were sumitted to Messrs. Pattinson and Stead, of Middlesborough, whose reply is appended to the circular, but that reply is of a very guarded character. It appears that the contractor, who was to build the railway up to the coal field, has "not unnaturally considerably modified the original arrangement under which he expressed himself willing to take his entire payment in shares of the Nimrod Syndicate." The directors add that they are making every effort to devise some scheme to meet the requirements of the case, in the belief that the Chimbote Railway and Coal schme will turn out a profitable enterprise. Meanwhile, the new issue of shares, authorised at the recent extraordinary meeting, will be held over. That is well, since the old are at present unsaleable.

Associated Northern Blocks.—At last the directors of this company have deigned to express their intentions with regard to convening a meeting of the shareholders. A circular has been issued this week informing the latter that "a complete sampling of the mine has been undertaken by the manager, in conjunction with Professor Liveing and Mr. William Griffith, with a view to allaying the uncertainty at present existing as to the value and extent of the ore bodies in your property. Professor Liveing is booked to leave Western Australia on the 17th inst. for London, and has been instructed by the board to bring with him the full text of the report of the present examination as far as completed. It is the intention of your directors to call a meeting of the shareholders upon Professor Liveing's arrival to receive the report and their statement with regard to the present position of the company's affairs." So it seems that the shareholders will have to possess themselves in patience for quite another five weeks, as it will take that time for Professor Liveing to reach London.

Victorian Deep Leads.—Just twelve months ago Mr. Allen Stoneham appealed pathetically to the shareholders of the Junction Deep Leads of Victoria, Limited, and the Victoria Deep Leads, Limited, to purchase a few shares—ten only as a kind of taster—in the Duke United. Now the Victorian Deep Leads itself is badly in want of the needful, although it was formed with the large capital of £350,000 as recently as 1898. However, it appears the shaft has been completed, which is something, and the drive has been carried a distance of 525 ft., which is something more. Slow progress was made with the driving, however, and "expense was unavoidably incurred owing to the unexpected hardness of the rock encountered. Efforts were made to expedite progress by the use of electric rock drills, but through continual breakages these were abandoned and the local directors were obliged to have resort again to hand drilling. The delay and expense thus involved led to the premature exhaustion of the working capital." It is now proposed to instal compressed air drills and complete this drive. Meanwhile, operations have been suspended with a view to framing a scheme of reconstruction. The directors direct the attention of the shareholders to the fact—presumably with a view to encourage them to put their hands in their pockets and feel cheerful—that "several important neighbouring

companies are in course of reconstruction and their future operations will be under the direction and management of Messrs. Bewick, Moreing, and Co.," and it is, therefore, proposed to put this company under the same management. The shareholders are to be called upon to subscribe 2s. in respect of each share they now hold, providing in all £32,000, which sum, it is believed, will be sufficient to complete the drive, drain the wash, and erect the necessary puddling plant for treating the wash dirt. Thus the nominal capital will be reduced from £350,000 to £320,000—the amount now issued—but even then the venture appears to be highly speculative. Has anything solid been found in the "wash dirt" so far?

TRADE AND PRODUCE.

Wheat.—The unfavourable weather has had as much effect this week upon the markets as any cables from abroad. Holders are taking a firmer stand, and though business does not show any great sign of activity, an improvement in tone is noticeable, and prices have slightly advanced during the week. The fine weather earlier in the month gave promise that the harvest might after all be good, but the renewed rains have not improved the prospect, and the outlook is not cheerful. Many fields in Essex and Suffolk are badly laid, and hand reaping will be necessary. A short time ago the yield of wheat was estimated to be 6 per cent. below the average of the past five years, and it will probably be considerably lower. The world's total production is put at 10,000,000 qrs. less than the 375,000,000 qrs. of last year, and the visible supply on the first of August at 9,130,000 qrs., or 310,000 less than on August 1, 1902, and 4,605,000 less than in 1901. A certain dulness and restraint characterised the American markets earlier in the week, but later the tone improved, principally owing to the firmness of the North-Western markets, and a continued large export business. The reports over there of the wheat crop are generally good, and a yield of 2,000,000,000 bushels is now held possible. Bradstreet places the supplies in sight east of the Rockies this week at 21,530,000 bushels, against 21,480,000 last week, and 32,293,000 bushels a year ago.

Wool.—Where the markets have recovered from the holiday season, there is some improvement in tone, and a more hopeful outlook for the autumn season. Both home and colonial wools are receiving more attention, the position of merinos is firmer, and, together with fine crossbreds, they are held at the highest rates. Lower and medium crossbreds are expected to be the favourites in the coming season, and the consumption of English wools for blending purposes is larger than it has been for two or three years. From one or two districts the reports of manufacturers are not very good, but, on the whole, complaints are not so general. Orders for spring dress goods are coming in more freely, and show more encouraging signs for the future. South Africa still seems to be the principal support of the export trade. The shipping, on the whole, is fairly well maintained.

Cotton.—Business in American cotton on the Liverpool market has only been of moderate dimensions this week, yet prices have steadily risen. One cause of the small number of transactions is the stoppage of several mills in the consuming districts on account of the holidays, although the general short time movement is likewise beginning to be appreciably felt. Egyptians are receiving more attention, and have risen in price. The sale of yarn, Sir Jacob Behrens and Sons tell us, continues only meagre in character, and spinners, though compelled to advance their prices in accordance with those of staple, are not able to improve their margins. In order to cope with this unsatisfactory condition of affairs many spinners are prolonging their annual holidays, besides working on short time. Business coming forward from India has not yet reached a profitable level, and many orders have been sent back for higher rates. In cloth, also, although the enquiry is better, transactions are few, and those carried through are of a very miscellaneous character. Several important lines have been arranged in fine fabrics, though prices are far from being remunerative.

In America the situation continues to be governed by the bull interests, as they control practically the whole of the visible supply of raw cotton. Therefore so long as they hold they can do what they like with the markets, and all hopes of any change centre in the new crop.

At Liverpool on Friday America was in small request at 6.84d. spot, 6.57d. August futures, and 5.89d. to 5.90d. September-October.

Linen.—Business goes on calmly and quietly without any exciting event to cause a stir in the markets, and there is practically no change in the position since a week ago. Everyone is well employed, and awaiting the commencement of the autumn season without anxiety. Union goods are the only ones in which there is any doubt as to the future, and the eccentricities of cotton place them in a very uncertain position. Little is doing in yarns, and prices are without any quotable change, tow wefts continuing as scarce as ever. The new flax crop on the Continent is not very promising. Heavy rains in France and Belgium have interfered with the pulling, and it is feared injured the fibre. In Russia, on the other hand, some districts have suffered from drought, and a considerable decrease in yield is anticipated. Cross-channel business in finished linens has been rather larger, with every promise of improving still further, particularly in fancy linens and novelties. Shipping remains much as it has been for the past few weeks, but is beginning to show signs of waking up.

Iron and Steel.—The Glasgow warrant market has been quiet again, owing to the unsatisfactory nature of the advices received from abroad, especially those from the United States. From these it would seem that the foreign demand for Scotch pig-iron is not likely to expand, while home consumption continues to be only on a moderate scale. Both Scotch and Cumberland warrants are inactive, the price quoted for the former being 51s. 9d., and for the latter 56s. to 56s. 3d. cash, while in Cleveland a small business has been done at 46s. 4½d. Makers of finished iron and steel are fairly busy, though still complaining of the lack of new orders, the keen foreign competition having a detrimental effect upon business. In the north of England the situation is more cheerful. Traders are taking a happier view of the situation, and are not allowing themselves to be influenced so much by the unfavourable position in the States. The possibility of American iron being dumped, not only in the neutral markets, but also in the home, still, however, causes a certain amount of anxiety, though not so much, perhaps, as a few years ago, for the financial position is worse now than then. One branch of business—East Coast hematite—has shown in the past few days more activity than for a long time past, the sales for the week aggregating more than for the whole of the past two or three months. This activity arises through sellers having reduced their price from 56s. to 55s. per ton, in order to meet the views of buyers. Only makers of steel rails are busy, South Africa still being a good customer for this class of work. Elsewhere business is dull, with no sign of any improvement. At Barrow there is a fair trade in hematite pig-iron mainly for home accounts, the foreign and colonial business being but small, while steel makers are better off for orders than they were a short time back, the principal demand being for rails. Ship-plates are, however, also better, under the influence of the hope of a better demand in the autumn.

Coal.—The slack season is not yet over, and there is very little change in the position of the trade. A good deal of irregularity has been caused by the continued holidays in different districts. Wales, especially, has suffered from the vagaries of non-union men, and shows a considerable drop in its steam and anthracite shipments. The export trade for July compares favourably with that of the same month last year, 145,545 tons being exported from Hull against 118,226 last year, the total for the seven months being 866,618 tons, against 744,875, and from South Wales and Monmouthshire 2,241,641 tons were shipped, as against 2,001,641 in July, 1902, and showing also an increase over the shipments in June this year of 449,000 tons.

Copper.—More cheerfulness and a firmer tone are noticeable in the market this week, but business has not been active nor have prices risen much. They commenced a shilling or two lower than at the close of last week, but have risen steadily each day since, closing firm yesterday at £57 17s. 6d. cash, and £56 10s. three months. Last week's shipments from America amounted to 1,781 tons.

Tin.—With no stimulating news from America, and closed Eastern markets, the opening here was dull on Monday, and prices fell during the day to 20s. below Friday's quotation. Since then they have fluctuated more or less, with a general downward tendency, firmer advices from the East not making any permanent impression. On Friday the market was quiet, £128 being asked for cash, and £124 12s. 6d. for three months.

Tea.—The markets opened this week better even than at the close of last auctions, a more general demand, and firmer rates ruling all round. 26,442 packages of Indian tea were offered for sale, and obtained an average price of 8.02d., against 7.34d. last year, broken leaf grades alone showing any signs of weakness. In Ceylon 31,300 packages were put up, and sold well at slightly advancing rates for common and high grade teas, with mediums firm. Java teas also went briskly in spite of the somewhat heavy supply of 41,137 packages. Messrs. W. J. and H. Thompson's circular gives the quantities of tea in stock at the end of July from 1899 to 1903, showing that the quantities of tea now in bond—62,987,000 lb.—are no larger than in 1900, the last normal year, being then 63,482,000. Exports from Ceylon to this country during the month show a deficiency of 1,700,000 lb., August is not expected to show any increase over last year's figures. Indian exports so far have only been very moderate, and, unless they are heavier for the rest of the season, the market is not likely to be overloaded, and the position for the near future is very sound.

Sugar.—The market this week has been irregular owing to the better weather reports from the Continent. For a time prices eased off to the extent of 1½d., but ½d. of this was recovered before the close of the week. However, on the whole, prices were fairly steady, Mr. Czarnikow giving the following movements in the quotations for beet: August 8s. 3¼d. to 8s. 2½d., October-December 8s. 11d. to 8s. 9¾d., and January-March 9s. 0¾d. to 8s. 11½d. In cane business was only moderate, as the quantities available were small. This led importers to ask an advance of about 3d. per cwt., though even at this price medium and good refining grades would easily sell were they available. The American market is firmer, sales being effected privately at prices above the official quotations. During the week landings at the three ports were only 21,000 tons, and with 45,000 tons melted, stocks are down to 269,000 tons.

Mr. Arnold White's fine has been paid by a subscription raised by the *Daily Chronicle*. So now both Whitaker and his greatest opponent are free after having each paid a visit to Brixton, though for widely different reasons.

Company Reports and Balance Sheets.

*** *The Editor will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

London and North Western Railway.

Gross receipts for the six months ended June 30 were £6,808,958, an increase of £135,003 against a rise in expenditure of £67,021, to £4,372,276, the ratio of outlay to revenue being 64.21 per cent., against 64.50 per cent. Number of passengers carried fell 50,226, but those who did travel proved more remunerative, and as the result of an increase in every class, together with season tickets, the revenue improved £47,026. Parcels, horses, carriages, etc., showed a moderate improvement, but mails fell away, and it is only natural, perhaps to find an increase in the passenger mileage. The growth was 212,942 miles, not excessive, as things go, but giving far greater satisfaction, is the mileage statement relating to goods and mineral trains. Here a saving of 834,404 miles was effected in face of a substantial advance in merchandise income, the fact that mineral receipts were a little less by no means detracting from the good result. Some of the movements on the expenditure side are substantial. Maintenance of way cost £37,830 more, carriage and wagon repairs rose £8,101, and, inevitably, rates and taxes went up, this time by £18,728. The company now pays almost half a million sterling annually for rates and taxes, and it is not surprising that the constant expansion causes proprietors considerable anxiety. Perhaps the check likely to be put on the freedom with which municipalities have been in the habit of borrowing may arrest the growth. Locomotive power was less expensive by £13,033, owing to a considerable saving in coal and coke, and a small decline is noticeable in compensation. The net result is a free balance of £2,436,681, against £2,368,700, and with the much larger sum of £102,868 brought forward, the total credit is £97,309 higher, at £2,628,687. Fixed charges were about £4,000 less, an important decline in general interest and in Shropshire Railways and Canal lease being partly neutralised by advances in debenture interest, and under the Birmingham Canal agreement. Thus the balance available for dividends was more than £100,000 better at £1,947,999, and after meeting guaranteed and preference payments, the distribution on the consolidated ordinary stock is raised ¼ per cent. to 5 per cent. per annum. These dividends absorb £1,867,199, and £80,799, against £54,672, remains to be carried forward. In the half-year under review the company laid out £520,080 on capital account, of which the very small amount of £39,970 was for new construction. Lines open for traffic swallowed up £355,096, widening of lines and additional accommodation at various stations absorbing most if it. Then working stock took £112,319, and leased lines £12,191. Estimate for the current half-year is much the same, at £526,000, and it is not a little disturbing to find the capital account already overdrawn £2,502,091. It means that all the immense trust funds in the hands of the company have been used up, and it is worth noting that with something like £2,500,000 to be provided for dividend and interest payments, the actual cash held is no more than £669,931. This position urgently calls for adjustment, but the moment is not propitious for new issues. Dividend warrants posted August 20.

North London Railway.

This company's gross receipts for the six months ended June 30 were £274,861, or £831 less than in the first half of 1902, but the expenses fell £1,430, to £161,828, so that the ratio of expenditure to income was 58.88 per cent., against 59.22 per cent. Passengers carried rose 576,654, but the receipts were £392 down, and the directors tell us that the traffic was adversely affected by the exceptionally wet and inclement weather of the last half-year, and to a slight extent by the opening of the Whitechapel and Bow line. The stimulating effect in the corresponding period of the peace announcement and the preparations for the Coronation is also referred to. Merchandise fell £2,927, due to the slackness in the shipping trade, and the transfer to other stations, at a lower rate of toll, of traffic hitherto dealt with at the company's Poplar dock and elsewhere. With the exception of traffic expenses all ordinary outlay items were less, and the net revenue is returned at £113,033, against £112,434. Balance brought forward, and general interest were both better, and the sum for disposal is £116,021, a rise of £1,088. After meeting fixed charges and preference interest, the directors propose a dividend on the consolidated stock at the rate of 6½ per cent. per annum, the same as a year ago, with an advance of £944, to £2,963, in the balance carried forward. Dividend payable August 15.

Brazil Great Southern Railway Company.

During the year ended December 31 last this company's revenue at the exchange of 27d. per milreis was £17,932, or £392 less than in the preceding year. In the same time the expenditure rose £200, to £22,232, so that the loss on operating was £592 higher, at £4,300. Adding a profit on working the Porto Alegre and Uruguayana Railway, etc., and deducting £82 loss on ferry, the debit is £3,725, and is further swelled to £3,902 by interest payable in Brazil. There was, however, a gain on exchange of £1,634, so that the net loss for the year is reduced to £2,268. From the Government the guaranteed interest received was £40,500, and other revenue came to £21, or £40,521 in all. The loss for the year is met from this, together with debenture interest, sinking fund charges, and administration, etc., leaving a net sum of £389. It is added to the previously existing credit of £15,847, but for reasons heretofore existing, the amount cannot be dealt with. Some progress is reported with reference to the company's claim upon the Brazilian Government, but no definite time can yet be counted upon for a settlement. The judge of the Federal Court at Rio Janeiro came to the conclusion that he had no jurisdiction, and referred the suit to the Local Court at Port Alegre, where it is now being prosecuted.

Baker Street and Waterloo Railway.

A good deal of work was accomplished on this undertaking during the six months ended June 30, and altogether £143,513 was spent. On construction the outlay was £127,992, land and compensation absorbed £12,095, and various small items which need not be detailed, accounted for the balance. In the half-year now current the expenditure is estimated at £250,000, and in subsequent half-years at £1,582,867, or £1,832,867 in all. Capital authorised and in hand to meet this outlay is £1,923,589, and as the credit to capital account is only £48,692, more money must soon be called up. Amount so far expended on the undertaking is £1,255,411, and we hope the estimates of total expenditure will not be much exceeded.

Grand Trunk Railway of Canada.

The accounts for the half-year ended June 30 show that the gross receipts were £2,778,000, and the working expenses £1,995,000, including a special appropriation of £15,000 to bridge renewal account. Net receipts were £783,000, and the net revenue charges, less credits, absorbed £514,000, leaving £269,000. Deducting £14,400, the Detroit Grand Haven and Milwaukee deficiency for the six months, and adding £4,000 brought forward, and the amount for appropriation is £258,600. It provides the dividends for the half-year on the guaranteed and first and second preference stocks, with a balance of £5,600 carried forward. The Grand Trunk Western accounts show a surplus sufficient to provide the interest on the first mortgage bonds, with a balance over of £3,700.

Glyn, Mills, Currie, and Co.

This well-known firm of bankers publishes a strong-looking balance-sheet made up to July 31 last. Current and deposit accounts are stated separately, the one amounting to £8,837,508, and the other to £4,781,670, or £13,619,178 in all. Cash in hand and at the Bank of England figures for £2,100,396, and the amount lent at call and short notice is £2,743,500. Then investments come to £3,038,251, including £1,500,000 Consols taken at 90, and bills discounted and advances reach a total of £7,117,031.

Bank of Calcutta.

This well-managed Indian bank reports some shrinkage in profits for the six months ended June 30. Including Rs.3,762 brought forward, the net balance is Rs.1,06,593, compared with Rs.1,85,061 in the first half of 1902, when the much larger sum of Rs.32,830 was credited from previous account, so that the decline is actually under Rs.50,000. Preference dividend absorbs Rs.15,000, and the directors propose the usual dividend at 5 per cent. per annum on the ordinary shares, placing Rs.50,000, or Rs.50,000 less, to reserve, and carrying forward Rs.29,093. Reserve now reaches Rs.15,50,000, against the paid-up capital of Rs.10,000,000, and we note that the amount owing on current accounts and fixed deposits is very little altered, at Rs.1,51,58,895. On the other side loans, cash, credits, and overdrafts amount to Rs.93,88,753, local bills discounted to Rs.2,05,449, and advances to Rs.21,09,771. Then what may be called cash assets amount to Rs.60,60,011, and include cash Rs.43,29,457, Government paper at market rates Rs.11,83,995, and other authorised investments Rs.4,24,851. Altogether the position is very satisfactory, and doubtless the decline in revenue will prove to be temporary.

The Bank of New Zealand.

Apparently this colonial Government institution made £1,090 more profit last year than in the year ended March 31, 1902. After paying the interest on the £2,000,000 of guaranteed stock, the net balance was £210,591, against £209,501 twelve months back. How is it, then, that it was able to pay £23,257 more over to the Assets Realisation Board than it did a year ago, after assigning £5,000 in reduction of Colonial Bank property, and premises account, and £10,000 in reduction of Bank of New Zealand property, premises, and furniture, as well as paying £21,180 in the form of a 5 per cent. dividend on a paid-up share capital of £423,590, and assigning the statutory £50,000 out of profits to the said Assets Realisation Board? The balance of £124,410, which was left to be also handed over to that Board as against £101,135 a year back, was arrived at simply because nothing is this year written off the liabilities of the Bank of New Zealand Estates Company, in liquidation, whereas in the year closed March 31, 1902, £22,000 was thus set aside. Whether this is good policy or not we cannot say, without knowing more of the position of the Assets Realisation Board. One or two remarkable changes have taken place in the balance-sheet, and the most noticeable of these is a decline of £1,491,500 in the investments in the colonies. A year ago the total of these came to £2,225,684, whereas on March 31 last the total was only £734,184. We cannot explain this change either, but it may be all right. The liabilities on deposits have risen £504,000 to a total of £10,520,936, and amongst the assets are coin and cash balances at bankers £1,834,729, or an increase of £458,810. Money at call and short notice, Government and other securities in London and bills receivable in London, together £3,478,572, or a decrease of £130,399, Assets Realisation Board debentures, held in London and New Zealand, figure at £1,754,034, so the bank has a long way to travel yet before it is free. Bills discounted stand at £1,886,392, an increase of £58,887, and ad-

vances, etc., £4,478,648 show an increase of £36,662. The book value of the assets of the Bank of New Zealand Estates Company figures at £212,030, and landed property and premises of the Bank at £350,159. Colonial Bank property is now written down to £17,625. As both the chief auditor and the directors of the bank give emphatic certificates testifying to the accuracy of this balance-sheet, we can have nothing whatever to cavil at, and hope the bank is not too deeply committed with the Government.

Belfast Street Tramways Company.

During the six months to the end of June the business of this tramway enterprise exhibited an all-round expansion, the receipts having risen £2,451, expenses £288, and gross profit £2,163. The net revenue was, therefore, £8,238 against £6,130, and out of it a dividend of 5½ per cent. per annum is recommended on the ordinary shares, leaving £1,336 to be carried forward. Cash amounts to £12,749, and sundry creditors total £4,152 against debtors for £54. The report states that the Corporation have decided to promote a Bill next session for the purchase of the company's undertaking, which action, says the directors, "is in flagrant breach of the contract scheduled to and confirmed by the Act of 1893, whereby the date for the Corporation giving notice to purchase is postponed to 1907. The draft agreement submitted by the Corporation, the directors consider "unfair, and in some respects even confiscating in its terms," and they will therefore "resist to the utmost any attempt to force them into an agreement such as that of which the draft has been submitted."

Milford Docks Company.

The report issued by this undertaking twelve months ago led us to hope that better times were in store for it, but expectations have not been realised, and the accounts for the half-year ended June 30 are just as depressing as ever. Tonnage of vessels entering the docks improved a little to 281,612 tons, and revenue rose £[illegible] to £8,117, but all the gain and more was wiped out by increasing expenditure, and the net balance is £42 lower, at £3,299. This means that the 3d. added to the amount of interest paid on the first debenture stock for the corresponding period now disappears again, the return to proprietors being just 16s. 4d. per cent. The company's bill did not receive the Royal assent until June 30 last, and the capital account remains unaltered in the balance-sheet now submitted. The directors, however, have since placed a sufficient amount of the authorised special mortgages to meet the company's requirements.

John Lovibond and Sons.

This company's ordinary dividend is coming down as rapidly as it went up, but as all the ordinary capital is held by the vendors the public is not affected. It is fortunate not to be involved because the financial position is none too strong. Actual allowance for depreciation cannot be traced, but we notice that the various assets continue to grow, and the reserve of £16,000, all locked up in the business, is not a giant accumulation for seven years' trading. Creditors exceed debtors by more than £20,000, and the cash is so slender that it will do little more than meet the final dividends now proposed. Stocks look big at £40,656, considering the trade done, and it should be noted that the debenture debt exceeds the share capital. Trading profits in the twelve months to March 31 fell £4,600 to £26,785, and the net balance was £4,152 lower at £10,594. Allowance for repairs, upkeep, and depreciation was about the same at £7,883, but against a saving of about £1,000, at £3,642, in general administration, debenture interest rose £437, to £4,674. After meeting preference dividend, the distribution on the ordinary shares is reduced 5 per cent. to 10 per cent., making a drop of 7½ per cent. in two years. Then £2,000, or £2,000 less, goes to reserve, and another £1,000 to leasehold redemption, and the amount carried forward is increased a few pounds to £6,974.

Friends' Provident Institution.

The valuation balance-sheet of this institution made up to November 20, 1902, shows the net liability under assurance and annuity transactions at £2,755,503, against life assurance and annuity funds amounting to £3,014,890. Thus the surplus is £259,387, and includes £65,897 brought forward from the last distribution of profits, but does not take into account a sum of £863 paid away by way of final bonus on endowments and endowment assurances that have expired by effluxion of time during the five years 1897-1902. Of the surplus, £256,361 has been divided amongst 8,693 policies assuring £6,341,860, and £3,026 is carried forward. The addition to the funds of the institution during the five years covered by the valuation was £379,390, and the investments reserve fund was increased from £10,891 to £17,777.

Houlder Line.

This undertaking did not perform at all well during the year 1902, and we judge that the second part of the period was the worse. Profits on voyages were £64,480, or £1,344 less than in 1901, but it was necessary to place £33,313, or £4,552 more, to depreciation fund, so that the net balance, after providing a few small charges, was £6,472 lower, at £30,286. Also the balance brought forward of £15,224 was £3,824 down, at £15,224, so that with the debenture and preference dividend provided for the available balance is no more than £25,552, a decline of £10,297. This means a further drop of 2½ per cent. in the ordinary dividend to 5 per cent. and as 3¾ per cent. was distributed as interim payment, proprietors have now only 1¼ per cent. to come. It was this division that led us to infer that business in the second half of the year was less prosperous than in the first. The balance forward is further reduced to £11,802, so that even the 5 per cent. dividend was not earned. Undoubtedly the depression in freights was very acute throughout the year, and there does not seem to be much prospect of material improvement in the near future. Was it wise, then, to acquire practically the whole of the issued share capital of the Oswestry Grange Steamship Company and a substantial proportion of the share capital of the Empire Transport Company, even though the latter has entered into a pooling arrangement with the Houlder Line? Neither of these acquisitions seems to have been paid for, a fact which causes the balance of floating assets and liabilities to be against the company. Depreciation and reserve now stand at £120,000, a fair total, but none too much we may be sure.

Weldon's, Limited.

In the brief profit and loss account published by this company for the year ending June 30, it is stated that the net profit, after writing off depreciation on leasehold property, furniture, fittings, etc., and all other charges, is £30,101, which compares with £28,490, the directors prefering to be reticent on the matter of what sums have been appropriated. Nor are any details of expenditure given, so shareholders cannot judge whether the concern is managed economically or not. A balance of £2,609 was brought forward, giving a total of £32,710. After paying the dividend on the preference shares, and 10 per cent. interim on the ordinary for the half year to December 31, there remains a credit of £18,710. Out of this it is proposed, after paying the final preference dividend, requiring £5,000, to make a final distribution on the ordinary shares of 10 per cent., making 10 per cent. for the year, to add £2,000 to reserve, and carry forward £2,710. Even then the reserve will only amount to £6,000, against a capital of £380,000. A strong balance-sheet is issued, but there appears to be no writing down of goodwill and copyrights, which stand at £337,500. The report says nothing about the business done during the year, only congratulates the shareholders "upon the continued success and prosperity of the company."

Motor Manufacturing Company.

This undertaking seems all the better for its couple of reconstructions. The last one was effected during the opening half of 1902, and the report and balance-sheet just issued cover twelve months to May 31, 1903. Gross profits are set down at £35,104, to earn which cost £22,913, in the way of general expenses, depreciation, advertising, exhibition, travelling, etc., and after providing debenture interest and directors' remuneration, the net balance is £10,045. The reconstructions have so attenuated the capital that the directors might have made a big dividend show with this sum, but they wisely prefer a policy of caution, and pay 5 per cent. only, carrying forward £6,883. Balance-sheet totals £111,634, of which, on the assets side, £14,140 is represented by licenses, patent rights, goodwill, etc. Trading accounts are adverse, and cash is not very startling at £5,328, but stock, consisting of finished vehicles, work in progress, etc., and materials, stores, and sundries is valued at £40,054. The directors must not forget the question of reserves.

FORGED TRANSFERS.

The Court of Appeal by reversing the decision of the Lord Chief Justice in the action brought by the Corporation of Sheffield against Barclay and Co., has added but little to the law. It is true the case is one of considerable importance, as it deals with the question of which of two innocent parties should bear the loss occasioned by a fraudulent transfer of stock. In order to clearly understand the decision of the Appeal Court, it is necessary to set out briefly the facts of the case. Certain stock issued by the Sheffield Corporation stood in the names of two trustees, one of whom forged the name of his co-trustee for the purpose of transferring the stock to Messrs. Barclay and Co., the bankers. They, not knowing the transfer to be forged, in all good faith gave notice to the Corporation, which accepted it. Subsequently the forgery was found out, and the Corporation was compelled to restore to the trustees the stock illegally transferred. To recover the loss sustained, the Corporation in its turn sued Messrs. Barclay and Co., and this action the Lord Chief Justice decided against the bankers. It is this decision which on appeal was reversed. The Corporation argued that it did a lawful act at the request of Messrs. Barclay and Co., which lawful act resulted in damage to the Corporation, and therefore Messrs. Barclay and Co. were liable to repay the damage. This argument the Court of Appeal rightly refused to entertain, for, after all, the forgery was not perpetrated either by Messrs. Barclay or with their cognizance. Therefore the burden of indemnifying the time owners of the stock remained with the Corporation and not with Messrs. Barclay. While on this question of forged transfers, it is worth noting that several of the respectable insurance companies dealing with accident risks are prepared to issue policies to meet such cases, and, this being so, it is strange the Corporation did not insure.

RAILWAY TRAFFIC RETURNS.

Foreign.

Argentine North-Eastern.—Traffic receipts for the week ended July 3, $9,952; decrease, $170. Aggregate from January 1, $330,824; increase, $16,141.

Assam Bengal (Chittagong Section).—Traffic receipts for week ended June 30, Rs. 49,610; decrease, Rs. 13,289. Aggregate from January 1, Rs. 8,24,403; increase, Rs. 8,686.

Assam Bengal (Gauhati Section).—Traffic receipts for week ended June 30, Rs. 22,110; increase, Rs. 6,559. Aggregate from July 1, Rs. 2,26,941; increase, Rs. 32,264.

Bengal Central Railway.—Traffic receipts for week ending July 18, Rs. 18,385; decrease, Rs. 309. Aggregate from July 1, Rs. 50,288; decrease, Rs. 2,428.

Canadian Northern Railway.—Traffic receipts for week ended August 7, $55,700; increase, $28,200. Total, from July 1, $310,500; increase, $150,700.

Lucknow Bareilly Railway.—Traffic receipts for week ended July 11, Rs. 35,381; decrease, Rs. 5,017. Aggregate from July 1, Rs. 35,381; decrease, Rs. 5,017.

Quebec Central Railway.—Traffic receipts for the 1st week of August, $12,793; decrease, $2,913. Aggregate from January 1, $402,059; increase, $20,740.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended July 11, Rs. 13,523; decrease, Rs. 2,910. Aggregate from July 1, Rs. 13,523; increase, Rs. 2,990.

Salvador Railway.—Traffic receipts for week ended August 8, $11,400; increase, $1,900.

White Pass and Yukon Railway.—Traffic receipts for the week ended June 31 amounted to $68,008.

English.

Cleator and Workington.—Gross receipts for the week ending August 8, £1,029; increase, £22. Total receipts from July 1, £5,801; decrease, £406.

Cockermouth and Keswick Railway.—Receipts for week ending August 8, £1,247; increase, £32. Aggregate from July 1, £6,572; decrease, £456.

East and West Yorkshire Union Railway.—Traffic receipts for the week ending August 8, £236; increase £33. Aggregate from July 1, £1,979; increase, £98.

Liverpool Overhead Railway.—Traffic receipts for week ending August 9, £1,961; increase, £164. Aggregate from July 1, £10,531; increase, £667.

TRAMWAY AND OMNIBUS RECEIPTS.

Home.

Aston Manor Urban.—Traffic receipts for week ending August 8, £634, increase £57; aggregate from July 1, £3,334, increase £144.

Belfast Street.—Traffic receipts for week ending August 8, £2,681, decrease £157; aggregate from July 1, £17,910, increase £1,452.

Birmingham and Midland.—Traffic receipts for week ending August 7, £1,028, increase £90; aggregate from July 1, £5,169, increase £241.

Birmingham City.—Traffic receipts for week ending August 8, £5,576, increase £363; aggregate from July 1, £31,631, increase £1,620.

Blessington and Poulaphouca.—Traffic receipts for the week ending August 9, £58, decrease £8; aggregate from July 1, £173, decrease £29.

Bristol Tramways and Carriage.—Traffic receipts for week ending August 7, £6,613, increase £330; aggregate from July 1, £33,145, increase £1,813.

Burnley Corporation.—Traffic receipts for week ending August 8, £902, increase for week £198; aggregate from July 1, £5,198, increase £894.

Dublin and Blessington.—Traffic receipts for week ending August 9, £236, increase £19; aggregate from July 1, £1,037, decrease £41.

Dublin and Lucan.—Traffic receipts for week ending August 9, £191, increase £9; aggregate from July 1, £865, increase £60.

Dublin United.—Traffic receipts for three days ending August 8, £5,846, increase £185; aggregate from July 1, £34,483, increase £5,980.

Edinburgh and District.—Traffic receipts for week ending August 8, £4,482, increase £227; aggregate from January 1, £138,486, increase £18,378.

Edinburgh Street.—Traffic receipts for week ending August 8 £529.

Harrow Road and Paddington.—Traffic receipts for week ending August 8, £352, increase £36; aggregate from July 1, £1,866, increase £59.

Isle of Thanet.—Traffic receipts for week ending August 8, £2,309; increase, £259; aggregate from July 1, £8,412, increase £392.

London General Omnibus.—Traffic receipts for week ending August 8, £25,776, increase £1,115; aggregate from July 1, £159,012, increase £2,775.

London Road Car.—Traffic receipts for week ending August 8, £8,211, decrease £1; aggregate from July 1, £48,265, decrease £790.

Rossendale Valley.—Traffic receipts for week ending August 7, £182, decrease £6; aggregate from July 1, £1,129, increase £20.

Foreign.

Anglo-Argentine.—Traffic receipts for week ending July 13, £6,019, increase £1,523; aggregate from January 1, £161,076, increase £34,798.

Barcelona.—Traffic receipts for week ending August 8, £2,663, decrease £77; aggregate from January 1, £72,302, decrease £1,380.

Barcelona, Ensanche y Gracia.—Traffic receipts for week ending August 8, £308, increase £202; aggregate from January 1, £9,002, increase £5,052.

Brazilian Street.—Traffic receipts for the month of March, Rs. 42,144; increase Rs. 936.

Brisbane.—Traffic receipts for the month of April, £10,309, decrease £407.

British Columbia Electric.—Traffic receipts from July 1 to June 30, £672,882, increase £95,717. Net earnings £224,347, increase £39,172.

Buenos Ayres and Belgrano.—Traffic receipts for the month of June, £12,834, increase £605.

Buenos Ayres Grand National.—Traffic receipts for week ending July 11, $43,701, decrease $162; aggregate increase from April 1903, $1,554.

Calais.—Traffic receipts for week ending July 25, £175; decrease £11; aggregate from July 1, £916, increase £12.

Calcutta.—Traffic receipts for week ending August 8, Rs. 33,520, increase Rs. 6,965; aggregate from July 1, Rs. 194,561, increase Rs. 47,494.

Carthagena and Herrerias.—Traffic receipts for the month of July, £4,307, increase £75; aggregate to July 31, £27,254; increase £3,536.

Lombardy Road.—Traffic receipts for the month of July, £1,356, increase £16; aggregate from January 1, £8,795, increase £144.

Twin City Rapid.—Traffic receipts for the month of June $347,744, increase $37,861; aggregate from January 1, $1,918,653; increase $252,214. Net traffic receipts $178,999, increase $483; aggregate from January 1, $996,281, increase $110,202.

MINING RETURNS.

Alaska Treadwell.—Crushed 79,384 tons ore; value of bullion $80,025; saved 1,690 tons sulphurets; value $92,182.

Angelo Gold.—Tons crushed, 8,633; oz. 2,857; tons treated by cyanide 7,867; oz. 2,538. Total 5,395 oz.

Antenior (Matabele) Gold Mines.—Crushed 1,324 tons; yield 916 oz.; cyanide treated 828 tons, producing 171 oz.

Associated Financial —Great Northern Mine.—Crushed 190 tons, yielding 160 oz.; trial crushing new reef.

Associated Gold Mines of W.A.—Number of tons milled, 4,034; tailings, 2,400 tons; slimes, 2,590 tons. Total, 6,232 oz.

Atlas.—1,030 tons ore; yield 536 oz.; cyanide, 10 oz.; value, £2,146.

Australasian Gold.—Cleaned up 131 tons of quartz, yield 29 oz.

Avino.—Leaching plant treated 1,600 tons, produced $20,000; ore shipped, 240 tons, value $5,000.

Bonanza.—Crushed 8,070 tons for 4,169 oz.; from cyanide and slimes, treated 8,070 tons; yielding 2,349 oz. Total, 6,518 oz.

Brilliant and St. George.—Crushed 2,390 tons, for 1,693 oz.; cyanide, £3,835.

Brilliant Gold.—309 tons of quartz crushed, produced 304 oz.

British Broken Hill Proprietary.—3,071 tons crude ore produced 542 tons concentrates, which contain 314 tons lead and 14,092 oz. silver.

Broken Hill Proprietary.—Fine silver, 293,200 oz.; soft lead, 3,299 tons; antimonial lead, 20 tons.

Burma Ruby—122,000 loads washed, producing rubies valued at Rs.1,10,000.

Cape Copper.—Ookiep Mine, 1,804 tons of 15 per cent., equal to 251 tons; Nababeep mine, 2,837 tons of 6 per cent., equal to 158 tons.

Champion Proprietary.—1,020 tons of ore crushed, 615 oz. recovered; 645 tons of tailings treated, yielding 67 oz.

City and Suburban.—Tons crushed, 16,000 for 8,228 oz.

Clitters United.—Ore treated, 2,322 tons; mineral recovered 9 tons 5 cwt. black tin, 18 tons Wolfram.

Clutha.—Crushed 1,400 tons, valued at £850; tailings, £230; concentrates, £64.

Coetzeestroom Estate.—281 oz.

Consolidated Gold Fields of New Zealand.—Progress: Crushed 4,672 tons, yielding bullion (including tailings cyanided £511 and sulphurets £1,000), value £8,781. Golden Fleece: Crushed 1,230 tons, yielding bullion (including tailings cyanided £312, and sulphurets £95), value £2,309. Wealth of Nations: Crushed 1,110 tons of ore, yielding bullion (including tailings cyanided £401 and sulphurets £85), value £1,655.

Craiggiemore Proprietary.—Crushed 1,300 tons, cyanided 840 tons, for £608 oz.

Crown Deep.—Tons crushed, 22,568; yield 5,029 oz.; tons of sands and concentrates treated by cyanide, 16,830; yield 3,040 oz.; tons of slimes treated, 5,525; yield 517 oz.; total 8,587 oz.

Crown Reef.—Yield from mill, 7,531 oz.; yield from cyanide, 3,495 oz.; yield from slimes, 349 oz.; total 11,375 oz.

De Lamar.—Crushed 3,110 tons, yielding $25,220; account $20,165; profit $5,880.

Driefontein Consolidated.—Tons crushed, 14,887; ounces, 4,257; tons treated by cyanide, 12,188; ounces, 3,186; total ounces, 7,443.

Duke United.—1,040 oz.

Durban Roodepoort Deep.—Tons crushed, 8,110; yield 2,470 oz.; tons of sands and concentrates treated by cyanide, 5,700; yield 1,011 oz.; tons of slimes treated, 2,391; yield 205 oz.; total 3,686 oz.

East Murchison United.—Tons treated, 4,863; ounces, 1,390; tons of tailings treated by cyanide, 2,150; ounces, 304; total ounces 1,694.

Ferreira Deep.—Tons crushed 8,890; yield 4,203 oz.; tons of sands and concentrates treated by cyanide, 6,000; yield 1,361 oz.; tons of slimes treated, 2,550; yield, 207 oz.; total 5,772 oz.; value £24,255.

Ferreira Gold.—Crushed, 12,301 tons, yielding 5,459 oz.; concentrates caught 211 tons, yielding 591 oz.; sand treated, 7,840 tons, yielding 1,550 oz.; slimes treated, 3,530 tons, yielding 470 oz.; total 8,070 oz.

French Rand.—Crushed 6,776 tons, yielding 1,643 oz.; tons tailings treated, 4,920, yielding 998 oz.; total, 2,641 oz.

Geldenhuis Deep.—Tons crushed, 23,180; yield, 5,786 oz.; tons of sands and concentrates treated by cyanide, 15,840; yield, 3,023 oz.; tons of slimes treated, 6,959; yield 529 oz.; total 9,339 oz.; value £39,241.

Geldenhuis Estate.—Crushed 10,942 tons; obtained 3,244 oz.; from tailings by cyanide 1,540 oz.; from slimes, 561 oz.; from by-products 11 oz.; total 5,356 oz.; value £22,750.

Geldenhuis Main Reef Gold.—451 oz.; cyanide, 334 oz.; ore milled 1,795 tons; tailings treated 1,515 tons.

Globe and Phœnix.—Crushed 7,081 tons of ore; yield, 3,862 oz. bullion; cyanide, tons treated, 3,775; yield, 460 oz.; total, 4,322 oz.

Glen Deep.—Tons crushed 12,700; yield, 3,070 oz.; tons of sands and concentrates treated by cyanide, 8,420; yield 1,315 oz.; tons of slimes treated, 3,747; yield 338 oz.; total 4,723 oz.; value £19,848.

Golden Horseshoe.—Mill crushed 11,835 tons, yielding 3,963 oz.; tailings treated, 1,924 tons, yielding 1,011 oz.; slimes 9,197 tons, yielding 3,820 oz.; shipped to smelters: sulphide ores, 927 tons, yielding 6,591 oz.; concentrates, 455 tons, yielding 2,206 oz.; total output, 12,762 tons, yielding 17,591 oz.; value £64,955.

Great Boulder Main Reef.—1,750 tons of ore crushed yielded 1,233 oz.

Great Boulder Perseverance Gold.—Bullion, 17,941 oz.

Great Boulder Proprietary Gold.—Sulphide mill, 9,342 tons, 14,094 oz.; tailings (old), 2,292 tons, 788 oz.; total yield 14,882 oz.

Hainault Gold.—Crushed 2,003 tons for 802 oz.; total yield: By amalgamation 594 oz.; by concentrates 104 oz.; treated by cyanide 760 tons of sands and recovered 104 oz.

Hannan's Star.—2,250 tons own ore treated; bullion 1,865 oz.; value £5,880.

Hannan's Reward.—200 tons, yielding 235 oz.

Hyderabad (Deccan.)—Output of coal from the Singareni collieries, 17,853 tons.

Imani.—Crushed 1,338 tons, yielding 809 oz.

Ivanhoe.—12,540 tons of ore crushed, yielded 3,789 oz.; 6,540 tons of sands treated, yielded 1,866 oz.; 5,350 tons of slimes treated, yielded 2,337 oz.; 650 tons of concentrates treated, yielded 2,271 oz.; 210 tons of telluride ore treated, yielded 803 oz.; total, 11,066 oz.

Johannesburg Consolidated Investment.—New Primrose, 6,731 oz.; Ginsberg, 3,293 oz.; Rietfontein A, 2,855 oz.; Glencairn Main Reef, 3,723 oz.

Jourdie Hills Gold.—392 tons, yielded 342 oz.

Jubilee.—1,076 oz. from 4,648 tons crushed; cyanide, 443 oz. from 2,779 tons treated.

Jumpers.—Crushed 2,620 tons; obtained 801 oz.; obtained from tailings by cyanide, 398 oz.; total, 1,199 oz.

Jumpers Deep.—Tons crushed 15,909, yield 2,936 oz.; tons of sands and concentrates treated by cyanide 10,335, yield 1,891 oz.; tons of slimes treated 5,487, yield 361 oz.; total, 5,190 oz.

Lake View Consols.—8,305 tons of ore treated, yielded 4,636 oz. In this and all future returns the short ton of 2,000 lb. will be adopted instead of the long ton of 2,240 lb.

Lancaster.—Crushed 8,300 tons, yielding 1,990 oz.; cyanide works 6,379 tons were treated, yielding 1,030 oz.

Lancaster West.—6,492 tons, yielding 1,997 oz.; at cyanide 4,226 tons were treated, yielding 627 oz.

Langlaagte Deep.—Tons crushed 13,221, yield 2,949 oz.; tons of sands and concentrates treated by cyanide 10,092, yield 1,360 oz.; tons of slimes treated 2,608, yield 153 oz.; total yield 4,363 oz.

Langlaagte Estate.—Ore crushed, 22,987 tons; retorted, 5,723 oz.; tailings, cyanide, tons treated, 17,100 tons; recovered, 1,958 oz.; cyanide tons treated, 670 tons; recovered, 1,069 oz.; total, 8,750 oz.

Le Roi.—Shipped to the Northport smelter, 11,116 tons of ore, containing 3,776 oz. of gold, 4,011 oz. of silver, 191,600 lb. copper. Has resulted in a loss of $7,000. Shipped from the dump to the Northport smelter 2,325 tons of ore, containing 716 oz. of gold, 924 oz. of silver, 30,127 lb. copper.

May Consolidated.—Crushed 9,706 tons, yielding 3,025 oz.; cyanide 6,010 tons treated, yielding 1,326 oz.; slimes 2,143 tons treated, yielding 230 oz.

Meyer and Charlton Gold.—2,179 oz. from 8,096 tons crushed; 1,672 oz. from cyanide; total, 3,851 oz.

Montana.—Drumlummon Mine, crushed 2,300 tons of ore; tailings plant, 10,844 tons of tailings and slimes; produce, represented by 1,090 oz. of gold and 9,350 oz. of silver. Lucky Girl, crushed 14,000 tons of ore, producing 547 oz. of gold and 382 oz. of silver.

Mount Boppy.—Clean up from 2,469 tons gave 911 oz.; cyanide, 1,883 tons, 488 oz.; slimes, 695 tons, 402 oz.; total, 1,801 oz.

Mount Morgan (Queensland).—Tons chlorinated, 21,069 and tailings treated, 6,377; returned, 8,583 oz.

Mount Usher.—Treated 115 tons, for 90 oz.

Mount Zeehan.—530 tons of silver-lead ore, containing about 300 tons of lead and 5,000 oz. of silver.

New Goch Gold.—2,504 oz. from 8,842 tons crushed; 842 oz. from cyanide; 787 oz. from concentrates; total, 4,133 oz.

New Options.—Victory Mine, 400 tons, 81 oz.; Lady Jane Mine, 400 tons, 57 oz.; Pyrites, 50 tons, 55 oz.; Crescent, cyanide plant, 250 tons, 23 oz. bullion.

New United Main Reef.—Production 2,732 oz.

North White Feather.—Crushed 585 tons for 546 oz.; cyanide sands treated, 900 tons for 202 oz.; total, 748 oz.

Nourse Deep.—Tons crushed 13,850, yield 3,690 oz.; tons of sands and concentrates treated by cyanide 10,164, yield 1,784 oz.; tons of slimes treated 3,753, yield 315 oz.; total, 5,790 oz.

Oroya Brownhill.—Crushing 4,035 tons for 8,042 oz.

Peak Hill.—Crushed 5,200 tons, yield 2,730 oz., including cyanide plant, slimes, etc.

Queen Cross Reef.—Crushed 1,988 tons for 6,677 oz.

Red and White Rose.—Obtained 1,908 oz. from 2,825 tons crushed; cyanide 213 oz. from 1,829 tons treated.

Rezende.—Crushed 3,000 tons, recovered 751 oz.; from tailings by cyanide, 158 oz.; total, 909 oz. In addition 8 tons concentrates containing 28 oz.

Robinson Deep Gold.—Crushed 20,456 tons for 6,974 oz. 3,278 oz. from tailings by cyanide; and 609 oz. from slimes.

Robinson Gold.—Crushed 18,396 tons, yield 8,482 oz.; yield from tailings by cyanide 2,937 oz.; yield from own concentrates 750 oz.; yield from purchased concentrates 1,223 oz.; total, 13,392 oz.

Roodepoort Central Deep.—Crushed 6,002 tons, yielding 2,512 oz.; cyanide works, 4,134 tons were treated yielding 855 oz.

Roodepoort United Main Reef.—2,516 oz. from 6,405 tons crushed, 860 oz. from cyanide; total, 3,376 oz.

Rose Deep.—Tons crushed 17,093, yield 3,752 oz.; tons of sands and concentrates treated by cyanide 13,182, yield 2,832 oz.; tons of slimes treated 5,464, yield 394 oz.; total, 6,980 oz.

Santa Rosa.—From company's properties, $11,500; leased properties, $3,500.

Selukwe Gold.—Crushed 5,510 tons, produced 3,217 oz.; treated by cyanide 6,665 tons, yielding 1,439 oz.; total yield, 4,656 oz.

Simmer and Jack.—Crushed 23,060 tons; obtained 5,472 oz.; 3,281 oz. from tailings by cyanide; and 379 oz. from slimes.

Sons of Gwalia.—Ore crushed 8,194 tons, 4,065 oz.; tailings treated by cyanide, 4,800 tons, 1,346 oz.; total, 5,411 oz.

Surprise.—Crushed 2,673 tons, gained 1,023 oz.

Tomboy.—Mill crushed 10,000 tons of ore, yielding bullion value of $54,000; concentrates shipped, 940 tons.
Treasury Gold.—Crushed 8,300 tons, 3,930 oz.
Tyee Copper.—Smelted, Tyee ore, 2,527 tons, customs ore, 755 tons; matte produced from same, including low-grade matte re-smelted, 473 tons.
Van Ryn Gold.—Crushed 7,300 tons for 2,421 oz.; cyanide 660 oz.; tons treated, 5,000.
Victoria and Queen.—Crushed 589 tons, for 1,697 oz.
Village Main Reef Gold.—Total yield, 7,378 oz.
Vivien Gold.—906 tons of ore for 408 oz.
Wanderer (Selukwe).—Crushing 7,404 tons, yielding 1,715 oz.
Wemmer Gold.—Crushed 3,860 tons, yielding 1,811 oz.; 2,625 tons tailings treated cyanide, yielding 466 oz.; 103 tons concentrates, caught with average assay value of 107 dwts.; total, 2,828 oz.
Witwatersrand Deep.—Tons crushed 7,003, yield 1,776 oz.; tons of sands and concentrates treated by cyanide 4,831, yield 1,078 oz.; total yield 2,854 oz.
Wolhuter Gold.—1,095 oz. from 8,550 tons, loss £4,653.
Zeehan-Montana.—360 tons of silver-lead ore, containing about 200 tons of lead and 3,200 oz. of silver.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Canadian Pacific.—Dividends for the half-year ended June 30 as follows: Preference stock 2 per cent., common stock 3 per cent.
Cockermouth, Keswick, and Penrith.—Dividend at the rate of 3½ per cent. per annum for half-year ended June 30. For corresponding period of last year the dividend was 4 per cent.

TRAMWAYS.

Belfast Street.—For half-year ended June 30 dividend of 5s. 6d. per share, carrying forward £1,300.
London United.—Interim dividend at the rate of 8 per cent. per annum on the ordinary shares for half-year ended June 30.

MINES.

Brilliant and St. George United Gold.—Dividend of 6d. per share, payable on 22nd inst.
Camp Bird.—Interim dividend of 9d. per share for quarter ended July 31, 1903.
Queen Cross Reef Gold.—Dividend of 1s. per share and bonus of 1s. per share, payable September 7.
Victoria and Queen Gold.—Dividend of 1s. per share, payable September 1.
Waihi Gold.—Dividend of 2s. 6d. per share, payable September 1.

MISCELLANEOUS.

Arnott and Co.—Interim dividend for past half-year at the rate of 8 per cent. per annum on ordinary shares.
Barnsley Gas.—Further dividend will be paid on September 1 of 5 per cent. on general capital stock and "F" shares, 3 per cent. on "C" (preference) shares, and 3½ per cent. on "D," "E," and "G" shares.
Bradford Dyers'.—Interim dividend on ordinary shares for half-year to June 30 at the rate of 7 per cent. per annum.
Crocker, Sons, and Co. (1901).—Interim dividend at the rate of 5 per cent. per annum on ordinary shares.
David Richmond and Co.—Dividend on ordinary shares for past year of 7½ per cent. For the previous year the dividend on the ordinary shares was 10 per cent.
Dillwyn and Co.—Interim dividend for half-year ended June 30 last at the rate of 10 per cent. per annum.
Fuller's.—Interim dividend at the rate of 10 per cent. per annum for half-year ended June 30, payable August 15, 1903.
General Accident Assurance.—Interim dividend at the rate of 5 per cent. per annum.
Gloucester Railway Carriage and Wagon.—Dividend of 10 per cent., making, with the interim dividend, 7½ per cent. for year ended June 30.
Harrod's Stores.—Interim dividend on ordinary shares in respect of half-year ended July 31 last at the rate of 10 per cent. per annum.
Harrod's Stores Founders' Shares.—Interim dividend in respect of half-year ended July 31 at the rate of 10 per cent. per annum.
James H. Webb.—Dividend of 6¼ per cent. per annum.
John Anderson's Royal Polytechnic.—Interim dividend on ordinary shares for half-year ended July 19 at the rate of 5 per cent. per annum.
Merchants Trust.—Interim dividend for half-year ended July 31 on both preference and ordinary stocks at the rate of 4 per cent. per annum, payable September 1.
Plummer Roddis.—Interim dividend for half-year to June 30 at the rate of 6 per cent. on ordinary shares.
Pontefract Gas.—Dividend of 10 per cent. on the original, and of 7 per cent. on the new ordinary shares, carrying forward £326.
Richard Hill and Co.—Dividend at the rate of 6 per cent. per annum on ordinary shares for the last half-year, making 5½ per cent. for the year; adding £1,000 to reserve, and carrying forward £1,700.
South Staffordshire Waterworks.—Dividend on ordinary stock of 6½ per cent.
Sweetmeat Automatic Delivery.—Interim dividend of 6d. per share.
Walter Scott.—Dividend of 6½ per cent. on ordinary shares for half-year ended June 30, making 9 per cent. for the year.
Witwatersrand Township Estate.—Dividend (No. 4) of 20 per cent., or 4s. per share.

COMPANY MEETINGS.

HOULDER LINE.

The fifth ordinary general meeting of the shareholders of the Houlder Line, Limited, was held on Tuesday, August 11, at the Great Eastern Hotel, Bishopsgate Street, Mr. Ebenezer Cayford in the chair.

The Secretary read the notice calling the meeting and the auditors' report.

The Chairman said: Gentlemen,—I have pleasure in submitting for your consideration and approval the report and accounts for the year 1902, which doubtless you desire to be taken as read. The report, which is in your hands, shows that, after providing for insurance, al working and management expenses, fees for the auditors and trustees, and placing £33,313 5s. 11d. to the credit of the depreciation fund—thus bringing this fund up to £120,000—there remains a credit to profit and loss of £30,285 16s. 5d., which, supplemented by the balance brought forward in the last account, totals £45,510 2s. 6d. After providing the sum of £19,958 9s. 6d. for interest on debentures and dividend on preference shares, the balance remaining to the credit of profit and loss is £25,551 13s., and, after paying a dividend on the ordinary shares at the rate of 5 per cent. per annum, the balance to be carried forward to 1903 account will be £11,801 13s. Last year I stated that the results for the half-year just then passed were satisfactory; but, although the net profit of the steamers' voyages for 1902 exceeded those of 1901 by £2,385 14s., yet towards the end of last year outward freights to the River Plate probably touched the lowest point on record, whilst the total closing of the meat works in Australia for a good part of the year, owing to the long-ontinued drought, deprived the insulated steamers of a large proportion of their cargoes; and, although the outlook in Australia is better now, it will of course be some time before the meat works there can expect to be again turning out their full output; and, as the supply of tonnage has increased very considerably of late years, the surplus of tonnage over the cargo to be carried will necessarily induce great competition amongst the Australian liners. After fully considering the general outlook, your directors concluded that it is wiser to argely increase the depreciation fund, which, if their suggestion is adopted, will amount to £120,000 and to add £3,233 3s. 4d. to the insurance fund. For the same reason they have preferred to recommend the payment of a dividend of 5 per cent. per annum and to carry forward the sum of £11,801 13s., rather than pay a larger dividend and reduce this amount, and they feel sure that the shareholders will agree that the shareholders will agree that they have adopted the wiser course. I now beg to move the adoption of the report and balance-sheet, and that a dividend be declared on the 55,000 ordinary shares of the company at the rate of 2½ per cent. per annum for the half-year ended December 31 last, making 5 per cent. for the year, and that such dividend be paid forthwith.

Mr. C. F. Hartridge seconded the resolution, which was agreed to unanimously.

The Chairman: I have now to move:—"That the retiring directors, Messrs. Augustus Frederick Houlder and Frank Henry Houlder, be re-elected."

Mr. T. P. W. Forrester: I have very great pleasure in seconding that resolution.

The resolution was then put to the meeting and carried.

Mr. Edward Levy proposed "That the auditors, Messrs. Gane, Jackson, Wells, and Co., be re-elected auditors, at the remuneration for their services of 100 guineas."

Mr. Dawson seconded the motion, which was also agreed to.

On the motion of Mr. T. M. Rose, seconded by Mr. Walsham, a cordial vote of thanks was passed to the Chairman and directors, and the Chairman having replied, the meeting then separated.

LONDON ROAD CAR.

The forty-first ordinary half-yearly meeting of the London Road Car Co., Limited, was held yesterday at Cannon Street Hotel, Mr. John Howard Moore, J.P. (the Chairman) presiding.

The Secretary (Mr. Arch. Grierson) having read the notice convening the meeting and the auditors' report,

The Chairman said: You will not be altogether unprepared for the announcement that I intend to be very brief on the present occasion. I must, however, take the opportunity of congratulating you that notwithstanding two or three years ago we were condemned to a speedy death, the company is not only alive, but in as vigorous and flourishing a condition as ever it was. We have again carried an increased number of passengers, totalling for the half-year, 36,821,922, a surplus of 887,660 over the corresponding period of last year, in spite of the fact that in June of that year we had the advantage of the large influx of people into London on the occasion of their Majesties' proposed Coronation. It is true the actual passenger receipts are not quite up to the figure for that half-year, but you probably have not forgotten that during the Coronation period the fares were temporarily increased. Had the weather during April, May and June been at all what we expect in those months, the good receipts for 1902 would have been more than equalled. Yet the weekly average traffic receipts per car for the half-year under review (£17 5s.) are no less than 15s. 7d. more than they were in the corresponding period of 1901. The credit side of the revenue account might have been increased by a further sum of £625, which was received from the War Office during the half year, in addition to the similar amount which ap-

pears in the accounts. The board have departed from the former practice of crediting the whole amount from the War Office to the half-year in which it is received, and from now, it will be distributed over the two half-years in equal proportions. Most of the items on the expenditure side of the account show slight declines, due to the average number of cars working having been two less than in 1902. Horse renewals, on the contrary, show an excess, but this is in consequence of the scarcity of horses, and the increased prices which therefore have had to be paid for them. The board have also taken the favourable opportunity to strengthen the company's position in the matter of horse stock. The cost of forage shows a considerable decrease, the reduction in the prices of feeding stuffs anticipated at the time of last meeting having been realised. You all no doubt have been extremely pleased to find that Parliament has abolished the Corn Tax, and that item, which during the last twelve months has amounted to £2,185 16s. 7d., will no longer appear in our account. The jobbing department also shows satisfactory results, and may now be considered as fairly established. There are only two other points which I need touch upon. One, the Royal Commission on London Traffic, which has been sitting during the last few months, but which so far has elicited very little experts on the subject, were not fully aware of. It may interest you, however, to learn that one of the witnesses stated that no less than 480,000,000 of passengers were carried by omnibuses in London during the year 1902, notwithstanding the Tube Railway, electric trams, and other means of locomotion. It seems to me undoubtedly proved that the more increased facilities for travelling are provided the greater the public demand, and consequently, that the more passengers the railway companies (new and old) bring from the suburbs to the centre, the greater will be the number of passengers who will require to be carried from point to point within the radius by this and other omnibus companies. The second point is with reference to mechanical power. Six months ago I told you that, "During the next few months, unless anything unforeseen occurs, you will see on the streets of London several road cars driven by mechanical power." Our expectations in this respect, I am sorry to say, have not been realised, for the unforeseen did occur. Various causes have contributed to this great disappointment, not the least of which was the serious conflagration at Cannstatt in Germany, and which, we are informed, destroyed a number of motors which were in course of construction for this company. The date when these motor road cars will be seen on the streets is therefore deferred. The balance to the credit of profit and loss account, £20,849 4s. 4d., allows of a dividend at the rate of 5 per cent. per annum, with a bonus at the rate of 1½ per cent. per annum, and it is proposed to transfer £2,500 to the general reserve fund, carrying forward the remainder (£5,689 4s. 4d.) to the credit of the present half-year. This dividend and bonus at the rate of 6½ per cent. compares with 6 per cent. for the corresponding period of 1902, and I end as I commence by congratulating the shareholders on the excellent results which enable us to propose so good a dividend, and by expressing the confident belief of the board that the future prospects of the company are exceedingly bright. I now beg to move that the report and balance-sheet to June 30, 1902, be received and adopted, and that a dividend of 5 per cent. and a bonus of 1½ per cent. therein recommended, be paid on August 20, 1902."

Mr. Paul Edwards (Deputy Chairman) seconded the motion and it was carried unanimously.

The ordinary formal business was then transacted.

SAMUEL ALLSOPP AND SONS.

The ordinary general meeting of Samuel Allsopp and Sons, Limited, was held yesterday at the Cannon Street Hotel, London, E.C., Mr. Charles John Stewart presiding.

The Secretary (Mr. J. Hartshorn) having read the notice and the auditors report,

The Chairman, in moving the adoption of the report, congratulated the meeting on the results of the application to the Court to confirm the resolutions passed by such large majorities at the meetings held in the early summer. The result reflected great credit on the committees who framed the scheme, and who heartily deserved the thanks of the shareholders. Proceeding to go through the accounts, he said the gross profit for the year was £361,775, being £7,200 in advance of last year. Interest also showed an advance of £5,500, and were both satisfactory items, pointing to the closer investment of their cash balances. Their premises were all in first-rate order, and although the auditors called attention to the fact that no depreciation had been written off the plant and business premises, they were kept in thorough order, and the meeting could accept his assurance on the point. Salaries at Burton showed a reduction of £2,300, and agency expenses an increase of £3,500. It was difficult in these days of great competition to secure trade and keep down the agency expenses. It would be bad economy to starve the agencies. The matter was very carefully considered by the board. Advertising showed an increase of £12,000, and that had been very seriously considered before the increase was entered upon. They came to the conclusion they had a good article, and it only needed the public should know it in order to produce a good sale. They could not expect to reap the benefit of the advertising at once, but they believed that the very best results would ensue from it. The incidental expenses had increased by £1,200, largely due to gratuities to some of the members of the staff, whose services have been dispensed with. The law charges showed a decrease of £4,000 in the general charges, but those with regard to properties showed an increase of £1,000. Bad debts showed a decrease of £4,000. After roughly providing for bad and doubtful debts, and the loss on houses under management, which showed a decrease of £2,600, it left an increasing balance of nearly £8,000, largely due to the economies effected in the administration of the brewery by the head brewer and great credit was due to him. The net improvement on last year was £14,000. He hoped they would still further improve upon it. The debenture stock was increased £7,500, they had reduced the mortgages by £36,500, and the trust certificates by £67,900, making a decrease of indebtedness of upwards of £103,000. They had increased their freehold and leasehold properties by £23,000. Their new policy in this respect had proved successful, the amount of trade which they had disturbed by realisation of properties was only half they had been able to secure by increasing their investments. A source of difficulty to the trade was the action of the magistrate in refusing licences. Fortunately, owing to the care taken in the selection of their tenants, they had passed through the year comparatively unscatched in this respect, but they had been put to an additional expense of £1,000 in taking cases into the higher courts where their tenants had been refused licences not on the ground of misconduct, but because it was said that the houses were not wanted. They were successful in most of these cases, so that their loss was comparatively small. They held a very good stock, which was very well bought. The customers' balances showed a reduction of £60,000, but trade loans showed a net increase of £52,000. They had lent out their money where they had seen good opportunities of securing fresh trade. The results of the realisations which they had made showed that the properties sold had been undervalued by £10,000 to £11,000, that was, that they brought in that amount more than was expected, but, on the other hand, for their loans they had found it necessary to make £30,000 more provision. He moved the adoption of the report assuring the meeting that his confidence in the future of the company had not in any way abated.

Mr. William T. Western seconded the resolution, and it was carried unanimously.

In reply to a question, the Chairman stated that Mr. Auty had resigned in consequence of the resolution passed at the last meeting of the company, stating that his pension would not be paid as long as he continued to be a director.

Mr. Stewart, Mr. Perowne, and Mr. Quilter were reappointed directors, and Messrs. Turquand, Youngs and Co. were appointed auditors, and the meeting terminated with a vote of thanks to the meeting.

NEXT WEEK'S MEETINGS.

Wednesday, August 19.

Furness Railway.—Barrow-in-Furness, 2 p.m
Imperial Russian Cotton and Jute Factory.—Institute of Chartered Accountants, noon.
Lima Railways.—Winchester House, 2 p.m.
Maryport and Carlisle Railway.—Maryport, noon.
McNamara and Co.—Great Eastern Railway. Hotel, 12.30 p.m.

Thursday, August 20.

Blackpool and Fleetwood Tramroad.—Fleetwood, 2.30 p.m.

NOTICES.

MEXICAN CENTRAL RAILWAY COMPANY, LIMITED.

To the Holders of First Consolidated Income Bonds, Second Consolidated Income Bonds, Registered Income Bonds of the Mexican Central Railway Company, Limited.

For and on behalf of the Mexican Central Railway Company, Limited, Messrs. Ladenburg, Thalmann and Co., New York, hereby make the following offer to any and all of the holders of the above Income Bonds:—

Provided that Bonds of the above Issues to an amount satisfactory to the Mexican Central Railway Company, Limited, be deposited in accordance with the terms hereof, the Mexican Central Railway Company, Limited, will deliver through the undersigned, in exchange for the Bonds deposited hereunder, its Five Year Gold Collateral Trust Debenture Certificates of 1908, bearing interest from October 1st, 1903, payable half-yearly, at the rate of 3 per cent. per annum for three years, and at the rate of 4 per cent. per annum for two years thereafter, and redeemable at the option of the Railway Company on any interest date at par on thirty days' notice, as follows:—

For each First Consolidated Income Bond of the par value of $1,000 so deposited, $230 par value in the Debenture Certificates.

For each Second Consolidated Income Bond of the par value of $1,000 so deposited, $140 par value in the Debenture Certificates, and for each Registered Income Bond of the par value of $1,000 so deposited, $140 par value in the Debenture Certificates.

The Debenture Certificates, if the plan outlined be effected, are subject to the right of exchange and substitution herein below set forth to be secured by the Income Bonds deposited under this offer, and in such event they shall be delivered to the Trust Company named as Trustee in, and are to be hereafter held by it, subject to the provisions of a Collateral Trust Agreement to be approved as to form by Messrs. Ladenburg, Thalmann and Co., New York, and as to legality by their Counsel.

Each depositing Bondholder authorises the Railway Company at its election to exchange and substitute Bonds of the Railway Company of other existing classes for Second Consolidated Income and Registered Income Bonds, when deposited under the Collateral Trust Agreement, upon such a ratio of exchange as Messrs. Ladenburg, Thalmann and Co. may approve. The Collateral Trust Agreement may contain provisions to this effect.

All coupons appertaining to each Bond deposited hereunder and not heretofore surrendered must be attached thereto or be deposited with the depository at the same time as the Bond.

In any particular case, Bonds with missing Coupons may be received by the depositories on terms approved by the Railway Company.

Registered Bonds deposited hereunder must bear or be accompanied with suitable Power of Attorney insuring their transferability by delivery.

Debenture Certificates will be issued only in the denomination of $100 each.

Non-Interest bearing Scrip will be issued for fractional amounts, convertible on or before January 1st, 1904, into Debenture Certificates when amounts sufficient to make a whole Debenture Certificate are presented for exchange.

Application will be made in due time to list the Debenture Certificates on the New York Stock Exchange.

Any holder of the above Bonds desiring to accept this offer must deposit his Bonds to the order of Messrs. Ladenburg, Thalmann and Co., New York, with Messrs. J. Henry Schröder and Co., 145, Leadenhall Street, London, E.C., or with The Equitable Trust Company of New York, 25, Nassau Street, New York City, or with The Old Colony Trust Company, Boston, or with The Mississippi Valley Trust Company, St. Louis, before the close of business on September 4th, 1903, unless the Railway Company shall elect upon such terms as it may see fit to extend the time for deposit under this offer.

Each depositor shall receive for his deposited Bonds a Deposit Receipt, in form approved by the undersigned, transferable by delivery, entitling the holder on the surrender thereof, at such date as the Railway may fix by newspaper notice published in London, New York, Boston, and St. Louis, to the delivery of Debenture Certificates as herein provided for, or temporary Certificates therefor, or, at the option of the Railway Company, to the return of the Securities represented by said Deposit Receipt.

For the
MEXICAN CENTRAL RAILWAY COMPANY, LIMITED.
LADENBURG, THALMANN, AND CO., NEW YORK.

New York,
August 10th, 1903.

THE STOCK EXCHANGE.—NOTICE.

NO MEMBER OF THE STOCK EXCHANGE is ALLOWED to ADVERTISE for business purposes, or to issue circulars to persons other than his own principals.

Persons who advertise as Brokers or Share Dealers are not Members of The Stock Exchange or under the Control of the Committee.

A List of Members of The Stock Exchange who are Stock and Share Brokers may be seen at the Bartholomew Lane entrance of the Bank of England, or obtained on application to EDWARD SATTERTHWAITE,
Secretary to the Committee of the Stock Exchange.
Committee Room, The Stock Exchange, London, E.C.

NOTICES—*continued.*

THE UNION BANK OF AUSTRALIA, LIMITED.

INSCRIBED STOCK DEPOSITS.

NOTICE IS HEREBY GIVEN that the above will be repaid at par on and after 1st January, 1905. Stock certificates must be forwarded to the Head Office of the Bank, 71, Cornhill, London, E.C., so as to allow three clear business days for examination, prior to the above date, and must be accompanied by a form of receipt, which will be furnished to Stockholders in due course together with information as to any new issue that may be decided upon.

This notice is given in order to comply with the conditions of the first (1885-6) issue of this Stock.

Stockholders are requested to give prompt information of any change of address.

By order of the Board,
A. C. WILLIS, Manager.

Dated this Thirty-first day of July, 1903.

The Investors' Review.

The Banking Position.

Let us look at it quite frankly without any attempt at gloss or exaggeration. Several correspondents have written to complain of darkness, or rather to solicit light, on the position of our banks. One such writes, "you have periodically come down heavily on these institutions collectively. In your issue of the 8th inst., you single out the Scotch banks as likely to be in trouble in the coming financial crisis. Why? Will they fall alone? Are there no English banks with investments, millions of securities for which, as you say, there can be no market at anything like the prices quoted for them on the Stock Exchange? Have not Consols fallen as well as Kaffirs, and are there no bad debts, brewery shares and 'whusky' warrants south of the Tweed?" The writer pleads for a little enlightenment, and we sincerely wish his desire could be gratified, but it is not possible. Certain indications picked up during a long course of observing years in the City have brought the conviction to us that two at least of the Scotch banks are pitifully waterlogged, and there is fear haunting the mind that some English banks may be in a similar position; but we have, as regards the latter, lighted upon no data of a sufficiently complete or alarming description to cause us to speak of them with the same abrupt thoroughness. The misfortune is that banking accounts do not enable us to guess at the truth. Their balance-sheets are all much too slender to allow any reliable judgment to be formed with regard to the position of any individual bank. We may know that some of them are deep in ironworks and coal, that others have enormous commitments in shipping, that still others stand as props beneath sundry embarrassed branches of manufacture, or live to nurse depreciated securities, jerry builders and mine "bosses." But in no instance can it be said with distinctness that commitments are so erroneous in a particular line as to involve losses amounting to ruin. We must never forget the success with which numbers of businesses that formerly were sources of anxiety and probable loss to bankers have been successfully transferred to the general investor, that patient beast on whose back all sorts of financial quackeries and fakes have been heaped. The number of industrial undertakings of every description that have been converted into limited liability companies with success during the last fifteen years, and at severe losses to the community in the majority of instances, must have done a great deal to deliver several of the banks from imminent dangers.

In one respect, moreover, as one of the most eminent of living bankers pointed out to us recently, English banks are stronger now than they were before the fashion of amalgamation came into play. In the old days when small banks were scattered throughout the country, it was the custom for the purely provincial banker to keep no cash reserves at all. He depended upon his London agent, just as all the large banks now depend upon the Bank of England. Amalgamation has changed all this, and by bringing their head offices to London most of the great banks that have been formed out of the consolidation of a multitude of small banks have been driven to provide each a cash reserve, which in the aggregate is far greater than any that was in existence, say a dozen or fifteen years ago. Those who wish to study this subject cannot do better than send to Messrs. Effingham, Wilson and Co. for Mr. Harry W. Birks's "Analysis of the Accounts of Joint-Stock and Private Banks in London." It was issued the other day for the past half-year, and has for many years been the most systematic and accurate epitome of London banking figures to be found. By help of Mr. Birks's tables, we learn that the cash in hand and at the Bank of England, at various dates of their balance-sheets, possessed by the twenty-three banks whose figures are analysed amounted to about £72,000,000, as against a total liability on deposits amounting to £450,000,000. This is upwards of 13 per cent. of their direct and immediate liability to the public, and should be a sufficient figure in all ordinary circumstances, provided the larger portion is cash in hand. Here, however, we at once touch one of the obscurities that baffle every attempt to get at the truth about our banks. "Cash in hand and at the Bank of England" tells us nothing worth knowing. We can only make a guess as to how much may be cash and how much credit in the Bank of England, in use in its own business, by looking at the total amount of the "other" deposits in the Bank's weekly return—but there again the door is slammed in the enquirer's face. How much of the £40,000,000 odd generally represented in that "other" deposits entry consists of bankers' balances, how much of moneys belonging to the Bank's own private customers? Nobody can tell. Perhaps half the sum belongs to the other banks, perhaps one-third—all is pure guess work, and until we have some light upon this point it is quite futile to try and discover whether or not our great joint-stock banks are quietly accumulating cash reserves in their own safes against the day of stress.

Wherever else we touch the figures, the same result follows. One of Mr. Birks's tables gives us the proportion of cash in hand and at the Bank of England, of cash at call and short notice, and of investments to the total of deposits and acceptances in the case of each bank, but that does not help us at all, and the habit of treating call and notice money and investments as means under the bankers' hand, capable of being called in and utilised in an emergency, is lamentably misleading. There is no more dangerous "money" from the market point of view than

this call and notice money, of which the market employs on the average an amount equal to 15 per cent. of the deposits in the banks. Let a pressure arise, and half-a-dozen of the big banks be driven thereby to call in a couple of millions each from the outside market, and what follows? That market is immediately driven to the Bank of England with securities which it has to pawn, in order to obtain credit with which to meet the other bankers' demands. Examples of this kind of pressure have been furnished to a really alarming extent during the last few years, when the profligate borrowings of our Government have compelled the market to raise enormous amounts in credit. Only some months ago, when the Transvaal guaranteed loan was issued, amid a premium scalper's furore, the want of funds on the part of joint-stock banks as a whole drove the "open market," i.e., the banks, to the Bank of England for the whole of the application money. Does not this show that should a crisis really fall upon the market, induced by heavy exports of gold, or otherwise, call and notice money would become the most dangerous element therein, because the Bank of England, encountered by gold exports, might become paralysed, and incapable of creating credit to the amount the surrounding banks required. It was saved throughout the war years by the fact that the continent poured credit into our market instead of taking it away, and we have not paid that credit back yet.

Examine every other item in the published accounts on the same lines, and it will be seen how the stability of our banks, great though it may be, is only the stability of quiet times. They hold large investments in permanent securities, investments amounting for the twenty-three banks to nearly £97,500,000, and they could not sell the odd £7,500,000 were the market really to become distressed, and credit to contract with a snap, as it has on several occasions threatened to do during the past four years. The only really liquid assets the banks possess, other than their cash in hand, is represented by bills of exchange, and we are unable to say what proportion of their liabilities is covered by that asset. A few banks always keep a full bill case, but most of them do not, and nearly all wrap up bills of exchange with advances to customers in one item, and the bulk of these advances are probably just as inflexible, as fixed and irreducible in time of pressure, as investments in marketable securities made on a bank's own account.

It is well to look facts in the face always, and these are some of the facts appertaining to the position of our great English joint-stock banks. That most of these banks are strong, perhaps all of them, in ordinary times, that they are managed honestly and with care, we have not the slightest doubt. Some of them, indeed, are managed with extreme vigilance and unusual ability, but they are all trading on assumptions, on makebelieves, quietly accepted as if they were immovable facts. They all assume that they will never be called upon in a body to repay their depositors to an inconvenient extent. They all also assume that their advances and their loans at call and short notice can be drawn in at the end of the term for which the money has been granted, or on the instant, without difficulty. Deceived or misled by the smoothness with which the daily routine functions under their eyes—receipts balancing payments, as rack and pinion dovetail—and having the Bank of England always at hand to ladle out unlimited millions against pawned stocks, bankers live as if such a thing as a genuine credit cataclysm were an impossibility. A few of them possess some private reserves of gold, and to the extent of these reserves recognise the existence of an underlying or hidden danger, but the bulk of them unquestionably accept things as they are, and their horizon is bounded by routine. Perhaps this routine will continue undisturbed for many years, perhaps not. At least, if only we can continue to live by faith, it should see out the Brummagem "empire."

And it is almost certain that nothing untoward will occur as long as such cripples as may be are dealt with one at a time. There has been steady and persistent unloading of "strong box" securities going on in the Stock Exchange for some time back, and nothing has foundered, no institution, no firm or private capitalist. Catastrophe is thus averted, depositors kept serene, and "peace insured."

The Labour Prospect at the Rand.

There is an immense amount of loose talk floating about just now regarding the labour position at Johannesburg, and more particularly the prospect of the early importation of Ah Sin to solve the difficulty. Such reports have a common purpose easily discerned by the cautious, but calculated whether they galvanise the Kaffir market into activity or not, to obscure the real character of the situation. Look in what direction you will, the fact reveals itself immediately that those mining companies whose chairmen or directors orate loudest upon the scarcity of labour, invariably have a heavy overdraft at their bankers, and are only awaiting the earliest possible opportunity to replenish their coffers by a fresh issue of shares, which operation, it hardly needs to be said, cannot be undertaken with the market in its present condition. It may be admitted, of course, that a real shortage of native labour exists, although whether it need exist is a matter upon which opinions differ. The fact, however, that the full complement of stamps dropped before the war has not yet resumed crushing is taken advantage of for all it is worth, not only by those who wish to conceal the scarcity of their funds and their inability to procure further capital just now, as well as the backward development of their mines, but by those who possess a number of speculative ventures—not necessarily of a fraudulent character, but in all cases involving considerable risks, and still in the veld stage—which can only be financed when prices are buoyant, and the fever of boom times affects the judgment as well as the temperature of the victims. Thus, with the quantity of labour available the mines of the Rand are even now making relatively as large an output and earning as good dividends as they did in 1896 and 1897, and it is surely not too much to say, therefore, that if the Rand then "licked creation," and markets were active, similar, or better, results at the present time cannot mean that the industry has gone to the dogs, or that red ruin is staring in the face everybody who is connected with it. In 1902—despite the fact that the war continued till the end of May, and affected mining operations to a serious extent—the value of the total output was £7,269,888, or almost equal to the output (£7,809,000) in 1894—the year which saw the birth of the last great boom. For the present year, taking the figures only up to, and including July, the value of the output is £6,648,647. There has been, too, a steadily progressive increase in the returns, from £846,489 in January, to £1,068,917 last month. If figures and advances such as these indicate that the gold industry at the Rand is in a moribund condition, or that there is no hope for the patient unless a gang of schemers is allowed to quicken the pace by the introduction of the Chinaman, we fear that the word bunkum has lost its signification, and that the evil of share-gambling has only given place to the greater evil of the fashion of hysterical drivel. By the end of September next, the yield of gold will have overtaken and passed the whole output (£8,578,000) for the celebrated year 1895, when the Transvaal was a sort of earthly New Jerusalem, when market operators fell over each other in their haste to buy shares at absurdly-inflated values, when men who were almost born in the gutter rented or purchased the palaces of dukes, when peers of the realm, whose progenitors had taught manners and other things to John Lackland, were voted close-fisted vagabonds by hotel-waiters who battened upon the golden largesse of successful speculators, and when fashionable ostentation had a madly-merry if rather short, reign. And now—well now, Johannesburg wants a workhouse, and people are passing poor, like the young married couples in feminine novels, on incomes of £2,000 a year! No! if there is depression, as there undoubtedly is; if there is real poverty, which admits of no question; if brokers in Throgmorton Street spend their time in "talking Chinese" for want of anything better to do; and dealers in Johannesburg walk to Pretoria because they have no other means of getting there, the cause must not be sought in the mining industry on its commercial and industrial basis, nor the cure in vain hopes that by merely whistling to the Heathen Chinee he will flock in vast numbers to the rescue.

Without dealing with the surfeit of paper which no bank manager will touch on any account, or the labour shortage in relation to native sources of supply, let us come to close quarters with this Chinese alleged solution. To listen to the gossip of the street, or to read the columns of journals which are trying to hasten or manufacture a boom, one would be led to think that the market operators believe that within a week or two, or "by October at the latest," Chinese will be imported to the Rand in such quantities as to end for ever the labour difficulty. They are putting up the sheds for them already. It is hard to combat such nonsense without being accused of want of sympathy with South Africa, or a desire to accentuate the prevailng spirit of pessimism. "Oh! he's a bear!" is the type of argument that has suppliemented the "Yah! pro-Boer!" of a short time ago. Without possessing the slightest pecuniary interest one way or the other, we will put the case fairly and squarely in the hope that it may appeal to the ordinary intelligence of men who do not willingly care to make fools of themselves. In short form, our proposition is that in the most favourable circumstances no batch of Chinese coolies can arrive in South Africa within twelve months from now, and that at the very least two years must elapse before any considerable number, say 70,000 to 100,000, could be brought to the assistance of the mines. The reasons that point to this conclusion may not be palatable—the truth seldom is—but at any rate they dispose effectually and entirely of the idea that a boom is at hand, or that the labour question is just about to vanish from the scene. In the first place, Mr. Chamberlain has pledged himself to the House of Commons that, so far as he is concerned, no attempt to introduce Asiatics will be sanctioned until public opinion in the Transvaal has veered round, as he believed it might do, and probably would, in favour of such a step. His pledges may be Brummagem ware, like some of his ideas, but at any rate there is no reason either to doubt his sincerity (that is, of course, his political sincerity) in this matter, or to imagine that he would deliberately and unnecessarily flout white opinion all through South Africa, which he greatly values, by a premature or ill-considered effort to force the pace. He has assured us that ,although a Crown Colony, the Transvaal shall on this subject be treated as if it enjoyed full responsible government. Now, the Legislative Council, the only kind of Parliament which the Colony has, after a strenuous session in which such a mass of crude Ordinances and undigested financial proposals was flung at them, that the members did not know whether they were on their heads or their heels, has just adjourned, and will not meet again until May of next year. True, the Council could be called together for a special session, but there is not the remotest likelihood of that, seeing that the members are scattering in every direction, some to Europe for a prolonged holiday, and others to their farms for the approaching summer season. To the former class belong Sir Percy Fitzpatrick, corner-boy of the Council, who propounds the conundrums for the nigger at the other end of the bench to answer, and without whom no discussion upon any subject would be complete; to the latter the Boer members who have crops to look after, and the merchants who are going to look after the profits that can be squeezed out of the unfortunate public. The official members are also on the wing, and to crown all the High Commissioner himself has started on a long tour in search of rest. Is it not plain, therefore, that no official course can be decided upon until at the earliest May next, and only then if public opinion, at present all at sixes and sevens, has been brought sufficiently into line to admit of a full-dress debate? Even then the stand-up fight will only be beginning. Has not the Cape Parliament passed a resolution with astonishing unanimity that they will all, Messrs. Oats and Jameson with their diamonds blazing upon them, Messrs. Merriman and Sprigg, representing the moderate British element, and Messrs. Sauer and Hofmeyr on behalf of the Dutch—that they will all die in the last ditch, with the Prime Minister yelling for his police, before the accursed pig-tail shall set foot in the land? Is not the Natal Legislature equally opposed to the importation of any Asiatics except for the Colony's own use, and has it not just shown its lively sympathy for the Rand by throwing out a Bill to authorise the recruiting of its native population by Transvaal touts? So that, assuming the prevailing opposition to Chinese undoubtedly now existing in the Transvaal, were overcome by May next—and, of course, there is no saying what might happen unless some of the magnates are again so foolish as to leave their private letter-books lying about for inquisitive people to read—the era of deputations would then commence. There would be meetings of protest on both sides, memorials to England, petitions to the House of Commons, a big organised opposition here, the Cape and Natal ports closed, and Sir Gordon Sprigg carrying out his threat to line the borders with police (with Dr. "Jim" and some of his free-booters in command)—all this must happen after May, not before, whether or not the Stock Exchange grows hoarse shouting "Exeter Hall," or the Johannesburg speculator puffs himself out to bursting point, and commences building a triumphal arch to welcome President K—— no! no! we mean to kick Lord Milner out through! Cutting the painter is an idea not foreign by any means to the Rand and its masters.

Let us suppose, however, that all goes through in the end, towards the importation of the Chinaman. To allow from May to July for the discussions, deputations, divisions, and the delays consequent upon the necessity of reference home is certainly not excessive. That brings us twelve months ahead from now. Then, there must follow negotiations with Portugal about using Delagoa Bay for landing purposes, and making preparations for "warehousing the goods," pending transport. Negotiations with Lisbon take a long time, and co-operation in Mozambique takes much money. Imagine the Portuguese extra smart where there is any of the latter to be picked up, and put the time occupied at a month, thus bringing us to the beginning of September, 1904. Then, you have to get your Chinaman, an operation that suggests to our mind Hotspur's retort to the Welshman who said, "I can call spirits from the vasty deep!" "Yes! but will they come?" Firstly, a large staff of skilled recruiting agents, themselves speaking Chinese, must be gathered together—a work of some months. There are no less than twenty-two separate dialects in the language, and they differ so materially that the dialect of one district is quite useless fifty or a hundred miles away. The tout must be able to converse freely and to give eloquent lectures to the unsophisticated Ah Sin on the advantages of sitting astride the Equator, or working twelve hours a day—probably for a shilling to be paid him when he gets back to China—in a deep-level about 6 ft. removed from hell-fire. Such a nice change from the snows of Shao-hing, or having a toboggan slide down the Great Wall! That tout will earn his money and will probably get knocked on the head for it before it has been in his possession ten minutes, the bandits and the mandarin fondling each others' pig-tails afterwards, during the mutual congratulations on their short, but time-honoured way of dealing with the "foreign devil." But it will be said, "Get your trained tout from California or British Columbia!" As if those mining centres are going to stand idly by whilst the Rand snaps up their best men—if they are to be had. California and British Columbia as goldfields are over fifty years old now, and probably John Chinaman knows the way there by himself by this time, and does not need any guide to fleece him. But we are going miles too fast. The Chinese Government has to be squared first, and the Chinese Government takes as long over the process as the Portuguese, only more so. Next, there is no excess of labour at the Chinese ports. It will be necessary to go inland walking all the long way, or riding horseback at the risk of disturbing the grave of somebody's ancestors, whilst the somebody goes to look for his gun. There are no railways and no means of communication with the interior except by small canal-boats or river craft, usually crammed full in the ordinary course of business. Assume that the tout and his guides take a month or two to reach a large city in the interior. We are now at October; give him two months more to combat every obstacle, and is he likely to gain in that period 1,000 coolies? Even if he did, he has then to get them to the coast, a distance of, say, 100 to 250 miles, every step of which must be walked by the

coolies. Arrived at Shanghai or Ningpo, is there a probability of obtaining suitable transport for 1,000 (excluding losses by the way) of these poor despised creatures? No one supposes they are going to be carried by crack P. and O. liners, or will be allowed to put their feet upon the saloon table of even a third or fourth-rate steam vessel. Is there, we ask, the smallest chance of getting a supply of twelve-knot tramps at a Chinese port, at all events until some time after the system of recruiting has been established, and there is rather more than the bare chances of a human freight being obtained? Tonnage of this class is not easily chartered, as the boats become unfit for any other use worth speaking of. Depots will, therefore, have to be established, and on every occasion when a little money is doled out on account, there will be the usual "amusements," the usual desertions, the usual visits by moonlight to the sick friends, or the men who keep dogs, and a profound conviction (after handling all the available cash and portable property) that better, far better, is a Cycle of Cathay than to be grilled as a meat-tea for some Hottentot blade and his young woman, when the butcher has forgotten to call.

We have now come to December, 1904, not far off eighteen months from now. Picture to yourself Ah Sin brought from the interior in thousands. Imagine him resisting the wiles of other touts from the neighbouring tobacco islands. Think of him refusing to desert his new-found friend by wriggling through the keyhole until he has robbed him of all he can. What then? Given a supply of cheap tramps and packing them each with 2,000 Chinese, like sardines in a tin, it will take a month to steam at a slow rate to Delagoa Bay, monsoons, typhoons and other things permitting. Here a bad single line of railway, with a platform of goods waiting to be forwarded, will cause further delay. You cannot put 50,000 coolies into one boat or one train. Say it takes thirty steamers, some sailing concurrently from different points, and each packed as we have said, that would mean at the rate of two per week, over three months, and for 100,000 coolies actually embarked, over six months, occupied in transportation alone, and more likely nearer a year. In any case we have said enough to show that in the most favourable circumstances the prospect of Chinese relief for the mines is not hopeful. It could not begin until this time next year, and it would be quite two years before 100,000 or even 50,000 could be debarked at Lourenco Marques, assuming the recruiting were successful. But what we cannot assume, and do not believe, is that even 5,000 Chinamen will leave their homes for an unknown land (unlike in that respect the countries which at present obtain Chinese labour, and of course these will compete fiercely to retain control of their own sources of supply), where they are to be treated like convicts, and turned out like dogs when no longer wanted. They will, we are convinced, prefer to await the return of the first batch to hear how they got on. How is that? If the natives of South Africa have shown their readiness to go on strike because an attempt was made to take advantage of them—a successful strike, too, in which it was the masters who had to surrender at discretion—will they not go on strike again at the first sight of the Yellow Man? They will, indeed, and we can fancy the aristocratic Zulu or the cautious Basuto who won't go underground now at any price turning up his flat nose with scorn at the herd of Asiatic dregs, and consulting the missionary for the equivalent of "blackleg." The present supply of natives will in short go to their homes, each the proud possessor of a pig-tail with a piece of the scalp clinging to it. The mines, did you say? Well, water always finds its level, and so will paper, but the operation is bound to be painful, and it is quite another story!

Notes from New York.

New York, August 11.

With regard to the new currency measure which is intended to be laid before Congress at the coming session, Senator Aldrich says that the chief object of his bill is to provide a way to get back into circulation the surplus capital in the Treasury vaults. As a critic of this bill says, he seems to have no thought of a bill reducing taxation and thus doing away with a surplus revenue. There will be a chance for a great hubbub when the bill comes up in Congress, and if any bill does pass, it is pretty sure to be nothing more than a rehash of present monetary evils. The main object of the Aldrich bill is to bring about the transfer of the surplus from the Treasury to the City National and the other banks that have passed under the Rockefeller control. Eventually, it would seem, the Standard Oil Company and its affiliations must become the dominating influence in this country, and there is not enough intelligence apparently or energy among the people to withstand them.

The latest reports of the grain crops confirm what I have previously written. The wheat crop, it is now ascertained, will be a short one, while maize will be about 250,000,000 bushels short of last year's crop. Oats also run much below last year's crop. It would have been surprising had the returns been better than they are, for all the weather conditions since the opening of the season to now justified the belief that they would have been worse.

Labour conditions are very little improved, and there is a statement in the morning's papers that, owing to one cause and another, the coal companies are unable to market all their coal. A good many people are becoming nervous as the autumn approaches, and have begun laying in their stock of fuel, and this announcement of the coal companies looks very like an intention to profit by the demand and find an excuse for raising the price.

The retirement of General Nelson Miles from the chief command of the United States Army, by limit of age, three days ago, has given occasion to our astonishing President to perpetrate the most astonishing act of his career. Although an officer of distinguished merit, General Miles has been practically dismissed as if he were in disgrace. The meanness and spite of the manner of his retirement is solely due to his exposure during the war with Spain of the vile meat that was served out to the army when General Alger was Minister of War, and to his further exposure of the water cure and other tortures applied by American officers and soldiers to the Philippinos. This was the unforgivable offence, and General Miles has reason to be proud of it. The wording of the order of dismissal was extraordinary, and almost incomprehensible. It concluded by saying that the General will now proceed to his home, and that this travel is recommended by the public interest. Some of the papers have not ventured to comment upon it, whilst in those that have, the indigation is immeasured. The sequel of this matter it going to be very interesting, and may be very important politically.

Economic and Financial Notes and Correspondence.

The Macedonian Upheaval.

It seems to have come at last, after so many long centuries of oppression and misgovernment. Benevolent people, accordingly, are now beginning to call out in this country for interference with the Sultan's chaotic administration, in order to restore order and to deliver the Macedonians from imminent danger of massacre at the hands of the Turkish troops, or to prevent neighbours from attempts at mutual extermination. They may call out as much as they please, but no help will be given from Western Europe, least of all by us. In a sense, one might say that all the troubles of the old European provinces of the Greek, or Græco-Roman, Empire, have sprung from the misdeeds, neglect, and treachery of Western nations, the so-called "Latin Christians." It is just seven centuries since the members of the fourth crusade, organised by the Papacy with the ostensible purpose of reconquering Jerusalem, turned aside on the temptation of the Venetians and overthrew the Roman Empire of Constantinople. Until then, with more or less efficiency, often with conspicuous heroism and splendid genius, the Eastern Christians had stemmed the tide of barbarian invasion, and again and again rolled back the conquering hordes

of the followers of Mahomet in Asia. After the Latin conquest of Constantinople, and the substitution on the throne of the Cæsars of a follower of the Roman Pontiff for the native Emperor, the empire was no longer able to make headway against the invaders from Asia. In a little time the Turks established themselves in Europe, and although Constantinople did not finally become their prey until nearly two and a-half centuries later. the power of oriental Rome to hold up its head against the enemy was destroyed for ever. The mischief was done at the beginning of the thirteenth century, and has not the policy of Western Europe been more or less identical with that of the hypocrites who formed the fourth Crusade? From the day when the horde started from Venice to do a job of conquest and rapine on the Adriatic for the Venetian Republic, and then went on to overthrow and usurp the throne of Constantinople, until now, when has ever "Latin Christian" really cared to succour Greek? When did Western Europe really do its best and its utmost to restore something of liberty to the broken fragments of races and principalities that have for so many centuries lain beneath the heel of the incompetent and, when roused, brutally fanatical Turk? In the middle of the last century we joined France in preventing Russia from acting as emancipator, and at every step in the slow deliverance of those oppressed peoples Russia has been the helper and Western Europe the hinderer. What have we done for the Armenians in Asia Minor whom we promised to protect? What have we ever done to stay the hand of the Turk? One may say nothing. With large classes in this country the Turk is still popular, an object of admiration for his vigour in killing, his cunning, his power to "wipe out" enemies by fire and sword. No, the Macedonian insurgents will get no help from us as a nation. They must work out their own salvation, unless Russia comes to their assistance.

Is Russia going to do so? It is highly probable. Many influences and interests, foreign and domestic, pull the Tsar in that direction, or the Tsar and his overmastering bureaucracy and military controllers. Look what a fine counter poise to the intrigues of England with Japan in the Far East a Russian occupation of Constantinople would be. The one danger that Russian politicians may be said to apprehend at the present time is the union of the fleets of England and Japan to batter down the new fortifications at Port Arthur and elsewhere about their ears, or a high handed and determined attempt in combination to prevent Russian domination in Corea. If troubles in European Turkey come to a head they would paralyse our activity in the Far East, and leave Russian intriguers at perfect liberty to work their will with China and against Japan in that part of the Earth. Nor is there much danger that Europe will just now be set in fire by a forward step against the moribund Turk on the part of Russia. Western Powers are nearly sure to be open to a financial "deal." Austria is practically helpless, and Germany, like ourselves, is so weighed down by the peace cost of its fighting apparatus on sea and land that any attempt on her part at a great expedition to hinder the progress of Russia would almost certainly throw the finances of the empire into irretrievable confusion, stop loan floating all round. It is much the same, only more so, with France, where the chief preoccupation of men's minds must now be whether Russia can stand the strain of all these movements and continue to meet the interest upon her foreign debt.—What a master stroke of confusion it would be to Western Europe were the Russian Treasury to find it inconvenient to any longer meet the interest upon the hundreds of millions of that debt chiefly in the hands of French investors! Ah, she will not do that, at least not yet; it will be a better speculation to bribe the West by a patronising guarantee of the Turk's debt, fraudulent imposition though most of that is.

Whatever Russia may immediately design as against the other Powers, no unprejudiced student of the history of her relations with the peoples liberated from the grip of the Turk can wish her anything else than success in any further efforts she may make to deliver further slices of the misgoverned remnants of the Turk's empire from the hordes by whom they are now devastated. Domestic reasons may have as much influence as great political designs abroad in driving the Russians forward at this critical juncture. The efforts of Russian statesmen to lift the empire on to a higher plane of industrial development have conjured up a new danger to absolutism, as we can gather from the meagre descriptions of strikes and labour revolts all over the country. The formless swarms are becoming organised masses of workmen hot for revolt. To draw off the malcontents and occupy the public mind with dreams of expansion, or freedom for the downtrodden in Turkey, may seem to the Cabinet of the Tsar an excellent policy, and we do not think that the world will suffer much if it is allowed in this matter also to get its way. Absolutism is doomed in that great empire, and Russian political idealism, as expounded by men like Tolstoy and Kropotkin, has something very attractive and noble about it. No people whose minds are coloured and influenced by that idealism can be mean and grasping, or for long oblivious to all interests save their own, after the fashion Latin civilisation has made familiar to the world. This, however, may be all idle speculation, but one thing is sure.—England's hands are tied so effectually that she can no longer, hypocritically or otherwise, play the part of protector of oppressed nationalities, deliverer of fragments of humanity from the yoke of incompetent tyranny, upholder of the standard of freedom in wolf consumed Turkey, or anywhere else.

The Whisky Problem.

The materials relating thereto are contained in the forty-sixth report of the Commissioners of His Majesty's Inland Revenue for the year ended March 31, 1903. This most valuable publication is packed from end to end with material interesting to the taxpayer and highly illustrative of the saying that "the hand of the diligent tax gatherer maketh poor," but we concern ourselves for the present only with the portion relating to spirits, because of the bearing it has upon the position of sundry banks. Last year the number of gallons of spirits distilled in the United Kingdom was 49,744,430, a decrease of 5,448,000 gallons on the previous year. So far, therefore, the position is better than it has been for many a year back, the decrease having been greater than in either of the two preceding years, and the total 13,694,000 gallons below the figure for 1898-99, which was the highest ever reached, the culminating effort, in fact, of the whisky-making gamble in Scotland. In that part of the kingdom alone, where more than half the home-made spirits are produced, the decrease, compared with 1898-99, was last year about 9,762,000 gallons, and the decline upon the total of 1901-2 was about 3,965,000 gallons. There is also a decline in the number of distilleries at work, so far as Scotland is concerned, four having disappeared during the twelve months, making the total nine less than that of 1899, or 152 distilleries now compared with 161 then. But the total at work in the whole United Kingdom is still eight in excess of the total for the year ended September 30, 1897, although ten below the number producing spirits in 1899. There is also a slight decrease of 485,000 gallons in the total stock of spirits on hand in the warehouses on March 31 last. It amounted to 166,526,719 gallons, so that here likewise there is a faint improvement, although the figure is higher than that of any preceding year, with the one exception of 1901-2, and is quite monstrous compared with, say the total of 1889, which was only 91,297,451 gallons. The increase between these two dates is therefore 75,230,000 gallons, and we should again like to know how much bankers' money this enormous increase in the stock represents? It is an increase that has gone on almost without pause for at least a quarter of a century, and although there was a slight decrease in the total stock on hand on March 31 last, the Scotch stock was greater than that of the previous year by nearly 395,000 gallons, and stood at 120,342,958 gallons, as against only 58,504,000 gallons in 1892-93. The Scotch position, therefore, does not improve in spite of the reduction in the quantity of spirits produced.

Yet the drinking continues powerful, and amounted in the past year to .83 of a gallon per head for the United Kingdom in home-made spirits alone. This is a higher figure by .02 gallon than in the preceding year, although lower by .12 than the total for 1899-00, but that higher figure not only embraces the Mafficking season, but the first alarm in the whisky trade regarding increased taxation.

Both then and in 1900-01 all who could command money or credit withdrew whisky from bond, and paid duty on the old scale, so as to cheat the revenue as much as they could, being imperial patriots. The country has been doing its best to drink up this extra stock ever since, and, including the consumption of colonial and foreign spirits imported and consumed, more than a gallon a head of proof alcohol is now poured down the throats of citizens every year. In the year under review the total was 1.03 gallons, and the figure has never been less than a gallon since 1895-6. Clearly, therefore, the drunkards are bestially doing their duty, and yet the whisky position does not improve. Pressure of financial obligations, the necessity of keeping things going in order to hide losses, and other influences, combine still to force the production beyond the demand. We cannot, indeed, fully reconcile the figures relating to consumption and stock. Last year duty was paid on 35,897,175 gallons of home-made spirits, and of that total 34,765,135 went into consumption, the remainder being still in stock. Then 6,438,802 gallons were exported, bringing the total consumption, home and foreign, up to 41,204,000 gallons. This, however, was 8,545,000 gallons less than the production. Another 4,240,000 gallons, however, were methylated, and the balance of 4,900,000 odd gallons must, we suppose, be taken to represent the annual wastage upon the stock in hand. In other years the Commissioners of Inland Revenue used to furnish a table, in which the amount of wastage, "or deficiences," was set forth. That is not to be found in the current year's report, but in 1900-01 the total alcohol that in this way vanished came to 4,830,661 gallons. We may, therefore, infer that the whisky thus lost in the past year more than accounts for the difference between consumption and exports and the actual quantity distilled. What influence has this complete disappearance through evaporation, leakage, samplings and other causes, of so much whisky upon the position of the credit institutions by which the industry has been supported, and blown to its present monstrous size? Assuming that 5,000,000 gallons thus disappeared in the past year, the absolute loss since 1894-95 will have exceeded 30,000,000 gallons, all of which must have been originally paid for, and which there is nothing whatever to represent. Whisky dealers were formerly able to recoup themselves for wastages by augmented prices. The older the whisky, within limits, the higher the price demanded for it. But with stocks at their present magnitude, this enhancement of price can no longer be possible except to a most limited extent. The tendency must rather be for the price of whisky in bond to depreciate irrespective of age. We are therefore driven to the conclusion that a liquidation in bankruptcy is inevitable for an industry situated as whisky distilling now is, and feel persuaded that the longer such liquidation is delayed the more certain are thousands of the thrifty to find their savings gone like the mountain dew.

The English Railway Half-Year.

At first sight the English railways appear to have had a fairly prosperous time during the six months ended June 30. Gross revenues, with one or two small exceptions, show substantial increases, while working expenses are less in proportion on every important line save the Midland, Great Eastern, District and Furness. Yet the increase in the dividends paid on the ordinary stock in no case exceeds ¼ per cent., and even this small addition is made by but few companies, the majority being compelled to keep to the same rate as that paid a year ago. For although the ratio of working expenses to capital may decline, it does not necessarily follow that the amount actually spent is less. Two companies only, the North-Eastern and Great Northern, have succeeded in reducing their expenditure this half-year as compared with the figures of June, 1902, while all the rest have spent considerably more. This, too, in spite of every company, except the District, having saved on its coal bill—reduced the cost of locomotive power. The saving effected in this direction was swallowed up by maintenance of way and works, traffic expenses and other items, which rather discounts the fall in the ratio of expenses to revenue. Modern conditions of travel and freight handling, it is true, require heavier rolling stock, and consequently heavier roadbeds and more powerful locomotives, consequently a costlier upkeep, but then the earning capacity should be proportionately greater. That such is not the case is shown by the steady and continual rise in the proportion of expenses to revenue. None of the big trunk lines, and few of the smaller systems, are nowadays able to keep the ratio below 60 per cent. In some items, such as rates and taxes, the increase is beyond the control of the companies. But considerable savings might be made in traffic expenses were the companies to more generally adopt the use of larger wagons for certain classes of heavy traffic, and the system of graduated train loads initiated by the Lancashire and Yorkshire. Economy should also result from an intelligent supervision of the traffic, so that the waste mileage of empty or nearly empty trains, goods and passengers might be saved.

RAILWAY ACCOUNTS.—JUNE, 1903.

* Estimated. † Electrification of lines.

The most unpleasant section of the railway accounts continues to be the steady expenditure of capital upon lines open, and on new rolling stock. Year after year the companies persist in spending large sums, which ought to be furnished by revenue, on these two items. This has been done ever since the railways were first constructed, and therefore they are now saddled with an enormous amount of unproductive capital, capital that has been used up and against which there is now no asset of value. For example, the North-Western and Great Western, in addition to devoting £626,727 and £690,502 of their respective revenues to upkeep, spent capital to the tune of £367,879 and £228,269 on "lines open" alone. All the other companies did the same in a greater or less degree, besides paying for fresh rolling stock and constructing new lines. It is time some effort was made to check this extravagance, to put an end to a habit certain to be in the end as ruinous as colonial loan raising. When once a line has been constructed and fully equipped, we are disposed to think that the capital account in respect of it should be closed, and that all future increments in permanent way or rolling stock necessary to cope with the development of traffic should be paid out of revenue, if not on the nail, then by means of short term annuities. But this method would by no means please the class of people who now call themselves proprietors of these railway, it would reduce their dividends too much, though it would doubtless in the end enhance the value of their possession. At present the ordinary stock holder has merely a secondary or tertian interest in the railways, and every year sees him pushed further to the rear. But he generally gets a dividend of some sort, whether paid out of capital or not, he does not care. So as long as new money can be raised, sometimes on terms giving a bonus to the subscribers, all will be well. The English are the most improvident of all civilised peoples, and their railway companies spend nearly £6,000,000 on capital account last half-year.

The Transvaal Labour Supply.

The Johannesburg *Star*, in the number to hand by mail, publishes the following figures of the labour supply in the Transvaal, issued by the Government mining engineer, showing the number of employees at work in the gold and coal mines in the Transvaal, on the last full working day of June. Was it a Sunday? Nearly 12 per cent. of the labour, it may be noticed, is employed on non- producing mines. No wonder dividends are slow and poor, and the cry for slave labour strenuous.

Welsh Railway Figures.

It is not often that such general improvement is witnessed as that shown by the various Welsh railways for the half-year recently closed. With the single exception of the Cambrian Company, which reports a small decline, all the companies whose results are set forth in the subjoined statement show improved gross receipts compared with the corresponding period of 1902, the mineral lines of South Wales doing particularly well. More important still, working expenses were on a reduced comparative scale, and the net revenue figures look rather attractive. Substantial gains are reported by the Alexandra Docks and Railway, the Barry, Cardiff, Port Talbot Railway and Docks, Rhymney, and Taff Vale Companies, the Cambrian

again disturbing the excellent record. In no less than seven instances the improvement is reflected in the dividend record, and although certain companies are so hopelessly waterlogged that it only means a little more on a debenture stock, or an additional preference security receiving a dividend, it is pleasant to note the recovery in the better class companies. Thus the Barry adds another ½ per cent., notwithstanding that additional stock ranks for dividend, and it looks as though the ordinary security will soon be on its old 10 per cent. basis once more. Rhymney ordinary stock being small in amount quickly feels the effect of expanding revenue, and the rise for the past half-year is the substantial one of 1½ per cent. per annum. The Taff Vale pays 3½ per cent., against 3¼ per cent., equivalent to 8¾ per cent., compared with 8⅛ per cent. on the original ordinary stock, but it should be explained that revenue received a special credit of £5,000 out of the damages received from the Amalgamated Society of Railway Servants. The full amount was £23,000, and we find that, in addition to the £5,000 just mentioned, £1,000 was paid to the manager for special services, expenses of legal action absorbed £8,751, and £8,429 was carried to suspense account. Powers have been granted to the company for the electrification of the line, but the conversion is not at present contemplated, as a motor coach, on the lines of that introduced by the South-Western and Brighton Companies will better meet the company's needs. The Festiniog Railway struggles into the dividend list with a 1 per cent. per annum distribution, and the Vale of Glamorgan pays 4 per cent., against 3½ per cent. This railway is in a curiously happy position. It receives from the Barry Railway, which works the line, 40 per cent. of the gross receipts and sufficient in addition to make up 4 per cent. on the entire capital. For the purpose of calculating this rate £39,073 is deducted, representing expenditure on restoration of viaduct and premiums received, but as the debenture stock bears only 3 per cent. interest, 4 per cent. can be paid on the ordinary capital. Should further debenture stock be issued, the revenue and the return to ordinary stockholders will be actually increased, because the company will receive 4 per cent. on the amount and pay only 3 per cent. The increased revenue of the Brecon and Merthyr Company is absorbed by the additional amount of "B" debenture stock created in connection with the capitalisation of arrears of interest, and the Cardiff Company prefers to raise its balance forward instead of the return to stockholders. The Port Talbot undertaking, which has not borne out the original expectation, did a little better, and pays an extra 1 per cent. on its preference capital.

A Suggestion for a Birmingham Leaflet.

That staunch radical and free-trade paper, the *Edinburgh Evening News*, has been quietly poking fun at Mr. George Bernard Shaw and drawing from him an enunciation of some of his many "principles." Mr. Shaw, it seems, is at once a socialist and a protectionist, rather a bizarre combination of political creeds, but then Mr. Shaw has always loved the original. When, therefore, asked by the *Evening News* whether he would prevent the American Trusts sending us iron and steel for nothing, Mr. Shaw emphatically said he would because of the injury such free imports would inflict on the British iron and steel trades. To show Mr. Shaw the pretty absurdity of his position, the *News* recalled Bastiast's famous Candlemakers' Petition, and the extract is so very funny that we pass the summary on. Perhaps "Consistent" Birmingham might like to print a new petition adapted to the sad case of Sir Thomas Wrightson and others.

Bastiat represents the candlemakers as pointing out to the French Government the great harm which was done to their trade by the intolerable competition of a foreign rival whose goods were imported into France for nothing. That rival was the sun. The moment the sun rose the candle-making trade was reduced to stagnation. The trade leaves the candlemakers and consumers greedily use light which costs them nothing. Just as Mr. Bernard Shaw would use legislation to prevent the importation of free iron and steel, so the French candlemakers are represented as calling upon the Government to legislate against free light. In the words of the petition: "What we pray for is that you may pass a law ordering the shutting up of all windows, skylights, dormer-windows, outside and inside shutters, curtains, blinds, bull's-eyes—in a word, of all openings, holes, chinks, clefts, and fissures by or through which the light of the sun has been in use to enter houses to the prejudices of the meritorious manufactures with which we flatter ourselves we have accommodated our country, a country which in gratitude ought not to abandon us to a strife so unequal." The candlemakers then proceed to show that such legislation would not only help them, but would also be beneficial to French industries as a whole. To again quote the Petition: "And, first, if you shut up as much as possible all access to natural light, and create a demand for artificial light, which of our French manufacturers will not be encouraged by it? If more tallow is consumed, then there must be more oxen and sheep, and consequently we shall behold the multiplication of artificial meadows, meat, wool, hides, and, above all, manure, which is the basis and foundation of all agricultural wealth. If more oil is consumed, then we shall have an extended cultivation of the poppy, of the olive, and of rape. These rich and exhausting plants will come at the right time to enable us to avail ourselves of the increased fertility which the rearing of additional cattle will impart to our lands. Our heaths will be covered with resinous trees. Numerous swarms of bees will, on the mountains, gather perfumed treasures, now wasting their fragrance on the desert air, like the flowers from which they emanate. No branch of agriculture but will then exhibit a cheering development. The same remark applies to navigation. Thousands of vessels will proceed to the whale fishing, and in a short time we shall possess a navy capable of maintaining the honour of France, and gratifying the patriotic aspirations of your petitioners."

Yet from one point of view Mr. Shaw's combination of political creeds is by no means inconsistent. Protectionists and socialists equally desire to establish a bureaucratic form of government, the only difference being that the protectionists want a bureaucracy of capital, while socialists apparently seek for one of labour. But so far as the poor citizen is concerned, the effect would be much the same, an illustration of the cormorant and the worm.

Ilford Reform.

Shareholders of Ilford, Limited, hardly need to be reminded that as a result of the fierce controversy surrounding the offer of the Eastern Kodak Company to purchase their business, a committee of enquiry was appointed at the extraordinary general meeting held on June 25 last. It was not proposed to take into consideration the suggested purchase by the American concern, but rather to investigate the existing circumstances of the Ilford undertaking, and ascertain where and what reforms were necessary. The labours of the committee have now been completed, and their report was placed in proprietors' hands during the past week. From it we conclude that the men chosen were well fitted for the difficult task entrusted to them, and it inspires confidence to learn that at all meetings of the investigators every member was present. Evidently the Eastman people were not disposed to beat a graceful retreat after hearing the not very flattering opinions concerning their proposal, and two representatives attended one of the committee's conclaves, at which the whole position was exhaustively discussed. Counter proposals were made by the committee and rejected by Eastman's, so the former lost no time in expressing the opinion that the original offer was totally inadequate, and that no offer should have been entertained by the board which did not embrace an alternative of a cash payment (on a fair basis) instead of shares. The reasons for such a conclusion are obvious. The Eastman Kodak Company of New Jersey is an American affair, holding meetings in America, and subject to its laws; the shares command little or no market in this country, are troublesome to register, and by the rules of the Stock Exchange the new shares would not be realisable for some time. These are legiti-

mate objections, and as an alternative to immediate capitulation to the Americans a combination of the British trade is suggested, embracing the large plate and film makers, paper manufacturers, camera and lens makers, and distributors. Some trouble has been taken to investigate the causes of the discord between the members of the board, and while there appears to be no foundation for the unpleasant insinuations so freely bandied about, the view is expressed that in the recent negotiations one section pushed the proposals with undue haste, and the other advanced trifling objections and declined serious discussion. As a result no real effort was made to bring about an equitable arrangement in the interests of the company. These circumstances lead the committee to the conclusion that the "board as a whole exhibits a want of general business acumen and a lack of those essential qualifications so necessary for the maintenance of the cordial and harmonious relations that should obtain on every board, and for the successful conduct of so large a commercial undertaking." Therefore many changes in the administration are considered absolutely necessary. Each member of the directorate is dealt with separately, and commencing with the chairman, Major-General G. F. Blake, it is suggested that he should retire from his present position and accept an ordinary seat upon the board. Mr. C. J. Cox and Major-General J. Waterhouse are asked to seek obscurity so far as this company is concerned, the former because the state of his health does not permit of active labour at present, and the latter because he has no practical knowledge of English trade and finance. Mr. Thomas Hughes is asked to resign his position of director, retaining that of works manager "for which he is so well qualified," while Mr. E. B. Knobel and Mr. A. H. Harman are both to be kept on account of their scientific and practical manufacturing knowledge. Most shareholders will observe an apparent absence of consistency about these recommendations, for while the Eastman offer is condemned and rejected, those members of the board who opposed it are either reduced or politely discharged, while its champions are retained. But in these fierce competitive days no trading company can hope to live and thrive unless administered by men possessed of wide knowledge and experience, and doubtless the committee's recommendations were dictated by such incontrovertible facts. The vacancies on the board which the adoption of these proposals will create must be filled by men capable and willing to further the interests of the company, and if sound appointments can be guaranteed the recommendations seem entitled to support. We are glad to see that the directors' fees are to be reduced. They were formerly much too high.

Guest, Keen, and Nettlefolds.

We should more appreciate the dazzling displays of profits made by this great combination of iron and steel businesses, had we some slight conception of their origin. But needless to say no profit and loss account is submitted, and we have no means of knowing whence the sum of £410,180 earned during the twelve months ended June 30 was derived. How much came from the immense invetments of the company, amounting to £1,541,171, and what was the net product of the freehold and leasehold land, buildings, collieries and blast furnaces, machinery, rolling stock, and plant? We might, too, with advantage have a little information vouchsafed about those investments. Is it money sunk in allied concerns, or do they consist of tip-top securities worth entered figures? Shareholders would more enjoy their fine 10 per cent. dividend were they in possession of these details. The questions are not asked in any spirit of hypercriticism, because we believe the concern to be sound financially, but a company whose balance-sheet reaches £5.434,748 ought not to allow the credit side to consist of a mere five items. They convey no information of any value, and ought to be liberally expanded. We note that debtors are largely in excess of creditors, and cash and bills amount to £175,734. Stock of finished and unfinished goods and raw materials does not show much change, but is lower at £545,490. As mentioned, the profits of the twelve months were £410,180, and £129,119 was brought forward, making £539,299. Debenture interest absorbs £69,702, and preference dividend £86,000, and the directors now propose a final dividend on the ordinary shares of 5 per cent., making 10 per cent. for the year, with £150,000 to reserve, bringing it to £450,000, and £137,097 carried forward. The statement submitted a year ago covered twelve months' trading of Guest, Keen and Co., and fifteen months of Nettlefolds, so no comparison can be made with the present accounts.

Yorkshire Wool Combers.

Whether the latest proposals put forward for the reorganisation of the almost defunct Yorkshire Wool Combers' Association will meet with greater favour than its host of predecessors it would be bold to predict. But, on the other hand, only harm can result from the drifting policy all too long pursued, and if only for the sake of ending a very wearisome business, we are inclined to wish a good reception for the present scheme. Since the collapse in November last, the vendors have many times tried their hands at resuscitation, but always without success, and since the efforts of shareholders were equally futile, it rested with the debenture holders committee, appointed at the general meeting of debenture holders held in May, to formulate suggestions for once more setting the concern on its legs. Violent diseases usually call for violent remedies, and all concerned will doubtless concede that something pretty drastic is required to meet this company's deplorable case. The scaling down now proposed will eliminate some 47 per cent. of the capital, but, bearing in mind the history of the concern, it is far from certain that even this immense reduction is sufficiently severe. Floated in August, 1899, with an authorised share and debenture capital of £3,000,000, of which £661,074 in preferred ordinary shares, £544,681 in deferred ordinary shares, and £760,066 in 4 per cent. debenture stock, had been subscribed and called up when the smash came, the concern never made a return on its deferred shares, owes now three years' preferred ordinary and one year's debenture interest, and when the last balance-sheet was issued had a debit of £18,000. This, for a conglomeration whose component parts were said to earn £100,000 annually before they were joined, is decidedly steep. Clearly, then, the whole affair was grossly over-capitalised, and the committee commence their recommendations in excellent fashion by proposing the extinction of the whole of the deferred ordinary shares, mere promoters' booty. The preferred ordinary shares are to be reduced by 75 per cent., and then converted into 5 per cent. cumulative preference shares, so that should the undertaking one of these days earn sufficient profit to provide this dividend, lucky shareholders will receive 1¼ per cent. on their original flutter, without hope of anything additional. Next to be taken in hand are the vendors, and the committee's attitude towards them is certainly not characterised by misplaced leniency. It is proposed that the commission wool combers should be repaid their bank guarantees, amounting to £33,000, one-half in cash and the remainder in new deferred shares, and that they should exchange £30,000 worth of debenture stock for a like amount of new deferred shares, in such proportion as they should agree upon amongst themselves. The vendor topmakers are dealt with in much the same manner, their bank guarantee being £26,000, and the amount of debenture stock to be given up for deferred shares £70,000. They are also asked to take up £40,000 of additional deferred shares, in order to provide working capital. As to the debenture holders, if the scheme goes through unamended, they must take their year's arrears of interest, amounting to £30,400 in new 5 per cent. cumulative preference shares, and exchange 20 per cent. of their holdings for the same class of security. Unsecured creditors must accept 50 per cent. in cash and 50 per cent. in preference shares. These charges would reduce the issued capital from £1,965,821 to £1,039,750, consisting of £528,000 debenture stock, £342,250 new 5 per cent. cumulative preference shares, and £169,500 new deferred shares, and to pay debenture and preference interest and 7 per cent. on the deferred shares would require annually a sum of £50,097. There is no reason to suppose that anything like this profit is being earned at the present

moment, and it would be folly to hope that the reconstruction would bring the deferred shares within sight of a dividend. The pending actions against five of the vendors are a troublesome factor in the situation, but the acceptance of the scheme may be a prelude to their withdrawal. Unfortunately the vendors show no signs of becoming amenable to reason. About half of them duly gathered together on Wednesday to consider the latest proposal, but, after discussing it for about one and a-half hours, most of them refused to fall in with the committee's suggestions. The scheme, it was said, was rerjected by 15 votes to 8, and most of the absent vendors are thought to be hostile. The only alternative now seems to be to sell up the assets for the benefit of the debenture holders.

A Ravenous Treasury.

Last year, in spite of a Consol issue of £32,000,000 nominal, the Treasury had to come into the market and raise the wind by credit "kites" called Treasury bills, and it also borrowed a good deal from the Bank now and then, principally on Ways and Means account, but also "for deficiency." It did not, however, begin its excess Treasury bill issuing until the last week of September, when £2,000,000 of the bills were sold at a price representing an average discount rate of £3 6s. 2d., and up to a considerably later period of the year there was no material demand made upon the Bank for assistance, the net outstanding debt of the Exchequer to the Bank being only £1,000,000 in the end of September. This year, however, the Government is in distress for money by the middle of August, and not only raised £4,000,000 last week at the Bank of England as a loan for Ways and Means, but is rushing out £2,000,000 of Treasury bills next week, in addition to the amount already in existence, a formidable amount full of danger to the credit market should it enter stormy waters. The impression in the City is that these additional Treasury bills will be followed by other issues, perhaps to the amount of £8,000,000 or £10,000,000 in all, and consequently every effort will be made to put discount rates up so as to make the Government pay a high price for its accommodation. Last year up to the end of December the borrowings on new Treasury bills amounted to £7,500,000, and the aggregate amount of Government floating debt in this form then oppressing the market was £28,633,000. What would become of the Treasury were it unable to renew any portion of that debt in a panic? To be sure it will this autumn have £18,000,000 coming in from the Transvaal guaranteed loan, and may be able to raise another £5,000,000 by selling the unissued portion of that loan, but nearly all this money will go abroad in one form or another, and constitute an element of danger to the credit market by imperilling our stock of gold. Great is the magnificence of the spendthrift.

Mummers at Montreal.

And a mountain laboured and gave forth a mouse. This fitly describes the work of the Montreal Congress of the Chambers of Commerce of the Empire, which, after three days' hard talking on the fiscal question, finally agreed on a resolution, as one member described it, of a milk and water description. The most amusing feature of the discussion was the way in which the Canadian members showed their hands. "We want you to tax the wicked foreigner, not because we think you would reap a benefit, though you might, but because we know we shall." That is practically what they said to the British free-trade delegates. Such a nice kindly attitude for a child to adopt towards its parent. Our forty millions may starve for all Canada cares so long as she gets a chance of pouring her grain on to our markets free from the foreign competition she now meets, and therefore at millionaire-making prices. A few of the British delegates did resent this cool insolence, but many sat on the wall, waitng perhaps until Mr. Chamberlain's "enquiry" shows them on which side to fall. Fall they must one way or the other. Do these mural decorations really for a moment think that Canada is disinterested in her attempt to form a customs union? If so they are more innocent than Moses Primrose when he came home with his gross of green spectacles. Look at the well-worn argument—ever on the trot, though its bones are showing through its hide, that the producer pays the tariff duties. This was a great point with several of the Canadians who repeated it again and again, rolling it round their tongues, but without bringing the smallest shred of proof or intelligent argument to prop it up. They probably knew it could not be true. One of the Australasian delegates also told the meeting he saw no harm in Canada having a corn tax in her favour, if Australia had one on wool, which only shows what horse-leech daughters these self-governing countries are. But what does it matter. The delegates are having a pleasant holiday mixed with a little desultory talk on matters serious or sham-serious, and who knows what chances of private log-rolling. The *Times* correspondent states that the frequent interruptions of the last day's debate by telegrams reporting the progress of the yacht race formed an interesting feature of the proceedings. To be sure. Life's a gamble, stack the pack!

A Yankee Bank "Merger."

Somebody has kindly sent us from New York particulars of a wonderful feat in finance recently accomplished in that city. It is no less than what the newspapers describe as a far-reaching "merger," which makes the National Bank of Commerce the mightiest banking institution in America, and brings the rival houses of J. Pierpont Morgan and Co. and Kuhn, Loeb and Co.—"the two largest private banking firms in that country"—to sit round the same table with representatives of the Mutual Life Assurance Society and the Equitable Life Assurance Society. The engineer who accomplished this fusion is said to be a Mr. Thomas F. Ryan, who is described as "tall, straight, even-tempered and silent," a man who "works without noise." Along with him are young Mr. Hyde, the principal supervisor of the Equitable Life Assurance Society's assets, and leading enjoyer of its revenues, Mr. Schiff of Kuhn, Loeb and Co., President McCurdy of the Mutual Life Office, and others. In tones of triumph the newspaper recorder declares that the total assets represented in the combined bank exceed £187,000,000, viz., the Mutual Life Office assets £76,500,000, the Equitable Life Office assets £72,000,000, the Western National Bank assets, say £18,300,000, and the National Bank of Commerce assets about £21,000,000. This is splendid, only we should like to have some idea what the liabilities are, and feel a little suspicious of a "deal" of this description accomplished in the midst of an acute crisis upon the stock markets, where the insurance offices interests, both direct and more or less indirect through the financial trust companies they control, are stupendous, and where the assets of the two banks brought together are without doubt deeply engaged. Was the combination forced upon the banks and the two monster life offices themselves leading stock manipulators in a wild and despairing attempt to stave off the consequences of rash speculation and headlong participation in the current gambles and combines? Probably we shall get an answer to this question on a day not so very far off. In the meantime it is well to put the facts as set forth in American newspapers on record. And those who like that sort of thing are at liberty to fall down and worship mere bulk.

A Flurry in Water Stocks.

It is really dreadful the way the poor gambler is being knocked about in these days. A little while ago nothing seemed to the select circle interested in water stocks more certain than it would bag a glorious profit at the expense of the London ratepayer by selling the securities of the companies to the newly constituted Water Board at fancy prices. Some time ago we drew attention more than once to the merry gamble going on in these water stocks. They went bounding up 10 and 20 in a week, sometimes 10 in a day, and the jovial old times of the late W. H. Smith and the Disraeli Government's effort to buy out water interests seemed quite to have come back again. On Thursday morning, however, the newspapers printed a horrible official statement to the effect that the new Water Board has quite other ideas, ideas worthy of subver-

sive socialists or an anathematised County Council rather than a good old delegation of City aldermen and common councillors, with an eye to the flesh pots. It seems that no offer at all is to be made for the stock of the East London Water Company, only its debentures are to be "assumed" by the new Water Board. It intimates that it will relieve the company of its liability on these debentures, amounting to £2,051,000, but that the nominal share capital of the company, £1,720,000, for which the East London Company's board modestly demands £7,214,000, is not in the Water Board's opinion worth anything. Almost a worse fate befalls the New River Company, whose nominal share capital of £2,019,000 is taken to be worth no more than £3,000,000, as against the £11,666,000 asked by the company. The Water Board thinks this figure more than sufficient to repay the company the whole of the money which has been expended upon the undertaking. Neither of these companies, in fact, is regarded with favour, because their water supply is insufficient and often bad. What is going to happen to the other companies we cannot guess, but the whole memorandum is interesting and full of ghastly suggestion. What will the lately all so jovial market do? Get at the arbitrators? Perhaps.

E. R. Holden and Co. bob up again.

A good many people will recollect Messrs. E. R. Holden and Co.—sad memories some of them—so-called bankers of Threadneedle Street, with New York, Boston, and Philadelphia connections, who some two years ago were actively engaged in a share pushing campaign connected with that notorious bubble the Sand Fork Petroleum Company. These world-famed Yankee philanthropists—England, France and Germany all received attention—told the unsophisticated that all the shares could have been placed in their native land, but they preferred to reserve 200,000 for an introductory offering in Great Britain, "feeling assured that each share sold would make us friends." Monthly dividends of 1 per cent. were promised, and when the new wells were producing, £3 or £4 was quite the lowest price these dollar shares would reach. The sudden merging of the Sand Fork Petroleum Company into the National Consolidated Oil Company, suspension of dividends, and practical collapse of the whole affair, are facts still vividly before the mind, but nothing daunted and with superb impudence, Messrs. Holden come up smiling—from a fresh address. They speak of the great dissatisfaction amongst their dupes at the loss of money, gone, we fear, never to return, but wish it to be clearly understood that their connection with Sand Forks was solely as agents for the sale of its stock, and they had no voice or part in its management. To these words, in view of the language used when the shares were being foisted on the foolish, we have nothing to say. We simply marvel at the greatness of human nature. But is it to be supposed that a firm of the standing of Messrs. Holden and Co. would allow clients, friends for life, to lose money through their instrumentality? Certainly not. Messrs. Holden will take back those shares—oh no, not for cash, but for nicely printed sheets representing shares in the Tonopah Gold Mining Company of the State of Nevada, as likely as not more worthless than National Consolidated Oil rubbish, if that be possible. Of course, a little of the needful must be forthcoming, just to "oil" the new thing—but let the "bankers" speak for themselves.

"We have been endeavouring to secure a block of stock in some desirable company whereby we could give the purchasers of Sand Fork Petroleum Stock, shares in a company which would be a profitable investment with good prospects of large returns to its shareholders, and put in their hands a stock, the future of which we could fell certain. Having secured an option on a block of the treasury shares of the Tonopah National Gold Mining Company of the State of Nevada, we are enabled to make the following proposition to the purchasers from us of the stock of the Sand Fork Petroleum Company. We will take back the common stock of the National Consolidated Oil Company, allowing you 3s. per share in exchange for the stock of the Tonopah National Gold Mining Company, which is 4s. per share, you to pay the difference of 1s. on cash share so exchanged."

Lest anyone should be so unreasoning as to doubt the richness of Tonopah, a copy of the "London Edition" of the *Tonopah Herald*, published in New York, duly arrives with the offer, and the evidence of riches therein disclosed would make even Rand magnates gasp and become green with envy. There is a pretty little story about discoverer Butler who invested a £5 note in Tonopah's first mine. The return on the fiver to date has not been much, only £1,600,000, but more than £21,000,000 is blocked out, so there is no need for acute disappointment just yet. The fiction is embellished with a picture of Butler and his wife seated on £600,000, and another illustration is entitled "millions lying unguarded and never a pound has been stolen." Here is an example of honesty that many would do well to copy. The whole affair is very entertaining, causing, we should imagine, the features of those who have been duped to relax a little, and these people will, we trust, consign both the offer and the *Tonopah Herald*, London edition, to the back of the fire. Will Messrs. Holden tell us what commission they received for planting Sand Fork shares? Would it be not only generous but just to distribute this amongst the buyers of these worthless "securities"?

Critical Index to New Investments.

*** *To assist subscribers of* The Investors' Review *in deciding how to act when new issues of capital appear during the early part of the week, and lists close before the critical examination given in this Index can appear, the Editor has decided to reply by telegraph to all enquiries referring to such issues. A letter sent to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, Strand, ana enclosing a shilling for the reply, or a reply-paid wire to "Unveiling, London," will bring a prompt answer whether to subscribe or leave alone.*

The Colombian Petroleum Co., Limited.

This undertaking is put quite straightforwardly before the public, and that is much in its favour. It is formed with a capital of £100,000 in £1 shares, of which only 40,000 are offered to the public at par. The remaining 60,000 go fully paid to the vendors of the concession, the Bolivar Syndicate, together with £10,000 in cash, so that the Syndicate probably gets back in cash little more than it has expended in prospecting for oil over an area of 4,000 square miles in the Republic of Colombia, all within easy reach of excellent ports on the Atlantic. A report by Mr. William Farquhar accompanies the prospectus, and from this we learn that as a result of about three years' work he has come to the conclusion that there is abundant evidence of the existence of deposits of oil over this territory, which lies near the coast, with three ports easy of access. Already it would seem that there are private oil works within the district, and these are not touched, but a contract for twenty years has been entered into with the Government of the Republic, in virtue of which the company will have 2½ years within which to select the rights for mining coal, petroleum and natural gas which belong now to the nation. Natural gas, it seems, rises to the surface under great pressure, a fact which points to the probability of finding spouting oil wells at a depth. It is not the intention of this company to work these oil wells when found all by itself. Primarily, its object is to prove the value of its concessions, with the object of selling the rights conceded to it over the great area of land comprised in the concession. Hence the £30,000 of working capital is considered ample for the purpose, and for those who like to take hazards, and who know the character of this kind of business, the proposals look attractive. It is a speculation, of course, but given the oil, and there seems no doubt about its existence, the scheme appears promising. No promotion money has been or will be paid, and the directors are careful to point out that it is impossible to estimate profits. All going well these might be important.

The directors of the London and County Bank have appointed Mr. Frederick James Barthorpe to be secretary in place of the late Mr. J. H. Atkinson.

Passing Events.

Sir William Harcourt has written a long letter to the *Times*, in which he trounces the Colonial Secretary with a vigour that must excite the envy and admiration of many younger men. The only criticism we venture to offer is that the letter is too long, and much too able to be understood. The *Times* itself evidently does not comprehend it, else it could hardly write the wild nonsense it does, but that, perhaps, is not surprising, because the *Times* lives in a world apart, and is too blind even to "see men as trees walking." One point, however, in the letter strikes home, and will it is to be hoped penetrate the minds of the easily misled masses. Sir William insists that Mr. Chamberlain must tax food. He is pledged to do so, and he cannot draw back from that pledge without making himself the laughing stock of the empire, let alone countries outside that magical entity. He is going to tax bread and meat, if the nation allows him, mainly in the interests of Canada, remotely in the interests of the corrupt colony of New Zealand, and must pass on to tax many things besides, still in the interests of Australasia and others of our dependencies where sheep live and flourish. He has taxed sugar in the interests of Jamaica, fantastically and to the hurt of the community, and as he has begun he must continue, until where he will end no man knows. He always seems to us like a rudderless boat whose sail has been blown away, tumbling along helplessly in a swift flowing river. That he can control his destiny no person of observation nowadays dare believe. He is the sport of accidents, the tool of men abler than himself, a fantastic imperialist whose cost to the nation is already beyond any man's calculating.

Turkey has formally bowed to the inevitable—this time it took the shape of the Russian fleet—and has agreed to do everything the Powers desire. So now Russia, Austria and Italy are going into the Balkan bear-pit to try and sort out things a bit, while we are going to stand on the edge and give them our moral support. Any occupation by the three is, it goes without saying, to be only temporary. But even if it is not—and we ought to know something about "temporary occupations" after Egypt—the question really does not concern us, and we shall do well to let the three fight it out amongst themselves.

It will be eminently comforting to the minds of timorous people in this country to learn through Baron Hayashi, the Japanese Minister at the Court of St. James', that no danger of a collision between Russia and Japan exists so far as Corea is concerned. The Ambassador disclaims all the panic war stories, and declares all fears of a conflict between the two countries to be groundless. He further informed the interviewer, who was doubtless there by pre-arrangement, that instead of the trade of Japan being hurt by the Russian occupation of Manchuria it has been improved, and that there is no danger in Russian designs on the independence of Corea. Nor is Baron Hayashi alarmed at the appointment of a Russian Viceroy for the Far East. So everything is for the best in that best possible of Eastern worlds, and we may go to sleep in peace, in spite of alarmist messages from *Times* correspondents and everything else. Were we to believe what these fellows say, Russia is doing its utmost to draw a sort of cordon round the doomed Corean state, salivating it, so to speak, like a boa-constrictor, preparatory to absorption.

Discontent is unquestionably spreading in Cape Colony, owing to a breach of faith on the part of the Sprigg Government. It, through its Attorney-General, Mr. T. L. Graham, gave a pledge that a Colonial Commission would be appointed to inquire into the administration of martial law. Under pressure of some sort, perhaps from Downing Street, perhaps from Kimberley, the Ministry has now backed out of this pledge, on the pretence that any stirring up of the ashes of that miserable time would send a flame of strife through the country. The result of this tortuous and dishonourable proceeding must be to intensify the disgust of all right-minded citizens in South Africa, no matter whether native born or British immigrants, with the British overlordship. As several speakers pointed out, the wrongs unredressed will fester and become more intense, but it is all preparing the way for a united South Africa, capable of taking care of its own affairs without asking Mr. Chamberlain, Mr. Alfred Beit, Lord Milner, or anybody else.

That is a most interesting return furnished at the instance of Mr. Gibson Bowles, setting forth the condition of the trade and people of the United Kingdom at decennial periods, from 1801 down to the present time. All we are afraid of is that the public is not sufficiently instructed to grasp the significance of the figures. It can understand a cricket match score, and perhaps the points in a game of golf, as well as the ins and outs of a football tussle, or—although this is doubtful—the merits of a race horse, but when it is told that in 1801 wheat cost £5 19s. 6d. per quarter, as against 28s. 1d. last year, we doubt if nine men out of ten are capable of drawing any inference. The multitude has not sufficient imagination to grasp what the result in bread would be at the two prices to the consumer. When we come to the values of exports and imports, the inability to comprehend becomes greater still, and we may be quite sure that nothing in this table will prevent the stupid English farmer from clamouring, in his landlord's interest, for a duty of 5s. a quarter on foreign wheat. All the same, the return is very interesting, and a thing to keep at hand for reference, and we are much obliged to Mr. Gibson Bowles for inducing the Board of Trade to make it up.

It is announced from Ottawa that the Dominion Government will shortly "open" 50,000,000 acres of reserved land for settlement. All the land subsidies lavishly bestowed upon the railways have now been taken up, and these millions of acres are part of the Government leavings. By way of attracting the speculative settler it is added that the completion of the railway would within ten years add $2 more an acre to the value of 20,000,000 acres of this land. It is beautiful, and we trust our surplus population drifting into that part of the world will not be disappointed.

All glorious is the God of War. The ex-Sultan of Sokoto has been slain, with his chiefs and followers, to the number of 700, and at small loss in officers and men to the conquering black British army. Peace and plenty will henceforth prevail all over Nigeria, and we shall have another "supplementary estimate." Jubilate!

The Cape Government has taken power to borrow another £300,000, in order to meet further war compensation claims in the colony. Will there ever be an end to the tale of ruin? And is robbery or devastation a good security on which to base debt, more debt, and yet again debt?

No less than £11,415,044 worth of goods was imported into the Transvaal during the first half of the current year, as against £4,217,698 in the corresponding half of last year. How is this splendid total paid for? Not out of exports, for they amounted only to £5,708,515, as against £2,852,043 in the first half of 1902, and of this total no less than £5,579,730 was gold, so that the export of other produce from the annexed republic was only worth £128,785. Could any statement be more eloquent of the devastation and impotence produced by the De Beers-Chamberlain war?

A brief telegram from Adelaide gives the revenue of South Australia for the past financial year to June 30 at £2,483,095, or £45,000 more than the estimate. Expenditure was just brought within this total by £176. This is surely a marvellous feat. For the current year the revenue is estimated at £2,498,265, and the expenditure at £2,483,095.

Naturally, Mr. Alderman Pound, chairman of the London General Omnibus Company, is dead against "Municipal Trading," and a pal in this respect of Mr. Emile Garcke's. The L. G. O. C. has been such a stunning success, you know, and its buses are so perfectly comfortable and profitable compared with the electric tramcars of the London County Council. It is doubtless because of the antiquated character of the latter, their slowness and lack of space that the Corporation, of which Mr. Pound is an honoured member, refuses to allow the County Council to bring its lines across the river! By this refusal it incommodes tens of thousands of humble workers in the City every day in their work—but what of that? The bus

must be protected, said bus being in truth more and more of an obstruction and a nuisance on the public thoughfare.

The news comes from Newcastle that the newly combined shipbuilding undertaking of Swan, Hunter and Wigham, Richardson has completed negotiations for the purchase of the Tyne Pontoon and Dry Docks Company. This concern owns the largest dry docks on the Tyne, and has its premises situated between the two important shipyards recently amalgamated. By the present acquisition, the new company will possess large and complete facilities, not only for building and equipping ships, but also dry docking and repairing them. Profits of the Pontoon Company in the past year were £12,326, compared with £17,182 in the preceding twelve months, and the dividend was reduced from 7½ to 5 per cent.

It was a happy little gathering, that of McNamara and Co., on Wednesday last, at the Great Eastern Hotel. Ordinary shareholders got a dividend of 5 per cent., the first for five years, and although Alderman John Pound could not promise a continuance of such "prosperity," proprietors, temporarily stunned by the prospect of handling a little cash, forthwith voted £500 in recognition of the board's magnificent services. So each member gets an extra £100 for the past year, and a similar sum goes to the secretary and manager, a joint office. Ah well! It is nice to know the past is forgiven.

If we may trust the New York correspondent of the *Morning Leader*, those great bosses of finance, Messrs. Morgan and Rockefeller, would appear to be standing over poor President Roosevelt with clubs, intent upon bullying him into calling that extra session of Congress. We hear them bawling, "Look here, mister, we have scooped all the money bankers had, roped in the assets of the monster insurance companies, smothered our railways in floating debts, burst the fools who took a hand in our shipping deal, smothered the steel industry in paper, combined the coal interests, railroad and other, so as to inflate stock prices to the skies, and beyond, and now we want you to hand over the Treasury reserves and balances, and to give us a free hand in the manufacture of unlimited poker-chip money. If you don't you shan't have the nomination next year, and more than that, we'll bust the whole show. Look alive, then, you impotence, you." And he'll do it, you bet.

The American Panama scandal bids fair to outrival the French. Not content with having side-tracked the Nicaraguan scheme at Washington in favour of Panama, the American Transcontinental railroads have, it is alleged, now secured, at a cost of five million dollars, the rejection by the Colombian Senate of their own substitute. The *Morning Leader's* New York correspondent, who has sent over this news, further states that the railroads are prepared to spend further millions rather than run the risk of seeing their freight traffic threatened with sea competition. To safeguard against another canal bill passing through the United States legislature, the railway bosses have, it is declared, bought up the Senates of the Central American Republics so as to be able to block the schemes indefinitely. Which is American though not honest.

Major-General Egerton requested the War Office to send three Parson's pumps to Somaliland. The department knew what parsons were and what pumps were, but the combination of the two was beyond its intelligence. However, it solved the difficulty by shipping out three chaplains of different denominations. And yet there are some unfeeling persons who are crying for War Office reform.

Although the last directors' report prepared them for the event, "bulls" of Grand Trunk securities are rather disconcerted by the calling of a special general meeting to be held on Monday for the purpose of increasing the amount of the guaranteed stock by almost £5,000,000 to £10,000,000. Had they been favoured with a little delay the third preference boomers would not have regarded the episode as quite so tantalising, but coming right on top of the rather disappointing half-yearly figures, the action of the board is considered particularly disagreeable. How will Trunk "Thirds" stand when all this stock has been issued and the net revenue is mulcted in an additional annual charge of nearly £200,000?

It must not be forgotten that the Canadian Government intends providing the Dominion with another trans-continental railway, a proposition that is being discussed with some heat in the Canadian press. Contrary to expectations opinion favours this new line, the Grand Trunk Pacific as it is called, and Canada will get it on much cheaper terms thain it did its first enterprise. In making comparison between the bargain struck with the Canadian Pacific Railway and the terms offered to the Grand Trunk Pacific, Sir Wilfred Laurier is said to have pointed out that whereas the former obtained 25,000,000 of land—now bringing much revenue to the company's coffers—the Grand Trunk Pacific will not receive a single acre. The Canadian Pacific, too, received the equivalent of a cash subsidy of £12,000,000 against the £2,600,000 payable to the new line, and also was favoured with exemption from competition, which is not now to be granted. The methods adopted by the Canadian Pacific should ensure plenty of traffic for the latest project, and this cannot be to the advantage of either of the existing big roads.

We are very sorry for the people of Jamaica, and sympathise with their unhappy plight. A hurricane in those western isles is an appalling event, and we can quite believe that the damage done has been enormous. It must, however, be an exaggeration to put it at £3,000,000. Knock off a cipher, and we may approach the truth, and it is a pity that wild statements of that description should be made, because they tend to prevent sympathy in this country from taking practical shape.

Fire insurance companies appear to be in for a rough time of it in Canada. It seems the Canadian Fire Underwriters' Association in that independent dominion, an institution which includes several representatives of British companies, recently raised their rates in Ottawa to a high figure in order to recoup themselves for losses arising from the disastrous May fire, whereupon a newspaper campaign against the association has been started, and one paper, the *Free Press*, proposed that each of the twenty-eight companies belonging to the Association shall be indicted for violating the criminal code. The extreme penalty is $10,000 for every offence. That news is not quite so cheerful as it might be, but perhaps it is only newspaper fun.

Nitrate companies shareholders will doubtless read with pleasure Messrs. Henry Bath and Sons' report on the position of the industry, published during the past week. It says that a big business could be done for shipment this year if only supplies were at all equal to consumption. At present, however, nitrate for shipment before next year is very scarce, and stocks are only about 1,050 tons, with the result that higher prices are now generally asked. Hitherto the companies have suffered severely from over production and low prices, and existing conditions seem a good augury for the future, even though no immediate benefits are derived.

Answers to Correspondents.

[*A Fee of Five Shillings per query is charged for replies under this heading. Letters, Five Shillings extra per letter.*]

F. E. D.—(1) There is no hurry, I think, to purchase this security at present. The earnings, as you say, have been exceedingly good, but the general condition of affairs is against any rise in value. You might watch the market, and purchase if there should be any set-back.

(2) Were there any public demand it is quite possible that these shares might rise some 5s. or 6s. The property is considered a fair one, but I cannot obtain any reliable information as to its probable life. At present it seems likely to be able to maintain its current rate of distribution, but I doubt that it is worth while risking so much for so small a percentage of probable profit.

The Investors' Review.

The Week's Money Market.

BANK RATE 3 PER CENT. (Reduced from 3½ per cent. on June 18.)

Norfolk House, Friday Evening.

Until Wednesday morning the market was quite puzzled how to account for the extraordinary cheapness of short credits. No sooner, however, were the revenue figures for the previous week issued, than it was discovered that the poor empty Exchequer had been compelled to go to the Bank and raise the wind to the extent of £4,000,000, borrowing that sum on Ways and Means account. About half of it had been dispersed right away, and hence the glut of "short money," as it is called, in the open market. There is no substance behind this money, it is pure credit throughout, but it was just as effective as sovereigns in knocking down the seven-day loan rate to 1¾ and 2 per cent., and driving call money so low that it could be had over-night in the afternoon for 1 per cent., and never cost more than 2 per cent. Yesterday and to-day it has been lent at from 1 to 2 per cent., call money seldom costing more than 1½ per cent., and notice money rarely more than 1¾ per cent. To-day, in fact, money could be had into September, at 1¾ per cent., and seven-day loans at 1½ per cent. If this slushy condition remains with the market until Tuesday next stock brokers should be able to arrange their account to account loans with the banks at 3 per cent., or less, instead of the 3½ per cent. paid last time.

Discounts have been kept firm, or fairly so, all the time, so that the bill brokers are making up for some of the hard times they endured in the first six months of the year. The rate for three months' bank bills has never been lower than 2¾ per cent., and generally brokers have got 2 13-16, and sometimes 2⅞. Wednesday also brought the news that the hard-up Government is going to raise an additional £2,000,000 by means of six months' Treasury bills, and that also helped to keep the discount rate up, because money jobbers do not mean to let the Government borrow at a low figure. Some say the bills will go at 3⅜ per cent., others think 3¼ per cent., but cupidity may raise the figure still further before Monday morning, when the new tenders have to be sent in. There is a good but not excessive supply of bills in the market, but the Continental exchanges are against us, and although the fear of exports is not immediate enquiries for gold on New York account have not been entirely absent. Meantime, however, Germany has been buying all the bar gold in our open market, and parcels of sovereigns have been dropping out of the Bank for export, not to any significant extent, but still in a way suggestive of larger drafts to come.

The Bank return offers nothing to comment upon. It is all a matter of pure credit, and a little return of coin and notes from the active circulation. By help of the Government borrowing, and of this return of coin and notes to the amount of £817,000, the market has been able to pay off £525,000 of its debt to the Bank on other securities, and could still show an increase of £2,131,000 in the other deposits, alongside an increase of £2,105,000 in those of the Government. The reserve is now in one sense strong enough, amounting to £24,570,000, but the stock of coin and bullion is only £35,738,000, far too little to protect the market from such an export demand for gold as may be excited before many weeks are over by the crop necessities of Egypt, the payment of the Netherlands South African Railway bond and stockholders, and by the increasing indebtedness of Europe to the Argentine Republic. Leaving the United States out of account altogether, the autumn prospects of the bullion market are not pleasant to those who play with short credits now as if they would remain cheap for ever. This afternoon 100,000 sovereigns were withdrawn from the Bank for export to Egypt, but that had nothing to do with the coming autumn demand.

Cash displacements in the coming week are on rather an important scale. Calls on new issues are moderate enough, but on Tuesday the Great Western and Great Northern Railways dividends will release £1,998,300, and on Saturday £3,000,000 of Treasury bills must be paid for, against only £1,000,000 maturing. Other dividend payments during the week aggregate £288,000, and the total amount of calls payable is £290,000, including £120,000 on West Ham 3 per cent. on Friday and £100,000 on Metropolitan Electric preference shares on the following day.

SILVER.

Enquiries for silver during the past week were chiefly for future delivery, and quotations are now closer together than for some time past. The slackening in the demand for prompt delivery is due to the shortage for August having been covered, while special orders for October, and a slight revival of the Indian demand, brought about the rise in forward positions. Quotations are steady at the end, at 25½d. and 25⅜d. per oz. respectively. Rs.50,00,000 India Council drafts were again offered for tender on Wednesday last, total applications amounting to Rs.2,85,60,000 in bills and Rs.26,05,000 in telegraphic transfers. In the former, Rs.42,13,000 were allotted, and in transfers Rs.7,87,000, tenders, at 1s. 4d. and 1s. 4 1-32d. per rupee, respectively, receiving 31 per cent.

BANK OF ENGLAND.

AN ACCOUNT pursuant to the Act 7 and 8 Vict., cap. 32, for the Week ending on Wednesday, August 19, 1903.

ISSUE DEPARTMENT.

	£6,696,000		£6,696,000

Exclusive of £184,744 last week paid over in aid of local expenditure making the total of such payments to date £2,852,612.

The total estimated income for the year is £144,270,000, and the total income to date is £47,170,557 from ordinary revenue sources, including £12,929,000 from customs, £10,773,000 from Excise, £5,316,000 from estate, etc., duties, and £7,319,000 from income-tax. In addition, £310,000 has been borrowed under Telegraph Acts, £28,000 for the Uganda Railway, £438,000 for naval works, and £1,000,000 for military works. Also £4,000 has been borrowed for Land Registry buildings. It is to be noted that £6,962,272 of the expired £10,000,000 of exchange bonds has been renewed, so that only £3,000,000 has been redeemed, out of the Transvaal Guaranteed loan, leaving the net debt at £7,000,000. Not only so but £4,000,000 has been borrowed from the Bank of England as a "Ways and Means" advance.

The year's estimated ordinary expenditure is £143,954,000, of which £27,000,000 is the National Debt charge, and £114,035,000 the "supply" outgo. Up to date £55,110,000 has been disbursed, including £42,005,000 for "supply," principally Army and Navy corruption and extravagance. In addition borrowed money has been laid out as follows:—Telegraphs £310,000, Uganda Railway £38,000, naval works, £438,000, military works £1,050,000, Land Registry buildings £4,000.

Balances at Banks of England and Ireland £3,750,000, against £4,597,000 a year back.

TREASURY BILLS OUTSTANDING.

Tenders for Treasury bills to the amount of £3,000,000 will be received at the Bank of England on the 24th inst. at one o'clock. They will be dated August 29, 1903, £1,000,000 replacing bills falling due on the 30th inst., and payable at three months after date. The remaining £2,000,000 mature six months after date—namely, February 29, 1904.

Stock Market Notes and Comments.

Another "account" is upon the market for settlement, and perhaps the less said about it the better. Since last carry-over day there has been a steady flow of "distress" liquidation in the Consol market, and the position generally is unquestionably weak. Nothing, however, comes to the surface to indicate that the settlement of the end of August account will differ from any of those that have preceded for months back. Some few small weaklings will be despatched, but the big accounts will probably continue to be arranged, because any attempt to liquidate some of them would almost certainly bring upon us the long overdue credit panic. Who the sellers of Consol are we have not traced, but the stock is unquestionably being poured into the market, together with large parcels of many other first-class securities, by those who cannot help themselves, be they individuals or credit institutions, and the process is not nearly at an end; in fact, losses are only just beginning to be admitted, because those who have to face them cannot any longer put off the day of reckoning.

In the Kaffir Circus all is hollow, and the low contango rates prevalent there for some time back merely indicate a desire on the part of those who have had the market in their hands to persuade the public that there is a demand for the shares. There is no demand, even the French demand, we believe, comes mostly from French speculative bankers and banking institutions. Therefore, if the unfortunate people who have in former days let themselves be drawn into this great arena of imposture are wise they will continue to sell the shares they hold on every advance engineered by the outside bucket shops at Johannesburg and London. Were the Rand in full swing, and producing twice as much gold as it did in 1898—a magnificent assumption—the quotations for the mass of Rand companies' securities would still be on the average at least 50 per cent. too high. Whatever you do, good reader, abstain from buying any of the nicely labelled parcels of shares in the newer companies, finance and other, the bosses have prepared with a view to netting a few more monster fortunes by trading them off upon the community.

The Week's Stock Markets.

With the holiday season in full swing and the public still persistently standing off, Stock Markets have become spent playthings in the hands of the few speculators still possessing sufficient courage to carry on operations, and no lasting tendency was manifest during the past week. Movements, indeed, have been somewhat erratic, and any hopes that other sections of the House would share the boomlet in Yankee shares, so assiduously engineered after the recent slump, were quickly dissipated when the upward bound in that department showed signs of collapsing. The disturbing news from South-Eastern Europe was not without effect in assisting prices to give way, although they did not require much encouragement, and markets continue listless and uncertain, with no genuine support at any point. One or two rallies were witnessed when "bears" took profits, but there was no strength in the movement, and the conviction daily grows that much trouble must yet be experienced before any revival of legitimate business can come.

The menacing political outlook far from explained the pronounced weakness of Consols, and it is said that in one or two important directions the weight of gilt-edged stuff, nursed through many weary months in the hope of relief from the oft promised but always delayed revival, could no longer be endured, and holders were compelled to throw their stock upon the market. Bears, too, were actively engaged, and so persistent was the offering that at one time the cash price was driven below 90. When we remember that in a very short time the October dividend will be deducted this means a net quotation well under 89½, a level not seen for thirty years. Operators for the fall, however, decided to take profits when this low figure was reached, and as the quantities of real stock thrown out showed signs of diminishing, and the Government was in the market, a rather smart recovery ensued. Final quotations, therefore, are not much altered, being ⅛ higher for money at 90 11-16 to 90 13-16, and unchanged for the account at the same figures. Transvaal scrip fell to about 3-16 discount, thus affording an excellent opportunity to those disappointed at the time of the original allotment to get in, should they be so minded. Perhaps a few of them did effect a purchase or so, as the loan recovered with Consols and closes 5-16 higher at 5-16 premium. National War stock never gave way much, ending ¼ better at 97¾, but amongst other British Funds India 3 per cent. lost ½. Extraordinary calmness prevailed amongst Home County and Corporation stocks, and changes were extremely rare. Those that did occur were adverse, and include losses of 1 each in Metropolitan 3½ per cent., Bradford 3 per cent., and 3½ per cent., and Birmingham 3½ per cent. Metropolitan 3 per cent. were ½ lower. Colonial Inscribed stocks only call for silence, the week's movements consisting of relapses of 1 in Canada and Cape 3 per cent.

Although naturally weak in tendency, the Foreign Bond market was not badly disturbed by the Macedonian crisis, and at times showed quite remarkable resistance to the distressing news daily filtering through. Both Paris and Constantinople gave early support to the lower Turkish groups, presumably on a statement to the effect that group "C" is to obtain a larger portion of the new unified stock—when it is created—than was originally proposed. The amount at first consigned to it was 40 per cent. of the common stock, as against 37½ per cent. given to group "D," but the British holders want 42½ per cent., and some say they will get it. We shall see, perhaps next Wednesday. Paris and Berlin grew despondent as the week wore on, and the news from the Balkans gradually becoming worse, prices gave way all along the line, although never to a pronounced extent. Turks lost their initial rise, or most of it, Bulgarians dropped 1, German 3 per cent. 1, Greeks ½ in several instances, and Spanish ¼. Most prominent Brazilian and Argentine loans finished ¼ to ½ easier, but Uruguays were exceptionally steady on the satisfactory result, from the market point of view, of the amortisation tendering. The amount to be applied was £40,000, and with applications amounting to £80,000, those at £59 15s. received no less than 80 per cent. Colombian bonds fell 2½ on the news that the Panama Canal Treaty had been rejected by that Republic, but the refusal to ratify the treaty is described as a "job," prompted by those with ulterior motives, and we shall doubtless hear more of the matter. Chinese and Japanese bonds shared the general heaviness, and leave off with a pretty general fall of about ½.

There is little to say about Home Railway ordinary stocks except that they shared the opening weakness of Consols, but failed to recover when that stock rallied. All leading counters daily lost something from their quotations, and it is useless to look for recovery while other sections are more or less demoralised and the public has apparently forgotten the existence of the market. Undergrounds were weak, selling being prompted by the Paris disaster, which certainly was not without effect on the traffics of the English tube lines. Other traffics on the whole were satisfactory, the decreases in the Brighton and South-Western Companies being due to the comparison with the Naval Review takings a year ago. Scotch stocks, in view of the dividends, were not quite so dejected as the English issues, and North British deferred lost only ½. Its dividend is due on September 10, and the market looks for 1½ per cent. per annum on the deferred stock. The Caledonian announcement, expected on the 1st, will please the bulls if 1 per cent. per annum is recommended on "Coras." At the end the falls range from ¼ in Chatham ordinary and Great Central deferred to 2½ in Brighton "A."

The Yankee market was much less turbulent during the past week and seemed quite calm after the exciting events

recently witnessed. The little boom which followed the disastrous slump had worn itself out by Saturday last, and although no pronounced set-back took place, quotations began to get ragged, causing dealers to adopt a cautious attitude. Wall Street once more was called upon to face a poor New York Associated Banks' statement, and the resultant depression encouraged operations here to indulge in a few "bear" sales, when the week's business commenced. The manipulators on the other side seemed a little angry at this, fearing it would spoil their efforts to tempt the public in, and noisily bid up some of the lighter stuff easily handled. The "shorts" here naturally rushed to cover and prices bounded back with a fine show of strength, Eries leading the way. Thanks, however, to the

morning set-back, this did not mean an imposing display of advances, the largest gain being in Erie ordinary up 1½. Then Baltimore preferred, Illinois Central, and Ontario were 1 better, with Atchison preferred, Missouri, New York Central, Southern, and Wabash preferred about ½ higher. Nor was the recovery universal, for in spite of the demonstration against the "bears," Reading left off ½ down, and Pennsylvanias ⅜ easier. New York followed this up with a fairly comfortable session, deluding itself into the belief that the market was sold out. The rejection by Colombia of the Panama Canal Treaty was regarded as a "bull" point on the assumption that Secretary Shaw would not, under the circumstances, require to keep $50,000,000 in reserve to pay for the Canal, and might release it to the banks. They have not yet got the cash, but anything serves nowadays to swing prices upward, and with other stories about, a "bull pool in Eries," "Keene covering Shorts," and so on, further substantial gains were registered. Once more our market was tempted to sell "bears" on the advance, and once more it was entrapped. Much professional manipulation was in evidence in Wall Street, which was quickly reflected here, and by the close on Wednesday Milwaukee and Wabash debentures had risen another 2, Wabash preferred and Chesapeake 2½ and Denver ordinary 1⅜. Then Norfolk ordinary went up 1⅛, Southern Pacific and Southern preference 1, Eries ½ to 1, Southern ordinary ⅞, Reading ordinary ¾, and the rest ½ or thereabouts. This, however, was the beginning of the end. New York suddenly became restless owing in part to an unfavourable Government crop report, but our market, fearful lest it should again be caught, was in no mood to press down prices unduly. Its timidity, however, was not profitable, because statements were made as to the probable postponement of the currency legislation, expected to be passed this autumn, and prices broke all along the line. Milwaukee, New York Central, and Wabash preferred led the declines with losses of 1½, and Baltimore preferred and Louisville left off 1 down. Erie ordinary suffered to the extent of ⅞, and the rest were ⅛ to ⅜ lower. Prices were carried down still further by New York, and the opening on Thursday was flat and miserable. It was followed by a feeble rally, but prices again fell away sharply, and the worst falls of the week were registered. Wabash debentures dropped 4 and the preferred 1, Atchison ordinary 2⅝, Milwaukee and Union Pacific 2½, Baltimore, Chesapeake, Erie common, Louisville, Norfolk and Western, Southern and Southern Pacific 1¾ to 2¼, and the rest ½ to 1. Then the mood on the other side changed once more, but there was no real backbone in the rally, and the market closes dull and listless.

Trunk issues were bid up at the start on the hope that the net figures for July will show a substantial increase, but the announcement that on Monday next a meeting will be held to sanction the creation of almost £5,000,000 of guaranteed stock made short work of the recovery. Business was not active, and prices leave off with very little movement. Canadian Pacific shares followed in the wake of Yankees, the dividend announcement having left nothing for "bulls" to go for. They finish ¼ down.

Nobody troubles about Foreign Railways nowadays, and with business practically non-existent quotations just held their ground. In the leading Argentine group, B. A. Western advanced 1 and so did B. A. Pacific first preference, while Great Southern recovered an early loss. Guayaquil and Quinto first mortgage bonds fell 2, and, after a feeble rally, Mexican issues fell back, leaving the first preference ½ lower. Antofagasta ordinary stock rose 1, and a few debenture and preference stocks were shifted about, but dealing rarely accompanied the movements.

The only sensation in the Miscellaneous markets was the startling collapse in Waterworks stocks, due to the replies of the newly constituted Water Board to the claims of the East London and New River Companies. The matters is dealt with in another column, and it is only necessary to say here that no value is attached to the East London Company's ordinary stock, and that £3,000,000 is offered to the New River Company, over and above its debenture stocks. Prices fell heavily on the

news, East London falling 29½, New River new 25, Chelsea ordinary 10, Southwark and Vauxhall 25, Lambeth (10 and 7 per cent. max.) 10, Grand Junction A 16, and the B 8½, West Middlesex 10, and Kent (10 per cent. max.) 10 and (5 per cent. max.) 5. In other directions very little business was done. Dock Stocks were weak, and London and India deferred fell back 3. P. and O. preferred and deferred each gave way 1, and both Cunard issues fell ½. Sweetmeats recovered a little, only to give way again when another weekly traffic decrease of £950 was announced. They are finally ⅛ worse. Most catering things were steady, but Meat shares dipped a fraction here and there. Nothing happened amongst Textiles, and the market is awaiting the Calico Printers' dividend. Brewery stocks moved downward, when they changed at all. Gas Lights fell back 2, Welsbachs were steady, and Omnibus Stock further improved 2. Hudson's Bays weakened towards the end, and leave off 1 lower. Home Iron and Steel securities showed no particular change, but United Steels finished 1 down for the common stock. Telegraph issues were dull, but usually unchanged.

The Stock Exchange has managed to get away for its holiday to-morrow in something like cheerfulness, thanks to the discovery that the brokers who bought Consols yesterday did so on behalf of the Government. That, at least, is what the Consol market believes to-day. The Government brokers, in other words, concealed their hands, and executed their order through these other brokers, so Consols finished to-night 90¾, ⅞ for money, and visions of a further advance sent the market home happy. Only cynical "bears" who have been caught by the recoil dared to remark that "perhaps the Government was investing some of the Ways and Means loan in this manner." All other sections of the market became steady, without doing more business, with the one exception of the department for Water stocks, and that continued disgustingly flat. East London stock fell to 200, and the jobbers are so frightened, or profess themselves to be, that it is quite useless for holders to try and unload. They had better possess their souls in patience, so long as they are not "bulls" on borrowed money, and wait for the decision of the arbitrators. Kaffirs even left off firm, and faintly better in some instances. The preliminaries of the account were partly gone through there to-day, and contangos ruled at 6 to 8 per cent., as before, except where sham "bear" accounts caused an apparent scarcity.

The Rand Labour Commission.

Share manipulators in the Kaffir market, together with the mine bosses, are gazing anxiously on the Commission now sitting at Johannesburg to hear evidence from all and sundry as to the condition and prospects of the local supply of blacks. The Circus feels that everything depends upon the decision of that Commission—a boom, or a slump. "O that it will advise that blacks cannot be got for love or money and that it will say the salvation of the mining industry depends upon yellow men" is the earnest, heartfelt prayer of many a punter whose pockets are empty and who has cherished many a sweet hope that has not yet fructified. This Commission, on whose report the needy gamblers place such supreme importance, was appointed by the Lieutenant-Governor of the Transvaal "to inquire what amount of labour is necessary for the requirements of the agricultural, mining and other industries in the Transvaal, and to ascertain how far it is possible to obtain an adequate supply of labour to meet such requirements from Central and South-Western Africa." It has now sat for several days and heard a great deal of evidence, but its report is not expected for some weeks to come. Those who have been following our mining notes know that the feeling is spreading on the Stock Exchange that the Commission cannot do other than tell the Government the supply of natives within South Africa is insufficient for the needs of the mining, agricultural and other industries, including railway building, and that this labour must accordingly be supplemented by large supplies from Asia.

Speculators have done their utmost to teach the public that the advent of the Chinaman will usher in that era of prosperity the first seeds of which were sown in the soldier's blood and the widow's tears, and that then will be the time to buy Kaffir shares by the million. "And they will buy, as sure as Beit is Beit," say the punters to one another, not in a tone of absolute conviction, it is true, but with a I-wish-I-could-know-for-certain kind of expression. That is why they have put prices up the last week or so, for if the public are coming in these generous men will take care they come in as near the top as possible. They have, however, received a staggering blow from an unexpected quarter. The Cape Colony will oppose the importation of the Chinaman strenuously, whilst Sir Gordon Sprigg has expressed his opinion that Africa's supply will satisfy Africa's demands, and that the Commission will say so. What does Sir Gordon Sprigg know? Surely he would not say this unless he knew and felt there was some ground for it? So the market thought, for dealers marked their prices lower the very moment they read the significant words.

However, the public are now in a position to form a tentative judgment, for the mail brings a report of the evidence tendered at the first three meetings of the Commission. The first witness called was the Rev. R. H. Dyke, of Basutoland. He said he had been in the country almost all his life and had been twenty-six years a missionary. The population of Basutoland he put at 26,000 natives, who had always been an industrious labouring class, and had constantly supplied the Orange River Colony with labour. But they considered the six months' engagement system a hardship and one of the greatest deterrents against their coming to the mines was the general state of health on the Rand. They also complained that when maimed at work—and here we have eloquent testimony to the humanity of the mine bosses—no compensation whatever was granted, and that, although doctors were provided, natives received very little attention at their hands. Had we said this we should have been accused of exaggeration and prejudice, but as it comes from one who has nothing to gain from concealing the truth, perhaps the public will be inclined to listen to it with the greater respect and attention. In reply to questions, the witness further stated that the demand is greater than the supply in Basutoland, and that he would not at all endorse the suggestion that "boys" of that locality should settle down and live with their families in locations. The next witness was another missionary, the Rev. E. Creux, who was a resident for twenty-four years in the Spelonken district. It is his opinion, "that if general conditions were improved all round there would be a largely increased supply. Indiscriminate drafting of "boys" from different tribes had a very bad influence, as they liked to be kept together." It is his opinion, too, that the present shortage is due, as we have said over and over again, to the reduction in wages after the war, when the magnates thought they could get multitudes of blacks for starvation pay and diet. A Mr. P. H. Ross, the next witness, dealt chiefly with the Central African tribes, and he had no hesitation in saying that about 10,000 of the Sena tribe could be induced to go to the Rand, though only at the present rate of pay. He also believed, he said, that Angoni and Yao natives would be attracted by present wages. The fourth witness was the Rev. F. Colliard, of Barotseland, who said he had been in the country since 1880, and had previously been twenty-five years in Barotseland. He estimated the population at 60,000, and calculated that about eight-tenths of the young men go to work on the mines and the railways. But he did not think the number of emigrants could be increased. The Rev. F. Suter gave evidence respecting the country ranging from Natal to Zululand, of which the population is 750,000. Zulus, according to this gentleman, do not like the Rand. He himself had visited a number of compounds and thought they could be improved. The natives in their own houses eat a large variety of food, and it was a mistake, therefore, to think they lived on mealies. But how on earth are the Rand millionaires to be kept out of the workhouse if they feed the natives on flesh? So this minister of the Gospel thinks the demand for these intelligent, flesh and blood Zulus, who prefer plenty to hunger, will be greater than the supply. Is it amazing?

At the third day's sitting the first witness was Mr. T. Maxwell, who, as a railway contractor in Zululand, has found a difficulty at times, in getting enough labour for his own purposes in that country, therefore he does not think the Transvaal can look to it for a supply. Evidently, however, he does not consider the living conditions provided by the mining companies paradisal. "To render the work on the mines more attractive to the natives he would suggest that cleanliness should be more considered than at present, and the questions of sanitation and hospital accommodation should be better looked after. Then there could be an improvement in the food." This was plain speaking on his part, which can hardly be pleasing to the magnates. This witness is also of opinion that the question of pay does not influence the supply much. But the native does not care "to be recruited for forty or fifty mines; he prefers to be recruited for one particular mine. To get the best results the native should be treated as if he had a choice in the matter." A Mr. T. Everard said the native labour supply was always insufficient in his district (Leeuwpoort). The supply at present is neither sufficient nor available; the great complaint is insufficient pay. Dom Francisco de Mallo Breyner, late Superintendent of Immigration for the Portuguese Government at Delagoa Bay, said he had been a Government official for many years in Gazaland. From 1895 he had been an agent for the Ferreira Mine, and later for the old Labour Association, and, therefore, he had a good knowledge of recruiting in Portuguese East Africa. He calculated that "even with the establishment and maintenance of an organisation to facilitate recruiting, it would take at least from five to seven years before the northern provinces are in a position to furnish to the Rand a completement of 60,000 to 80,000 labourers." It is interesting to hear this witness's opinion of the conditions of living for the natives on the Rand, for it is different from that expressed by the preceding witnesses. It must be remembered, however, that he was an official of the Ferreira Company, which is one of the Wernher Beit group and, therefore, is not disinterested. He thinks the establishment of schools in the compounds might be an attraction to the natives. The latter are, says he, "well housed and fed, better, indeed, than in their own homes. The "boys" are already satisfied with their food, and, naturally, if their wishes in this matter were studied still more, it could not fail to be a step in the right direction for attracting more." This is delightful logic. The "boys" are satisfied and yet they are not satisfied, for they have "wishes" for something still more than they get in the shape of food, and if only the bosses would spend a trifle more on buying this oil for human machines they would get more machines. They satisfy them with their generosity, but there is evidently, according to this logical and sagacious gentleman, something beyond mere satisfaction for which the native craves.

Such is the gist of the evidence given at the first sittings of the Commission, and it testifies, we think, to the fact that the magnates have only themselves to blame if they cannot get sufficient natives to work for them out of the millions in South Africa. They find, however, that the native will no longer submit to abject slavery, starvation and torture such as he has been accustomed to in the past. There may be a dearth, therefore, but it is not due to any restriction in the natural supply. The native is intelligent enough to profit from experience, and he can go back and tell his brother blacks what treatment he has been subjected to from his white, civilised employers. But Asiatics will know nothing of this. Their homes will be far away, and the vast ocean will lie between the Rand and them. Thus they will not be able to fly from servitude and tyranny at their own sweet will, and the magnates will sleep peacefully at nights when they get these under their thumbs and their lash. No matter. It is all done for a noble end—to send prices up to catch the British gudgeon. Will any statistics be furnished as to the death rates at the mines, and the proportion of sick, maimed or otherwise incapacitated to the total numbers employed?

The Enterprise of Bucket Shops.

They must have a wonderful fascination for multitudes of people, else so many of them would not exist. It is seldom that they send us their fascinating circulars direct, because the Investors' Review is not quite in their line. It never accepts any of their advertisements, nor payment for the insertions of quotations for shares they are benevolently desirous of transferring to the public on their own terms. From time to time, however, readers drop circulars, pamphlets, price lists, and so forth in upon us, and we occasionally read them with amazement at their effrontery and a feeling half of pity, half of contempt, for those who seem to be beguiled by this kind of thing. The other day we received a circular kindly bestowing the information that we could buy "fifty Canadian Pacifics" for £30 deposited with the bucket shop and "have no further liability." The bait thrown out is a quick profit and a speedy return of £50 on the venture. If we went in for betting, we should prefer to stake our money with an ordinary "bookie" on the turf. Another agency with a quite portentous name, which it is not our business to advertise, undertakes all kinds of business, and will, if you only send your name, supply you with copies of at least one of the prominent financial weeklies, not the Investors' Review. It also offers to do business for nothing, charging no commission, will buy and sell its suggested wares on its own lines to any extent for clients, only the deposit of so much money seems to be necessary. It amazes us that people should be enticed into parting with hard cash to unknown, and it may be irresponsible, circularising agencies of this description. The mere extravagance of the promises of gain alongside equally extravagant and unwarrantable professions of disinterestedness should induce every recipient of literature of this description to button up his pockets. Such, however, is the extent to which the spirit of gambling pervades the community, that not improbably adventurous owners of these bucket shops make money when the straightforward stockbroker has to live on his savings. Nothing will cure the public of its folly, not even the loss of its money. The gambler will have another throw as long as he has a shilling to toss.

MINING NOTES AND NEWS.

The Kaffir market this week has been more subdued, the professional gentlemen who are interested in pushing prices skywards being in a less cheerful frame of mind than they were in the week preceding. They have found, of course, that the public persistently refuse to respond to all their wiles and wheedlings, so it is hardly much use exerting themselves for nothing. Even the pyrotechnic display in the Yankee market has not created any contagious enthusiasm in Kaffirs, dealers gazing upon the American rocket-shooting with only a languid interest, though not without envy, for they wish they could rival the display with their own damp fireworks. So they still walk about, whistling the plaintive refrain: "We've got no work to do-oo-oo, and everything looks blue-ue-ue," because John Bull, with his wife and family, is disporting himself at the sea-side, and caring not so much as a brass button for Kaffirs, Consols, Yankees, or anything else. "Wait until my holiday is over, and the Labour Commission has issued its report, and I know what's going to happen out yonder before I try a fling. In the meantime I intend to enjoy myself, in the short intervals of sunshine this beastly climate vouchsafes, with all the spare cash I can scrape together." So says John to himself, and his spouse, and who can blame him for this philisophic indifference to everything save the weather?

Nor have punters recovered their spirits from the dreadful blow administered to them by the hostility of the Cape and Sir Gordon Sprigg to the importation of Chinese, and they cannot express themselves as hopefully as they did, before this important pronouncement, that Asiatic labour is assured for the mines. Elsewhere we summarise the first portion of the evidence given before the Commission by the earlier witnesses, from which it will be seen that on the whole they do not think the mines will be able to get a sufficient supply of blacks from South Africa. This is not so much the consequence of a real scarcity as of the natural reluctance and absolute refusal of the native to work in the mines, because of the ill-treatment he has received in the past, the poor food he gets, and the pig-stye conditions of the compounds in which he has to live during his incarceration. Further news to hand bearing on this question of labour, is that a deputation from the Chamber of Mines, the Chamber of Commerce, and the Trade and Labour Associations have interviewed Sir Arthur Lawley, the Lieutenant-Governor, and urged the stoppage of all men on railway construction work, on the ground that their employment will seriously interfere with the labour supply for the mines. Sir Arthur pointed out that 3,000 men were required for new construction, making a full complement of 22,000 required both for maintenance and construction. Most of the "boys" already recruited are Basutos, who refuse to work in the mines. The mining representatives urged the limitation of the field of recruiting for the railways, and asked for a commission of inquiry on the number of natives employed on railway work. Sir Arthur promised to give the matter full consideration, and was not, apparently, struck by the colossal impudence of these deputationists. The Johannesburg correspondent of the *Standard* reports that at a large Dutch meeting held at Nigel a resolution was passed in favour of the immediate introduction of Chinese labour, and that General Viljoen met his compatriots at Pretoria, and urged the necessity of importing unskilled labour. It is also said that President Kruger favours the resort to Chinese coolies, nevertheless quotations continue to droop, for African lies are less easily swallowed than they used to be.

In the Rhodesian section Tanganyika shares have been conspicuously weak on the statement that the railway scheme the company was to carry out, which was fully described in our issue of May 2, has had to be abandoned, or something of the kind. For though it appears the directors have issued a circular, copies of it have not been sent to the press. Evidently the *Financial Times* has had a sight of it, for that paper says it is in connection with the underwriting the hitch has occurred, that Mr. C. J. Leyland, a director of the Tanganyika and Zambesia companies, who agreed to underwrite £2,500,000 of the £4,000,000 debenture issue, has declined to go through with it on the ground that the form and security of the debentures differ from the original scheme. "Consequently, his co-directors have commenced proceedings against him for damages for breach of his underwriting obligations. At the same time, it is stated, they are endeavouring to negotiate an alternative scheme," that is, in forwarding the Rhodesia railway system north of the Zambesi.

In the Westralian market the principal events of interest have been the action taken by a section of the shareholders in the Associated Northern Blocks to compel the directors to convene a meeting at which to give explanations of their conduct in summarily dismissing Mr. Landau; and an official notice from the board that they have elected Sir Bartle Frere, Bart., and Mr. J. H. Curle on the directorate. These appointments have naturally given considerable satisfaction to the market, and the shareholders, and this, together with the fact that Messrs. Bewick, Moreing, and Co. have been appointed the company's engineers, has strengthened the share a fraction or so. The directors have replied to the shareholders' circular, saying they intend to give at the meeting they will hold on Professor Liveing's return, a full explanation of the causes which gave rise to their requesting Mr. Landau to resign. They have likewise issued a report from Mr. Roberts, the manager, on which we comment in a separate note. For the rest this market has been anything but lively, prices scarcely showing any change. Business has not been stimulated by the dividends declared by the Great Boulder Perseverance and Oroya-Brownhill.

As usual, there is hardly a word to say about the West African paper emporium. The warehouse is still piled up with the most artistically printed documents, specimens of which are exhibited in conspicuous places to catch the public eye. But buyers pass by unconcernedly, and the vendors call unto them and gesticulate in vain. Even prices are marked down here and there, in the hope that they might arrest the attention of the bargain hunter, but bargain hunters seem to have gone on a far voyage. So business is again reported "dull," and heads are shaken despondently.

In the miscellaneous list Rio Tintos have been soaring almost out of sight, so wonderful is the dexterity of those who are jerking them upwards with an invisible force. The immediate impetus to the flight is said to be the improvement in the metal market, and the bigish rise in the price of copper, though prices have fallen slightly the last day or two. But Rio Tintos are the plaything of groups who manipulate its movements capriciously, and only so long as outsiders gaze on in curiosity will they take no harm. Indian shares have been firm, but other assortments unsteady. Etruscans have declined on Mr. Scantlebury's letter. With respect to the strike of miners at Stratton's Independence, Mr. Hays Hammond cables there is no need for worry, but that the strike, he believes, will ultimately be beneficial.

Kadur-Mysore.—The directors of this disappointing and struggling company have this week issued a circular to the shareholders from which, we fear, they are not likely to derive ecstatic comfort. "In continuation of the report of the directors, dated December, 1902," says the circular signed by the secretary, "I am requested to give you information bringing the history of the company up to date. You will recollect that in the report referred to the directors informed you that they proposed to hold a general meeting of shareholders early in the present year. Soon after this report was issued, and during the investigation made by the directors, it was discovered that there had been certain irregularities affecting the legality of the titles to your property in India. I at once communicated direct with the Government of Mysore to make certain of a good title. Under certain conditions the Government has now agreed to condone all irregularities as to past imperfect titles, to cancel all existing leases, and to grant new leases to this company or to their successors in title. Your directors at their own expense have obtained a report on the Tarri Kerri block, the portion of your property on which no work has at present been done, and they are of opinion that it will be wise to develop this portion of the property, and they are now considering the best means to raise further funds either by the issue of new shares or by a reconstruction. The directors are awaiting further information from the Mysore Government, and when this is received the shareholders will be called together and the reports received placed before them. The liabilities of the company are comparatively trifling, and the principal creditors have verbally promised the

directors their cordial co-operation in carrying through any scheme for the benefit of the company generally." Thus a further chapter is now to be added to the sad story of this company's history, to be headed "Another Re-construction," or "Another Issue of Capital." Surely the shareholders are finding it painful to keep putting their hands in their pockets in this fashion? And this new block, with the striking looking title, is a virgin piece of ground. How much capital will be wanted to prove what lies below the surface? Suppose as much gold is found beneath it as there is in Epping Forest? However, if there are people who chose to risk their money in such an enterprise, on the chance of making a fortune, we will not bid them "stay."

Zoroastrain, Limited.—This is a West Australian company that has attained a kind of glory by re-construction twice in five years. The last reconstruction was in July, 1902, and the report and accounts now issued cover the period of ten months to the end of April, 1903. The directors have very little to say. They give a brief account of the work done, which has been principally sinking and driving, with little gold winning. However, the shareholders may find some consolation in the fact that "the operations of the past year have thus augmented to a considerable extent the reserves of payable stone, and it is worthy of note that in the lowest workings the ore remains amenable to ordinary battery treatment." The expenditure is capitalised, and from the report is to be gathered the fact that gold realised £1,067, and crushing fees brought in £266, against mine expenditure of £5,193, and London charges, less a trifle from transfer fees and interest £1,586. Cash at bankers totals £1,432.

Tanganyika Concessions.—The directors of this company have issued a lengthy technical report from Mr. J. R. Farrell, in which he says:—"Before leaving the properties of your company in September of last year I recommended that certain development, for purposes of information, be done at the depth of 100 ft. upon each of the areas known as Kambove No. 2, Likasye, Fungurme, Kakanda, and Kabalela, in the Congo Free State, and also a continuation of the work being done on the Kansanshi mine in north-western Rhodesia. Not only has this been carried forward as outlined, but, further supplies having come to hand, and knowing that the heaviest item of expense at any mine was the pay and board of the white men in charge, your manager has had additional work done upon the Katanga mines mentioned. Weekly mine sheets, up to May 16, of this development have been received, and they show the continuation in strength of the bodies of high grade carbonate copper ores, with looked for characteristics and values, to the depth of 100 ft., below which it will not be necessary for you to mine for an indefinite number of years, and also furnish much desired information as to the ore occurrences in the different properties." In the Kambove No. 2 249 ft. have been sampled by Mr. Studt, giving an average assay value of 13 1-3 per cent. copper, the highest assay being 14 1-3 per cent., and the lowest 12 1-3 per cent. Samples from Likasye have assayed from 5½ to 27 per cent., "but no systematic sampling of the mine has yet been reported." Speaking of the Fungurume, Mr. Farrell says:—"From the developments so far reported some ideas may be formed of the enormous tonnage that will be obtained from this gigantic property, and while the grade, from 6 to 8 per cent., is lower than on the other mines, it is above the estimated amount that can be treated at good profit, and will, therefore, be entirely available." Speaking generally, he says:—"It can be seen that as the great bodies of high-grade oxidised copper ores continue in strength and character to the greatest depth it will be necessary for you to work for an indefinite time. Upon each of the properties there again is found the wide bodies of sandy, sugary, honeycombed quartz, the cavities of which are filled with masses of pure malachite, and, on either side of this, wide belts of laminated ore. It is still clear that while the greatest tonnage will come from these laminated ores, the pure malachite found in the quartz will play a highly important part in your operations. It is found loosely, as if in a sponge, in the quartz cavities, and in large quantities on each of your properties." All this reads quite sweet.

Associated Northern Blocks.—The shareholders in this company have at last made a move, better late than never. Half a dozen of them have issued a circular to their co-shareholders asking the latter to support a requisition calling upon the directors to convene a meeting, "for the consideration of the circumstances attending the dismissal of the late chairman." They proceed to say:—"Our sole object is to safeguard the interests of the company and its shareholders. . . We submit that the extraordinary powers vested in the board under the articles for the removal of a director should not be exercised without a full explanation to the shareholders, and we shall be guided in the use of your proxy entirely by the nature and truth of any charges which may be brought against the late chairman, and which the directors will be called on to state at this meeting. If we should find that their action was justifiable, we shall, if necessary, urge reparation by legal proceedings. If, on the other hand, we should find, as is alleged by the late chairman, that no justification exists for the action of the board, we shall move a resolution for the removal of the present directors and the appointment of a new board. If, in the further alternative, we find that any charges made demand further investigation, we shall move the appointment of a committee to investigate and report to an adjourned meeting on the acts and conduct of the late chairman and the present directors in regard to the company's affairs, and their respective fitness to hold office as directors of the company." The circular is signed by Messrs. B. W. Levy, T. E. P. Gardner, J. W. Gillies, T. Shaw, T. Lloyd, and H. Sopper. We hope the shareholders will give their entire support to these gentlemen, that they will insist upon a meeting being convened, and upon a thorough clearing up of the present intolerable and pernicious mystery surrounding the affairs of this company. We repeat what we said a week or so ago, that if any official of the company has abused his trust to the injury of the shareholders, he deserves punishment. But no one knows who is in the wrong, and until the matter is threshed out, it is impossible to point the finger to the guilty party, assuming some one guilty of a grave dereliction of duty. It must be regarded as a remarkably strange coincidence that, simultaneously with the publication of this circular, the directors should send out an official notification to the effect that at a meeting held on Tuesday last Sir Bartle Frere, Bart., and Mr. J. H. Curle, were unanimously elected directors of the company, and Messrs. Bewick, Moreing, and Co., engineers. These names are familiar to all, and will command respect. Mr. J. H. Curle has figured prominently of late years as the special mining commissioner of the *Economist*, and as the author of that valuable book, "The Gold Mines of the World." He is a mining engineer by profession, has visited every gold field of the world, and has examined thousands of mines. Such an expert will undoubtedly greatly strengthen the board, and so will Sir Bartle Frere, but that is no reason why the directors should not give publicly a full explanation of their past conduct, in justice to themselves, Mr. Laudau, and the shareholders. They have promised to convene a meeting on Professor Liveing's return to London, but that will not be for weeks hence, and precious time could be saved by holding a preliminary meeting to discuss purely domestic matters. In view of Mr. Curle's accession to the board, it will be interesting to recall what he said of the Associated Northern Blocks mine in the last edition of his well-known work. "It lies," he said, "on the east zone of reefs, which have proved the most treacherous in depth. The question is, can this mine be expected not to go wrong in the same way as the others when its levels reach to, say, 500 or 600 ft.? A lot of good ore has certainly been exposed, and I doubt if the mine is so good as its owners think it to be. It is misleading to be guided by the value of picked samples of ore that are sent to the smelters." Events, therefore, seem to have thoroughly justified the doubts expressed by Mr. Curle. We shall know more when Professor Liveing's report is issued, and when he addresses the shareholders at the forthcoming meeting. In the meantime, we would ask the directors if they know what is the tenour of that report, whether good, bad, or indifferent, and if they do know why not give the shareholders an idea of what they are to expect?

The above circular has been promptly replied to by the directors, in which they say:—"It is, and has always been, the intention of your directors at that meeting (the meeting to be held on the return of Professor Liveing), to give a full explanation to you of the causes which gave rise to their requesting Mr. Landau to resign and to their exercising the powers conferred upon them by the company's articles of association on his refusing to do so. The intention will be carried out at that meeting, and you will then be able to form a judgment, not only upon the merits of this particular point, but also on the important matter of the present position and prospects of your property." If that was the intention of the directors, why on earth didn't they say so before? It is true they told the shareholders a meeting was shortly to be held, but said not a word about giving explanations, and naturally shareholders and other intelligent individuals would infer they intended only to talk about Professor Liveing's report, and the condition of the mine. They would not have lost any valuable vital energy if they had penned a sentence to this effect in their recent very brief circular. As it is, they have now gone to extra trouble and expense—which presumably the shareholders will have to stand—in inditing another circular and posting the same. It is comprehensible how they have been stirred into such electric energy by this movement amongst the shareholders, but such tardy activity is not creditable to them. They now plead with the shareholders not to sign the proxies of their representatives, but it has taken so long to initiate any movement amongst the shareholders that it will be a pity if they are lulled into impassivity by this directorial whimper. We see no sound reason why a preliminary meeting should not be held, otherwise there may be too much for one meeting to tackle, which would prove a temptation to rush the thing through. We do not like this procrastination. If the directors have done their duty and have nothing to fear, why this silence and reluctance to meet the shareholders? They must remember that Mr. Landau has been, by their action, placed in an unenviable position, and is under suspicion. Have the directors no sense of their duty to him, apart from their duty to the shareholders? The matter is of such gravity that it should be settled without a moment's delay.

That there will be enough to occupy the forthcoming meeting for several hours is apparent from the internal evidence afforded in the report of the manager, Mr. Roberts, issued this week, and dated July 18. Mr. Roberts took over the management of the mine on May 21 last, and he regrets "that my report will be disappointing in that the ore reserves figure much lower than was generally understood. The rich shipping ore had been practically exhausted, only a few pillars remaining to support the hanging wall of stopes. In order to maintain the high wage and output the practice had been to follow the rich veins of telluride ore, gouge them out regardless of cost or legitimate mining, and my first duties were to cable you to give the necessary notice to the smelters that we could ship only a limited time, and the average would have to come down considerably." Here, then, we have it on the highest authority that it has been the practice hitherto to pick out the eyes of the mine. What the shareholders want to know, and ought to know, is, who is responsible for this, and there is no sound reason why they should have to wait for weeks for explanations. It may have been the work of the late manager, but did the directors know of it, and did the manager act under instructions? These are important and pertinent question to which the shareholders, if they are concerned for their own interests, should demand categorical answers. Readers will likewise call to mind that there has been a great deal of controversy and difference of

opinion respecting the ore reserves in this mine. Mr. Roberts devotes a paragraph to this, which we give in full, because of its importance, and because it is concise, and to the point in itself. After reading it shareholders can hardly have a very hopeful opinion of prospects. At any rate, it proves that the future is highly doubtful, and speculative, and goes far to justify the description of the mine as "an empty husk." "It is most difficult," says Mr. Roberts, "to form an estimate of the ore in sight, as the ore body in most cases can be seen and sampled on one side only, and if the ore opened on three sides is taken only, the tonnage will appear very small. I have, in company with the underground manager, carefully examined the different levels and stopes, and after measuring up what can be actually seen, and allowing a liberal estimate for ore bodies of which one and two sides can be seen, I make the tonnage available for milling between the No. 1 level and No. 7 level 29,200 tons, assaying 27 dwts. per ton, and 15,800 tons at grass, same value, making a total of 45,000 tons, containing 60,750 oz. fine gold. This is a liberal estimate of the ore exposed in the mine workings. I have every reason to believe that development and stoping will open up fresh ore bodies; but at present the quantity of ore in sight is not large, and it is almost impossible to estimate exactly the quantity and quality, for the values change so suddenly. Above the No. 1 level there is nothing exposed of any value, and I am doubtful if anything of value will be discovered. There is quite a blank piece of country between the 300 ft. and 400 ft. level, and I think we shall open up some pretty good ore here. We intend to develop this portion of the mine, commencing next week. It is premature to say anything about the mine below the 7th level, although I have every reason to believe the No. 6 borehole records are all right; if so, we may open up a good ore body at the 1,050 ft. level."

Etruscan Copper Estates.—Mr. J. E. Scantlebury, who, in a recent letter to the *Financial News* severely criticised the directors of the Etruscan Copper Estates, returns to the attack this week with a further letter occupying two full columns. The previous letter was made into a pamphlet, and someone went to the expense of distributing copies, giving rise to the natural suspicion that the writer of the letter was not a disinterested spectator of events. He has himself disclaimed responsibility for this. As for us, we are keeping an eye upon developments, anxious to give the directors every opportunity of fulfilling the definite promises they have made from time to time. On one side we have these gentlemen asserting in the very strongest Anglo-Saxon that the mine is a magnificent property, and will soon begin to pay large dividends, and on the other are criticisms and statements equally as positive and forcible that the mine contains no mineral wealth worth speaking of. It is this antagonistic swearing that has created what is known as the Etruscan "mystery," one which time alone can clear up. At the last meeting the chairman said he had not the slightest doubt the company will be in a position to earn dividends from the beginning of 1904, dividends of "a very substantial nature." It will not be long now before 1904 comes, and we are willing to wait patiently until then. In the meantime the directors have issued a couple of circulars they call reports, and it must be admitted these give but the meagrest information, so they have only themselves to blame if they are criticised as Mr. Scantlebury criticises them. Do the directors mean to infer, asks this gentleman, that the details have not been supplied to them? "Of course they know," he goes on to say, "as I know, that the results are so poor and disappointing," that they "are ashamed to give them. They also know, or ought to know, as I know, and it is time the shareholders knew (I say this with deliberation and knowledge aforethought), that the average lead and zinc ores of the Etruscan mine are of less value in lead, zinc, and silver than the waste dumps of Broken Hill, of which there are millions of tons thrown aside; that, after three months' running on lead and zinc ore, which has been as carefully picked and selected as was possible under the circumstances, they have had no result, except such that as they are ashamed to publish, though the loss in treatment was not more than usual in dealing with such ores; that the plant has been blamed instead of the mine, though both are bad; that the lead and zinc mine is likely to be shut down; and a furnace designed to treat lead and zinc ores is to be used in desperation to treat copper ores, and, if not materially altered—which they probably have not had time to do—there will be a collapse to which 'the temporary stoppages incidental to all large installations' are small, indeed. . . When I was on the mine some months ago they struck a small vein of copper ore, the best they had ever seen—though that was not saying much. Hopes had been deferred and shattered so often by ore bunches vanishing soon after they were found, by the breaking into old workings here, there and everywhere, that the officials, who were so anxious to find payable ore somewhere, were delighted with this development, small as it was. It was found in a place where apparently the Romans had not worked, and, as one man said, 'I am sure Mr. Moreing could not have seen this, anyhow.' Samples of the ore were shown me, and I expressed a hope that it would develop into something good and permanent, although I could not see where there was room for it in such a place and in such a treacherous will-o'-the-wisp limestone country. Embittered, disappointed, and, therefore, indignant shareholders and other Etruscan advocates can rave against me as they may care to I say now, as I said then, that I have seen too many bad mines in my life not to welcome a good one; and that nothing would have pleased me more than to have found a good mine instead of a wild-cat in the Etruscan. I know the public would have forgiven all the previous errors of promotion, capitalisation, and, above all, of misrepresentation, if they had, even at the last hour, found something rich and permanent. This little vein has opened up fairly well. It is 3 ft. to 4 ft. wide, and will average 7 per cent. to 8 per cent. copper. It has been proved for about 40 ft. in length. Of course, the directors could not single it out for special comment, remembering the great things and the lodes of amazing richness and size depicted by the chairman and Mr. Govett at the annual meeting. . . Probably the vein will yield a few hundred tons, possibly 1,000 tons. I hope it will. It would pay a party of tributers to take out and send away to smelters; but when that little vein has to bear the burden of a capitalisation of £585,000, an expenditure of £400,000, a debenture debt of £200,000, a market valuation of £1,000,000, wages for 2,000 men, and big salaries for that gorgeous, ideal staff, 'properly leavened with Scotsmen,' it sinks into insignificance." So talks Mr. Scantlebury, and it must be admitted he speaks to the point. Finally, he says the directors may ignore or evade his challenge to publish the three months' output, and to allow an investigation, "but they are not going to escape it altogether. Time brings the truth home to every mine, and it is nothing new for me to wait for it, and to be well-blackguarded meanwhile." We ourselves hold a brief for no man, only a watching one for the shareholders, and when the time comes we shall have our say.

Rhodesia Consolidated.—This is the striking title of the new company that has been formed, with a capital of £550,000, to embrace five Rhodesian companies that apparently have not the physical strength to exist and flourish individually. We have already given the names and some particulars of them in our mining notes and news columns. They are:—Colenbrander's Matabeleland Development Co., Limited, Consolidated Belingwe Development Co., Limited, Holton Consolidated Co., Limited, Nelly and Pioneer Reefs Gold Mining Co., Limited, and Sabi (Rhodesia) Gold Mining Co., Limited. The entire assets of these companies stand in the books at £794,814, and are acquired by the present issue of 794,814 shares, credited with 7s. paid, and carrying a liability of 3s. per share. On the Nelly and Pioneer some £60,000 has been spent on development, and it is said that at least 30,000 tons of ore, averaging 1 oz. per ton, on a stoping width of 3 ft., are in sight. "The property has been opened up to a depth of 490 ft., the erection of a 20-stamp battery is contemplated, and it is expected that crushings will commence in the course of 1904, at an estimated profit of 30s. per ton." That being so, it is amazing that a mine with such prospects should want to amalgamate. On the directors' own showing there is a profit of £45,000 in sight, to say nothing of what is presumably out of sight, enough to pay a handsome dividend on its capital of £150,000. Then on the Sabi mine "the ore in sight amounts to 25,000 tons, estimated at 12½ dwts. per ton, over a stoping width of 3 ft. 4 in., and it is probable that the erection of a battery of 20 stamps will be justified during next year." Then there are lots of other things, such as 3,772 mining claims, 733,845 acres of land, 24 building stands, some plant, machinery, buildings, furniture, live stock, stores, valued at £55,200, and the right to locate ten square miles of coal north of the Zambesi River. Of course, the sole aspiration of the directors is to save money by the amalgamation. "Great economy of working capital, as well as increased efficiency, may be anticipated. . . The amount which will be saved in management expenses alone is estimated at £15,000 per annum." The entire cash capital of £119,220, to be provided by the present issue, is to be available for working capital, and £305,179 will be held in reserve. The liabilities of the companies—which we estimated to total about £100,000—are to be satisfied by the payment of about £20,000 in cash and the issue of not more than £80,000 7 per cent. first mortgage debentures, repayable at 105 per cent. at the expiration of six years from the date of issue, or convertible, prior to that date, into shares at par at the holders' option. So the new company will start on its career burdened with a big debt. Is there any plunder about for the sponsoring companies?

New Kleinfontein Company.—This company suffered considerable damage during the late war, the Boers making two desperate attacks upon the property, and destroying practically all the machinery, the loss to the company being estimated at over £200,000. The Anglo-French Exploration Company has issued a circular to the shareholders intimating that a claim was made to His Majesty's Government for that amount, and that the Governor has now definitely declined to consider it. We condole with the shareholders, but cannot weep copiously.

TRADE AND PRODUCE.

Wheat.—The markets keep quiet and firm, with prices still tending upwards. Last year at this time some of the new wheat was already on sale, but this season, though a few samples have been shown, none is yet on the market, and the very late and probably poor harvest will not allow any reaction to take place as yet. Fortunately many parts of the country have not suffered from the rains as much as in the south, and the harvests in these favoured districts, though late, promise fairly well. Farmers' deliveries last week averaged 29s. 11d. per qr., on 18,097 qrs., an increase of 9d. over the week before. Advices from America show that the markets there have been weaker, and more or less depressed. Export trade has been disappointing, large selling orders have come in from the North-West, and reports on the spring wheat crop are favourable. Bradstreet estimates the supplies in sight east of the Rockies at 21,259,000 bushels, against 21,532,000 last week, and 31,352,000 bushels a year ago.

Wool.—Reports from the various wool centres vary considerably in their estimate of the position of trade. Huddersfield, Dewsbury, and some of the smaller markets, which deal more in piece goods than in the raw material, all complain that the home trade is very depressed, much more so than is apparent on the surface. Many factories are only partially employed, new orders are difficult to secure, and the export trade, except with Canada

and South Africa at a standstill. Bradford and Leicester, on the other hand, are decidedly cheerful. Business there in colonial and home wools is more than usually brisk for the time of year. Local spinners are well employed, and have advanced their quotations for the export trade, which is said to be quite up to the average. Prices show no special change. Merinos are receiving more attention, and show a slight recovery, and cross-breds keep firm, with a tendency everywhere against the buyer, while in home-grown produce there is a large turnover.

Cotton.—American in Liverpool has fluctuated considerably during the past week, spot on Thursday being quoted 14 points lower than it was on the same day the week previous. The trade demand is small, with sales few, and holders are finding things very dull. Futures for October-November are at much the figure as they were a week ago, but September has weakened on account of the small spot sales. For Egyptians there has been a fair request, and prices are steady, though unchanged. The yarn market continues in a most deplorable condition, showing no signs of any improvement. Round Oldham producers of low counts, we learn from Sir Jacob Behrens and Sons' circular, have decided to still further curtail production during September, and only work three days a week, while the Bolton spinners are no better off now than they were before the holidays, in spite of short time. Trade from the East keeps quiet, though a few transactions in fine two-fold business are reported from Bombay. The continent is also asking for new crop rates, but as yet not much definite business has been booked. There has again been a fair enquiry for cloth, but matters rarely get beyond the enquiry stage, as the proposals made are seldom or never such as manufacturers can entertain. Most of the offers come from India, both Calcutta and Bombay being willing to buy in bulk at their own price. China is also on the market, but with limits much below values, and rather than accept them manufacturers prefer to stop their mills.

In the States prices have been largely influenced by the weather reports, and as these vary, so quotations rise and fall. Already the crop is between two and three weeks late, and it seems almost an impossibility for the yield to be large, yet a big return was never more needed than it is this year. The bulls are still confident of their ability to command the situation, though during the week one section sold September largely.

At the close of the Liverpool market on Friday the spot American was dull, the quotation for middling being 6.70d., but for Egyptian prices were firm, and slightly up at 7¾d. Futures were steady, those for the end of the month being quoted at 6.47d. and August-September at 6.39d. to 6.40d. Later positions ranged from 5.85d. for September-October to 5.30d. for March-April.

Linen.—Any change that may have occurred is for the better, and if business cannot be said to have yet shown much signs of improvement, it is confidently expected to do so in the course of a week or two. Medium class goods, such as sheetings, towellings, brown drills, etc., are all coming in for a fair share of inquiry, but it is in dress goods that the largest trade is expected, and already, we understand, more than 25 per cent. of business has been booked in these linens for the spring of 1904 than last year at this period. The tone of the markets is healthy, a hardening tendency noticeable in prices, warning buyers that they will probably only suffer by holding off longer. Foreign trade is looking up again, orders now coming in with increasing steadiness from the United States, though importers there are beginning to complain of the high prices. Canada, Australia, and Cuba all show an improvement lately, but the Continental markets are more than usually sluggish.

Iron and Steel.—The Glasgow iron market was quiet this week, and but little business done. A small number of Scotch warrants changed hands at 58s. 10d., delivery in ten days, while Cumberland sold for 56s. 3d., delivery in nine days, but as both descriptions are scarce, operators are shy of dealing in them. Cleveland are, however, more plentiful, and form the larger proportion of the dealings in the warrant market, prices being 46s. 9½d. cash, and 46s. 10½d. one month. The demand on the part of consumers of Scotch pig-iron has, however, been very small, as a fall in prices is considered probable, and this tends to keep purchases on a hand to mouth basis. Cleveland, however, is arriving in considerable quantities, the past week's entries into Grangemouth amounting to 16,004 tons, since a large consumption by the foundries is expected, as they have a fair amount of work on hand. The engineering shops also are busy, but the men are in rather a restless mood over the wages question, being by no means pleased with the result of the recent abortive strike. In the north of England the week has been a very quiet one, the shops and foundries being closed during the Stockton Races, in accordance with the usual custom. Moreover trade is so slack that nearly all the establishments seized the opportunity to close for the whole week, instead of a few days as in other years. At present the most favourable feature of the pig-iron trade is the large shipments to Scotland, which counterbalance the decline in those to the Continent. A strike of engineers at Newcastle and Gateshead is threatened, for the men are demanding to be restored to the scale of wages in force prior to May 1, their reason being that trade has materially improved since then. The master, however, declares there has been no material alteration in the condition of business and prices to justify the men's demand. At Barrow the hematite pig-iron market is steady, and though the greater portion of the business is being done is on the home account, the foreign shipments show a good average. Steel rail-makers are still the busiest among the manufactured iron and steel trades, the price for heavy rails, which are in most demand, being £5 10s. per ton. Shipbuilders are still looking for those long-expected orders, which they wish would quickly come, as at present they are badly off for work.

Coal.—With no improvement in any branch of Lancashire trade it is not to be expected that coal will "buck up" on its own account, and it drags on its weary way without fulfilling the hopes of a few weeks ago. Elsewhere also trade is quieter, both home and foreign, though heavy tonnages are still dispatched to the Humber ports for export. The decision about prices of house coal to the public is not yet settled, and until those of the London Exchange are fixed, no change is likely to take place in the provinces. Steam coals do not partake of the general slackness, but continue to hold their own, and in Wales the outlook is considered specially promising.

Copper.—A bullish tone in the American cables and the high prices quoted over here by American producers, and the rise in Tinto shares, caused some activity in the London market early in the week. The turnover was large, and on Monday prices went up 35s. to 40s., over Friday for cash and three months. Later on a reaction set in in face of further advances from America, and the temporary improvement was lost. On Thursday afternoon, practically no business was done at all. Yesterday's closing prices were £59 15. cash and £58 15s. three month, the market being quiet.

Tin.—The amount of business transacted during the week has been very small. Higher prices were reported from the East, but here their tendency has been downward, or rather fluctuating from 5s. to 10s. up or down each day. On Friday, however, the prices hardened, though the market was still quiet, and the close saw cash at £128 12s. 6d., and three months at £125 15s.

Tea.—Moderate supplies and a good demand keep the markets active and cheerful. Competition is keen, and prices well maintained for all classes of teas. The average this week for Indian teas is 8.18d. against 8.02d. last week, and 7.25d. a year ago, 26,300 packages were offered, most of it of a fair quality, and that from Assam giving promise of a better in the near future. The Ceylon auctions produced 24,700 packages, and though some of the common grades are still of poor quality, an improvement is noticeable in many of the invoices, and it is hoped that the worst teas have passed through the market for this year. The average price obtained for the week was 7⅛d. per lb., against 6½d. last year. "Duty payments," to quote from Messrs. Gow, Wilson, and Stanton's report, "continue to show an increase over those of last year, those on Indian tea for the first two months of the season—June and July—being four millions in excess of last year. Exports from India to the United Kingdom for the first half of August also show an increase, and bring up the total exports dating from April 1, to August 15, to 43,422,000 lb., against 39,590,000 lb. in 1902.

Sugar.—An improved demand for raw and higher American quotations had the effect of improving the market still further, beet at one time showing an advance of nearly 3d. for old crop, and 2d. for new, while granulated was sold at nearly 4d. above last week's prices. The scarcity of foreign refined available during the next two months is almost entirely due to the new Act. New sugar naturally rose in sympathy with this scarcity, in spite of the satisfactory crop reports from every part of Europe, except France, though how the harvest will turn out still depends largely on the weather of the next few weeks. The market, though anticipating fluctuations, does not believe the Sugar Act will materially alter prices, or that the Convention will restrict prices. We hope they will not suffer a severe disappointment. In the United Kingdom the large invisible supplies which early in the year caused our imports to fall off, are now absorbed, and the trade demand on the market is therefore more active, causing the week's imports to rise sharply, even after allowance is made for Argentine and Russian sugars landed to escape prohibition after the 31st inst. Mr. Czarnikow, in his weekly circular, gives the following movements in the prices of beet for the week:—August from 8s. 2¾d. to 8s. 5½d., October-December 8s. 10d. to 9s., and January-March from 8s. 11¾d. to 9s. 1¾d. Of the cane-producing countries the prospects in Cuba continue favourable, while in Louisana the recent rains have improved the growing crop, although not bringing it up to last year's total of 310,000 tons.

The American market is stronger than it has been for a long time back. This is regarded as an indication of a desire on the part of refiners to keep up fair stocks, and they have therefore submitted to an advance of 1-16 to ⅛ cent for raw. During the week the meltings were 45,000 tons, while the landings at the three ports amount to 54,000 tons, thus increasing stocks to 278,000 tons.

Freights.—There is plenty of tonnage available in the outward market and this continues to keep rates at low levels, notwithstanding chartering is again in full swing. Fixtures to the Baltic are easily arranged on the basis of 3s. 7½d. to 3s. 9d. Tyne-Cronstadt, with other ports in proportion, while to the Bay and Mediterranean, although there is a steady demand for vessels, quotations remain at 4s. 3d. Cardiff-Lisbon, 6s. 3d. Barcelona, 5s. 6d. Venice, and 4s. 6d. Port Said. Charterers to the Western Islands are well supplied, and business has for the time come to a standstill, as with rates so low, there is no inducement for owners to fix ahead. The South American market confidently expected a change to take place this week, but it has not come off, shippers showing no desire to come forward, and vessels were offered and fixed at the current figures of the last fortnight or three weeks. In the homeward market the most prominent feature is the steadier appearance of the River Plate, where better weather has increased the demand for prompt steamers at increased figures. Vessels in this position can now command 14s. Buenos Ayres, 16s. 6d. San Lorenzo, to United Kingdom or Continent, while handy ships for backward loading are worth about 1s. 6d. more. Elsewhere rates have remained practically unchanged, in spite of business having shown more activity in certain quarters.

Company Reports and Balance Sheets.

**** *The Editor will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Furness Railway.

This company's gross receipts during the half year ended June 30 were £272,316, or £16,468 more than in the corresponding period of last year, due largely to improvements in goods, live stock, and minerals. Working expenses, however, rose £13,858 to £142,841, so that the improvement in net revenue was only £2,609, at £129,475. Maintenance of way, works, stations, etc., rose £4,422, locomotive power over £4,000, and rates and taxes £854. Adding £5,383 brought forward and the total net credit is £134,859, from which prior charges take £48,903, or £415 more. Balance available for dividend therefore is higher by £3,334, at £85,956, and as debenture and guaranteed dividends absorb the same, the distribution on the ordinary stock can be raised from 2 to 2¼ per cent. per annum, with a sum of £1,636 carried forward. Outlay on capital account for the half-year was £24,663, and £17,437 only is to be spent in the six months now current. Debit to capital account is £141,694, necessitating the raising of £60,000 on temporary loan, besides £28,615 from the bankers. The company is not happy in the possession of any cash.

Great Northern of Ireland Railway.

During the half-year ended June 30 this railway earned a gross revenue of £451,295, or £17,997 more than in the same period of 1902. Working expenses, however, were up £19,867, at £263,765, their ratio to receipts being 58.83. This increase in expenditure reduced the profit on the half-year's working to £187,530, compared with £189,400 a year ago. Miscellaneous receipts added £1,343 to this amount, but £62,027 were required to meet interest on debenture and guaranteed stock, while £1,500 was placed to reserve. Including the balance of £54,860 brought in from last account, the amount available for dividend was therefore £180,206, or £5,360 more than in June, 1902. Out of this £139,864 was required to pay the usual dividend on the consolidated preference stock, and 6¼ per cent. on the ordinary, leaving £40,341 to be carried to the next account. All classes of traffic show satisfactory increases, the most substantial being passengers, which have risen £8,485 to £174,652, and merchandise, which at £160,353 is £5,249 higher. Maintenance of way, locomotive power, and traffic expenses all cost considerably more, while rates and taxes have risen exactly £2,000 to £18,200. The reserve fund now stands at the decent figure of £101,500, but the capital account is overdrawn £225,493, the half-year's expenditure amounting to £29,633, of which £29,146 was spent on lines open and rolling stock.

Midland and South-Western Junction Railway.

During the six months ended June 30 this company's gross receipts were £44,153, or £5,671 more than in the first half of 1902, and as expenses only rose £2,474, to £28,099, the gain in net revenue comes to the substantial sum of £3,197, at £16,054. A big increase in mineral traffic was alone responsible for the improved revenue, as both passengers and merchandise fell away, the latter by more than £2,000. On the expenditure side the chief advances were in maintenance of way, locomotive power and carriage and wagon repairs, while one or two small savings are also to be noted. At this time last year the balance brought forward was £7,146, but the long-deferred settlement with the Midland Company has taken place since then, sweeping away this balance, and the credit now to be added in from previous account is £346 only. Thus the sum for appropriation, in spite of the better working results, is £3,603 lower, at £16,400, and as the Midland Railway loan interest, amounting to £3,109, for the past half-year is now deducted from net revenue, only the slender sum of £2,327 remains, after providing interest at 3 per cent. per annum on the "A" debenture stock. It is carried forward. The company has a debit to capital account of £196,233, money provided by a loan from the Midland, and it is well, therefore, that no more than £4,782 was laid out under this head during the past half-year.

Cleator and Workington Junction Railway.

This little line earned a revenue of £28,729 in the six months to June 30 being £1,085 less than in the corresponding period of last, and as expenditure rose £452 to £19,346, the net balance comes down £1,536 to £9,384. Adding £515 brought forward, the sum for disposal is £9,899, against £11,457, so nothing is placed to renewal fund, against last year's appropriation of £500. Even then the dividend on the ordinary stock is reduced 1 per cent. to 2 per cent. per annum, and £135 is carried forward.

Alexandra (Newport and South Wales) Docks and Railway.

A decided improvement took place in this company's affairs during the six months ended June 30. Gross receipts rose £12,393 to £98,214, against a rise in expenditure of £5,057 to £56,085, so that the net revenue is £7,336 higher, at £42,129, and the ratio of outlay to income declines from 59.46 per cent. to 57.1 per cent. All important items of revenue showed improvement, dock receipts and graving dock dues advancing £10,776, and minerals, merchandise, and live stock £2,411. Working the dock cost £3,000 more, and the increased business led to additional expenditure in other directions, but there was an important saving of £968 in general charges. After providing rent charges and debenture and other interest, the sum remaining is £28,789, or £7,045 more, so that both first and second preference stocks receive dividends at the rate of 4½ per cent. per annum, and £8,989 is carried forward. For the opening half of 1902 the first preference stock only obtained its dividend. Capital expenditure for the six months was very modest at £6,429, but it is proposed to expend £45,000 in the curernt half half. Existing debit to capital account is £71,435.

Dublin and Lucan Electric Railway.

This is a very small undertaking, and in the six months ended June 30 earned a gross revenue of £2,726, or £61 more than in the first half of 1902. Expenses, however, rose £168 to £1,861, and the net revenue is down £107 to £865. An increased balance of £347 brought forward nearly makes good this loss, and the sum for appropriation is £1,212, against £1,233. Debenture interest absorbs £375, and the sum remaining provides a dividend at the rate of 5 per cent. per annum on the preference shares, the same as a year ago, with £300 to reserve, and £62 carried forward. The expenditure for the year included such special items as £137 for rebuilding a boundary wall, and £50 for repairs due to the great storm of February 26 last.

Old Albion Brewery.

This company's annual accounts made up to June 30 show that after providing unnamed amounts for depreciation and bad debts and directors' remuneration, the net profit, including £303 brought forward was £11,419. Debenture interest, etc., drew away £3,121 leaving £8,297, which pays the preference dividend, and 9 per cent. on the ordinary shares. Also £1,000 is transferred to property reserve account, making it £5,500, while an addition of £500 to the ordinary reserve, brings it to £1,500. The balance carried forward is £239. The accounts do not reveal a very encouraging position. Freehold brewery and fixed plant, freehold and leasehold houses, and short leases, are valued at £155,733, against an issued share capital of £82,500, so that the undertaking is kept going on borrowed money. Mortgage debentures come to £60,000, liability on a mortgage is £2,000, and £13,866 has been borrowed from bankers. The reserves, too, such as they are, are involved in the business, and although the balance of floating assets and liabilities is in favour of the company, we note that the cash balance is just £171. This state of affairs does not justify so high a dividend.

Joseph Robinson and Co.

This company's trading revenue fell away rather severely during the twelve months to June 30, and the directors' advance one or two reasons for the decline. First it appears that a good deal of expense was incurred in the erection of a new boiler at Whitehaven and on other necessary work, outlay which will greatly reduce the cost of mining and manufacturing in the future. As a result the loss for the year was £1,049, against £565, and trading profits at Knothill were less, owing to the old mine workings having extended further than the records show. This meant that the cost per ton for obtaining the rock was considerably increased. Profits, therefore, are down £1,624 to £5,133, and after providing debenture interest and all other charges, the net balance shows a decline of £1,015, at £3,980. Nevertheless the directors again pay a 5 per cent. dividend, and write off £500 for depreciation, but the balance forward is reduced from £1,222 to £438. Allowance for wastage seems to be on the small side, and the question of reserves has not yet crossed the directorial mind, but otherwise the accounts call for no particular comment.

Brighton Marine Parade and Pier Company.

By means of creditable economy on the part of the directors a falling off in the earnings of the above company was more than made good by a substantial reduction in expenses. In the six months to the end of June, gross receipts amounted to £6,196, a shrinkage of £2,670, compared with the corresponding period, the revenue from the pavilion being mainly responsible. Expenses took £2,989, a reduction of no less than £3,470, leaving a profit of £3,207. A balance of £1,686 is brought in, and after deducting £562 for debenture interest, the sum available is some £600 more at £4,330. Accordingly the directors increase the ordinary dividend from 6 to 7 per cent. per annum, which leaves a balance of £731 to be carried forward. Debtors are £1,245 against £2,047 owing to creditors, and cash stands at £2,369, not enough for the dividend.

Fire Reinsurance Company of London.

This is a small affair as yet, and during 1902 received net premiums of £39,581. Net losses paid and outstanding took £23,694, or a little below 60 per cent., and net commission and expenses of management £13,161, or 33¼ per cent., which is rather high. Net balance is £2,726, from which £1,675 goes to reserve, making it £18,000, and the shareholders receive two dividends aggregating 7 per cent. The balance carried forward is £1,443, against £714 brought in. Interest and transfer fees received more than provided the directors', secretary's, and auditors' fees and income tax.

Western Australian Crushing Returns.—The Agent-General for Western Australia has received a telegram from his Government stating that the crushing returns for all gold mining companies for the month of July last are as follows:—Ore treated, 185,458 tons, yield of gold, 191,681 oz., average yield per ton, 1 oz. 0 dwts. 16 grs.

SOUTH AFRICAN MINE RETURNS.

The return for July from the mines now crushing on the Rand and in the outside districts is the highest since September, 1899, and gives evidence of an improvement in the labour situation. From the Rand itself the output was 242,070 oz., of a value of £1,028,250, an increase of 13,903 oz. over June, and of £59,056 in value. From the outside districts, however, only 9,573 oz. were obtained,

of the value of £40,667, a decrease of 580 oz. and of £2,461 respectively. Thus the aggregate was 251,643 oz., of the value of £1,068,917, compared with 238,320 oz., and £1,012,322. The net gain in the labour supply during the month was 2,208 "boys," the total number employed being 66,662. Two new companies have now been added to our list in those of the Van Ryn and Wolhuter, but the figures of the latter are so poor that a loss of £4,553 has to be recorded. Good returns are those of the Witwatersrand Deep, Robinson, Crown Reef, Jumpers, Geldenhuis Estate, Ferreira Deep, Glen Deep, Geldenhuis Deep, Nourse Deep, Langlaagte Deep, and Ginsberg. The Crown Deep had ten more stamps at work, and increased its output by 460 oz., and its profit by £500, whilst the return from the Ferreira includes gold recovered from the treatment of sand and slime purchased from the Worcester Company. Although the Rose Deep had five stamps less operating, there is an all-round increase in the production and profit. The figures of the French Rand show a biggish decline, as do those of the Bonanza, whilst though the Jumpers Deep returned 140 oz. more, the profit shrank by £1,100. The falling off in the Wemmer profit is due to a sixteen days' stoppage for repairs to mill.

RHODESIAN MINING RETURNS.

It's certainly time we had a ramping boom in Rhodesians, for "records" are getting quite monotonous. Here's another this last month, the return for July of 23,571 oz. topping that for June by 1,405 oz. The individual figures show slight and unimportant changes, with the exception of those of the Red and White Rose, which exhibit a large increase, thus accounting in a large measure for the aggregate expansion. But this company's mill is now shut down, in order to push on with the development of the 4th and 5th levels, as advocated by the consulting engineer. Unless, therefore, the other mines can turn out more gold, we are afraid we have seen the last of the records for a time. Which is a pity.

Crystal Palace District Gas Company.

During the six months ending June 30 sales of gas brought in £78,585, public lighting £2,495, meters and stoves £4,931, residual products £24,071, and rents £67, making a gross total income of £110,149. Outgo on the manufacture of gas absorbed £63,478, on the distribution of gas £12,018, rents, rates, and taxes £3,695, and management £4,081, the total expenditure, including sundries, amounting to £86,897, and leaving a credit of £23,252 to which a balance of £1,654 is added. Interest on debenture stock requires £2,813, and after adding £2,400 to the recently created insurance fund, the available sum is £19,631. This is sufficient to pay the same dividend as on the last occasion, at the rate of £5 6s. 8d. per cent., leaving £120 undivided, which the directors propose to add to the reserve fund, making it £39,147 of which £32,436 is invested, though in what stocks, if any, is not stated.

RAILWAY TRAFFIC RETURNS.

Foreign.

Argentine North-Eastern.—Traffic receipts for the week ended July 10, $9,984; decrease, $2,607. Aggregate from January 1, $340,808; increase, $13,533.

Assam Bengal (Chittagong Section).—Traffic receipts for week ended July 18, Rs. 29,538; increase, Rs. 2,403. Aggregate from July 1, Rs. 77,947; increase, Rs. 68.

Assam Bengal (Gauhati Section).—Traffic receipts for week ended July 18, Rs. 9,367; increase, Rs. 3,999. Aggregate from July 1, Rs. 24,166; increase, Rs. 9,368.

Bengal Central Railway. — Traffic receipts for week ending July 25, Rs. 19,168; increase, Rs. 2,163. Aggregate from July 1, Rs. 69,456; decrease, Rs. 265.

Canadian Northern Railway.—Traffic receipts for week ended August 14, $58,400; increase, $30,800. Total, from July 1, $368,900; increase, $181,500.

Lucknow Bareilly Railway. — Traffic receipts for week ended July 18, Rs. 20,498; decrease, Rs. 1,949. Aggregate from July 1, Rs. 55,879; decrease, Rs. 6,966.

Québec Central Railway.—Traffic receipts for the 2nd week of August, $13,167; decrease, $749. Aggregate from January 1, $415,226; increase, $19,991.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended July 18, Rs. 9,418; increase, Rs. 1,153. Aggregate from July 1, Rs. 23,021; decrease, Rs. 1,837.

Salvador Railway.—Traffic receipts for week ended August 15, $10,595; increase, $2,845.

White Pass and Yukon Railway.—Traffic receipts for the week ended August 7 amounted to $35,841.

English.

Cleator and Workington.—Gross receipts for the week ending August 15, £1,133; increase, £5. Total receipts from July, 1 £6,934; decrease, £401.

Cockermouth and Keswick Railway.—Receipts for week ending August 15, £1,143; decrease, £63. Aggregate from July 1, £7,715; decrease, £518.

East and West Yorkshire Union Railway.—Traffic receipts for the week ending August 15, £382; decrease £27. Aggregate from July 1, £2,361; increase, £71.

Liverpool Overhead Railway.—Traffic receipts for week ending August 16, £1,647; increase, £43. Aggregate from July 1, £12,178; increase, £710.

TRAMWAY AND OMNIBUS RECEIPTS.

Home.

Aston Manor Urban.—Traffic receipts for week ending August 15, £513, decrease £8; aggregate from July 1, £3,848, increase £135.

Belfast Street.—Traffic receipts for week ending August 15, £2,633, decrease £21; aggregate from July 1, £20,543, increase £1,431.

Birmingham and Midland.—Traffic receipts for week ending August 14, £779, decrease £1; aggregate from July 1, £5,948, increase £240.

Birmingham City.—Traffic receipts for week ending August 15, £4,818, increase £75; aggregate from July 1, £36,448, increase £1,694.

Blessington and Poulaphouca.—Traffic receipts for the week ending August 16, £47, decrease £1; aggregate from July 1, £220, decrease £30.

Bristol Tramways and Carriage.—Traffic receipts for week ending August 14, £4,977, decrease £448; aggregate from July 1, £38,122, increase £1,365.

Burnley Corporation.—Traffic receipts for week ending August 15, £924, increase for week £97; aggregate from July 1, £6,122, increase £991.

Dublin and Blessington.—Traffic receipts for week ending August 16, £195, increase £6; aggregate from July 1, £1,233, decrease £35.

Dublin and Lucan.—Traffic receipts for week ending August 16, £164, increase £32; aggregate from July 1, £1,029, increase £92.

Dublin United.—Traffic receipts for three days ending August 15, £5,263, increase £34; aggregate from July 1, £39,745, increase £6,129.

Edinburgh and District.—Traffic receipts for week ending August 15, £4,304, increase £323; aggregate from January 1, £142,790, increase £18,701.

Edinburgh Street.—Traffic receipts for week ending August 15, £577.

Harrow Road and Paddington.—Traffic receipts for week ending August 15, £284, decrease £11; aggregate from July 1, £2,149, increase £47.

Isle of Thanet.—Traffic receipts for week ending August 15, £1,705; decrease, £184; aggregate from July 1, £10,117, increase £208.

London General Omnibus.—Traffic receipts for week ending August 15, £22,411, decrease £3,109; aggregate from July 1, £181,423, decrease £334.

London Road Car.—Traffic receipts for week ending August 15, £7,072, decrease £1,578; aggregate from July 1, £55,338, decrease £2,225.

Rossendale Valley.—Traffic receipts for week ending August 14, £195, increase £1; aggregate from July 1, £1,323, increase £21.

Foreign.

Anglo-Argentine.—Traffic receipts for week ending July 20, £5,882, increase £1,611; aggregate from January 1, £166,958, increase £36,409.

Barcelona.—Traffic receipts for week ending August 15, £2,793, decrease £28; aggregate from January 1, £75,095, decrease £1,408.

Barcelona, Ensanche y Gracia.—Traffic receipts for week ending August 15, £340, increase £218; aggregate from January 1, £9,342, increase £5,270.

Brazilian Street. — Traffic receipts for the month of March, Rs. 42,144; increase Rs. 936.

Brisbane.—Traffic receipts for the month of April, £10,309, decrease £407.

British Columbia Electric.—Traffic receipts from July 1 to June 30, £672,882, increase £95,717. Net earnings £224,347, increase £39,172.

Buenos Ayres and Belgrano.—Traffic receipts for the month of June, £12,834, increase £605.

Buenos Ayres Grand National.—Traffic receipts for week ending July 18, $41,048, increase $3,001; aggregate increase from April 1903, $4,561.

Calais.—Traffic receipts for week ending August 15, £220; increase £6; aggregate from July 1, £1,582, increase £9.

Calcutta.—Traffic receipts for week ending August 15, Rs. 31,905, increase Rs. 6,560; aggregate from July 1, Rs. 226,466, increase Rs. 54,054.

Carthagena and Herrerias.—Traffic receipts for the month of July, £4,307, increase £75; aggregate to July 31, £27,254; increase £3,536.

Lombardy Road.—Traffic receipts for the month of July, £1,356, increase £16; aggregate from January 1, £8,795, increase £144.

Twin City Rapid.—Traffic receipts for the month of June $347,744, increase $37,861; aggregate from January 1, $1,918,653; increase $252,214. Net traffic receipts $178,999, increase $483; aggregate from January 1, $996,281, increase $110,202.

DIVIDENDS ANNOUNCED.

BANKS.

Anglo-Californian.—An Interim dividend of 6s. per share for half-year ended June 30, 1903, being at the rate of 6 per cent. per annum.

Royal of Queensland.—Dividends at the rate of 3½ per cent. on the preference and 3 per cent. per annum on the ordinary shares, placing £2,000 to reserve, and carrying forward £652.

MINES.

Butters Salvador.—A third interim dividend of 15 per cent. (3s. per share), payable August 25.

Great Boulder Proprietary.—Dividend of 9d. per share, on account of year ending December 31, 1903.

Mount Lyell Mining and Railway.—Bonus of 4s. per share, together with final dividend of 3d. per share, payable to the shareholders in the old company.

Mount Zeehan (Tasmania) Silver-Lead.—Further dividend of 1s. per share in balance of the 20 per cent. dividend on preference shares for year ended June 30 last.

No. 2 South Great Eastern Gold.—Dividend of 1s. and bonus of 6d. per share.

Oroya Brownhill.—An interim dividend of 2s. per share.

Queensland Menzies G. M. (No Liability).—A dividend of 10 per cent., payable September 2.

MISCELLANEOUS.

Blackheath and Greenwich District Electric Light.—An interim dividend at the rate of 7 per cent. per annum upon cumulative preference shares for half-year ended June 30.

Bristol Water Works.—Intermediate dividends for the half-year to June 30, at the rate of £7 10s. per cent. per annum, on the ordinary, and at the rate of £5 5s. per cent. per annum on the 7 per cent. maximum consolidated ordinary stock, payable September 10.

East Indian Coal.—Dividend for the year ended April 30, 1903, of 9 per cent. on the ordinary, making, with interim dividend of 3 per cent. paid April 3, 1903, 12 per cent. for the year, and 6 per cent. on the deferred shares.

Craigellachie Glenlivet Distillery.—Dividend at the rate of 11 per cent. per annum for last half-year on ordinary shares, being at the rate of 8 per cent. for the twelve months.

Hills' Dry Docks and Engineering.—Dividend at the rate of 3 per cent., adding £5,250 to reserve, carrying forward £139.

Imperial Tramways.—Interim dividend on the ordinary shares of 8 per cent. per annum.

John Hunter, Wiltshire, and Co.—Usual interim dividend of 5 per cent. per annum for six months ended June 30.

Marsden's Engine.—Dividend on the ordinary shares at the rate of 10 per cent. per annum is proposed, adding £1,000 to reserve, and carrying forward £674.

Moss Bay Hematite Iron and Steel.—Dividend on the ordinary shares of 5 per cent. per annum, carrying forward £1,202.

Robert Deuchar.—Dividend of 10 per cent. on the ordinary shares, adding £3,000 to reserve, and carrying forward £1,228.

Steel Company of Scotland.—Dividend at the rate of 2½ per cent. per annum, carrying forward £2,517.

St. George's Coal and Estate.—An interim dividend of 5 per cent.

Tottenham and Edmonton Gas.—Dividends for the half-year ended June 30 at the rate of 6 per cent. per annum on the "A" consolidated, 4½ per cent. per annum on the "B" consolidated, and 4½ per cent. per annum on the "B" additional stocks, carrying forward £8,523.

W. T. Henley's Telegraph Works.—Interim dividend at the rate of 12 per cent. per annum for half-year ending June 30 on the ordinary shares, payable September 1.

MINING RETURNS.

Alaska Mexican.—Mill crushed 19,987 tons ore, value $33,040, saved 449 tons sulphurets, value $35,435.

Alaska United.—Mill crushed 16,730 tons, value $15,021; saved 355 tons sulphurets, value $10,078.

Briseis Tin.—Black tin, 36 tons.

Brookfield Mining (Nova Scotia).—800 tons yielded 30 oz.

Caylloma Silver.—25,500 oz. fine silver in export ores, 14,250 oz. fine silver in bullion.

Cherokee (Mexican) Proprietary.—Crushed 350 tons for £900.

Chinese Engineering.—Output of coal, 11,000 tons.

Credo Gold Estates.—Crushed 45 tons of stone for 49 oz. 12 dwts. 12 grs., smelted gold.

El Oro.—Crushed 8,685 tons, producing from new mill $115,844, from old cyanide plant $1,016; total $116,860.

Elands Drift Diamond.—5,200 loads (18 cubic feet), were washed, producing 151 carats.

Gibraltar Consolidated.—Tributors crushed 278 tons of ore for 298 oz.; 14 tons of concentrates produced, containing 105 oz.; extracted from tailings 27 oz.; total 425 oz. New Mines: Tributors crushed 64 tons of ore for 71 oz.; five tons of concentrates produced, containing 9 oz.; total 80 oz.

Golden Blocks (Taitapu).—Crushed 201 tons, obtained 197 oz.

Henry Nourse Gold.—Mill, 9,383 tons, 3,546 oz.; 6,298 cyanide tons, 1,666 oz.; 2,890 tons slimes, 267 oz.; total 5,479 oz.

Malacca Diamond.—136 loads washed, producing 191 carats diamonds and 3,525 lb. of tin.

Millionaire.—Crushed 646 tons, yielding 207 oz.

New Heriot.—Number of ounces, 3,052; tons crushed, 8,050.

Nigel.—Number of ounces, 2,398; tons crushed, 3,095.

No. 2 South Great Eastern.—Crushed 3,300 tons, 3,772 oz.

Pahang.—2,330 tons of stone were crushed, producing 45 tons black tin.

Pahang-Kabang.—700 tons of stone were crushed, producing 13½ tons of black tin.

Palmarejo and Mexican Gold.—Crushed 3,600 tons, treated 2,800 tons, producing $10,400 gold, $43,100 silver.

Queensland Menzies Gold.—Cyanided 480 tons for 139 oz.

Raub.—590 oz. from 2,350 tons ore crushed.

Rogers's Golden Gate.—554 tons crushed, yielding 696 oz.

St. John Del Rey.—Gold produce, £6,588; yield per ton, 56 oz. troy.

Tyne Valley Colliery.—Output 12,975 tons.

West Rand Central.—Ore milled and tailings treated, 4,145 tons, 1,005 oz.; value £4,275.

Westralia Mount Morgans.—Crushed 6,950 tons, yielding 2,726 oz.; cyanide treated 4,608 tons, yielding 1,833 oz.; slimes treated 2,143 tons, yielding 652 oz.; total value £13,526.

Witbank Colliery.—Output 34,020 tons.

NEXT WEEK'S MEETINGS.

Monday, August 24.

Ascot District Gas.—50, Cannon Street, noon.
Grand Trunk of Canada Railway.—Cannon Street Hotel, 2 p.m.

Tuesday, August 25.

Forth and Clyde Junction Railway.—Stirling, 3 p.m.
Guest, Keen, and Nettlefolds.—Birmingham, 2.30 p.m.
London, Deptford, and Greenwich Trams.—Winchester House, noon.
Leopold Schwabacher.—Winchester House, noon.
Seaham Harbour Dock.—Seaham Harbour, 12.30 p.m.
South Essex Waterworks.—Cannon Street Hotel, 2 p.m.
Workington Iron.—Workington, 4 p.m.

Wednesday, August 26.

Isle of Wight Central Railway.—3, Lothbury, 12.30 p.m.

Thursday, August 27.

Commercial Company of Salonica.—23, St. Mary Axe, 11 a.m.
Midland and South-Western Junction Railway.—Swindon, 2.30 p.m.
South Staffordshire Waterworks.—Birmingham, 1 p.m.
United African Exploration.—Winchester House, 2.30 p.m.

Friday, August 28.

Alexandra Newport and South Wales Dock and Railway.—Winchester House, 2.30 p.m.
Bath Gas Light and Coke.—Bath, noon.
Cleator and Workington Junction Railway.—Workington, 11 a.m.
Joseph Robinson.—Carlisle, 12.30 p.m.
North Mount Lyell Copper.—Winchester House, 3 p.m.
South Hetton Coal.—39, Lombard Street, 1 p.m.

THE JOINT STOCK COMPANIES' JOURNAL.

(Established 1845 as "Bradshaw's Railway Gazette.")

The Leading Mid-Weekly FINANCIAL and INSURANCE NEWSPAPER.

PUBLISHED EVERY WEDNESDAY MORNING IN TIME FOR THE EARLY MAILS.

Price 4d.

ANNUAL SUBSCRIPTION (Post paid):—
United Kingdom, 17s. 6d.; Foreign and Colonial, 19s. 6d.

A VALUABLE MEDIUM FOR PROSPECTUS ADVERTISEMENTS.

THE JOINT STOCK COMPANIES' JOURNAL is a weekly record of everything of real interest to Investors.

THE JOINT STOCK COMPANIES' JOURNAL devotes special attention to Lighting (Gas and Electric) and Water Companies and other high-class Industrial Investments.

THE JOINT STOCK COMPANIES' JOURNAL in regard to Insurance matters is a recognised authority.

THE JOINT STOCK COMPANIES' JOURNAL deals particularly with Mining interests.

ISSUE OF 40,000 SHARES AT PAR

PAYABLE AS FOLLOWS:—

5s. on Application; 5s. on Allotment, and the balance in three months from the date of Allotment.

The Minimum Subscription, as defined by Section 4 of the Companies Act, 1900, will be £20,000.

Directors.

JOHN MACKENZIE HANBURY, 41, St. James' Place, London, S.W., Brewer.
WILLIAM MACKAY LOW, Wellsbourne House, Warwick, Director of Chalmers, Guthrie & Company, Limited.
EDWARD MARSHALL TOUZEAU, 30-31, St. Swithin's Lane, London, E.C., Engineer.
JOHN McCONNELL, Hill Crest, Barrack Lane, Nottingham, Warehouseman.

Bankers.

LLOYDS BANK, LIMITED, 72, Lombard Street, London, E.C.

Solicitors.

CLAPHAM, FITCH & CO., 15, Devonshire Square, London, E.C.

Auditors.

PRICE, WATERHOUSE & CO., 3, Frederick's Place, Old Jewry. London, E.C.

Secretary *(pro tem.)* and Offices.

Mr. F. J. WILLIAMS, 15, Devonshire Square, London, E.C.

PROSPECTUS.

This Company has been formed for the general purposes indicated in the Memorandum of Association, and to acquire the work the Concession obtained by The Bolivar Syndicate, Limited, from the Colombian Government to search for and obtain Petroleum, Coal and Natural Gas.

The consideration for the sale of the Concession is the allotment 60,000 fully paid Shares in the Company, and the payment of £10,000 in cash.

The following are short particulars of the Concession:—

1 Area of the Concession.—Unappropriated and other lands belonging to the Republic, including lands or reservations of communities of Indians within an area of about 4,000 square miles.

2. Situation of the Conceded Property.—Between the Atlantic seaboard of the Republic of Colombia and the Magdalena River, extending as far south as a line drawn from Sambrano to Carmen, thence to Ovejas, thence to Coloso, thence to Piche, and thence to Boca Frances, and more particularly described in the Concession and in the accompanying map.

3. Available Seaports.—The Harbours of Barranquilla, Cartagena and Cispata.

4. Duration of the Concession.—Forty years from the day on which public order was declared re-established, that is to say the 1st of June, 1903, the localities for working to be selected within 2½ years therefrom.

5. Royalty.—A Royalty payable to the Colombian Government of Five per cent. of the value of the crude petroleum, coal and natural gas produced and sold, but not being less in any case than fifteen per cent. of the net profits which the Fiscal Code fixes as the minimum in this class of concession.

6. Privileges.—Free import into the country of machinery, tools, boats, rails and pipes required in conducting the Company's operations. Rights to construct pipe lines, roads, waterways, &c. Liberty to work, **in the Department of Bolivar,** mines of coal, petroleum and natural gas belonging to private persons that may be situated at a distance not exceeding 50 kilometres from the Atlantic coast or from navigable rivers, subject to contracts to be previously arranged with the owners.

It is now proposed to commence systematic boring in depth for the petroleum, indications of which exist **at surface** over a very wide area, and for this purpose to send out an efficient staff equipped with the necessary appliances.

The Bolivar Syndicate has conducted its investigations during the past four years through its Engineer, Mr. William Farquhar, a copy of whose report accompanies this Prospectus.

Mr. Farquhar considers that the local demand alone for oil is a large one, and that the indications point strongly in places to oil being discovered at shallow depths.

Should this view prove to be correct, the present Company may engage itself to a certain extent in the commercial development of the industry, but primarily its object will be to prove the value of its concessions with the object of selling the rights conceded to it over the great area of land comprised in the concession.

It is proposed to put down bore-holes of sufficient size to use commercially when the oil strata are reached, and not as mere tests.

The Directors desire it to be understood that very large profits would probably result from the successful prosecution of the enterprise, but it is not put forward, in its present stage, as one upon which any reliable estimate of such profits can be made.

Applications for shares should be made on the accompanying forms, and forwarded, together with cheque for the amount payable on application, to the Bankers of the Company.

If no allotment is made the application money will be returned in full, and where the number of shares allotted is less than the number of shares subscribed for, the surplus will be credited in reduction of the amount payable on allotment, and any excess will be returned to the applicant.

Failure to pay the instalment payable on allotment will render the previous payment liable to forfeiture.

The following particulars, as required by Section 10 of the Companies Act, 1900, are given to intending applicants for shares:—

(A) The contents of the Memorandum of Association, with the names, descriptions and addresses of the signatories, and the number of Shares subscribed for by them respectively, are printed in the fold of this Prospectus. There are no Founders' or Management Shares.

(B) The number of Shares fixed by the Articles of Association as the qualication of a Director is 100, and the provision in the Articles of Association as to the remuneration of the Directors is as follows:—

"Each of the Directors shall be paid out of the funds of the Company, by "way of remuneration for his services the sum of £100 per annum, "and if in any year a dividend at a higher rate than 10 per cent. upon "the capital of the Company for the time being paid up, shall be paid, "the Directors shall, in addition, be paid a sum equal to 5 per cent. "on the total amount of the dividend paid in such year in excess of "10 per cent., such additional remuneration to be divided among them "in such proportions and in such manner as they shall determine, and "in default of such determination equally. The Directors shall also "have power, if they think fit, to pay the necessary travelling expenses "of any Director to attend Board Meetings of the Company. All re-"muneration payable to the Directors shall be deemed to accrue due "from day to day."

(C) The names, descriptions and addresses of the Directors, or proposed Directors, are given above.

(D) The minimum subscription on which the Directors may proceed to allotment, and the amount payable on application and allotment on each share, are given above.

(E) The number and amount of Shares issued or agreed to be issued as fully or partly paid up, otherwise than in cash, and the extent to which they are so paid up, and the consideration for which such Shares have been issued, or are proposed or intended to be issued, are stated below in (K).

(F) The names and addresses of the Vendors of any property purchased or acquired by the Company, or proposed so to be purchased or acquired, which is to be paid for wholly or partly out of the proceeds of the issue offered for subscription by this Prospectus, or the purchase or acquisition of which has not been completed at the date of publication of this Prospectus, and the amount payable in cash or Shares to each Vendor, are set forth below in (K).

(G) The amount paid or payable as purchase-money, in cash or shares, of any such property as aforesaid, are stated below in (K). Nothing is paid for goodwill.

(H) No amount is paid or payable as commission for subscribing or agreeing to subscribe, or procuring or agreeing to procure subscriptions for any Shares in the Company, but the Directors are authorised by the Articles of Association of the Company to pay a commission at a rate not exceeding 5 per cent. and brokerage.

(I) The amount or estimated amount of preliminary expenses is £750.

(J) The amount paid or intended to be paid to any promoter, and the consideration for any such payment, are set forth below in (K).

(K) The dates of and parties to every material contract are given below. Such contracts or copies thereof may be inspected on any day during the usual office hours, at the office of Messrs. Clapham, Fitch & Co., the Company's Solicitors, situate at 15, Devonshire Square, Bishopsgate, London, E.C.

(1) A concession, dated the 1st day of December, 1902, granted by the Republic of Colombia, to the Bolivar Syndicate, Limited.

(2) An agreement, dated the 7th day of August, 1903, made between the Bolivar Syndicate, Limited (the Promoter of the Company), of the one part, and the Company of the other part, for the sale by the Syndicate to the Company of the said concession for £70,000, payable as to £10,000, part thereof, in cash, and as to the sum of £60,000, the residue thereof, in fully paid Shares of the Company.

(L) The names and addresses of the Auditors of the Company are given above.

(M) The Directors of the Company are interested in the property proposed to be acquired by the Company as Directors and Shareholders of the Bolivar Syndicate, Limited, their holdings in which are as follows:—

NAMES OF DIRECTORS.	Ordinary Shares of the Bolivar Syndicate, Limited, out of a total of 9,000 Shares of £1 each.	Deferred Shares of the Bolivar Syndicate, Limited, out of a total of 10,000 Deferred Shares of 1/0 each.
John Mackenzie Hanbury ...	1,152	384
William Mackay Low	544	181
Edward Marshall Touzeau ...	751	2,116
John McConnell...	200	800

Prospectus and forms of application (upon the terms of which applications will alone be received) can be obtained from the Bankers, Solicitors, and at the offices of the Company.

Dated 7th August, 1903.

The Investors' Review.

The Credit Deadlock.

We have been asked what the £1,000,000,000 depreciation in public securities mentioned recently in these columns may be taken to imply. How is the figure arrived at? We frankly confess it to be partly a guess, because it is almost impossible to ascertain the extent to which the nation's resources have been crippled by, first the disastrous war in South Africa and secondly the appalling increase in the national expenditure. At the very best, one can only arrive at an approximate valuation of the extent to which the credit resources of the country utilised as capital have been trenched upon and curtailed during the past four years. None the less is the estimate mentioned by us a reasonable one, and one can cite the fall in the prices of old securities alone as ample vindication of the figure. Long before the war actually broke out, it was insistently contended in this paper that our resources in credit-capital, and otherwise, were all so completely engaged that we could not afford the luxury of a big war, or, indeed, of any war. All our interests were then, as they are to-day, bound up in the maintenance of peace. If, disregarding the facts, the country was plunged into war, it was again and again pointed out here that the inevitable consequence must be paralysis in national development and a disastrous consumption of wealth, none of which we could afford to lose. Events have amply justified the forecast, and the position of the country to-day is one of extreme peril, not merely to its great trade and magnificent industries, but to its position as one of the mighty pillars of modern civilisation.

Our resources are crippled in three way—.1) A shrinkage in the value or price of marketable securities, (2) multiplication of new securities for which there is little or no market, and (3) corrupt waste of newly produced wealth by Government prodigality—and the most immediately obvious of these ways is illustrated in the condition of our credit market. No country in the world has carried to such a high pitch as we have the utilisation of every form of wealth, not merely for the purpose of sustaining industrial undertakings, but as basis for additional creations of credit-capital for all purposes, good and other. It is from this point of view that the most disastrous consequences of war and extravagance have fallen upon the Stock Exchange. To go through the list of securities dealt in there and note the terrible shrinkage in prices, is one of the most disheartening employments the mind can run to. It has been the habit of the Stock Exchange to continually utilise existing securities for the purpose of helping in the manufacture of still other securities, to be sustained in price upon the market by credit until such time as they might be absorbed by the investing public. In this way scores of millions are probably always engaged by the market and the public together. The market jobber pawns his old investments in order to take up new for the purpose of his business, and this habit has extended to the monied classes, or the would-be monied classes, of the three kingdoms. It has become a habit for the man of more or less means to pawn certain of his securities with his bankers when he wishes to take up something new in the hope of making a profit. And the higher prices rose on the market the easier was it for the speculative investor of this description, or the stock merchant inside the market, to obtain the required credit. Hardly had the war commenced when this freedom began to be restricted. Prices, instead of rising or continuing high, started to fall, and no sooner did the cost of the war produce heavy demands upon the investing classes by the issue of new loans, than paralysis began to creep over all sections of the Stock Exchange.

Up till quite recently the market bravely held out against the symptoms of credit and wealth exhaustion abundantly evident on all sides, but some weeks ago the jobbers in the Consol market, the wealthiest body in the Stock Exchange, had to pass a resolution that they would take up no more new securities by way of underwriting or guaranteeing. Their capacity to guarantee stocks which they could not sell had, in other words, come to an end. They had stretched their credit generating powers to the uttermost. What the consequences of this resolution will be to the habitual borrowers, our municipalities, our colonies, our railway companies—domestic, Indian and Colonial—time will be required to reveal, but the present effect is undoubtedly to altogether close the market to most of them. When borrowing is resumed on what may be described as a natural basis—the straight offer of a security to the investor—it seems probable that the average rate of interest borrowers will have to offer will exceed that of four years ago by from 15s. to 20s. per cent. per annum. Could any proof of the truth of the reasoning put forward in this journal be more telling, or better evidence of the fact so much harped upon by us, that all our resources were fully engaged to the last available shilling before we entered upon a self-destructive policy of conquest?

Consider what the decline that has already taken place in the prices of securities means to the handler of banking credit in every walk of life. The depreciation on the amount of Consols in existence before the war broke out now exceeds £106,000,000, and the same contraction of market values has overtaken every form of investment popular with the nation. The average decline in the prices of Home Railway ordinary stocks is quite 20 per cent. On the amount of London and North-Western stock in existence in April, 1899, the decline measured by existing

quotations is about £40,000,000, and every other home railway stock has shrivelled up in a similar way, sometimes to a greater extent. Railway preference and debenture stocks, also, have shrunk to the extent of from 10 to 12 per cent. in market prices. The same blight has overtaken our Domestic, Local securities, and all Colonial loans, with the exception, perhaps, of Canadian. The Dominion of Canada has in great measure escaped the decline, because it has not been a borrower, being able to obtain the capital required to maintain its appearance of prosperity indirectly through its semi-independent railroad corporations. But if we go through the list of securities dealt in upon the London Stock Exchange, and take merely the amounts in existence in the early part of 1899, and contrast the prices of that day with quotations now, it will, we believe, be found that the sum of the depreciation in market prices of the entire mass does not fall much short of £750,000,000. Quite early in the war we entered into an elaborate calculation, embracing various groups of securities, and arrived at the conclusion that in what may be called the potentiality of credit the nation was £500,000,000 poorer on its existing investments than it was six months before the war opened. That depreciation has continued, and is worse to-day than it was a year back. Moreover, to the depreciation on the old stocks have to be added those on the new. In all, £90,000,000 of new Consols have been issued for the war, and the depreciation on the issue price means a shrinkage of about £4,000,000. But the scrip went to a premium, so that the true loss cannot be measured. Multiply this experience into all the new issues, and add the result to the losses on old stocks, and do you really think £1,000,000,000 would cover it?

People are amazed that there has been no recovery in markets since the war, but they would not be so if they realised the fact that we suffer not merely from the paralysis of credit produced by a shrinkage in prices, but through the exhaustion of our recuperative powers in other directions. Among these other directions are the new mortgaging of wealth through the enormous borrowings of the Government. It has during the last four years added about £160,000,000 to the National Debt, in addition to nearly £17,000,000 on Local Loans stock, and £35,000,000 for the annexed republics in South Africa, as well as between £20,000,000 and £30,000,000 borrowed for "public works" of various descriptions, most of which as valueless as any Tower of Babel. Here are upwards of £230,000,000 locked up, and nearly all clean gone. The nation did not possess the free means to take up these new debts, and at the same time find the means for its own business. The more prices of securities shrunk upon the Stock Exchange the less capable did monied people become of subscribing for new securities, and therefore a dead weight of unvendable capital of all qualities was added to the other causes of paralysis.

In April, 1899, London and North-Western stock was quoted above 202, to-day it is quoted at 160. Consols were then between 110 and 111, to-day they are barely 90. Most of the Australian Colonies were then able to issue new loans at a price which meant borrowing under 3 per cent., to-day they would all have to pay from 3½ to 4 per cent. if they could get money on any terms. Every man of business should be able to understand what this sort of diminution in credit potentialities means to the community at large. In a sense it may be said that each fresh mass of debt thrown upon the market has added to the paralytic helplessness of the credit-generating classes and investors. The new stocks unsold, alike with the old stocks depreciated testify to market wealth disappeared. And even those investors who never utilise their stocks for the purpose of creating credit with which to enter into new engagements now find themselves poorer. They are no longer able to "turn round," as the phrase is, with the freedom they had before the war. They feel that they have lost part of their capital.

Added to all these influences tending to cripple the nation and produce a sense of loss, poverty, or soreness, a desire to find some way out, some remedy, to light upon a magician who will restore the past and make the evolutions of credit as easy as they were four years ago, there is the horrible pressure of Government peace expenditure. That has come upon a crippled nation, which finds itself stripped of its resources, totally without remedy. Five years ago the demands of the Imperial Government were considered large when they ran up to about £107,000,000, but in the current year the Exchequer wants about £145,000,000, and the outlook is for still larger demands. The War Office must have its wars, and is determined to undertake another Somaliland expedition. There is the cost of a garrison in South Africa, certain to be much larger than estimated. There are fantastic schemes relating to army corps and troops on a war footing in time of peace, so that instead of looking forward to a reduction in taxation the nation must expect to be called upon to find more and more money every year. The new Irish obligations must be provided for, as well as the ever widening cost of public works. It is this imperative necessity of profligate extravagance which lies at the root of the Birmingham agitation for a return to protection. We used to think ourselves heavily burdened enough when the Government took from £16,000,000 to £18,000,000 per annum out of our pockets as income tax, but the estimate for the current year, with fourpence knocked off the war impost, is for a revenue of £30,500,000 under that head alone, and we have revived the sugar duty, increased the duty on tea, on tobacco, on beer and spirits, and will soon have to extend it to many other commodities if the ravages upon our wealth are to be disguised. How, in these circumstances, is it possible to put in figures the exact extent to which the wealth of the nation has been impinged upon, swept away or absolutely destroyed, during the domination of the parties now in power by virtue of a compact essentially immoral and subversive of every principle of honesty and plain dealing?

An economical, prudent, wise and genuinely patriotic administration ought to have been able to conduct the business of the country, to protect all its interests abroad, and to maintain and increase the wealth of the people in a manner which would have guaranteed the United Kingdom a dominant position in the councils of empires on a national expenditure at least £50,000,000 less per annum than is now demanded from us. That sum represents the interest upon nearly £1,670,000,000 of capital at 3 per cent. per annum. Is it possible to measure the loss implied by such intolerable additions to our burdens? Is it possible to conceive what our position will be ten years hence if this insane profligacy continues? We think not, and therefore, above all other subjects now occupying the public mind, we maintain that this one of national retrenchment and thrift is supreme. Not only will there be no check to the paralysis of stock market and the decline in prices there for all descriptions of public securities, so long as the present system of wasteful expenditure continues, but it cannot endure much longer without bringing upon the country the most destructive economic overturn in all its history. "Money is cheap in the market," you hear the credit jobbers say most days. It is cheap, often dirt cheap, what is called money, the credit furnished by bankers. Therefore, it may be argued, the loss cannot be anything like what you state, be it £1,000,000,000 or £1,250,000,000, else we should have had money dear. That is false reasoning, and we regard this cheapness of credit as one of the most ominous signs of coming trouble it would be possible to find. For what does it really mean? It means that the losses, some examples of which we have given above, have not been faced and written off. They are concealed and hidden chiefly through the instrumentality of the banks. These banks must have enormous commitments upon which losses have accrued if they dared to face them. It is simply impossible that all the first-class securities in the market upon which banks in the aggregate have advanced hundreds of millions, could have shrunk in price as they have done without here and there landing the lender in unbearable losses. But as long as the losses can be concealed, the credit originally advanced continues to float in the market as bankers' money. Let the reader suppose a speculative investor, who in the beginning of 1899 had pledged, say, £250,000, of various excellent securities, including Consols, London and North-Western ordinary stock, and a few ten thousands of Colonial securities. Such an one would have been able to borrow on these securities from 10 to 20 per cent. more money than he could do to-day. Assume, further, that the decline has long ago used up the margins provided to the bank, margins

representing the difference between the then market price and the amount advanced, and that the unfortunate borrower is now penniless with the banks in possession of his securities. The borrower's impecuniosity, his ruin may make no appreciable difference to the market supply of credit money so long as the lending bank does not realise the securities and accept the loss between its original credits and the price actually received. The moment, however, it does that, the credit capital of the market is by so much reduced. But banks have not as a rule done this, they are sitting upon losses of this and many other descriptions—sitting as the Pease Bank sat—and consequently the market is full, not merely of false credit brought into existence by the pawning of new securities pledged by borrowers of all descriptions, from the Government downwards, but of credits of all sorts, behind which there is a vacuum represented by the difference between quotations at the date of the original advance and quotations to-day. While the banks are able to continue to brave fate and meet the day's payments, we shall often have what is called money cheap enough, because it is wind money without substance. It will be cheap up to a certain point even when gold is leaving the country, as it soon will be, but credit money of this description is really an agent in the destruction of wealth instead of a recuperative force. For such reasons we hold that things are not as they seem, and cannot accept current views about the return of prosperity, the soundness of our credit institutions or any base coin of current market speech of like description.

Some Effects of Protectionism in Germany.

Before dealing further with Mr. Francis Oppenheimer's report, it may be well to give his definition of "cartel," "syndicate," and "trust," as understood in Germany. A cartel, he informs us, is a combination which, while tolerating individual production, limits the freedom of production and to a certain degree balances strong and weak producers, as the weak are taken in tow by the strong. A syndicate, on the other hand, separates production and sale, while doing away with all direct intercourse between producer and buyer. It regulates through one central office the sale for a whole branch of manufacture. Producer and buyer are no longer in touch with each other. Finally a trust does away with individual production and manages a whole branch of production as a single enterprise. Weak concerns are wiped out and production becomes limited to only a few establishments which are equipped as perfectly as possible so as to provide the whole supply.

All these forms of combination are illustrated in the present state of German business, and their potency and effective power to rob producer and consumer alike have become great since the German Empire took to protectionism. In old times there were guilds that united manufacturers of the same class of goods, working locally to satisfy local demand, but nowadays the syndicate, thanks to the rapidity of intercommunication, aims at controlling the entire trade. Manufacture has ceased to be local, and under the shelter of a protective tariff an extraordinary state of things has been developed within the empire. Briefly, the modern cartel, syndicate, or trust puts prices up to the domestic consumer and exports what it cannot sell at home at any price obtainable. Undoubtedly the operation of the various German combinations in the iron trade have, since depression of domestic business set in, had the effect of lowering the world prices for certain classes of raw or half manufactured iron goods. The surplus which high prices deprived of a market at home has been thrown on the world's markets at a loss, in order to disguise the over-production which itself resulted from an artificial limitation of the domestic consuming power. The first class of people to be robbed by this system is the working class. It is deprived of any fair return for its labour by the power of the capitalist combinations to keep wages down, and just as directly robbed by the disposal of part of the produce of that labour in foreign markets at a loss. Thus the German syndicate of wire tack manufacturers is reported by Mr. Oppenheimer to have made in six months a profit of 1,200,000 marks on the home market by selling dear. But against this had to be placed a loss of 859,000 marks on sales abroad, so that the net result of the six months' business was a profit of only 341,000 marks. If figures could be obtained for other branches of business we should doubtless see similar results, in many cases probably worse results, all indicative of loss to the bulk of the people, of short-sighted greed that ends by impoverishing itself. The system is thus ruinous to the country afflicted by it, and the higher branches of industry suffer most conspicuously because they are unable to obtain equivalent prices for their products to recoup them for the high charges exacted for the raw, or semi-raw, material by the combination. "The German export of half finished goods is rapidly driven up, while the export of finished goods recedes," says Mr. Oppenheimer, and adds that this state of affairs is altogether contrary to the best economic interests of the country "since it is most beneficial to the country at large that the exported goods should contain and represent as much national labour as possible." Nothing could be more just.

A statement of this kind vividly illustrates the danger we are now running by reason of the violent and unscrupulous attempt being made to force our industries back under a protective tariff, beneath whose shelter cartels, syndicates, and trusts would spring up in all directions, to the punishment of the domestic consumer, to the impoverishment of the workmen, and to the ruin of our foreign trade. A factory in Düsseldorf for many years did a profitable trade with Holland in tinned goods, buckets, etc., but in consequence of the cheap export price of tin, a price brought about by the combination policy of maintaining prices at home to the destruction of the home demand, and dumping the unsaleable goods abroad, Dutchmen started the manufacture of tinned goods themselves, and mention is made of a manufacturer who was left with a stock of about 100,000 pails, for which he could get no consumers. Another firm decided to transfer a considerable part of its establishment to Holland because it can there obtain the necessary German raw material so much more cheaply than in Germany. Expedients are, of course, fallen upon to endeavour to counteract the ruinous consequences of this short-sighted mode of doing business, and amongst these are remissions of duty on re-exported articles. The Customs auhorities are empowered to admit free of duty importations of materials which, after having been manufactured into finished goods, are again exported under the control of the Customs authorities. How would our artisan population like to have their trade sent through official "tubes," so to say, in this fashion? The German Government is now, it seems, holding an enquiry into the conditions surrounding the various industries of the empire, and it was perhaps from this action that Mr. Chamberlain borrowed his idea of an "enquiry" in this country, translating it, as his wont is, into "a raging tearing propaganda." We hope the German endeavour is a more honest one than ours and that results tending to the diminution of the tariff-engendered misery will be suggested and carried out. Hampered trade tends to become dishonest trade, and the dishonesty degenerates into anti-human rapacity when its sole object becomes one of securing illegitimate profits at no matter what sacrifice on the part of the producer or consumer or both. There is an apparent strength, no doubt, in a combination to secure gain and solidify it which fascinates many minds, and we can quite understand that leaders in over-capitalised industries in this country, like Sir Thomas Wrightson—who, by the way, was right in his statement with regard to our importations of steel billets as against Mr. Robson—should seek to become members of the protectionist party, and active fomenters of a return to high tariffs. In this way alone may salvation from the consequences of their own miscalculating rapacity seem possible for them. They hope to buttress and conceal the greed of their capitalisations by forcing up prices, but their last state is certain to be worse than their present, and they would find that our splendid foreign trade would soon begin to slip away from us altogether, were it conducted under German conditions,

with workmen discontented and underpaid, with home markets restricted and foreign markets only retained at a ruinous loss. Our foreign trade is now a source of great profit to the nation, to the people who produce, a fountain of better wages for the workmen than any other European country can give. Hamper that trade by restrictions such as a Customs tariff imposes and the whole fabric of society would soon be convulsed from top to bottom. But protection, never forget, is coming, unless we abate the expenditure of our professional "killing combines."

Victorian Finance.

In addressing his constituents the other day Mr. Irvine, the Premier of the Colony of Victoria, boasted that the threatened deficit of £1,000,000 had been turned into a surplus of £150,000. This would indeed be a marvellous financial stroke did it represent the truth. Unfortunately at best it is only a sample of the figure juggling with which a long study of colonial finance has made us familiar. As illustrating the manner in which the feat has been performed in the present instance, readers are invited to peruse the following observations made by our Melbourne correspondent:—

"The age of miracles is not past. As if by a stroke of the magician's wand, the Victorian Treasurer produces, or says he has, a surplus of £153,199 out of an anticipated deficit on the year's transactions of about one million sterling. The announcement is of course very pleasant reading, but unfortunately when one dives ever so little below the surface he discovers that there is no room whatever for all the congratulations that have been exchanged on the subject. Under ordinary circumstances, this advance budget would not have been announced for two months yet, as Parliament is not in session, and it is not intended to call it together until the end of August. The Government had a two-barrelled object in anticipating the ordinary course of events. They desired in the first place to gain credit for themselves, and in the next to create a favourable impression in London in view of the conversion operations which will have to be resorted to in order to provide for the five millions and a half of loans which fall due on January 1 next. They have succeeded in the latter object to the fullest extent of their wishes, if one is to draw conclusions from the chorus of congratulations which have been cabled out here as appearing in several of the London newspapers. It is really astonishing the slender facts upon which these newspapers have sung their praises, and they will find before very long that they have been a bit too previous in their congratulations.

"As a matter of fact, when the real financial position comes to be analysed, there is no surplus at all—just the other way about. In the first place, the sums borrowed from the railway trust funds during the past year have been treated as revenue, just as the habit has even been in the colonies to treat as revenue loans borrowed in London. Another ugly fact which must be considered is that the Victorian railways during the past year are on the wrong side of the ledger to the tune of £553,000, and other departments also show serious decreases of revenue. Besides, the New Zealand plan has been adopted in Victoria of starving the railways that are open for traffic. Some time ago I directed attention to the fact that it had been estimated by the Acting-Commissioner that an expenditure of about a million sterling would be required to place the Victorian lines in a thorough state of efficiency and safety both as regards permanent way, engines and rolling stock. No money has yet been expended in that direction, and what is the result? That so far as the country railway services are concerned, the trains are seldom run up to time. Even in regard to the two main express lines —from Servicetown on the South Australian border, and from Albury on the New South Wales border, it rarely happens that the express trains to and from Melbourne are up to time. Very frequently they are hours late, and this is because of the state of the permanent way and the rolling stock. And in this department of the State the railways for the past year show a deficiency of over half a million.

"The Treasurer has not expended the votes of Parliament throughout all the departments of the public service. These unexpended balances have been carried forward to credit, and the Treasurer claims that by this means he has reduced the year's expenditure by £606,000, and claims credit for nearly £100,000, as exhibiting 'the real economies effected.' But at what cost have these economies been made? At the cost, in the first place, of starving the railways, and bringing about a state of utter stagnation and loss of population. Works that are urgently needed have not been put in hand, want of employment and enormous distress have followed, and a serious loss of population has been going on throughout the whole year, and is as continuous at this moment as it has ever been. And all this has been done so that the Government may get the credit of cutting down expenditure in various directions. But this has been done at the expense of producing a state of stagnation which has become as acute as it was after the 'boom' collapse.

"To swell his receipts, the Treasurer takes credit for the sum of £15,651 which he estimates for the months of July and August as the amount which he will receive from income tax. This amount, of course, belongs to the financial year 1903-4. Old age pensions have been cut down to the extent of £76,000, and he calculates that the reductions for the current year ought to amount to £100,000. It is easy to surmise the amount of suffering which these reductions of old age pensions involve, more particularly at a time when the want of employment is so widespread, and the wail of distress resounds everywhere.

"It was a bit of unexpected good luck that the Commonwealth Treasurer has been enabled to return to Victoria £234,000 more revenue than was anticipated. This came about through the Commonwealth Treasurer curtailing Federal expenditure, and also through the heavy imports of wheat and other fodder stuffs occasioned by the drought. But even this windfall leaves no justification for Victoria declaring a surplus instead of a deficit. No financier, after a critical examination of the finances, could possibly arrive at the conclusion that Victoria has any real surplus to show on the transactions of the past year."

Another Australian citizen has recently been devoting a good deal of attention to the finances of his State of Victoria, and has sent us two pamphlets embodying the results of his investigations. They are of a most suggestive description, and although we do not at all points agree with the political conclusions of the writer, Mr. Edward E. Burgess, and think also that he does not always quite bring his financial criticisms to a focus, there can be no question at all of the success with which he has, in the familiar saying, knocked the financial no-method of the colony into a cocked hat. He demonstrates that there is no such thing as a regular system of account keeping, nothing resembling a regular debit and credit account, still less any profit and loss account, and gives sundry striking illustrations of the manner in which the truth is obscured to the profit of those who waste. In the matter of debt, for example, he proves that it has been understated to the extent of almost £3,000,000—that is to say on the figures for the year ended June 30, 1902, those for a later date not being available when he wrote. At that date the total charges upon the colony as a State in the form of debt bearing interest amounted to £54,283,763, whereas the net debt is returned in the accounts at £51,314,928. The State has appropriated in one guise or another the whole of the trust moneys, savings bank and other, in its hands, with the exception of a tiny sum in the form of current cash. Also the capital accruing from land sales, has, according to the established colonial habit, been treated as revenue just as the proceeds of successive loans have been, and what the State, out of its general revenues, is alleged to pay to the railways for services rendered, is treated as a portion of the railway income. This helps to disguise the actual condition of the railway account, and to reduce the deficiency shown thereby.

These railways in all the colonies, form the hub, as it were, of the revolving financial kaleidoscope, and by starving them they are made to appear as a valuable asset. In actual fact, as Mr. Burgess says, the railway system of Victoria is so over-capitalised that the deficiency would be

materially decreased were many of the political log-rolling lines closed, even if the current interest on their construction remained a permanent debit against the department. In dealing with all these questions of Victorian finance, it must never be forgotten that the burden is laid upon a total adult population, male and female, of less than 800,000. The adult male population of Victoria is not more than 400,000—is, indeed, probably less at the present time, because of the steady emigration going on—and it is upon this population that a debt of nearly £55,000,000 has been laid. This, however, is by no means the whole of the liabilities borne by the people, because Melbourne and its surrounding municipalities are all more or less heavily burdened, and it is therefore only a question of time, and now a very little time, when the true position will force itself on both borrowers and lenders in a manner the reverse of agreeable. One complaint made by Mr. Burgess is that the cost of the Parliament and Civil Service has become pretty well unbearable. The Civil Service alone absorbed in the year under review £1,648,236, and if the railway working expenditure is included, the total amount paid away in salaries would not be much short of £2,000,000. Imagine an industrial centre like Manchester and its surrounding towns, or Glasgow, having to carry a dead weight such as these figures imply. They would very soon revolt against the pressure, and human nature is the same in Australia as here.

Notes from New York.

New York, August 18.

Matters on the Stock Exchange have now come to that pass, that there is as much puzzlement over the movements upward of the past few days as there was over the previous downward current. When the slump was on everyone was asking where the stocks came from; now the question is, where are they going to? Without special and particular knowledge of what is going on behind the scenes, it is impossible to speak dogmatically, but there is very little reason to doubt that we are passing through a period of laboured manipulation, in which no effort is being spared to sustain the market until the currency bill to be laid before Congress at its coming session has been put through. That those who are carrying the load are not quite sure of their ability to keep it up, was indicated a few days ago by statements that appeared in the papers to the effect that Congress might be called together a month earlier than originally intended in order to pass necessary currency legislation and end the present uncertainty. Whether this was a hint from those who are carrying the burden, or was given out to reassure an anxious crowd of speculating brokers, bankers, and millionaires, cannot be affirmed, but it was not entirely denied from official circles, leaving it to be inferred that the date at which Congress would meet would be determined by circumstances.

In the meanwhile a guerrilla war is being kept up by groups of different stocks, one day on one line of stocks and the next on some other, with the result that there is general demoralisation all round. Looking over reports on the financial situation from here to London papers I do not find anything indicating the true situation, and indeed it would be hard to explain it where everything is abnormal. Only one thing is certain. It is that the market is under the control of enormously powerful groups which are manipulating it to suit their own ends, and not caring a jot for public or private rights and interests; and the public is bewildered and trusting to legislators whose business it is to keep things obscure while they are betraying public interests into the hands of these groups. If the public would only awake next autumn would see some rude and rough work in the market. It may even come without it if the currency bill fails.

The Standard Oil is having a little fall all to itself. It has just declared a quarterly dividend of 5 per cent., which makes for the three quarters a total dividend of 32 per cent., compared with 45 last year, and 48 per cent. in 1901 and 1900. From 1891 to 1895 the dividends were at the rate of 12 per cent. only. The stock fell from 610 to 601 when the news was given out, but it was not of any importance; none of the stock hardly is held outside the group composing the company. It is too good to part with except under necessity. It is true that the company is paying more for crude oil than it used to, but then the public is paying far away and above in proportion for the refined oil, and 32 per cent. on a hundred millions of capital for nine months is a very comfortable return.

The Lake Superior Consolidated Company, whose troubles attracted a good deal of attention some months ago, has been passing through a hard experience. Its common stock was recently quoted at 1, and speculation in its various issues brought an old established Pennsylvania bank to grief. As far as has been made public, it appears likely that the company will be reorganised under the management of a large well-known foreign financial establishment here, with resulting heavy losses to the confiding purchasers of its heavily watered stocks. Under other conditions this enterprise might have been a solid and profitable one, but promoted as it was, it was wild-cat throughout. Its operations were partly in this country and partly in Canada in Western Ontario.

A noteworthy matter is the new turn of the American Press toward Canada. A few months ago Canada was as much ignored in American papers as Timbuctoo; now they are full of descriptions of its resources, and throwing out invitations to Canadians to cast in their lot with this country. Canada buys from us more than twice as much as we do from her, and you on your side pay for most of the difference; but there is a conviction that they are overdoing things a bit up there. Considerable amounts of Canadian money are seeking investment here, the Canadians evidently thinking it safer on this side of the border, while expansion beyond limit and inflation are the order of the day at Ottawa. What is really wanted is a fair reciprocity treaty between the two countries to begin with, but the present Congress is wedded to the short-sighted policy that has prevailed towards Canada since 1867, and I do not think there is any immediate prospect of one. Free trade of course would be better, but that would involve the adoption by Canada of our tariff and fiscal system which is not at present a practical question. We shall probably have to wait for fuller developments in Mr. Chamberlain's imperial zollverein scheme before anything can be done. At Boston and elsewhere, however, an agitation is on foot, and the New England fishing interest which at one time strenuously opposed the opening of the American market to Canadian fish, has now declared that it withdraws all opposition and favours reciprocity.

Economic and Financial Notes and Correspondence.

The Late Lord Salisbury.

It is hard to speak ill of the dead, and we should have preferred to add nothing to the judgment passed upon the late Marquis of Salisbury in these columns when he retired from public life in July of last year. There has, however, been such an outburst of indiscriminate eulogy in newspapers of all shades of politics and pieties since he passed away on Saturday evening last, that it seems a duty to recall some things and enter a mild protest. Judged by chief events in his public career and by the consequences to this country of his long tenure of the first official position in the State, the late Marquis can surely in no sense be considered a great minister. As we said in July, 1902, and many times before, the dominant note of his ministerial career was feebleness of will. Intellect he had of a fairly high order. In all the private virtues of life he was, we believe, a man of great excellence, but as a ruler of men, as a guide of the destinies of his country, he was in no sense great, in many senses a failure. Behold, what is happening in South-Eastern Europe at this hour, where the agonies of a life and death conflict between

oppressor and oppressed are filling one of the most fertile and beautiful countries on the face of the earth with blood. And did not Lord Salisbury as henchman of the late Earl of Beaconsfield, that showey and heartless political adventurer, come home from Berlin shouting "peace with honour," after having destroyed the hope of deliverance from bondage bestowed upon these regions by the Treaty of San Stefano? In the still more momentous crisis of our own history when, as the report of the Royal Commission on the War just published partially reveals, some of the colleages in his Cabinet of twenty were hurrying us into that most shameful and ruinous African war, did Lord Salisbury move a finger to prevent them, to hold back his headstrong and unprincipled Colonial Secretary? There is no tittle of evidence that he did. He knew, as probably none of his colleagues or followers knew, what this conflict meant, but he looked upon events and upon the passions of the nation with a cold cynicism that enabled him to take refuge in indifference. If the country was bent upon going to the devil why should he care to prevent it? Lord Melbourne is always credited with having been the model of a political leader who keeps his place by letting things slide, but his record in that art has been beaten hollow by the late Marquis of Salisbury.

Lord Salisbury was never a popular minister in any usual meaning of that term, and in some ways it is, perhaps, to his honour that he made no effort whatever to court popularity. But the root of his indifference seems to have been contempt for the nation as a whole, for the common people, contempt mingled with that cynical power of analysis which led him to keep his affections for class and family interests and these alone. His carelessness as to what men thought or said of him was the carelessness of class pride not principle. Hence under his ministry we have not merely suffered, or begun to suffer, from the ruinous consequences of an infamous war, but have seen class set against class within the nation, and the pushing charlatan exalted as the embodiment of political wisdom and national aspirations, the tool of the plutocrat placed in command. Had Lord Salisbury been as great a man of determination and conviction as he was of intellect, our national affairs could never have drifted into the confusion now visible. "A man of peace" he was, apologists keep declaring. He loved peace and strove for it, they allege. Surely that is ironical praise in view of the results of his striving and love. Wars abroad and conflicts at home—the revived zeals and jealousies of Nonconformity, the exalting of landowner privileges, doles here, bribes there, an Irish land-owning class endowed with even greater lavishness than that with which Mr. Gladstone endowed the Irish Church. These are some of the fruits of Lord Salisbury's tenure of the Premiership. Disintegration everywhere, and the trade of the country threatened with deadly peril, extravagance, nepotism, corruption, all the good old Tory vices in full enjoyment of the juices of the body politic. The late Premier passed away in peace in the bosom of his family, having already slipped in silence out of the public eye, and, let it be said, almost out of the public memory, but he has left behind him an inheritance of conflict, a harvest of disaster, a warring and confusion of selfish cross interests, such as no minister of the Crown since the younger Pitt ever let loose upon his country. Why cannot we be sincere even in dealing with the dead? It may be too early yet to measure the character and influence of the late Prime Minister in all respects, but it is not too early to speak the truth about what we know, about what is visible, obvious to every thinking mind, and to lament that the least admirable characteristics of the first great Cecil should have been so fully reproduced, and in some ways so accentuated, in the last as to make him the herald of imperial dismemberment, the weak instrument of men of stronger wills, if feebler intellects, than himself, the upholder of class exclusiveness and feudal privileges, at the same time that he was more completely the sport of the new wealth than any minister the late Queen ever had; the lover of quiet and of a world all easy, and yet a man of wars and bloodshed far beyond the average of British Empire builders. It was the irony of his fate, the fate of the man who understands and doth not, because his character is loosely knit and his mental force pliable.

A Colourless Royal Commission.

When Mr. Balfour promised the country a Royal Commission to enquire into the war, it was hoped the political as well as the military aspect would be gone into. But mingled with this hope there was a suspicion that the Commissioners, in spite of the wide terms of their reference, would somehow manage to avoid giving the public the information it desired, a suspicion only too well justified by the report now issued. Occasionally the line between purely military matter and the political is passed, but only by chance, and in a sort of frightened way. For no sooner do the Commissioners discover what they are doing then they stop and hurry back to the harmless discussion of military tactics, physique of the army and other kindred matters. The occasional digressions are, however, useful, as they indicate the possibilities of what the enquiry might have been had the Commissioners possessed the courage to tackle it boldly like men. For example, it is pointed out that the generals received no written instructions, but no explanation is given of what is meant by this reference. If they were detailed plans of the campaign drawn up by the War Office, then our commanders were better without them, but if the Commissioners intend the phrase to mean some general idea of the objects of the war, then the neglect of the War Office to supply such instructions must be held largely responsible for the early disasters of the war. That may account for the Commissioners' omission to explain what they meant by written instructions. But the light thrown on the preparations we made for the war is perhaps the most interesting part of the report. It appears that immediately after the Jameson Raid we began to study the lie of the land and make plans for the invasion of the Republics, continuing to do so all the time Mr. Chamberlain was hypocritically declaring that war was the last thing he desired. Yet this is not new but only a confirmation of what was all along suspected. On the whole the value of the report is practically nil, except to military experts, though when the questions put to the various generals are published, with their answers to them, we may learn something more, if only about the discord existing between the War Office and the Horse Guards.

The Native Death Rate on the Witwatersrand.

Again and again we have wanted to know how the blacks recruited for the Transvaal mines fare against disease and hard usage. An official paper has just been published giving some facts tending to satisfy this curiosity. In a brief covering despatch dated May 23, 1903, Lord Milner informs Mr. Chamberlain that the average number of natives in hospital daily is computed to be 21.09 per thousand, but he excuses this figure by saying that it includes many trivial cases of indisposition and a fair number of malingerers. That is quite in the Milnerian style. Apologies of this kind, however, do not minimise the effect of such a startling fact as a death rate amongst the blacks of 42.03 per thousand per annum. Were that rate to continue, one would have no difficulty in understanding the eagerness of the mine bosses to import Chinese or other Asiatic labour. It is improbable that the birth rate amongst the blacks in South Africa averages 25 per thousand. It is probably under 20 per thousand, at least under that in the ultimate product of adults, if one may use that phrase. Should this be the case it follows that a death rate of over 40 per thousand means steady depopulation, and it would be easy on this basis to calculate the date when all the blacks in South Africa would have disappeared underground. "Oh! but this is not the normal death rate," the district officer of health, Mr. Sansom, declares. Unfortunately he admits that under the most perfect conditions the rate will always appear disadvantageous compared with the figures for European countries. We can quite believe that and still think this an appalling figure. Mr. Sansom, however, attributes it to the effects of the war. Recent military operations, he says, diverted the stream of food supplies so that for many months natives have been fed on more or less non-nutritious mealies, hence they arrive at the mines in a feeble condition. Then blacks brought from a distance bring diseases with them, especially scurvy, so that it is a common sight

in the compounds to see natives who have come there unfit, fed up on nutritious diet for some weeks before being set to work. Food, moreover, is reported to be somewhat scarce in the northern districts, so that the number of diseased natives arriving from that quarter may very likely be increased. These are vague and not quite satisfactory statements. What is definite enough, however, is the enormous number of deaths from pulmonary disease. This is ascribed partly to the carelessness and ignorance of the native workmen, who does not realise that whilst he is living and working in a colder climate and at a higher altitude than he is accustomed to he should take some ordinary common-sense precautions against getting chills when heated by exertions. Also it is due to working in "a dust-laden atmosphere," and to the conditions of life in the compounds. In other words, the blacks are treated like beasts of burden, only not nearly so well as the average man treats his horse. And is it not the case that not only the close atmosphere but the temperature, in the deeper levels at least, is such as to provoke lung diseases? Will the Government of the Transvaal be good enough to get from the mine owners accurate statements relating to temperature and the circulation of air at all levels of the mines now in operation, so that some idea of the life led by these unfortunate wretches may be obtained? This health—or disease—return is shamefully incomplete but, meagre as it is, of most ominous significance to all interested in South African mining. Do you think, friend, that you have no responsibility for the way your dividends are earned?

An Old Adage in Modern Garb.

In December, 1901, the National Asphalt Company came to grief, and some ugly facts came to light concerning its capitalisation and its so-called assets. When the crash came the capital was practically $58,000,000, the greater portion of which had been supplied by the confiding public, but to this should be added $30,000,000 of stock in the Asphalt Company of America, purchased with $6,000,000 of the National's bonds, making the entire gas-distended capital not $58,000,000 but $88,000,000. In the report made by the Audit Company of New York, the actual assets of the bubble were estimated at $10,350,102, this including cash, real estate and plant. There were, however, other entries in the books amounting to about $51,000,000, but they could hardly be described as tangible, including as they did such items as concessions, leasehold, goodwill, retainers and deferred payments and stocks, and bonds in other companies, items which might have a value, but probably had none. The liabilities, the same report stated, amounted to $66,000,000, leaving a book deficit of a few dollars less than $5,000,000. For these glorious assets the public had been asked to pour out its millions, and did, it being assured by sundry gentlemen, among them the present Chief Commissioner of the New York Police, that all was "proper in law, equity and morals," and that interest and dividends could be paid on ten times the capital. Instead of payments default was made, and the company was promptly wound up and re-organised—this has quite a homelike sound. The new company was to issue $31,000,000 in stock, and a voting trust was formed, in whose hands were to be placed the securities of the defunct concern. This idea of a voting trust never seems to have caught on in this country, though it appears to be an excellent dodge for swamping unruly shareholders. For ten years the committee was to hold the securities of the National Company, placed in their hands with power to deal with them as they pleased, since the deposit was to be regarded as an absolute and irrevocable assignment for that period. By the end of that time, provided the business held out, the promoters of the original concern would have received a sufficient coat of whitewash to enable them to pose once more as respectable citizens. Some of the men on the committee of the voting trust represented great credit institutions, and for this reason the public have placed their faith in it, blindly handing over their rights, so that now it is almost impossible for any important part of the assets or investments to be recovered. On May 18 of this year the receiver ordered a sale under the auctioneer's hammer of the genuine assets of the National Company. They realised $6,006,000, though capitalised at nearly ten times that amount, and the future of the new company promises to be worse than the record of the old. To quote from the New York *Sun*, "one conclusion alone stands out in bold prominence in the whole matter, and that is that the investing public has lost millions of dollars by processes which, notwithstanding Gen. Francis V. Greene's statement, find no justification whatever 'in law, equity or morals.'" Corrupt we may be in England in our pursuit of mammon, but we have not yet arrived at the stage of openly setting a notorious company promoter to look after the morals of the city.

The Position of Our Money Market.

There was a letter in Thursday's *Times*, signed "Enquirer," of a stamp altogether different from the mass of effusions on fiscal questions inflicted upon the public by that, alas, now too often comic, newspaper. The writer drew attention to the weakness of the banking reserve of the Bank of England, and to the exposed position of our market, and went on to hint plainly enough that the country has been living beyond its means, thus causing an excess of imports beyond reason. We considerably agree with that view, and have often stated it, but it has nothing whatever to do with the question of free trade v. protection. We are, and have long been, about the most extravagant nation on the face of the earth, and under the leadership of our existing unprincipled and profligate Government there can be no question but that the nation has been spending beyond its means—living on its capital. Were it not so there would be much less foreign money continually floating in our market. Probably the amount of such money at the present time is about £50,000,000, and constitutes a danger of the gravest description, in view of the poorness of this year's harvests and of the menacing administrative necessities of our principal foreign creditor, France. All this is true, and it would be well if professional economists and other people now exercising their minds with the fiscal problem were to devote some attention to this aspect of our monetary position. "Inquirer," however, is a little astray when he demands that said professors ought to explain how the Bank of England should hold only one-third of the gold held by the Bank of France, less than half the gold in the Bank of Russia, much less than the Austro-Hungarian Bank, and so on. There is no great mystery in that. One explanation at least is obvious and on the surface. Our Bank of England note circulation is only about £30,000,000, against a stock of bullion amounting to from £35,000,000 to £37,000,000, or more, whereas the note circulation of the Bank of France ranges between £160,000,000 and upwards of £171,000,000, against a stock of bullion of between £102,000,000 and £105,000,000. In like manner, the Imperial Bank of Germany holds a smaller amount in bullion of both metals than the total of its note circulation. We do not say that our Bank is for this reason stronger, but it is none the less true that the enormous mass of Bank paper money circulating, in France especially, demands a larger stock of gold. The notes, indeed, are used to pay for the gold accumulated, so that as long as they circulate on a parity with the metal its accumulation does not necessarily imply thrift in an extraordinary degree. But the enormous excess of notes does imply danger.

Where our banking position is exceedingly weak is in its exposedness, not in the smallness of the gold stocks compared with the liability on notes in circulation. It is totally unprotected against foreign demands at the present time, and in a far worse position to apply its one remedy, an advance in the Bank rate, than it is in ordinary times, because of the necessities of our spendthrift Government. This point cannot be too much or too often insisted upon, and it is a pity that the clamour about protectionism should divert people's minds from its consideration. Nearly £18,500,000 of our note circulation is based upon debt due to the Government, some of it dating back to the days of William and Mary, the last £275,000 of it dating from this week. As long as that debt is not redeemed in gold it is impossible for the Bank of England to keep a large stock of metal against market necessities. But it could not do so just now in any case, because the Treasury is at every other turn rushing to the Bank to

order it to create fresh credit by means of which the debts of the nation may be paid. This credit is flung on the market regardless of consequences, and acts there at first as if it were sovereigns, but in the long run precisely as a forced paper currency acts. It presses down the current rate for short loans, and utterly paralyses the action of the Bank in endeavouring to maintain a barrier against gold exports. The ultimate action of credit stimulants of this description must be to stimulate exports of gold. The false or sham money drives away the real. It prompts extravagance in all directions, and helps to delude the unthinking multitude with the notion that we are so abundantly rich that it really does not matter what we do or how we spend. Hence excessive imports and, by and by, an alarming scarcity of hard cash. We shall certainly have a banking crisis of the most appalling description as finale to this abandoned system of finance, but until the crisis comes we may be certain the City will plough on its way, uneasy but indifferent, half aware of its danger, but hoping for the miracle that would turn paper into gold at need.

Australian Indebtedness.

The writer of the following letter is really not in disagreement with us; he merely fails to see the consequences within the colonies of a stoppage of the inflow of borrowed money from London. Where would the money come from to pay the wages of the unemployed but for that money? Everything in Australia is on an unreal foundation so long as the means to pay the workers is to such a large extent found in new loans. Let the borrowing be stopped, whether because we cannot lend or because the market or the borrowing state has acquired some touch of commonsense and common honesty, and the whole pressure of the charges upon the already existing debts would at once fall upon the wealth producers in these colonies. Nothing can be more sure than that the people would immediately throw off this burden, regarding it as intolerable. That, briefly, is why we continually harp upon the danger underlying the false and dishonest system of loan multiplication under which Australian indebtedness has risen to its present magnitude.

To the Editor of the Investors' Review.

Sir,—I have read your article appearing in the issue of May 30 on the above subject, and cannot agree with the conclusion you arrive at, namely, that if "London ceases to lend" "then the collapse will come." The great hope of the commercial community, and I may say of all who have a sincere interest in the welfare of their country, is that the British investor will refuse to lend more money to the States, but in particular to the State of New South Wales.

If that were accomplished then jobbery and corruption would become less rampant, and the army of unemployed would be obliged to work in a legitimate manner, obtaining payment accord ing to the ability and energy displayed. Past experience prove that the stoppage of loan money means an impetus to the produc tion, and consequently to the prosperity of the State.

The characteristic of an Australian is always to "lean against a post," and the only way to teach him to stand upright is to gradually take away the support.

Great Britain has for many years supplied the Governments of these States with money whenever it has been asked for, with the result that they have become spendthrifts.

Let London cease to lend, and it will be the greatest blessing vouchsafed to Australia for many a long year.

Yours truly,

A Twenty Years' Colonist.

Sydney, July 9, 1903.

The Shell Transport and Trading Company.

This is one of the interesting and peculiar joint-stock companies whose share list we intended to overhaul at an early date, but the *Financial News* has got ahead of us. Therefore, we are indebted to it for the appended extract from the list. It will be found most interesting, especially, perhaps, after the next list comes to be filed. The two principal shareholders are members of the firm of Marcus Samuel and Co. As is well known the company holds a dominant position in the Asiatic Petroleum trade, and that has not been altogether flourishing of late. Profits must, therefore, have been cut into, especially as the United States Standard Oil Monopoly is in the fight—and losing money we hope. To calm shareholders' minds, in the absence of the balance-sheet for the past calendar year, which should have made its appearnce in June last, a sort of official statement has been published to the effect that all is well. No facts are given to support this optimism, and the only excuse offered for the delay in issuing the accounts is "formalities and negotiations incident to the formation of the Asiatic Petroleum Company, one-third of whose capital is held by the Shell Transport Company." Said Asiatic Petroleum Company was registered here in June last with a capital of £2,000,000 in £10 shares, says the *Financial News*. Is it a new "combine" designed to end competition? Probably, but why delay the Shell Transport Company's balance-sheet on that score? Oh, the new company was really a year old before it took legal shape at Somerset House, and all the trading was done by it since July 1, 1902, so Shell Transport shareholders must wait its convenience before they know how they stand. Good, and we are glad that about half the issued capital appears to be still held by those who can afford to wait:—

A Vickers Transformation.

When in 1900 the £1 ordinary shares of the great war material business of Vickers, Sons and Maxim soared to nearly £7 each, and the growth of the company's profits seemed illimitable, few people imagined that within a comparatively short time the board would be called upon to attempt to re-assure their shareholders in consequence of a disastrous fall in the market price of the capital. Those, however, who have followed closely the history of the undertaking, and are aware of the unreal nature of a large part of its capital, will be little surprised that these ordinary shares recently touched 25s. each. In the analysis of the accounts which have appeared in this Review during the last two or three years, we have exposed the weaknesses of the financial position, and as recently as March of the current year pointed out how severely strained the business had become. A decline in the interim dividend and an explanatory circular were therefore fully to be expected. Needless to say, the directors commence with a "regret," and it is to the effect that the adverse conditions of trade alluded to in the last report still continue, and have diminished the operations of the company in nearly all branches of its manufactures during the past half-year. But the board desires to reassure the alarmed shareholders, so it tells them that, as was the case last year, the second half promises to be better than the first, and there is good reason to look forward to a further advance next year, although there does not at present seem to be much prospect of any decided improvement in the general steel and shipbuilding trades. Letters have been received from individual proprietors asking the reason for the great fall in the price of the shares, and such "wild and totally unfounded rumours" have been started "that the directors think it desirable to state that nothing in the company's affairs warrants the shrinkage in price which has taken place." Those interested will doubtless be relieved to hear this, but if, as is stated, the financial position is very strong it must have improved materially since the issue of the last balance-sheet. The company's manufactures, we are told, still retain their prominence, and in the opinion of the directors there is no reason why with a revival of trade the profits should not rise again to the level of the years previous to

1902. But how stands the latest purchase, the Beardmore business? Are its revenues still being used in extensions, or were the profits of this costly acquisition available for distribution in respect of the past half-year? And what about the effect of recent lavish additions to capital? These are questions which ought to be answered by something more than good words. We must never overlook the fact that interest has to be found on the £1,000,000 of debenture stock raised under such peculiar circumstances at the end of last year.

The Corporation of Foreign Bondholders.

We cannot devote much space to the report of the Corporation of Foreign Bondholders for the year 1902-3. It tells us little that is new, and only those directly concerned will feel inclined to waste valuable time in perusing the doleful story of failure which the Council once more unfolds. Needless almost to say, the bulky volume commences with an expression of regret that none of the defaulting foreign governments have come to an arrangement with their creditors during the past year. But the singular body over which Lord Avebury presides hastens to record that no fresh default has occurred, and that the credit of several of the countries which are making efforts to keep faith with the bondholders has materially improved. The Council seems to be in constant dread lest its efforts should go unappreciated by the unfortunate individuals whose affairs are confided to it, and in the report now under notice gives vent to quite pathetic language. It fears that most of those who read these reports, which are necessarily confined to a review of the most important features of each year's operations, have little idea what a large amount of work is done by the Corporation, no account of which appears, or which is only incidentally mentioned, and proceeds to impart a little information. The weary creditor who cannot get his interest, and whose capital is usually worth about 20 per cent. of its face value, sometimes less, is told that many schemes which necessitate most careful consideration are discussed, and are frequently embodied in draft agreements. Only too often, however, the proposals, through some unexpected development, prove abortive, and all the labour expended produces no practical results. Whether settlements are effected or not, the volume of work is practically the same, but details of the negotiations cease to be of interest, and it is useless to reproduce them, or at any rate to give them more than passing notice. It must also be remembered that the Corporation gives information on a great variety of questions to numerous correspondents and enquirers. Having digested this digression, bondholders will at once turn to the little table which always appears on the last page of the report, because it bears such eloquent testimony to the work accomplished in each successive year. The statement is always worth reproduction, and we append it:—

Summary of Principal Loans in Default in 1902-1903.

	Approximate Principal Outstanding. £	Approximate Interest Arrears. £
Argentine Municipal Loans	1,051,500	773,728
Argentine Provincial Cedulas	15,207,738	—
Colombia	2,700,000	216,000
Costa Rica	2,000,000	185,250
Former Confederate States	2,418,800	6,434,008
Guatemala	1,482,800	266,904
Honduras	5,398,570	14,289,783
Louisiana (Certificates)	184,432	—
Mississippi	1,400,000	4,625,000
Santo Domingo	3,885,350	—
Venezuela	4,571,167	859,992
West Virginia	3,047,874	—
Total	43,348,231	27,650,665

Congratulations are accorded Nicaragua, Paraguay, Uruguay, Salvador, and Liberia on the faithful observance of their obligations, but the Council seems a little ashamed of the Portuguese settlement, and again expresses the opinion that the more favourable terms asked for should have been granted. Bondholders will no doubt be truly grateful for these kind words, and share to the full the hope that the Portuguese Government will break loose from the traditions of the past in the management of its finances, and that the deficits which appear year after year in their accounts, owing to excess of expenditure over revenue, will disappear. Greece does not encourage the Council to breathe words of praise regarding its financial administration, and stepping from that country to Ecuador, which is next dealt with, we find that some of the old tricks have been played again. Funds for sinking fund No. 2 have not been forthcoming, nor has the substitution of security bonds in accordance with the terms of last agreement been effected. However, a new arrangement has been entered into, which under all the circumstances of the case the committee think the bondholders will be wise to accept. Naturally the amount of security to be substituted is considerably less than was originally provided for, but we must not forget that in the interval the amount of the special series bonds has been very considerably reduced, and as the Government undertakes to apply preferentially the sum of $90,000 per annum to the purchase on the market of these special bonds everything is now expected to be all serene. The Colombian Government has been urged not to forget the poor external bondholders when the money received in connection with the Panama Canal is being divided up, and Costa Rica promises yet one more proposal now that the two years' suspension of the debt service asked for has expired. Various unfortunate incidents stood in the way of a settlement of the Argentine Cedulas question, and Guatemala is proof against all entreaties to display a little honesty. Honduras shares its neighbour's reluctance, and the Ituana Railway quickly made use of a possible excuse for ceasing to pay the interest on its debentures. The New Zealand Midland Railway business is best passed over, lest one indulges in violent language, but it may be remarked that the £150,000 payable to debenture holders is to be forthcoming in cash, and not 3¼ per cent. bonds, which, without a doubt, would stand at a discount. As to Santo Domingo, the Council are able to report "with much satisfaction" that an agreement was signed in January last between the Governments of the United States and Santo Domingo, under which the matters in dispute between the Improvement Company and the Dominican Government were to be referred to international arbitration. These peaceful arrangements, however, are evidently becoming rather tame to the Council, and we rather fancy it would like to see all these defaulting foreign States battered into submission, as was Venezuela. It is a bit disappointed that the bondholders' claims on that country have been placed in the third rank, but a magnificent precedent has been laid down, and if only the Government would lend a few gunboats what wouldn't the Council do. Even the country's creditors will be pleased if we make only a brief reference to Turkish affairs. As is well known the Lord Chief Justice of England, on July 23 last, upheld the right of the debt council to pay an additional ¼ per cent. interest on the Turkish grouped bonds, a right which had been disputed by the Ottoman Government. Meanwhile, the unification negotiations have proceeded, and, as usual, the Corporation did not see its way to advise bondholders to reject the scheme as accepted by the Sultan and Continental holders, but contented itself with seeking one or two modest concessions. These are under consideration, and the result is anxiously awaited. We are glad to observe that a fitting tribute is paid to Mr. H. Babington Smith on his retirement from the Council of Administration of the Ottoman Public Debt for his splendid services on behalf of the English bondholders. If only the Corporation of Foreign Bondholders consisted of men of his abilities, resource and tact how different things might be.

Irish Railways.

Of the four countries comprised within the United Kingdom, Ireland has certainly occupied the foremost place in the public mind during recent months. The King's visit, the Land Bill, the great motor car race, and the change in the Lord Lieutenancy, have all done their share in bringing the distressed isle into prominence, and we may indulge the hope that these far reaching events may mark the dawn of an era of greater prosperity than the land has witnessed for many a day. Should they do so, the first institutions to feel the beneficial effects will probably be the country's railways, and it is a good augury for the

future that in the six months to June 30, which we are about to bring under review, the position of most of the undertakings was more than maintained. From the subjoined table it will be noticed that every company reports an increase in gross earnings, and that in six instances that advance is reflected in an improved net revenue. The Great Southern and Western leads the way, both passengers and goods expanding considerably, and we learn that the management is making considerable efforts to cultivate the traffic of butter and other perishable commodities which form some of the chief industries of the land. The rise in expenditure was chiefly due to heavy expenditure on locomotive repairs and renewals and a bigger coal bill. A portion of the Midland Great Western increased revenue was saved, notwithstanding that here also the locomotive department drew away a tidy additional sum, but the considerably improved earnings of the Great Northern all disappeared when working expenses had been provided. In almost every department expenditure increased, maintenance of way and locomotive power leading the way. The Dublin, Wicklow and Wexford shared the misfortune of the Great Northern, but the Belfast and County Down, Belfast and Northern Counties, Cork, Bandon and South Coast, and the Donegal all derived net benefit from the advance in gross income. The Dublin Wicklow seems to have suffered from an adjustment of accounts, for whereas last year maintenance of way cost £16,750, a sum reduced by £3,000 by a transfer from the coast defences reserve account, for the period under review the charge was £19,250, and no relief came from a special source. As is well known, the Belfast and Northern Counties Railway has been acquired by the Midland Company, and it may be supposed that the report recently issued to shareholders is the last they will receive. The company did nothing out of the way during the past six months, and, although there was an increase of £6,000 in minerals, this is chiefly owing to a change in classification made at the request of the Board of Trade. Certain points of the line became invaded by floods, necessitating increased expenditure, but a recurrence of the trouble need not be looked for. As to the dividend record, three favourable movements and nothing adverse have to be recorded, as the apparent change in the Donegal distribution is merely due to rearrangement of capital. Taken altogether, the figures may be regarded as satisfactory, and we hope to be able to speak of further improvement when the current half-year's results come under discussion.

* On Converted Ordinary.

A Few of Lipton's Faithfuls.

A couple of years have elapsed since we last had a peep at Lipton's share list, and feeling a little curious as to how some of the favoured allottees had behaved during the steady fall in the value of the company's shares took advantage of the prevailing business slackness to once more attack the three huge volumes containing the names of the ordinary shareholders. The great bulk of the shares is still in the hands of the small "general" shopkeeper and kindred tradesman who, when the original allotment was made, became the happy possessor of five or ten shares that might at one time have been sold at a substantial premium. Their confidence was worthy of a better reward than a fall of 3 per cent. in the dividend and of £2 in the market price. The humble holders, however, have been indiscreet in good company, even along with the upper ten, as, on comparing the latest list with the one given in our columns in September, 1901, we note that several "big" people who ought to know better are still tenaciously holding on. Most of the Faudel Phillips's, dear friends of Sir Thomas, decline to further break the market by throwing out their holdings, the Marquis of Breadalbane hangs on like a leech, as does his wife Alma, the Marchioness, together with Mr. John Barker, of the well known stores, the Right Hon. Sir Francis Jeune, Lord Pirbright, and Mr. Alexander Young, the famous accountant. Let us, however, offer a few people our congratulations on having either "got out" or reduced their holdings. Mr. John Balfour and Miss Ada L. Balfour have disposed of a tidy few shares, and among the banks which seem to have struggled clear, or nearly so, we may mention the Manchester and Liverpool District, British Linen, Parrs, the Bank of Scotland, the London, City and Midland, and the Clydesdale. The National Bank of Scotland's clients succeeded in selling a fair quantity, we hope at a profit, but as it performed the duties of issuing house it will doubtless long be more or less encumbered with this kind of thing, Mr. Geo. M. Jevers has passed on a few, and the Earl of Sandwich his entire holding, but we suppose we ought to congratulate the yachtical baronet —is he a baronet, by the way—who sold the business and let in the public, on the fact that the building of three *Shamrocks* has not involved the sacrifice of a single share on his part. Indeed, the completion of the latest boat—most shareholders will sincerely hope the last—seems to have left him with a few pounds in hand, as we observe that he has added 100 shares to the number received as part of the purchase price. But let the record speak for itself:—

The United South African Association, Limited.

Subjoined are the names and holdings of some of the principal shareholders in this interesting little company, which was incorporated in February, 1902, for purposes not yet acknowledged, at least not known to the public at large. We are disposed to think that the principal immediate object of its existence is the nursing of the Premier Mine in the Transvaal, that wonderful "find" of diamonds which is going to yield such fabulous aggregates of millions in the vague by and by. We say "nursing," because it is entirely against the interests of De Beers

that the Premier, or any other diamond mine outside its immediate control, should be allowed to become active competitors in the diamond market until the Kimberley mines are worked out. When they approach exhaustion we may be quite sure that De Beers will be ready to undertake the development and marketing of the other mines. But why should the company be formed at all, if its object is not to bring about an immediate market boom in the shares, or the creation of subsidiary companies, which could also be utilised as distillers of millions for the favoured few? The answer seems to be that some kind of organisation was necessary to hold the rights over the Premier Mine, and to make the holding of these rights all the more easy it looks as if the sublime Government of Lord Milner had been beguiled into drawing up conditions applicable to the Premier Mines of such a drastic character as will effectually keep independent adventurers off the field. We do not know that this is the case, but only suspect, and the inference is thoroughly in accordance with what we have been taught by the past career of some of the gentlemen conspicuous amongst the owners of this United South African Association's shares. So we have taken the trouble to copy the list of shareholders, and print the major part of it here so that it may be on record when the development of events attracts public attention to the Premier Mine and those who own it. Under existing laws or ordinances, six-tenths of the property remain in the hands of the Transvaal Government. How much will remain when De Beers is ready to open up the new mine, and the diamond vending syndicate behind it anxious to traffic in the stones?

Passing Events.

Argyllshire has changed a Conservative majority of six hundred into a Liberal one of over fifteen hundred. As the election was practically fought on Mr. Chamberlain's fiscal policy, the blow is a severe one to him and his followers. May they have many more like it.

Well may the Sofia correspondent of the *Times* declare the situation in the vilayet of Monastir to be "absolutely intolerable." Allowing for Greek prejudices, which may to some extent have coloured the story of the sack of Krushevo, there is enough left to fill thoughtful minds the civilised world over with horror, and Western Europe is responsible. We in England, by our supineness, by our protection of the Turk, by the dandyism of the political dilettante who opines that "the balance of criminality" is rather against the insurgents, are keeping the Sultan in countenance and encouraging him to lay the land waste, to murder and rob, to commit every crime the devilish side of mankind can devise in order to bring back to slavery and worse a goaded people, fighting in despair for the chance to be free. What are we going to do? Have we warned Russia that we will raise a disturbance, in Persia, in the far East, if she puts out a protecting hand over Macedonia? It is quite possible. All that is visible, however, is our complete inaction, perfect indifference, the cold sneer of the heartless cynic. Yet shall Western Europe be punished for its callousness if it refuses to intervene or to allow Russia to intervene. A joint occupation of all Turkey in Europe until such time as the provinces can be settled, would be the simplest immediate remedy, and it will not be tried.

What a pity it is that those renowned gentlemen, paper millionaires and others, who condescend to utilise British intellect and muscles for the safe keeping of South Africa as their private preserves, cannot light upon some new and independent device in deception or hocus-pocus. They weary us by repeating the same old stale dodges. Here is Commandant-General Louis Botha compelled to write to the *Volksstem* warning his fellow Boers against agents who are unlawfully using his name to convene meetings in support of the introduction of Chinese labour, thus entrapping Boers into giving sanction to what they may, in a measure at least, have grave doubts about. Well may the General say that such agents are not acting in the interests of the Boers but against them, and he adds that the question of imported labour is perhaps the most serious South Africa has ever had to face, and may be fraught with the greatest disaster. But the motive for the imposture is obvious enough. These mine bosses are very anxious that the responsibility for bringing in Chinese labour should rest upon other shoulders than theirs, hence the intrigue to make it seem as if the Boers had been the real criminals when the outcry against Chinamen becomes dangerous. This sort of low cunning becomes as monotonous as Madame Humbert's story of the Crawford millions, and it is not a whit more creditable.

It is very unkind of Sir Arthur Lawley, the Lieutenant-Governor of the Transvaal, to refuse the demands of the mine bosses that work on the Government Railways should be stopped, so that all the Kaffirs in the country may be sent down the shafts to dig out gold. His refusal is certain to "strengthen," as the phrase is, the agitation in favour of the importation of Chinese. He intimated that the contemplated new construction work will require 10,000 Kaffirs, not 6,000 as he had stated verbally to the deputation, but that against this 1,000 burghers and 1,500 natives now employed on the public roads would be transferred to the railways. This means, however, that 7,500 Kaffirs who might be sent down the mnies to die at the rate of 42,000 per annum will be kept above ground to do healthier work. It is quite shocking, and no wonder that Mr. Langermann, the Vice-President of the Chamber of Mines was indignant. He wanted the railways to recruit their hands from Nyasaland, Uganda, Natal, West Africa and Rhodesia, districts close to the mines. Perhaps they would be close to the railways likewise. All the more

reason, therefore, why money should be spent in sending sham Boers about to catch votes in favour of the importation of Chinese. We rather sympathise with Sir Arthur Lawley and commend him for his independence.

The Australian Commonwealth legislature has passed the bill providing for a colonial contribution of £200,000 per annum for ten years to the cost of the British navy. This is to help to pay for a naval force in Australian waters of one first, two second, and four third class cruisers and four sloops. A branch of the Royal Naval Reserve is also to be formed in the federation, but we need not go into details, for the incident only deserves notice because it will probably be used as a pretext for further exhibitions of the confidence trick in the shape of additional loans on the London money market. Imperialism of this description is perfectly revolting in its hypocrisy. These colonies cannot afford two hundred pence a year out of their own resources towards meeting the cost of our navy, let alone £200,000.

What a glowing statement that Argentine budget for 1904 is. It dwells on the prosperous financial situation and promises strict economy. Expenditure is next year to be reduced by $12,500,000, paper dollars we presume. The 10 per cent. surtax Customs duty is to be abolished, half on January 1 and half on July 1 next, and reductions in the taxes on natural wines and alcohols are to be made, the changes altogether representing a diminution of $17,500,000 paper in the anticipated income. And we believe there is warrant for these reliefs to taxation, nay, that they might go considerably further if the administration of the country was consistently thrifty, but because it is not we are in no position to cast stones. It is satisfactory to note that the redemption of the external debt goes on and absorbs just now upwards of £1,100,000, besides $6,000,000 paper devoted to the cancellation of the internal floating debt.

Trade figures for the Republic reveal the origin of this prosperity. The favourable balance for the first six months of the current year is stated to be $67,000,000 gold, and it is computed that the exports in 1903 amounted to over $225,000,000 gold, or £45,000,000. Imports also for the first months of the current year show an increase of £2,000,000 over the first half of 1902, and altogether the exhibit is a most gratifying one. Let us hope that it will not tempt Argentina to rush into further extravagances requiring further additions to the debt, but we do not quite like the hint that a unification of debt project is again being entertained. If the external debt is converted and unified, experience warns us in expecting that it will also be increased.

There is still a Cabinet crisis in Chili of an obscure sort that we cannot profess, on the meagre information allowed to come through, to understand, but it seems the Balmacedist party is strong enough to prevent any solution of the difficulty, and it has refused to accept Senor Miguel Varas as Prime Minister. We hope there is no fresh political tempest brewing.

We have received from the Crown Agents of the Colonies copies of several *Gazette* advertisements relating to the paying off of holders of Netherlands South African Railway Company's debentures and shares. First it is intimated that bondholders of the company who wish to receive florins should deposit their securities at the office of the Netherlands Trading Society in Amsterdam instead of at the address previously advertised by the Agents. Then we are told that 1,124 florins per thousand will be given for each 4 per cent debenture of the company with all unpaid coupons attached. Payment will be made in London in sterling at the cheque rate of exchange of Amsterdam on London ruling on October 30 next. There are various warnings and cautions that bondholders will do well to read in the advertisement. Finally, as for the shares it is intimated that the 1,000 guilders 6 per cent. shares will get £145 16s. 8d., including £10 16s. 8d. for interest, and the 1,000 guilders 4½ per cent. share, £121 10s. 6d., including £9 0s. 6d. for arrears of interest or absence of dividends, both rates of interest to be paid, being rather meanly cut down. A warning is given that shareholders must satisfy the Crown Agents that they were genuine holders on October 9, 1899, because no shares which were the property of the Government of the late South African Republic or the property of directors or officials of the Netherlands South African Railway Company will be paid for. This seems the reverse of fair to the officials, who were but servants, and the resulting bad blood seems hardly worth the money saved. But we are getting economical, are we not?

After all we are going to have another cut at the Mullah, and spend a few more millions in trying to wipe him out. This time the force will not start from Bohotle, but from Burao, through the Nogul Valley. Along this route water abounds, we are told, though much the same thing was said of the road from Bohotle. But what is it all for, and who is to pay the cost?

There promises to be a rare lot of wreckage among Atlantic shipping lines soon. Here is the Canadian Pacific Railway Company growling about its Elder-Dempster purchase; freights as hard to get as ever; Grand Trunk sticking to its Portland, Maine, interests instead of sacrificing these for the good of the "all-British" C. P. R. adventure and so on. Doubtless, also, freights are being cut, and should a bad harvest reduce the bulk of cereals shipped, all the empire will be saddened by the howling of the self-deceived. But the Dominion Government will make good the loss? Oh, of course.

What is the meaning of a Reuter's message from Tien-Tsin to the effect that the British mortgage on the Peking-Shan-hai-kwan Railway is diminishing, and that the line will soon be the property of Russia? Are the Russians going to seize the line without paying off the British mortgage? We cannot believe that, and therefore merely put the question waiting for more light. Reuter says the line is a dead loss and that we can quite believe. Most railways in China not directly serving mines are certain to be a loss for many years.

So the German sugar manufacturers have formed themselves into a trust in the good German fashion for the purpose of robbing everybody else. The compact is to last from September 1 next until February 29, 1904, and the members bind themselves not to sell sugar at less than trust prices. If any of them do they will be fined 3 marks per double cwt. of sugar sold. Refineries are divided into eight groups with a board to manage the affairs of the trust. Minimum sale prices will be settled by this board, and it will decide all questions of equalisation of freights, allowances to refineries finding difficulty in disposing of their produce, and so on. A daily report must be made by the refineries as to all details of their business, and a firm which finds itself selling 5 per cent. less than the amount it sold before entering the trust, may claim to have its minimum sale price reduced. On the other hand, should it sell more it is to pay compensation to the trust at the rate of 30 pfennigs per double cwt. for an excess of 5 per cent., 40 pfennigs for an excess of 10 per cent., and 50 pfennigs for any greater excess. The plunder thus accumulated will be divided *pro rata* amongst the members at the end of the term. Five pfennigs per double cwt. of sugar sold in Germany must be paid to the trust for working expenses, 25 pfennigs set aside to serve as premium to customers who accept the trust's terms of sale, and another 20 pfennigs will be collected for a special fund. A fine of 5 marks per double cwt. will be imposed if the sugar, after being entered for export, is not sent out of the country. There are other details interesting to the trade perhaps, but we do not get any clue to the manner in which the tempting business is to be utilised for our undoing. Perhaps we shall find that out to our cost presently.

The *Times* St. John correspondent states that the shortage of cod for the Newfoundland fishing season will probably be 350,000 quintals. Labrador fishery has been much below the average, the Grand Bank fishery very backward, and the American, French, and Canadian fleets have all met with poor results. We are sorry to hear it.

The meagre details supplied in the balance-sheet of the great business of Guest, Keen and Nettlefolds compelled us to ask a few questions about it when dealing with the figures a week ago, and we are glad that the chairman of the company, Mr. Arthur Keen, saw his way to answer them at the meeting on Tuesday last. Every department, it seems, contributed its share to the splendid profits, and we learn that the immense investments of £1,541,171 consist mostly of high-class securities which would on a realisation return more than the sum at which they are entered in the balance-sheet. The position, therefore, leaves nothing to be desired, and we congratulate all concerned upon it.

Rather depressing accounts are appearing of the harvest and vintage prospects in France. The apple orchards in Normandy are said to be almost without fruit, and the crop of cereals will be below the average in most parts of Western France. Officially the estimate seems to be a yield of 118,000,000 hectolitres, but the French National Agricultural Society thinks that the yield will only be from 110,000,000 to 112,000,000 hectolitres, and last year the crop amounted to 120,000,000 hectolitres, while it has occasionally risen to 125,000,000. Also the quality of the corn is said to be poor. The beetroot harvest, too, will be a bad one unless a spell of sunny weather comes to fill the tubers with sacharine matter, and as for the vintage it is estimated that if the Hérault district, the principal wine producing region in France, yields one-ninth or one-tenth part of the production of the past year it will be as much as can be expected. Reports from the Haute Garonne are equally unfavourable, and the return there is not expected to exceed one-half to two-thirds of the average. Only from the Pyrenees is a satisfactory account furnished. This shortage of the vintage, however, is not likely to materially affect the wine trade, because last year's yield was so enormous that the vineyard owners and wine merchants did not know what to do with it. They will now probably make a profit out of their stocks to compensate them for the smallness of this year's supply.

We must congratulate France on having disposed of a very troublesome criminal—clever, unscrupulous, resourceful and perfectly without moral trammels of any description. The sentence passed upon Madame Humbert and her husband may seem to many people in this country light when the long years and colossal proportions of their depredations are considered, but it is in reality heavy enough, five years reclusion or solitary confinement. If confirmed by the Court of Appeal and carried out in its rigour it will probably mean the death or insanity of both criminals, particularly of the active-minded intriguing woman who was the principal in all the plots. It is a sordid tale of almost unmatchable criminal audacity, but here likewise it is not for us to assume a moralising attitude and talk about "these French" being so foolish, for we in our own way are just as gullible and probably even more greedy.

That enterprising and rather shrewish paper the New York *Commercial*, has been poring over the share list of the United States Steet Trust, and has discovered that many Pittsburg steel manufacturers who received stock of the Trust in payment for their plants have been conspicuous on the sale side of the market. That is only what we should expect, but a year ago a list of seventy houses deeply interested in or committed to this monster bubble was published, and had great effect in stimulating public confidence. Doubtless they sold on the favourable opportunity thus furnished. It would be interesting, therefore, to have a table setting forth the holdings of some of these great paper potentates fourteen months back and now.

"It never rains but it pours," or its equivalent in Turkish is what the Sultan thinks just now. For following on the murder of the Russian Consul in Macedonia comes the news of the assassination of the American Vice-Consul at Beyrout. Warships are on their way to the Bosphorus to back up any claim the Republic may make, and Abdul will have to raise some more money to indemnify the widow of the murdered man. He must be getting very tired of having to pay so heavily for the barbarities of his subjects.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1903, and August 22, 1903 :—

Revenue and Other Receipts.

—	Estimate for the year 1903-1904.	Total Receipts into the Exchequer from April 1, 1903, to August 22, 1903.	Total Receipts into the Exchequer from April 1, 1902, to August 23, 1902.

The Investors' Review.

The Week's Money Market.

Bank Rate 3 per cent. (Reduced from 3½ per cent. on June 18.)

Norfolk House, Friday Evening.

At the beginning of the week short credits were extremely cheap, thanks to the effect of the large sum raised by the Exchequer from the Bank of England, half of which had been paid out. By Wednesday, however, there were signs of a draining away of the extra supply, and credit jobbers were disposed to think that the cheapness was at an end. There was even talk of borrowing at the Bank of England on Saturday in order to help to pay for the £2,000,000 of new Treasury bills sold on Monday at an average discount rate of 4d. over 3 5-16 per cent. Yesterday, however, the market went flop, and those who had balances to lend and could only get 1 to 1½ per cent. for them overnight, were ready to accuse the Treasury of having poured out some more of its borrowed millions to swamp the market, just when it was beginning to recover from the previous doses of unreal money. There was no evidence, however, that the Treasury had paid out any unusual sums, and it seems probable that the Stock Exchange had over-provided itself for its settlement wants, and that the balances unused by it were offering in the discount market in the afternoon. Also it seems that the London and Westminster Bank has had unusual amounts of credit placed at its disposal, and some of the banks made up their monthly accounts for balance-sheet purposes on the 26th inst. These, therefore, are now free to lend all they dare spare, and it is thus probable that there will be no pressure at the Bank to-morrow for means to pay for the new Treasury bills.

In spite of the untoward cheapness of short credits, which benefited nobody except the bill brokers, who are reaping a comfortable profit, discount rates have been steady throughout the week, and 2 13-16 to 2⅞ per cent. the general daily quotations for three months' bank bills, hardest if anything at the close when some quoted 2 15-16 per cent. There has been plenty of paper in the market, and as the joint-stock banks were either not buying at all from the brokers or buying on stiff terms, there was no disposition to allow rates to fall back. Some of the banks got 2⅞ per cent. from the brokers on parcels of bills bought by them yesterday morning, so that there was not much inducement for the discount houses to cut rates, nor ought they to be cut, for autumn prospects are not reassuring at any point. We are almost certain to see heavy drafts made upon our all too insignificant stock of gold, and unless both loan and discount rates advance considerably every market that wants the metal will come here. But there is very little hope of rates stiffening much as long as diseased credit is being manufactured by the Government and disbursed to add to the supply of lendable balances in the open market. We do not like the outlook from that point of view in the very least, and think discount houses wise in trying their hardest to keep rates up. A dragging market now, in short, is but too likely to mean a sharp and disconcerting upward movement in rates a little later in the year. Some already begin to talk of a 4 per cent. Bank rate early next month, although nothing on the surface warrants any such anticipation. Beneath the surface, however, there is a great deal of uneasiness, and Continental exchanges continue more or less adverse. There is, for instance, about £600,000 in raw gold due in at the end of this week, and it will all be taken for abroad, while parcels of sovereigns are almost daily withdrawn from the Bank for export. The lifting of £1,000,000 to send away would almost certainly drive the Bank rate up.

The one interesting point in this week's Bank return is the increase of £275,000 in the fiduciary note circulation, the total of which is now brought up to £18,450,000. In itself so small a sum is of no consequence, especially in a cheque-money country like this, but if it does not do much harm it certainly can do no good to inflate the paper money to any extent after this fashion. The Bank is perfectly within its rights, because the Bank Act of 1844 empowers it to issue its own notes against Government security to the extent of two-thirds of the provincial bank note circulation cancelled. A continual cancellation of such note issues has been going on through the absorption of small country banks by the big London ones, and there has, therefore, been a steady lapsing of small circulations. These, however, are in actual fact invariably well within the amount authorised. Some of them are not half that amount, some less than one-third; that is to say, the actual notes in the hands of the public are a more or less insignificant portion of the authorised issue always, but the Bank of England can issue two-thirds of the authorised amounts and consequently it is now bringing a certain amount in notes into existence which do not fill any gap at all, but represent pure excess in the paper money. And £18,450,000 is a very large sum to be issued upon Government credit in a country like this with an open gold market and such a small stock of the metal as might be exhausted in three days were a real banking scare to seize the public mind. The law ought to be altered, and, as we have contended for many a year, the debt of the Government to the Bank ought to be paid off in gold, but it is hopeless to expect any such reform in these days of administrative waste and corruption.

SILVER.

A demand for bars on Eastern account sprang up early in the week, and buying proceeded with sufficient vigour to push prices up to 26 3-16d. per oz. for cash and 25 15-16d. per oz. for delivery two months' forward. To some extent the support came from the Far East, but the principal inquiry was on Indian account, and there appears to be a certain amount of speculation induced by the belief that the Indian Government will be forced into the market in the near future by its currency requirements. The above-mentioned levels, however, proved rather higher than conditions warranted, and caused a slight increase in the available supplies, while at the same time buying was checked, and a relapse occurred to 25 15-16d. and 25 13-16d. per oz., but of this 1-16d. was recovered to-day, making the net gain on the week ½d. per oz. in each case. Applications for the Rs.50,00,000 India Council drafts offered on Wednesday reached a total of Rs.2,17,55,000, of which Rs.1,86,50,000 were for bills and Rs.31,05,000 for telegraphic transfers. Of the amount Rs.43,13,000 was allotted in bills and Rs.6,87,000 in transfers, tenders at 1s. 4d. and 1s. 4 1-32d. per rupee respectively, receiving about 23 per cent. Another Rs. 50,00,000 will be offered next week.

BANK OF ENGLAND.

AN ACCOUNT pursuant to the Act 7 and 8 Vict., cap. 32, for the Week ending on Wednesday, August 26, 1903.

TREASURY BILLS OUTSTANDING.

Tenders for £3,000,000 Treasury bills were opened on Monday at the Bank of England. The total amounts applied for were £2,753,000 at three months, and £5,026,000 at six months. Tenders were accepted as folows:—For bills at three months at £99 5s. 11d., about 13 per cent., above in full; for bills at six months at £98 6s. 3d., about 6 per cent., above in full. The average rate per cent. was: Three months' bills, £2 15s. 6d.; six months' bills, £3 6s. 7d.

	£2,664,000		£2,664,000

Exclusive of £381,000 last week paid over in aid of local expenditure making the total of such payments to date £3,233,612.

The total estimated income for the year is £144,270,000, and the total income to date is £49,834,557 from ordinary revenue sources, including £13,628,000 from customs, £11,938,000 from Excise, £5,492,000 from estate, etc., duties, and £7,418,000 from income-tax. In addition, £310,000 has been borrowed under Telegraph Acts, £28,000 for the Uganda Railway, £438,000 for naval works, and £1,000,000 for military works. Also £4,000 has been borrowed for Land Registry buildings. It is to be noted that £6,962,272 of the expired £10,000,000 of exchange bonds has been renewed, so that only £3,000,000 has been redeemed, out of the Transvaal Guaranteed loan, leaving the net debt at £7,000,000. Not only so but £4,000,000 has been borrowed from the Bank of England as a "Ways and Means" advance.

The year's estimated ordinary expenditure is £144,186,000, of which £27,000,000 is the National Debt charge, and £114,390,000 the "supply" outgo. Up to date £57,616,243 has been disbursed, including £44,511,422 for "supply," principally Army and Navy corruption and extravagance. In addition borrowed money has been laid out as follows:—Telegraphs £410,000, Uganda Railway £48,000, naval works, £438,000, military works £1,050,000, Land Registry buildings £4,000. Public Buildings Expenses £44,000.

Balances at Banks of England and Ireland £5,753,713, against £4,653,210 a year back.

Stock Market Notes and Comments.

Perhaps Stock markets will get interesting again presently, but they are not so just now. To help the settlement of the account, prices were raised in all directions at the beginning of the week, but almost entirely without any dealing on the part of the public, and the advance in Consols very soon gave place to a renewed decline. We still fail to see where real strength is to come from. Investment buying there is; in a great market like ours business of that kind will continue, one might say, to the crack of doom, but selling of various kinds, much of it distress selling, also continues, and we see no trace at any point of relief coming to an overloaded market. Credit will doubtless be comparatively cheap for the Consol settlement beginning to-morrow, but that will not strengthen the stock, which is wholly out of favour with investors, and likely to remain so. Every part of the market is in some sense overloaded, but none of it, perhaps, to the extent of the Consol market, and as long as the masses of Colonial Government and Home Corporation securities held there by underwriters on borrowed money fail to find purchasers amongst the investing classes, strength cannot be looked for. Moreover there is a continual addition to the strain, in the shape of calls to be met on some of these unsold and unsaleable securities. Something like a miracle would be required to carry this overloaded market past the end of the present year without grave events.

Some vitality has been shown by Home Railway common stocks, and prices have been lifted a pound or two in some cases, partly by purchases either for investment or for speculative investment, but here also very little is being done from outside. The "bears" of yesterday become the supports of to-day, but a market is never strengthened by the closing of accounts open for the fall. We, therefore, do not regard the Home Railway market as by any means in an impregnable position. At the same time, should the price of banking credits continue low, it is possible enough that during September a further advance may be manipulated, and if that proves to be the case all who

have profits on speculative holdings should take them for the simple reason that there are storms ahead, and there would be no stopping the fall, even in this most popular class of stocks, were gold to begin to leave the country in heavy amounts.

It is not necessary to burden this column with further comments upon the Kaffir market, which is one of the most perfectly artificial in the world. We can only repeat the advice to weariness, that holders should sell on every favourable opportunity, and be thankful if they have escaped without material loss. There will be no satisfactory outlook in Kaffir shares for the outside public until prices have been allowed to fall to figures that in some degree represent the actual intrinsic worth of the securities the shares dealt in are supposed to represent. Nothing could be more foolish, therefore, than to buy upon vague prophesyings and dream-fed hopes of wealth to come. Look what each share is yielding now, and do not touch undeveloped properties on any terms, still less properties most of whose shares are in the hands of the promoting agencies.

As for the Yankee Railroad market, do not believe half the pleasant stories coming from the other side about easy money in New York throughout the autumn, and splendid traffic receipts, strong buying, and all the usual furniture of the trader anxious to sell, and then take 50 per cent. discount off the half you do believe. To be a "bull" of Yankee Railroad shares just now is to invite loss, unless, of course, the speculation is that of the day-by-day punter, the man who stands in the market or on the kerbstone and buys on a fall, to sell immediately any rise takes place. Undoubtedly the Stock Exchange has made a good deal of money by this kind of speculation in these securities during the past year or two. It has been a fine time for the "bear," as a rule and on the average, in Yankee rails, but people at a distance and investors even of a speculative turn of mind cannot hope to hit the right medium once in half-a-dozen times with this kind of trading; therefore, it is better to let the market alone, especially as there cannot be any danger of losing a good chance to invest for at least another six months. That is the line we should be disposed to follow were we at liberty or inclined to speculate.

The Week's Stock Markets.

Stock markets continue in pronounced holiday mood, and, with a minimum of business passing during the past week, call for only the briefest description. In the absence of any exciting events, prices held their ground fairly well for the first few days, and it looked as though markets would finish without any set back, but then dealers became a little apprehensive regarding Macedonian affairs, owing to the blowing up of a train near Adrianople, and quotations gave way in almost all departments. The House, however, contemplates the future with its usual optimism, and is beginning to talk quite cheerily of the "coming" boom. September is now the month fixed for its commencement, and if it does not then begin the date can be easily altered to October, and thence to Christmas, providing nothing jarring happens in the meantime. Yankees, for the moment, seem inclined to pause, and the events of the week were quite mild compared with the recent excitement. A little attention was absorbed in the adjustment of the fortnightly account, which proceeded smoothly enough, with bankers' charges about 3¼ per cent.

Consols at first were quite steady, mainly owing to the cessation of the recent forced sales, and also to the fairly easy monetary conditions prevailing, which raised hopes that account loans on Saturday would be obtainable at comfortable rates. Quotations both for money and the account occasionally reached 91, and remained round about that figure until near the end, when they gave way sharply to about 90¼. Dealers gave as the reason that the rush upward from under 90, to which the stock last week fell, had been too rapid, and that a set-back was about due. How nice for the premier security. A slight rally occurred from the lowest points, and quotations finish ¼ down for both money and the account commencing to-morrow at 90 7-16 to 90 9-16. Account loans will probably cost about 3 to 3¼ per cent., and the making-up price will show another difference against the "bulls." Transvaal scrip rose and fell with Consols finishing 3-16 lower, at 1-16 to 3-16 premium, but Khaki stock remained at 97¾. Other British funds were unchanged, and exceedingly little was doing in Home County and Corporation stocks. Amongst Colonial Inscribed issues, Natal 3 per cent. and New South Wales 4½ per cent. were up 1, while Canadian 3 per cent. closed 1 lower. Several Quebec Provincial bonds were advanced 2 to 3, for no apparent reason.

The Foreign Bond market distinguished itself with quite a little boom in Argentine securities, the glowing budget figures providing the necessary impulse. These afforded an opportunity for once more indulging in unification talk, and at the end some imposing improvements are visible. Buenos Ayres Water Supply bonds show a gain of 3, the

Northern Central Railway loan is up 2½ and advances of ⅜ to 1½ are quite numerous. Brazilians followed the lead, although to a less extent, and Uruguays were amongst other South American things to finish higher. Venezuelan bonds more than recovered an early loss of 1, and Columbians were marked up ½. In the Far Eastern division, Chinese Silver bonds rose smartly with the metal, taking two or three of the Gold bonds up with them, and Japanese improved about ½. Not much was done in inter-bourse stocks, but Turkish were flat throughout the week, on the news from Macedonia. No definite settlement appears to have been arrived at regarding the amount of new stock to be given to group "C" under the unification scheme, but a meeting of the London committee was held on Wednesday. At this the managers of the debt juggle are understood to have offered 1½ of the 2½ per cent. extra demanded by the holders of group "C." Modifications of the stamp duty, calculated to increase the revenue by £100,000, are also said to have been agreed to, but everything is not yet settled, as members were not unanimous in accepting the concession. The business, though, is practically finished. At the end the lower Turkish groups were ⅜ to ½ weaker, and Bulgarians lost an early rise of 1. Greeks advanced smartly here and there, and German 3 per cent. rose ½, but Spanish was dull and lower. The account to be arranged on Tuesday was of the usual insignificant dimensions, and rates again meant no profit to money dealers. Such things as Spanish, Turks and Portuguese never cost more than 3 per cent. to continue. Russians were done at even to 2 per cent., and even South Americans never commanded more than 4 per cent. Making-up prices were irregular, and most leading securities showed only fractional movement. Uruguays, however, were ⅞ to 1¾ better, and Chinese Silver loan rose 1¼, but Venezuelan bonds fell 1½, and Colombians receded 2.

The public still holds aloof from the Home Railway market, but notwithstanding this apathy, and the absence of any kind of stimulus, dealers were more cheerful, and followed the course of the Consol market with faithful consistency. In other words, prices were for the most part steadily lifted during the earlier part of the week, to such effect that the setback which occurred on Thursday afternoon left the majority with more or less substantial gains over last Friday's figures. Brighton deferred, for instance, after touching 119, finished with a rise of 2, at 117½, North-Eastern advanced 1, North-Western and Midland deferred ½, South-Eastern deferred was up 1, and Great Western advanced ⅞. Underground stocks recovered to some extent from the depression following the scare induced by the Paris accident, and Central London ordinary and City and South London ordinary were each 1 higher. Scotch lines were again fairly good, with advances of ¼ to ½ in Caledonian and North British deferred issues, but the preferred stock of the latter declined 1. The first Scotch dividend for the past half-year was declared on Tuesday by the Great North of Scotland, and as the announcement meant an increase of ½ per cent. per annum on the deferred stock, the prices both of that and of the preferred were lifted 1. Of the few adverse movements, the largest were 1 in South-Eastern and South-Western ordinary. Rates at the settlement arranged on Tuesday were again fairly heavy, in spite of the moderate dimensions of the account, and ranged from 5 to 6, 7 and 8 per cent., with the usual exceptions of Dover "A," North-Eastern and North British deferred, on which money cost from 3 to 4 per cent. Changes on the fortnight, as shown by the making-up prices, were mostly adverse, and in quite a number of instances the declines were substantial. Brighton issues were from 2 to 3 down, South-Western ordinary dropped 2½, and Midland deferred and South-Eastern preferred, amongst others, receded 2. Undergrounds, however, showed the most serious falls, ranging from 3½ in City and South London to 4 and 5 in Central London. South-Western deferred, however, improved 2, and Great Western, North-Western and Furness were all 1 up.

A bad beginning was made in American Railroad shares on Monday, as, owing to the holiday on Saturday, the changes in quotations were compared with those of Friday, and in the meantime Wall Street had experienced another disappointment in regard to the Associated Banks' return, which showed a large increase of nearly £2,000,000 in loans, due, according to some authorities, to borrowing by the Wabash Company. Our market, however opened firm, and, thanks to the closing of speculative accounts for the fall, in anticipation of the settlement, succeeded in establishing an advance of ½ or so over parity, but the apparent strength tempted New York to sell, and although there was a further faint rally later the day ended with losses of 1 or more in a large number of stocks, Milwaukees indeed losing as much as 3¼. Tuesday was a little better in some ways, as support was forthcoming both here and on the Continent, and the firmness encouraged buying from New York, where there was a further stimulant in the shape of glowing reports about enormous business

being done, and fears of a shortage of rolling stock, but, in spite of all this, there was not sufficient energy to bring about an advance of as much as $1 in anything. The truth of the matter is that the Government crop report poor though it is, is regarded as too optimistic, and until something more definite is known operators are not much inclined to force even an appearance of activity. On Wednesday and Thursday the market followed much the same course, being seemingly firm in the morning, and giving way immediately after Wall Street opened on sales from that quarter, but finishing with moderate gains on balance. A very ugly story was hinted at on Wednesday regarding one of the most recent American millionaires, to the effect that he had been operating on this side to a tune which left him about £250,000 to the bad, and that he was expected to have difficulty in raising the funds. Nothing further has transpired since, nor is there likely to be more at present, but if it is true the account, which on the surface has passed without a hitch, may after all prove disastrous to some of those interested. On the week prices mostly show declines of more or less magnitude, notwithstanding the rally brought about by Wall Street. Milwaukee and New York Central lost 2, Wabash income debentures fell 1, Illinois Central 1½, and Atchison preference, Baltimore ordinary, Southern Pacific, and Southern ordinary and preferred were from ½ to 1 lower. Some good buying of Eries was reported from Wall Street, but the only effect was to leave prices unchanged at last Friday's level. Money in this section at no time cost more than 3½ to 4 per cent., and was often obtainable at less, especially on Atchison and Union Pacific, on which there appears to be something of a "bear" account. Movements during the account, however, were uniformly in favour of speculators for the rise, and in the majority of instances substantially so, rises of 4, 5, and even 6, being by no means uncommon in the list. Erie ordinary advanced 5¾, Union Pacific common and Southern preference 6, Milwaukee were 5½ and Atchison ordinary 5¼ up, Chesapeake gained 4¼, and Illinois Central, Louisville, and Wabash debentures 4.

The meeting of the Grand Trunk Company on Monday, when powers were given to make an addition of nearly £5,000,000 to the guaranteed stock, had a rather depressing effect on quotations, but the declines were trifling, because of the directors' statement that the money would be raised only when and as it was required. Then came the pleasant surprise of an increase of just under £26,000 in the July traffic return, when the expectation had been for £15,000 to £20,000 only, and the new issue

was forgotten. Prices went up with a jump, and although part of the improvement was afterwards lost, the ordinary at the close was ¼ up, the guaranteed and third preference rose ½, the first preference 1, and the seconds 1½. Canadian Pacific shares also participated in the improvement, and as Wall Street bought them freely they finished 1½ better, at 127-x.d., after being slightly above that figure.

In the Foreign Railway section Argentine issues have once more come into favour, speculators being attracted by the splendid traffic returns and by the sanguine tone of the preliminary Budget statement. Considering the period of the year the buying has been brisk in several of the old favourites, with the result that advances of 2 and 3 have been recorded. Buenos Ayres and Rosario ordinary stock has perhaps met with most attention, and it finished 1½ up, while the deferred stock gained 3, the preference stock 2, and the Rosario and Central debenture stocks 1 each. Buenos Ayres and Pacific ordinary and second preference stocks also rose 2 to 3, Bahia Blanca and North-Western ordinary put on 2, Buenos Ayres Western ordinary 2, and Buenos Ayres Great Southern 2, while gains of 1 were too numerous to mention in detail. Other South American issues, however, were somewhat irregular. San Paulo ordinary lost 1, and the 5½ per cent. debenture stock rose 2, Uruguay Northern preferred stock fell 2, and Salvador mortgage debentures 2, and Southern Brazilian Rio Grande do Sul debenture stock was 1 harder. Mexican Railway stocks were pushed up by the rise in silver, and the continuance of favourable traffic figures, and closed with gains of ¼ in the ordinary and 1 in the first preference. Contangos on those stocks in which there is any speculative account open ranged round about 6 per cent., but the market's requirements were far from large.

Waterworks stocks again supplied the principal excitement in the Miscellaneous market, and during the opening days of the week further nasty troubles were recorded. Southwark and Vauxhall ordinary dropped another 10, New River new 10, West Middlesex 15, Chelsea 10, and East London, Grand Junction "D" and Kent each 5. The market, however, steadied a little after these relapses, and modest professional support brought about recoveries of 10 in Southwark and Vauxhall, and 5 each in East London and West Middlesex. London and India Docks deferred received a little support, but nothing occurred to disturb the Shipping section, and prices are all unchanged. Welsbach stocks were rather pressed for sale, the ordinary and preferred declining 1, but Gas Lights were steady, and maintained their recent rise. No further drop occurred in Aerated Breads, and all other Catering things were steady. Breweries moved irregularly with pronounced weakness in Allsopp stocks. Meat shares stood much as before, and Oil descriptions were flat and easier. Sweetmeats recovered a fraction, although another heavy traffic decrease was published, and the price is now 35s. Calico Printers were unaffected by their first dividend of 2½ per cent., and Iron and Steel things showed an improving tendency. British Electric Tractions recovered smartly to 12½, a rise of ¾. The carry over on Tuesday was easily adjusted with rates much as before.

Nothing at all happened in the Stock Exchange to-day, business both here and on Wall Street having been brought down to the lowest summer magnitude seen for many years. At one hour prices were talked up and the next talked down, but the only interest of the moment in the market is the Consol settlement, and money is going to be about ¼ per cent. dearer for the October account than it was for the September one, that is to say 3 per cent. will be the minimum rate, and already Consol contango business has been done at 3⅜ and 3¼ per cent.

The Western Australian Bank have advised their London agents, the Bank of Adelaide, that they are opening at Burtville, Western Australia.

The London and South Western Bank will open a branch at Wood Green (corner of High Road and Lordship Lane), on Tuesday, September 1.

Critical Index to New Investments.

A CORRECTION.

THE COLOMBIAN PETROLEUM CO., LIMITED.

We regret the slip corrected in the following note very much, and hasten to apologise for it and put it straight. How the 40 came to be converted into 20 we have been unable to discover, but once a mistake of the kind has been made it nearly always escapes detection.

To the Editor of the INVESTORS' REVIEW.

Dear Sir,—I notice in the paragraph that you have inserted in your issue of to-day relating to this company that it is stated that the contract with the Government is for 20 years. This should be 40 years, as you will see from the prospectus.

I shall be much obliged if you will insert a short notice making this correction in your next issue, as the error is an important one to the interests of this company.

Yours faithfully,
FRED. J. WILLIAMS,
Secretary.

Answers to Correspondents.

[*A Fee of Five Shillings per query is charged for replies under this heading. Letters, Five Shillings extra per letter.*]

A. R. S.—It is true enough that in the long run the position of the stock you name will probably be adversely affected, but I do not think that you should sell now because there is a stronger company, in a financial sense, in control of affairs. By this company the necessary new capital is being found with no serious difficulty, and the market opinion is that the stock is likely to improve. The market is not always right, but for the present I am inclined to agree with it. Wait a little; even in ordinary times this is about the worst season of the year to try and sell anything.

B. H.—No, I do not think you should invest a single pound in the debentures of any of the three companies named by you. First of all they are not marketable, or marketable only by flukes and with the greatest difficulty, and, secondly, the very fact that they are guaranteed by a third party indicates inherent weakness. You had much better put the money into some stocks standing upon their own basis, and issued by companies of stability and high repute.

Whitaker Wright's Trial.

Last Monday the proceedings against Whitaker Wright passed out of the formal stage, and some progress was made in developing the charges. The case is being tried in the first instance before Alderman Smallman at the Guildhall, Mr. Horace Avory and Mr. Guy Stephenson appearing for the prosecution, Mr. Percy C. Simmons for Mr. Flower and the Prosecution Fund Committee, while Mr. R. D. Muir defends Whitaker Wright, Mr. Bodkin holding a watching brief on behalf of Mr. Leman.

Mr. Avory, after telling how the prosecution came to be instituted, and the story of the defendant's efforts to resist his extradition from the United States, said:—The facts on which the prosecution relied were these. The London and Globe Company was incorporated on March 1, 1897, to take over the assets and liabilities of two former companies, of which the defendant had been managing director. Under the agreement for the formation of the new London and Globe Corporation, the defendant became the owner of 321,925 shares, which were put into the names of nominees. But in addition to these shares he acquired 67,650 further shares; and at the time of the winding-up of the London and Globe he appeared, so far as could be traced, to hold only 2,500 of the total of over 388,000 which were originally allotted to him or acquired by him. The office of the company was 15, Austin Friars then, and afterwards 43, Lothbury. The defendant became its managing director at a salary of £2,000 per annum; and he was also entitled to 5 per cent. of all dividends distributed by the company. The other two companies with which the case was mainly concerned were the British America Corporation, which was registered on October 7, 1897, the capital being subscribed almost, if not entirely, by the shareholders of the

London and Globe, and the Standard Exploration Company, registered on February 11, 1898, but which did not come into active operation until May, 1899. The defendant was managing director of these companies also, receiving from each a salary of £2,000 per annum and 5 per cent. on all dividends distributed. The three companies had the same office, and their business was managed by the same staff of clerks and secretary. The operations of these three companies until the date of their winding-up were controlled entirely by the defendant. Some of the directors in each company were the same, and they appeared to have confirmed, whenever their confirmation was necessary, whatever the defendant had done as managing director. The names of the three companies—he said the names advisedly—were used by the defendant as suited his purpose for Stock Exchange speculation either in shares of these very companies themselves or in shares of other companies; as it suited his purpose he bought the shares of the one company in the name of the other, or sold shares to one company in the name of the other; and for the purposes of the balance-sheets of these three companies they were made under his direction to lend and to borrow money of each other, or to buy and sell each other shares a day or two before the date, sometimes on the very day, when the balance-sheet was made up, for the purpose as the date of each balance-sheet came round of showing that the company was flourishing and had a large balance to the credit of its profit and loss account. These transactions were in some instances actually annulled before the date of the meeting at which the report and balance-sheet were adopted by the shareholders. This showed conclusively that the transactions were fictitious transactions, entered into on paper only for the purpose of making the accounts of each company in turn look favourable. He invited the Alderman to regard in that broad and general view the detailed facts now to be laid before him in relation to the balance-sheet of the London and Globe for September 30, 1899, and December 5, 1900.

In the first balance-sheet there appeared on the credit side the item "Cash at bankers," £534,455. This would ordinarily convey the impression to shareholders and creditors that the *bona fide* operations of the company had led to this result; and that this was the impression intended to be produced could be shown from the company's report and the speeches made by the chairman and by the defendant himself at the shareholders' meeting on October 24, 1899, when the accounts and report were adopted. The report, referring to the balance to credit of the profit and loss account, said:—"The aim of your directors during the past year has been to consolidate and strengthen the position of the company, and one result of this policy may be seen in the fact that more than the whole of the amount to the credit of the profit and loss account is in cash—a much stronger position than existed last year." Lord Dufferin, as chairman, in presence of the defendant, said:—

"You will have observed that the balance to the credit of the profit and loss account available for dividend amounts to £500,000 sterling. Were we, therefore, so imprudent as to divide our profits to the extreme limit, it would be possible for us to declare a dividend of 25 per cent. We have, however, adopted a sounder and more cautious policy, believing it to be much more to your interest in the long run to consolidate and strengthen the position of the company than to attempt the payment and distribution of such excessive dividends as would encroach too freely upon the cash reserves which it is desirable to hold at our disposal."

A little later on he stated that it was proposed to limit future dividends to 10 per cent. per annum, and he proceeded:—

"It is true this policy may somewhat eliminate the speculative element affecting your shares; but that is a circumstance that will not be unfavourably regarded by the genuine investor, who will be only too glad to welcome a 10 per cent. security, the permanency of which he will recognise as being better assured than, perhaps, most investments in the mining market."

And later on he said:—

"All the other items on our list of assets are perfectly sound, and some of them of a very promising character, while the balance at our bankers, £534,455 17s. 3d. (which is more than a quarter of the capital of the company), is one of the best witnesses we can point to in support of the success of our operations."

The defendant, having listened to that speech, seconded the motion for the adoption of the report and accounts, and invited any shareholder who wanted to ask any questions to ask them of him, and he would be ready to answer them. How was the defendant to be made responsible for the expressions of the chairman? The answer was not only what he had stated as to the defendant's control of the financial operations of the three companies, it was that the defendant himself prepared and wrote out for the chairman the speech which he was to deliver. And he would produce, although he saw the defendant shaking his head at that observation, the original notes in the defendant's handwriting, which he sent to Lord Dufferin for the purpose of his making that speech accompanied by a letter of October 19, 1899, which was in these words:—

"My dear Lord Dufferin,—I enclose herewith the substance of what should be said at the meeting—which when put into your elegant diction will, I am sure, be very satisfactory for the shareholders. I should be pleased if you will not destroy my notes until we have gone over them together after your address is prepared, and had a little discussion together with regard to the same.—Yours sincerely, WHITTAKER WRIGHT."

He enclosed with the letter what were called the notes for the speech which, in substance, was the whole speech. With the exception possibly of what the defendant called "more elegant diction," the whole of the speech was in effect written by the defendant.

Comparing the representations to the shareholders with the facts, of the £534,455, £359,000 odd was received from the Standard Exploration Company on September 29 and 30, September 30 being the very day that the balance-sheet was made up, and, according to the books, the Standard Company was represented in different shapes and forms as liable to the London and Globe for this amount, chiefly on account of shares supposed to have been bought by the Standard from the London and Globe or liability for shares undertaken by the Standard in the place of the London and Globe, the balance being made up of the alleged indebtedness of the Standard Company to the Globe for money that had been borrowed. The Standard Exploration Company had no money available to pay these sums; and for the purpose of obtaining it the Standard Company got from the sister company—the British America Corporation—£113,000, of which £19,000 was entered in the books, admittedly as a loan to the Standard Company; £40,000 was obtained on loan from a firm of stockbrokers, £100,000 from the bankers, and £40,000 was actually lent by the defendant himself on the day the balance-sheet was made up, to swell this item of cash at the bankers. Some of the securities which the Standard Company pledged with the bankers in order to obtain these loans were also lent by the defendant himself. On October 6, three weeks before the date of the meeting at which the accounts were adopted, at least £100,000 of the money had been repaid to the Standard Corporation, and through them to the bankers, the shares of the defendant pledged as security being also returned to him. His £40,000 was received back on October 13, eleven days before the meeting. The cheques by which the £357,000 was handed over to the London and Globe were all signed by the defendant himself in his capacity as managing director. There were no minutes in the books of the companies of these transactions between them.

Next, the prosecution attacked the balance-sheet of December 5, 1900, and charged as a false entry there an entry on the credit side showing shares held in sundry companies to the amount of £2,332,632. Such shares, if it was intended to give real information to the shareholders, were usually put down at their market value at the time. In this case it was represented, to deceive the shareholders, that these shares were being put down at their market value, as was shown by a passage in the report claiming that a very large sum had been written off for depreciation at a time when, owing to the war, the market value of all securities had heavily declined, but that notwithstanding this there was a balance of £757,000. Lord Dufferin said to the meeting of shareholders on this occasion:—

"In the face of these difficulties, however, your directors did not lose heart, but applied themselves with renewed energy to replace your affairs upon their normal prosperous footing. As a result we are enabled to present to you to-day a balance-sheet with a very substantial sum standing to the credit of the profit and loss account."

A reference was also made by Lord Dufferin to the item "shares held in various companies" as standing at £2,332,632, after writing off the heavy amount for loss and depreciation; and in answer to questions put to him as managing director the defendant himself said that over a million sterling had been written off, and it had been no easy matter to make up. A shareholder asked "was that including the £500,000 of reserve against depreciation?" and the defendant said, "Yes, that is all wiped off. The list of assets is now marked down as low as we could possibly mark them." The real fact about these shares was that more than one million had no market value at all; most of them were shares that had never been issued at all; and such of them as had a market value had been depreciated in the books by the amount of only £179,922. The actual depreciation of these shares at that time was £397,000; so that there was, as to the shares appearing in the balance-sheet which had any market value at all, an excessive valuation of £217,000. That the market value of the shares included in the balance-sheet was well known to the defendant was beyond dispute, because he was dealing in many of these shares right up to the date of the balance-sheet. Shares in the Standard Corporation Company, which the London and Globe, under his direction, were dealing in at 10s. per share, were put down at £1 0s. 3d. Of the whole item of £2,332,000 odd, £561,000 was represented by shares in the two sister corporations, which the defendant must have known at that time were as insolvent as the London and Globe itself.

The next matter on this balance-sheet which was made the subject of charge was the omission from the debit side of liabilities of the London and Globe to stockbrokers, which at that date amounted to £1,603,000 odd. That liability was the result of speculations on the Stock Exchange, which the defendant in the name of the London and Globe had been engaged in, chiefly in Lake View shares. Under the defendant's directions these enormous liabilities were transferred just before the issue of the balance-sheet to the British America and Standard corporations without any notice to, or consent of, the brokers, and it was made to appear that these companies were liable. It would be established that on December 29, the day after the London and Globe made default, and 12 days after the adoption of the accounts at the London and Globe meeting, the £1,603,000 was written back, and the original liability of the London and Globe reinserted in the books. This was an illustration of the way in which by paper entries either assets were swollen or liabilities diminished or wiped off by this transfer at the will of the defendant from one company to another just before or on the very date of the balance-sheet.

The next item attacked was one of £479,399 represented as a balance of profit on the profit and loss account, and was arrived at after taking credit for an alleged profit of £564,000 which was supposed to have accrued to the London and Globe on the con-

version of Victorian Gold Estate shares of £1 each into shares of two new companies which were promoted and registered just before the date of the balance-sheet and were called the Loddon Valley Gold Fields and the Moorlort Gold Fields, whose shares were at £5 each. The Moorlort shares were never in fact issued, and transactions in them were supposed to be going on between these companies even before the date of registration. In the balance-sheet for 1899 the London and Globe took credit for £500,000 supposed to be a payment made by the British America Corporation for property sold by the London and Globe. Having taken credit for this in September, 1899, when the time came round for the British America to publish a balance-sheet, the London and Globe returned £250,000 of this sum, and thus enabled the British America in 1899 to show a profit of £200,000, and to declare a dividend of 10 per cent. So the money having done duty in 1899 in both balance-sheets, the London and Globe on the day before its 1900 balance-sheet suddenly discovered that that £250,000 ought never to have been returned to the British America, and that company purported to repay the money, and so increased the profits or assets of the London and Globe. This was an illustration of £250,000 doing duty three times over. If the London and Globe balance-sheet for 1900 had been made at the proper time—in September—it must have shown that the company was hopelessly insolvent. A balance-sheet actually prepared in the Official Receiver's Department showed a loss at that date of several hundred thousand pounds. The company made default on December 28; the claims of creditors put at £600,000 in the balance-sheet had been found to be over £2,000,000.

The dividend to be paid to the creditors was estimated at about 1s. 3d. in the pound; the creditors of the British America might get about 3s. in the pound, and the Standard Exploration Company's creditors 7d. in the pound. There would be a total loss to the shareholders in these three companies of £5,000,000 of nominal capital. But it must be remembered that many of these shares were bought at a premium. He invited the Alderman on these facts to come to the conclusion that a case was made out under both these sections and to send the defendant for trial upon these charges.

Mr. F. W. Boustred, from the office of the Registrar of Joint-Stock Companies, was then called to produce the files of the various companies referred to by Mr. Avory, and to prove the facts stated as to the appointment of the defendants as managing director of the three companies carrying on business at the same offices.

Mr. Benjamin Nicholson, J.P., stated that after hearing Lord Dufferin and the defendant at the meeting in October, 1899, he was induced by the report, the balance-sheet, and their remarks, to increase his holding from 812 shares to 2,012, and that he subsequently, in 1900, increased this by a further 900 shares, on reading the report of the meeting.

Mr. Albert Edward Flowers also gave similar evidence.

Mr. Herbert H. Peppercorn, solicitor, and managing clerk to Messrs. Collier, Bristow, and Co., 4, Bedford Row, examined by Mr. Avory, said his firm were solicitors to the late Lord Dufferin, and now were solicitors to his executors. He produced a letter of October 19, 1899, from Mr. Whitaker Wright, to Lord Dufferin, with an enclosure, headed London and Globe, containing notes of the speech to be made by Lord Dufferin, as the chairman. Those documents were found among the papers of Lord Dufferin. He also produced pencil notes headed London and Globe, which appeared to be notes for the speech of the chairman at the meeting of December, 1900. Witness also produced a letter of March 15, 1899, from Mr. Whitaker Wright to Lord Dufferin in these terms, after a reference to the defendant's illness:—"As to the Standard (Exploration Company), pray do not worry. I want to make a success of that issue and to make it a signal for a bull market in our things. The moment has not arrived. Lord Loch is making a great mistake to fidget about it, as it can do no good. I will bring it out in good time, and at the right time. Everything is going our way at present. I can see a most successful year—all our money back, with a profit from New Caledonia of course included. I cannot do everything, and if the other directors agree with Lord Loch, I am quite willing to retire from my position, or even from the company. . . I can only bear a limited amount of work at present. When my colleagues fidget it only adds to my burden."

Mr. Avory: We also produce a letter of July 12, 1899, from the defendant to Lord Dufferin, stating:—"The Globe books should close in October. After due provision for depreciation we can declare a dividend of 10 per cent. About a month after the Globe meeting we should hold the British America Corporation meeting and pay a like dividend. Before then, however, I hope we shall be able to issue the West Le Roi." Another letter of October 9, 1899, contained this passage:—"The Globe balance is excellent. The profit shown is after deducting £500,000 from market value." I put that in for the purpose of showing that in 1899, as in 1900, the shares were represented to be put down at their market value.

In answer to Mr. Muir, witness said the notes were found in Lord Dufferin's possession. The notes referred to in the defendant's letter were preserved apparently intact.

Several witnesses were then called to explain the methods by which the Standard Exploration Company had borrowed the money which it had paid to the London and Globe Finance in September, 1899, and after their evidence had been taken, the hearing was adjourned. On Tuesday nearly the whole of the sitting of the Court was occupied with the examination of Mr. Arthur Russell, the senior examiner in the department of the Official Receivers in Companies Liquidation, and at the conclusion of his evidence the Court adjourned until September 1, though no further progress will be made until September 15. Owing to the pressure on our space we are compelled to hold over the details of Mr. Russell's examination until next week.

MINING NOTES AND NEWS.

A dreary account came to an end on Monday last, and the generous, noble manipulators of the market went out of their way for once to let speculators off lightly. When the market opened up flew prices like a flock of scared birds, and what is more, they actually stood aloft for an hour or so, until prices were made up, and then they came flopping down. Accordingly, making up prices made quite a presentable exhibit, and rejoiced the hearts of the speculators for the rise, it has been so long a time since they had no heavy differences to face. As usual, the account to be carried over was of small dimensions, and charges were anything but onerous. On Gold Fields, East Rands, Rand Mines, and Modderfonteins money could be borrowed at from 4 to 5 per cent., a slightly higher rate being exacted on Barnato Consols, and Johnny's Investment. The general contango was no higher than 6 to 8 per cent., whilst Chartered and De Beers were continued at 3 to 5 per cent. and less. The charge on Rhodesians was about the same as on Kaffirs. West African and Egyptian speculators were not so favoured, lenders asking for 7 to 8 per cent. on the former and 7 to 9 per cent. on the latter. In the Westralian section the general rate was also 7 to 9 per cent., but Golden Horseshoes, Lake Views, and one or two others were continued at a charge of 5 to 7 per cent.

Kaffir making up prices were mostly in favour of holders, many of the advances being substantial, such as 3/8 in Crown Reef, 1/2 in Northern Copper, 7-16 in Modderfontein, 3/8 in Angelo, and Anglo-French Matabeleland, 5-16 in Cason Block, Rand Mines, Knight's, and Cinderella Deep, and 1/4 and less in numerous others. Tanganyikas were conspicuous with a further fall of 1 1/2, whilst Ferreira made up 3/4 lower, representing the dividend deducted, and Bonanza 11-16, of which 5/8 represents the dividend. West Australian shares showed few changes, but there were fractional gains in Cosmopolitan, Sons of Gwalia, and Northern Terrors, and a loss of 3/8 in Golden Horseshoe. West Africans, Egyptians, and miscellaneous likewise generally made up fractionally lower, with the exception of Rio Tintos, which gained 2 3/8 in the fortnight.

For new time business was on the customary minute scale. Prices quickly fell from the heights to which they were suddenly manipulated in the early morning, but at the close gains of 1-16 or so were scattered here and there. Dealers spoke hopefully of labour prospects. They had evidently read eagerly the evidence tendered at the sittings of the Labour Commission, and came to the conclusion the report must be in favour of the importation of Asiatic labour.

Monday morning's papers also contained brief extracts from a letter written to the "Volksstem" by General Botha, warning his fellow-countrymen against agents, who, he says, are unlawfully using his name to convene meetings in support of the introduction of Chinese labour, and thus entrapping Boers into passing resolutions in favour of such labour. He regards the question as the most serious South Africa has ever had to face, and is, perhaps, fraught with the greatest disaster, a warning which people in this country would be wise to take seriously to heart. "The mines which want the Chinese want to place the responsibility for any possible disaster upon others," which is perfectly true. He finally advises his countrymen to have nothing to do with the matter until the report of the Labour Commission is published, when the Boer leaders will convene meetings to consider the matter fully and express their opinions thereon.

On Friday last a meeting was held at the Simmer and Jack mine to discuss this question, and it is said miners were present from several other mines. Similar meetings were also held at the Robinson, Primrose, and Glen Deep mines, at all of which resolutions were passed in favour of the importation of Chinese. A White League meeting, held at Heidelberg, "at which several of the speakers were Dutchmen, unanimously passed a similar resolution." Again, some Lydenberg Boers held a meeting at Boksburg, "and deputed General Ben Viljoen to advocate on their behalf the importation of labour from China." Believe all that if you like.

But the market received a blow on Tuesday in the answer given by Sir Arthur Lawley to the deputations that waited upon him from the Chamber of Mines and Chamber of Commerce, who, as we said in our notes of last week, asked that the contemplated new railway construction work might be postponed in order that there might be more natives available for the mines. Sir Arthur says he cannot accede to such requests, and, says the cable, "this news has been received with consternation in mining circles." It was received with something akin to consternation here, for prices were immediately banged. After reflection, however, the market came to the conclusion that it was really more of a "bull" than a "bear" point, as it made it the more certain the mines must have Chinese, so prices were lifted up a trifle. The Johannesburg correspondent of the *Financial Times* cables that a meeting is to be held of the various groups to discuss tentatively arrangements for the importation of Asiatics, and to place the whole matter on a business footing. "It is also proposed to make arrangements to embark Celestials, and, should the Legislative Council refuse permission—which is, however, deemed improbable—the industry regards the expenditure incurred, which might amount to £50,000, merely as a matter of insurance. The idea is fully to pave the way for the importation of Chinese, and to enter into all the necessary arrangements. If permission be given it is considered that the first arrival of imported labour is possible in January next, but it is feared that if no solution is reached previously certain groups of mines will be compelled to hang up stamps, as the labour returns for August are unsatisfactory." If the mine bosses do not have their way, and have labour over which they can exercise despotic control, we may be sure they will do something desperate, no matter who may suffer. The labour supply is in-

creasing month by month, even if it be slowly, and there would be no justification, therefore, but only an act of vengeance on the part of unscrupulous men, to hang up any stamps.

A brief cable reports the gist of the evidence given before the Labour Commission on the 25th inst., by Generals Delarey and Cronje. Both asserted emphatically that the supplies in the country are ample, but considered the efforts of the Native Labour Association futile to meet the needs of the present occasion. This is supported by the evidence of Mr. Perry, the chairman of the Association, of which a summary is given in an article elsewhere, though probably this gentleman would be the last to admit it. He showed how various districts are closed to the Association. Why have the Association not made efforts to have them opened? General Delarey said the old Government had no difficulty in the matter, and pointed out that when natives were required officials were sent out with requests to the chiefs for such labour as was wanted. General Cronje endorsed this, and averred that unless the present Government make direct representations to the chiefs no increase in the supply of native labour can be expected. Again we ask, why have not these direct representations been made? Because the mine bosses have made up their minds to have Chinese, who will work for lower pay, and who cannot run away, and if they cannot have the slaves by fair means they are quite prepared to resort to foul.

An interim dividend of 4s. per share, or 20 per cent., has been declared by the directors of the Durban Roodepoort Gold Mining Company, but it has not helped in any degree to stimulate business.

The other sections of the market can again be dismissed in a few words, for nothing that can be called business has been transacted in any one of them. One or two Westralians have hardened slightly, but the majority have remained stationary from day to day. West Africans, where they have changed, have receded. A blow to this market has been the progress report for June of the celebrated Wassau, the mine upon which the entire section bases its hopes of future activity. The figures show unmistakably that the reefs are not only getting narrower, but poorer in depth, and are consequently discouraging. In the No. 4 level the average value was over 24 dwts. per ton, and this has gradually deteriorated until at the sixth level the quality is no higher than 10 dwts. per ton. The question shareholders will put to themselves is:—"Does this indicate a pinching out of the reefs in depth?" The manager anticipates some such questions, for he says, speaking of the north drive in the 6th evel, where the reef averages 13 dwts., "there is every appearance of a fault in the present face, and it may well be that after passing same a better body of reef will be encounterd." He thinks the south drive "may shortly be expected to read a good ore chute, opened up at the above level," and he is delaying the starting of the mill until these expectations have been verified.

Egyptian shares have tended downwards, Indians have, as usual, been steady, Etruscans are weaker, and Rio Tintos have again moved upwards.

Buluwayo Estate and Trust Company.—Another Rhodesian amalgamation is in prospect. The Buluwayo Estate and Trust Company is a concern that is trying its best to toddle along without piling up too heavy losses, a task that needs considerable mental ingenuity in these days. At Wednesday's meeting the chairman gave utterance to the following interesting and lugubrious opinions:—"I make no secret of my belief that the assets of this company would do far better if they were amalgamated with some other interests of the same class. With this in my mind I have been trying to formulate, during the past twelve months, a number of schemes for amalgamating Rhodesian companies of the same nature as ours. I am sorry to say that none of these have borne fruit up to the present time, for a reason that you will probably understand. Large blocks of real estate and mining estates are comparatively of little use unless they are supported by substantial sums of working capital. Well, we have not thought there was much virtue in mere amagamation without cash working capital, and when we have devised a scheme which has had attached to it some proposition of obtaining working capital, we have found that the feeling in the market has been too much against putting money into Rhodesian companies under present conditions. I am afraid that state of mind will continue so long as the markets remain in their present condition; but as soon as South African markets do revive we shall make it our business to put some scheme before you of combining with some other companies of the same nature and obtaining a substantial sum of working capital—say, at least, £50,000 to £100,000." So the shareholders have something very pleasant to look forward to. Their bank balances have grown to unwieldy proportions of late, and it would be advisable to reduce them lest they become a little too burdensome.

Mount Morgan Gold Mining Company.—During the twelve months to the end of May last this great gold mine produced 143,585 oz. of gold, being 4,044 oz. less than in the previous year, and 11,274 oz. below the average output to date. This realised £565,268. In addition copper yielded £2,673, interest £546, rent £425, the gross revenuee, with smaller sums, totalling £649,113. Expenditure absorbed £317,308, and dividend duty and royalty £20,477, and out of the balance £275,000 was distributed, of which £125,000 was a special dividend, on the company's £1,000,000 of capital, being an aggregate of 27 per cent. The total amount of all ore treated was 262,919 tons, being 29,666 tons more than in 1901-02, and 154,021 tons more than the average per annum treated since the formation of the company. 51.84 per cent. of ore put through during the year consisted of the more refractory ore taken from the lower levels of the mine, which was put through the mundic works. This is the first year in which the amount of this kind of ore has exceeded the oxidised ore, the proportion in the year previous being 43.60 per cent. mundic and 56.40 per cent. oxidised. The average grade of all the ores was 11.69 dwts., equal to 46.51 shillings, showing a decrease in value of 6.43 shillings per ton and a decrease of 70.49 shillings on the general average of all ore put through since the formation of the company. "The value of the ore," says the metallurgical engineer, "varies between pretty wide limits from time to time in different parts of the mine, and it has been found advisable to mine and treat pretty large quantities of a grade that leaves barely any profit, as this ensures the winning of ore of better grade that would be otherwise missed. This policy has been very successful during the last six or eight years in opening up better grade ore, and reducing the cost of prospecting. Of late, a very small reduction of cost renders a comparatively large amount of ore of lower grade available, and economy is consequently of the greatest importance, as a small increase of cost would narrow the scope of operations and a small decrease would widen it very considerably." A credit of £36,328 is carried forward, and, as usual, the company issues a good balance-sheet.

Dolcoath Mine, Limited.—The report of this Cornish tin mining company for the half-year to the end of June states that for the first time in its history there has been a serious retrogression in the quantity of ore crushed, some 4,396 tons less than in the previous half year. On the other hand, the quality improved, from 38.28 lb. per ton to 40.39 lb., whilst the price of black tin averaged £80 3s. 6d., against £72 8s. 4d. The general result was that the amount realised from the sale of the tin was greater by £4,535, at £69,388, so shareholders need not bemoan very loudly over these results. Including receipts from other sources, the gross income was £69,762, and as expenditure took £53,648, the profit was £16,114, compared with £12,039, in the preceding six months. Out of this the directors have written off £2,717 depreciation on machinery and plant, £709 on loose tools, and £4,500 off mine development, aggregating £7,927, and leaving a credit of £8,766, after adding the balance brought in. Accordingly, the directors propose to declare a dividend of 6d. on the fully paid, 4½d. on the 15s. paid, and 3d. on the 10s. paid shares, at the rate of 5 per cent. per annum on the share capital. This will require £7,756, and leave £1,010 to be carried forward. The company's financial position could do with some propping up, as liabilities are heavy at £12,264, against cash £7,760, stocks £4,237, and debtors £142. The dividend alone will absorb all the cash. The directors say they have been in negotiation with Mr. Basset on the subject of his dues, but an unfortunate delay has occurred in his arriving at a decision owing to the illness of Mr. Forster Brown, whom he wishes to consult. Pending this decision Mr. Basset is prepared to make an allowance, regarding which further discussion is proceeding.

Penhalonga Proprietary Mines.—The directors of this Rhodesian company have been tardy in issuing their report and accounts to the end of 1902. Here it is at last, however, and all the more precious for that. It only takes a minute or two to read, for the directors apparently have nothing to say worth saying. Shareholders will learn from it that the capital remains the same at £275,000, which is a blessing in these days of innumerable reconstructions and fresh capital issues. Nevertheless, their satisfaction will be modified on hearing that the directors borrowed approximately £8,500 towards the erection of the 40-stamp mill and plant, and that arrangements have been made whereby "such further funds as may be required for this purpose will be forthcoming." They do not say with what parties they have made these arrangements, nor upon what terms, and probably the shareholders will not be curious to know. "For the present," they add, "your directors have decided not to proceed with the proposed railway from Umtali to the mine, in view of the fact that sufficient transport is obtainable; the board will, however, again take the matter under consideration as soon as crushing commences and returns are obtained from the mill." It appears that crushing commenced on the 17th inst., but that returns are not to be expected before the end of September. The total ore reserves at the end of December were 260,000 tons in the western section, and 27,500 in the eastern section. In addition to the loan above-mentioned the company owes £2,081, and has £1,756 in cash, with debts to the amount of £865. The revenue during the year consisted of £165 interest on loans, £64 from transfer fees, and £20 from rent. Accordingly, after allowing for outgo, including £1,928, written off machinery, plant, and buildings, a debit balance of £6,237 is shown, making an aggregate debit at the end of 1902 of £14,681.

Nerchinsk Gold Company.—At the last general meeting of this company the directors intimated they were taking steps with the object of obtaining an improvement in the terms of the concession, dated January 31, 1900, granted by the Czar's cabinet to M. Perschine, and recently transferred to this company. It was explained that when Lord Dunmore and Mr. Whamond were in St. Petersburg they experienced considerable difficulty in inducing the cabinet to permit the transfer of the concession from M. Perschine to the company, and that it would have been futile for them under such circumstances to have endeavoured to obtain any modifications in its terms. The company thereupon sent out a staff of engineers to the property, who proceeded with the work of exploration. The directors now intimate in a circular to the shareholders that they have at last succeeded in their objects, and "are gratified to be able to inform the shareholders that the company has been met by the Cabinet in the most liberal manner." The modifications include a reduction in the deposit to be made with the Cabinet against the payment of the minimum annual revenue from £10,600 to £5,300. It is also explained that "the original deposit made by the old company was forfeited to the extent of £9,000, in respect of the unpaid revenue prior to and including 1901, and in terms of the concession this amount had to be made up by the new company. The amount now payable in

this connection is consequently reduced to £3,700." The outstanding minimum annual revenue payable for the years 1902 and 1903, amounting to £19,100, has been entirely remitted. The tax on gold obtained from alluvial working, which was originally fixed at 15 per cent., and 12 per cent., according to the yield of the gravel worked, has been reduced to a uniform rate of 8 per cent., whilst the tax on gold ore, which was originally fixed at 10 per cent., has been reduced to 6 per cent. These are doubtless important concessions, and may even help to tempt the shareholders and the public to subscribe the working capital. The past holders and the public to subscribe the working capital. This is a reconstruction in 1901 of the Siberian Goldfields Development Company, which was registered in 1900, with a capital of £1,000,000. The present company has increased this by another £100,000, so huge profits will have to be earned to pay dividends upon it. But shareholders need not trouble their heads about dividends for years to come. The directors have now authorised their consulting engineer to increase the staff in Siberia, "in order that the value and extent of the ore bodies which have been located may be ascertained at the earliest possible moment." Thus it means years of development work, even under the most favourable conditions, before dividends are possible. They have also decided to forward a ten-stamp battery, "so that no delay may take place in commencing crushing," but what can such a small mill do towards earning dividends on a capital of £1,100,000?

Great Fingall Southern Blocks.—Although this West Australian Company was formed in 1901, they are still energetically boreholing the property "with the view of cutting the Great Fingall Reef at a depth of 1,050 ft." A circular has been issued stating that at a depth of 676 ft. a reef 12 ft. in thickness was met with, showing a fair quantity of mineral, and assaying 3 to 4 dwts. of gold per ton. There is nothing, however, to excite ecstacy in this, for 3 or 4 dwts. will not leave much to divide amongst the shareholders; on the contrary, it should mean certain loss. However, it is undoubtedly a great achievement to find gold. The bore then passed through 23 ft. of country rock, and at 711 ft. met with another reef, 23 ft. in thickness, slightly mineralised, and assaying 1 to 2 dwts. to the ton. The conclusion arrived at is that "it is evident now that the reefs referred to above are the Great Fingall Reef, apparently divided into two sections, and that it has changed its course to a more southerly direction." The directors have, therefore, given instructions to stop this bore, with a view of putting down another further south to trace the reef in that direction, in order to fix a site for sinking a shaft. So a shaft has yet to be sunk, and levels will have to be driven before profits can be so much as thought of. The directors consider—and this is not really astonishing—that "no great importance must be attached to the assays, as the core is less than 2 in. in diameter; the important fact is that the Great Fingall reef system is continuing into this company's property"; whilst the manager says:—"I would remind you that the above values are not necessarily a true criterion as to the true value of the reef, as the bore might just have missed quartz of greater value." There is an old aphorism that "a miss is as good as a mile," and the truth of it has been proved hundreds of times in the case of mines, where the innumerable misses have had tragic consequences.

TRADE AND PRODUCE.

Wheat.—The harvest prospects grow daily worse. Rains have become more general throughout the kingdom, and in many places where the corn has been cut the dry interval has not lasted long enough to allow of its being carried away. In others the fields are so laid and twisted that the costly process of hand reaping has to be employed, making not only a late and poor harvest, but an expeensive one as well. At present very little English wheat either old or new is on the market, and any of the new crop that has been offered is in poor condition. Farmers deliveries for the week were 17,542 qrs., averaging 29s. 9d. per qr., imports from abroad 461,490 qrs., against 434,376, while "Dornbusch" estimates the quantity on passage at 2,085,000 qrs., against 2,110,000 last week. As during last week the market has been more affected by weather reports than cables, the lower the barometer the firmer the tone, and prices naturally have hardened. Buyers, however, have not shown any desire to purchase freely, and in the cargo market singularly apathetic. American markets have fluctuated a little but closed steady, a bearish tendency disappearing on poor reports of foreign harvests, and the strength of the Western markets. Bradstreet estimates the supplies in sight east of the Rockies at 21,252,000 bushels, against 21,259,000 in the previous week, and 31,558,000 last year.

Wool.—Where raw wools are principally dealt with cheerfulness abounds, and business steadily increases. Cross-breds in all grades change hands in large quantities, merinos, if no longer in such favour as earlier in the year, are still high priced, and English produce gains ground every day. So much cannot be said for the piece trade, and manufactured article. Prices for one thing are difficult to obtain at a rate proportionate with the high prices of wools, and for another the bad weather has had a disastrous effect. Yarns have been fairly active, and spinners have put up their rates within the last week or so, and are adopting an independent attitude in their dealings with foreign merchants. Exports in piece goods are rather dull, South Africa, Canada, and Australia continue to send substantial orders, but trade with the United States is almost at a standstill, and the Continental and Chinese markets are inactive.

Linen.—Hopes of a good autumn season still buoy up the market, but until the middle or end of September no great increase in business is looked for. Meantime the healthy firm tone is well maintained, medium drills, household linens, brown power looms working off well, and dress goods still attracting a great deal of attention. Unions are as uncertain as ever. In cross-channel and export trade there is nothing fresh to note, the former being about up to the usual average, and the latter, though gradually improving, it not yet up to expectations. More particularly in the United States where the independent attitude of Scotch and Irish merchants and the high prices are having a restraining effect. The yarn market has been livelier of late, and prices noticeably hardening.

Cotton.—Prices have advanced this week, as the latest advices of the growing crop in the States are unfavourable. Heavy rains and lack of sunshine have affected the central and eastern districts, while in Texas the damage done by the boll weevil is reported to be extensive. In addition the reports from Alexandria concerning the Egyptian crop have also been unsatisfactory, and all round the prospects for the autumn are very black. Spinners of Egyptian yarn are in an unfortunate position, since owing to the poor demand they have been unable to raise their prices, and, Sir Jacob Behrens and Sons state, are now losing about 1d. per lb. Most of the enquiries are for late delivery, and a considerable business is being done for December, and the beginning of the year, but some of the mills will in the meantime have to close unless the new cotton arrives. American yarns are even worse to buy than Egyptians, and production is now so much reduced that stocks are non-existent. However, prices keep firm, as the demand, although not increased, is nearer the level of the restricted output of the mills. In cloth there is no change, the position remaining much the same as last week. India continues to offer, but for the most part at rates which manufacturers cannot accept.

The weather continues to be the dominating factor of the American market, and with unfavourable reports coming in nearly every day, prices showed a tendency to rise. Occasionally market operations would cause a slight fall, but almost immediately the loss was recovered, and quotations put a few points higher.

At the close of the Liverpool market on Friday spot was steady, the prices being 6.86d. for American middling, and 8 1-16d. for Egyptian fair. Futures were steadier even than spot, August being quoted at 6.64d., August-September, 6.54d., and October-November at 5.67d.

Iron and Steel.—Advices from the States show that the pig-iron market there is easier, a considerable reduction having taken place in the output. This news has induced Scotch consumers to hold off the Glasgow market, which during the week has been comparatively idle. Purchasers are hoping for a fall in prices, but whether it will come is doubtful, as the market, though quiet, continues firm. Quotations for both Scotch and Cumberland warrants are again little more than nominal, the actual business done being confined to Cleveland, for which 46s. 10½d. is asked, delivered in seventeen days. In the finished iron and steel trade there has been a small though steady enquiry, and most of the firms are fairly well supplied with orders. The outlook, however, is not very promising, as when the present work runs off there is little coming forward to take its place. Were it not for Government orders shipbuilders would be very miserable, as orders for merchant vessels are few and far between. In the north of England, although the trade in pig-iron is better than it was last week, it can hardly be described as flourishing. Manufacturers of iron and steel, especially those turning out shipbuilding material are severely affected by the depression in the yards. Owners with freights so bad do not see the force of building new ships, while those they already have are earning nothing, and, therefore, refuse to be tempted by the very low rates offered by builders. In the pig-iron trade makers are looking forward to the autumn when they expect to do a brisk business both on home and continental accounts. Meanwhile the variations in the price of warrants has been very small, the quotations since June varying between 47s. and 46s. At Barrow the hematite pig-iron trade keeps steady, most of it being done on home account. Steel makers also are busy, especially those engaged in heavy works, but shipbuilders are short of work.

Coal.—London merchants continue to look gloomily on the autumn prospects of trade, and Lancashire depression shows no signs of lifting. Trade conditions are not conducive to a brisker season, but generally speaking, there appears no great cause for complaint. Prices keep firm, even in house coals, production being limited as much as possible, and the beginning of the month is expected to see an advance in this commodity. Steam coals are as brisk as ever, contract rates of 9s. in the Sheffield districts are exceeded by from 3d. to 9d. per ton in the open markets, and in Cardiff the best Admiralty coals have touched 16s. Various rumours of large contracts for steam coals with foreign Governments are current, but as yet no definite arrangements have been come to. Large shipments, however, of patent fuel have already been made from the Welsh ports to France, Germany, and Italy. Scottish shipments show an increase of 20,000 over last week, and generally throughout the kingdom have been better.

Copper.—In the early part of the week prices slipped back considerably, what demand there was being freely met. Later the market steadied, and prices hardened, but the improvement was only temporary, as there is no real strength in the position over here, and sellers are in the majority. Friday's close saw business quiet, with £58 7s. 6d. asked for cash, and £57 17s. 6d. for three months.

Tin.—Prices have fluctuated considerably during the week, as Singapore on the whole showed a tendency to put values down. Occasionally there were rallies caused chiefly by bears coming in to cover and temporary improvements reported from Singapore On Thursday pricese hardened in spite of a decline both in th East and in the States. The improvemenet, however, was not main

tained, and Friday saw the market easier, with cash at £125 5s., and three months at £123 10s.

Tea.—The state of this market is very satisfactory for the moment. Most of the tea supplied is bought up, and prices, more particularly in common grades, show a hardening tendency. 30,400 packages of Indian tea were offered this week, containing some good liquoring teas from Assam and Darjeeling, and the average price obtained was 8⅞d. per lb. against 8¼d. last week. Ceylon auctions comprised 31,200 packages, which were well competed for at ruling rates, the average for the week being the same as last—7⅞ per lb. A fair number of export orders for useful medium teas helped to maintain the market. Though at present supply about equals demand, a word of caution is uttered by Messrs. Gow, Wilson, and Stanton, in their circular to the effect that during the next few months the quantities of Indian tea arriving will be greatly in excess of requirements, and the hope is expressed that growers will endeavour to regulate supplies and not make the quantities put up for auction dependent on the vagaries of ships' arrivals as appeared to be the case last year. Buyers would have more confidence in holding stocks if supplies were more equally proportioned.

Sugar.—With more encouraging reports from America our market continued firm, with prices well up to last week's level, and even better in the case of some grades. Refiners operated to a fair extent in beet, and for prompt delivery were willing to pay slightly higher prices, while dealers bought moderate quantities of granulated. The favourable advices about the beet crop has, however, caused consumers to hesitate in making purchases for future deliveries. Mr. Czarnikow, nevertheless, considers that as the consumption is proceeding satisfactorily, and distributors are not well provided, a steady demand will continue for some time to come. During the week the prices of beet were steady, August moving from 8s. 5d. to 8s. 6d., October-December from 8s. 11½d. to 9s., and January-March from 9s. 0½d. to 9s. 2d. A combination is reported to have been formed among the German producers for the purpose of restricting the output, and regulating prices from September next until February, 1904, but how the conflicting interest of producers of raw and refiners have been reconciled is not disclosed. America during the week again put up the price of raws, both near and future, though dealings were chiefly in the former. Stocks are down to 251,000 tons, the week's landings at the three ports being only 22,000 tons, while meltings reached 49,000 tons.

Company Reports and Balance Sheets

*** *The Editor will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Bank of Victoria.

Profits of this bank fell off a little during the six months ended June 30, compared with the corresponding half of last year, the total being £70,634 against £72,547. Balance brought forward, too, was smaller, at £14,360, and the sum for appropriation shows a drop of £2,856 to £84,995. Current expenses were almost the same, at £37,983, and after deducting bank note tax, £45,893 is available for distribution, so the directors provide income-tax on profits for the year 1902, preference dividend, and a payment of 3½ per cent. per annum on the ordinary shares, but nothing is placed to reserve, against £10,000, a fact which permits of an increase in the balance forward from £9,636 to £14,810. Notes in circulation, £110,458, and bills in circulation, £453,397, show further small contraction, Government deposits are much the same at £346,826, and other deposits are a little lower at £4,156,365. Coin, bullion, and cash at bankers have further fallen to £939,295, and the total cash assets are more than £100,000 lower, at £1,433,467. Bills discounted are £45,890 up, at £4,899,626.

Commercial Banking Company of Sydney.

This bank's profits rose smartly in the six months ended June 30, compared with the corresponding period of 1902. Their total was £65,793, compared with £58,406, and as the sum of £26,847 brought forward also showed improvement, the total for disposal comes to £92,639, an advance of £10,095. So after providing rebate on current bills, a dividend of 5 per cent. for the six months is again paid, and £15,000 against nothing placed to reserve, at the cost of a reduction of £4,777 only at £20,615 in the amount carried forward. At the date of the balance-sheet the bank was responsible for a note circulation of £460,174, and had deposits and other liabilities of £11,384,272, besides bills in circulation of £770,833. The deposits, etc., are £580,273 less than in the preceding year, and we note a considerable fall to £2,592,357 in the coin, bullion, gold in transit, and cash at bankers. Investments, bills receivable, etc., make up the total of the "cash assets" to £5,085,386, and bills discounted, advances, and other debts due to the bank are a little bigger, at £9,185,532.

Forest Hill Brewery Company.

This company favours its shareholders with an interim report unaccompanied by a statement of accounts, the period covered being six months to June 30. The directors consider that the result of the trading is satisfactory, having regard to the continued depression of the trade. Sales show a slight decrease, compared with the corresponding period of 1902, and profits have shrunk from £8,104 to £7,763. After providing for interest, repairs, and bad and doubtful debts, the balance over is £6,569, to which a sum smaller by £1,000, at £2,700, being the amount brought forward, is added, making £9,269, against £10,705. Nevertheless the directors again propose a dividend at the rate of 10 per cent. per annum on the ordinary shares carrying forward £1,436 less, at £6,469.

Floating Dock Company of St. Thomas.

This company's dock was employed for 113 days during the twelve months ended July 30, against 108 in the preceding year, and the receipts swelled visibly. From all sources they were £6,453, compared with £5,580, and after providing expenditure of all kinds, the net balance is £2,981, or an advance of £805. This enables the directors to increase the dividend on the first preference shares by 1¾ per cent. to 4¾ per cent.—the seconds and ordinary were entirely wiped out under the capital reorganisation—with £435 to reserve, and the balance of £138 to provide income-tax. The balance-sheet is quite strong looking, for this company, because the reserve comes to £731, and the renewal fund to £1,045, both separately invested, and cash stands at no less than £3,184. Of course, nothing has been written off "dock account" for depreciation, but then we should never look for that.

Martin, Earle and Co.

This business of cement manufacturers has on its directorate Messrs. Vavasour Earle and Harry le Marchant, both of Etruscan Copper prominence. At first sight the display made seems rather dashing, but closer examination removes a little of the gilt. First we note that very heavy amounts have been laid out on capital account, £11,853, having been spent on buildings, wharves, and extension works, and £37,657 on plant and machinery, including renewal, which ought to have been charged to revenue. Other small items need not be detailed, but additions were nearly always in excess of depreciation allowance, and this we judge to be inadequate in most cases. Indeed, the auditors give publicity to the fact that the directors do not consider it necessary to provide for depreciation in respect of leases, buildings, wharves, and extension works, or goodwill, and we note that on plant and machinery the allowance is only about 4 per cent. Now, if the company were possessed of substantial reserves, constantly being increased, this neglect would be less serious, but the board's attitude in this matter is very reprehensible. A year ago the reserve reached the overpowering sum of £3,371, and prudence would have dictated a small dividend, and a substantial addition to the savings. But quite the opposite happens. To begin with, the costs attending the issue of second debentures amounting to £546 were charged to the fund, and then the directors actually take £1,000 in order to maintain a 10 per cent. dividend. We were about to say that if this policy did not cease, it would lead to trouble, but it must quickly come to a natural end, as the reserve now remaining is just £1,824. The balance-sheet otherwise seems fairly satisfactory, as there is a considerable excess of debtors over creditors, cash comes to £20,366, and bills receivable to £3,419. Profits for the twelve months are returned at £52,175 gross, and £35 was received for transfer fees, making £52,210. Various charges altogether drew off £25,752, leaving £26,458 net. This is a decline of £2,377, compared with the preceding year, and as already stated, it was necessary to take £1,000 from reserve in order to keep up the 10 per cent. dividend on the ordinary shares. It is only fair, however, to point out that as it was found advisable to adopt certain further mechanical improvements in connection with the rotary plant, only one half of the projected installation was completed at the beginning of the year, and for this reason the company has not yet enjoyed the benefit of the full increased output. The remainder of the rotary plant will be running in the course of the present year, and if that should mean increased profits, we trust they will be utilised in strengthening the company's position.

MINING RETURNS.

Brilliant Block Gold.—Value of bullion produced at cyanide works, £510.

Brilliant Central Gold.—Crushed 3,105 tons for 3,090 oz.; value of the cyanide bullion £2,540.

British Broken Hill Proprietary.—3,787 tons crude ore produced 699 tons concentrates, which contain 398 tons lead and 18,174 oz. silver.

Camp Bird.—Mill crushed 5,877 tons of dry ore; bullion sales, $170,568; concentrates sales (156 tons), $10,605; deposit in cyanide, 3,880 tons.

Central Chili Copper.—Production of regulus, 273 tons.

Dolcoath.—Tons crushed, 9,134; black tin sold, 141 tons; slimes, 8½ tons.

Chinese Engineering.—12,500 tons.

Mount Lyell Mining and Railway.—Total quantity of 25,501 tons of ore treated, made up as follows:—Mount Lyell Mine, 21,042 tons; North Mount Lyell Mine, 4,459 tons; total, 25,501 tons; also 2,120 tons of purchased ore and metal bearing fluxes. The converters have produced 678 tons of blister copper, containing copper, 670 tons; silver 59,910 oz.; gold 1,848 oz.

New Ravenswood.—Crushed 1,280 tons of ore, value £6,200; 295 tons of concentrates and smelting ore, value £2,950; total £9,150.

No. 2 South Great Eastern.—Crushed 3,300 tons for 3,772 oz.

Ouro Preto Gold.—6,074 tons of ore produced 2,001 oz.

Salisbury Gold.—Output 1,510 oz.

St. John del Rey.—Gold produce, £6,780; yield per ton, .57 of an oz.

Waihi.—17,356 tons crushed, yielding, inclusive of concentrates, £51,577.

WEST AUSTRALIAN CRUSHINGS.

The West Australian market is sadly in need of a stimulant to activity, but such a help has not come in the shape of the monthly return for July. For it shows retrogression, both in quantity and quality. The output fell from 224,026 oz. to 191,691 oz., but it must be borne in mind that the June figures included 26,924 oz., which belonged to previous returns. Thus the net return was 197,102 oz., so that the actual decline during July, which was a longer month, was 5,421 oz., whilst the quality shows a depreciation of 2 dwts. The Lake View Consols intimate that their returns will be calculated on the basis of the "short ton" of 2,000 lb., instead of the "long ton" of 2,240 lb. The object evidently is to bring the comparison into closer line with the Rand mining companies, and it is likely to be adopted by other companies in the future. It will also be seen that several companies publish their returns in fine ounces, and others in bullion, and it is to be hoped all will eventually adopt the "fine" method, as the South African companies do. It will be noticed that the Associated Northern Blocks figures continue to drop away.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Great North of Scotland.—Dividend on the preferred ordinary at the rate of 3 per cent. per annum, and on the deferred ordinary stock at the rate of 1½ per cent. per anum, carrying forward £2,572.

Minneapolis, St. Paul, and Sault Ste. Marie.—Dividend of 2 per cent. on the common stock for the year to June 30 in addition to the 7 per cent. paid on the preferred capital, carrying forward $1,000,000.

BANKS.

Bank of Victoria.—Dividend at the rate of 3½ per cent. per annum, carrying forward £14,810.

Commercial of Sydney.—Dividend at the rate of 10 per cent. per annum, placing £15,000 to reserve, and carrying forward £20,614.

London of Mexico and South America.—Interim dividend for half-year ended June 30 last, of 4s. per share, payable on September 19.

BREWERIES.

Forest Hill.—Dividend on the ordinary shares at the rate of 10 per cent. per annum.

Swansea United.—Interim dividend at the rate of 4 per cent. per annum on the ordinary shares for half-year ended June 30.

MINES.

Brilliant Central Gold.—Dividend of 9d. per share.

Durban-Roodepoort Gold.—Interim dividend on account of 1903 of 4s. per share (20 per cent.).

No. 2 South Great Eastern Gold.—Dividend of 1s. and a bonus of 6d. per share, payable August 28.

Mount Lyell Mining and Railway.—Bonus of 4s. per share, together with final dividend of 3d. per share, payable 21st prox.

Mount Zeehan (Tasmania) Silver-Lead.—Further dividend of 1s. per share on the preference shares for the year ended June 30.

MISCELLANEOUS.

Atlas Assurance.—Interim dividend of 5s. per share on account of 1903.

Bolckow, Vaughan.—Dividend at the rate of 5 per cent. per annum for year ended June 30, less interim dividend paid in March last, carrying forward £45,990.

British Insulated and Helsby Cables.—Interim dividend at the rate of 8 per cent. per annum on the ordinary shares.

Calico Printers.—Dividend of 2½ per cent. for the year ended June 30, carrying forward £38,525.

Carpet Manufacturing.—Dividend of 6½ per cent. on the ordinary shares.

Casebourne and Co.—Dividend equal to 5 per cent. for the year on the £10 shares, and also of 5 per cent. on the £1 shares, carrying forward £737.

Chester Halkyn Mines Drainage.—Dividend for the half-year ended June last at the rate of 9 per cent. per annum.

David Richmond.—Dividend of 7½ per cent.

Farncombe and Co.—Interim dividend for the six months at usual rate of 4 per cent.

Gandy Belt Manufacturing.—Interim dividend on the ordinary shares at the rate of 5 per cent. per annum.

Gloucester Gas Light.—Maximum dividend of 5 per cent. per annum, carrying forward £3,605.

Hadfield's Steel Foundry.—Interim dividend of 1s. per share in respect of the current year.

Hardy Patent Pick.—Dividend on the 7 per cent. preference, 5 per cent. dividend on the ordinary shares, £5,000 to reserve, carrying forward £993.

Herne Bay Water Works.—Dividend at the rate of £5 10s. per cent. per annum on the ordinary stock for half-year ended June 30.

International Investment Trust.—Interim dividend for the half-year ended July 31 at the rate of 4½ per cent. per annum on the preferred stock.

John Moir and Son.—Interim dividend for six months ended June 30 at the rate of 5 per cent.

Lawes' Chemical Manure.—Dividend of 4½ per cent. on the ordinary shares, in addition to interest at 5 per cent. for pre-payment on fully-paid shares, placing £500 to reserve, and carrying forward £1,345.

Nautilus Steam Shipping.—Final dividend of 13s. 6d. per share, making 5 per cent., carrying forward £3,135.

Pyle and Blaina Works.—A final dividend of 2½ per cent., making 5 per cent. for the year ended June 30, payable on September 11.

Robt. Campbell and Sons.—Interim dividend of 2½ per cent. (1s. 6d. per share).

Romano's.—Dividend of 5 per cent., carrying forward £325.

South Staffordshire Water Works.—Dividend at the rate of 6½ per cent. per annum, carrying forward £4,824.

Ulster Steamship.—Dividend of 6 per cent., carrying forward £1,359.

West Surrey Water.—Dividends at the rate of 7 per cent. per annum on the 7 per cent. maximum dividend shares, and at the rate of 8 per cent. per annum on the 10 per cent. maximum dividend shares.

NEXT WEEK'S MEETINGS.

Monday, August 31.

Axminster and Lyme Regis Light Railway.—17, Victoria Street, noon.

Gloucester Railway Carriage and Wagon Company.—Gloucester, noon.

Manufacturers' Trust and Finance.—Cannon Street Hotel, 12.30 p.m.

Middlemass and Son.—Edinburgh, 2.30 p.m.

Tuesday, September 1.

Floating Dock Company of St. Thomas.—Suffolk House, 1 p.m.

North Borneo Trading.—Winchester House, noon.

Wassau Consolidated Gold Fields.—Cannon Street Hotel, 2.30 p.m.

Welshpool and Llanfair Light Railway.—Welshpool, 2 p.m.

Wednesday, September 2.

Buffalo and Lake Huron Railway.—Liverpool, noon.

Car Trust and Investment.—Winchester House, 2 p.m.

New Incandescent Oil Light.—Winchester House, noon.

Thursday, September 3.

Lawes' Chemical Manure.—58, Mark Lane, noon.

Friday, September 4.

Natal and Nova Cruz (Brazilian) Railway.—Winchester House, 2 p.m.

Price's Patent Candle.—Cannon Street Hotel, 12.30 p.m.

RAILWAY TRAFFIC RETURNS.

Foreign.

Argentine North-Eastern.—Traffic receipts for the week ended July 24, $8,875; decrease, $2,387. Aggregate from January 1, $360,212; increase, $9,344.

Assam Bengal (Chittagong Section).—Traffic receipts for week ended July 25, Rs. 35,823; increase, Rs. 5,753. Aggregate from July 1, Rs. 1,13,770; increase, Rs. 5,821.

Assam Bengal (Gauhati Section).—Traffic receipts for week ended July 25, Rs. 9,057; increase, Rs. 3,484. Aggregate from July 1, Rs. 33,223; increase, Rs. 12,853.

Bengal Central Railway.—Traffic receipts for week ending August 1, Rs. 22,726; increase, Rs. 4,339. Aggregate from July 1, Rs. 92,182; increase, Rs. 4,074.

Canadian Northern Railway.—Traffic receipts for week ended August 21, $57,800; increase, $31,200. Total, from July 1, $426,700; increase, $212,700.

Lucknow Bareilly Railway.—Traffic receipts for week ended July 25, Rs. 23,641; increase, Rs. 2,534. Aggregate from July 1, Rs. 79,520; decrease, Rs. 4,432.

Quebec Central Railway.—Traffic receipts for the 3rd week of August, $15,060; decrease, $991. Aggregate from January 1, $430,286; increase, $19,000.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended July 25, Rs. 10,512; increase, Rs. 149. Aggregate from July 1, Rs. 33,533; decrease, Rs. 1,688.

Salvador Railway.—Traffic receipts for week ended August 22, $11,000; increase, $3,250.

White Pass and Yukon Railway.—Traffic receipts for the week ended August 14 amounted to $53,718.

English.

Cleator and Workington.—Gross receipts for the week ending August 22, £1,099; increase, £43. Total receipts from July, 1 £8,033; decrease, £358.

Cockermouth and Keswick Railway.—Receipts for week ending August 22, £1,230; increase, £5. Aggregate from July 1, £8,945; decrease, £513.

East and West Yorkshire Union Railway.—Traffic receipts for the week ending August 22, £389; increase £40. Aggregate from July 1, £2,750; increase, £111.

Liverpool Overhead Railway.—Traffic receipts for week ending August 23, £1,716; increase, £46. Aggregate from July 1, £13,894; increase, £756.

TRAMWAY AND OMNIBUS RECEIPTS.

Home.

Aston Manor Urban.—Traffic receipts for week ending August 22, £557, increase £43; aggregate from July 1, £4,405, increase £178.

Belfast Street.—Traffic receipts for week ending August 22, £2,675, increase £139; aggregate from July 1, £23,218, increase £1,570.

Birmingham and Midland.—Traffic receipts for week ending August 21, £826, increase £29; aggregate from July 1, £6,774, increase £269.

Birmingham City.—Traffic receipts for week ending August 22, £5,140, increase £431; aggregate from July 1, £41,588, increase £2,126.

Blessington and Poulaphouca.—Traffic receipts for the week ending August 23, £57, increase £14; aggregate from July 1, £277, decrease £16.

Bristol Tramways and Carriage.—Traffic receipts for week ending August 21, £4,851, decrease £144; aggregate from July 1, £42,973, increase £1,221.

Burnley Corporation.—Traffic receipts for week ending August 22, £902, increase for week £206; aggregate from July 1, £7,024, increase £1,197.

Dublin and Blessington.—Traffic receipts for week ending August 23, £198, increase £20; aggregate from July 1, £1,431, decrease £15.

Dublin and Lucan.—Traffic receipts for week ending August 23, £139, decrease £32; aggregate from July 1, £1,168, increase £58.

Dublin United.—Traffic receipts for three days ending August 22, £5,234, increase £289; aggregate from July 1, £44,980, increase £6,211.

Edinburgh and District.—Traffic receipts for week ending August 15, £4,304, increase £323; aggregate from January 1, £142,790, increase £18,701.

Edinburgh Street.—Traffic receipts for week ending August 22, £562.

Harrow Road and Paddington.—Traffic receipts for week ending August 22, £287, increase £5; aggregate from July 1, £2,437, increase £53.

Isle of Thanet.—Traffic receipts for week ending August 22, £1,752; decrease, £153; aggregate from July 1, £11,869, increase £55.

London General Omnibus.—Traffic receipts for week ending August 22, £23,123, increase £1,599; aggregate from July 1, £204,546, increase £1,266.

London Road Car.—Traffic receipts for week ending August 22, £7,259, increase £250; aggregate from July 1, £62,597, decrease £2,086.

Rossendale Valley.—Traffic receipts for week ending August 21, £176, decrease £11; aggregate from July 1, £1,499, increase £10.

Foreign.

Anglo-Argentine.—Traffic receipts for week ending July 27, £5,766, increase £1,644; aggregate from January 1, £172,724, increase £38,053.

Barcelona.—Traffic receipts for week ending August 22, £2,485, decrease £122; aggregate from January 1, £77,580, decrease £1,530.

Barcelona, Ensanche y Gracia.—Traffic receipts for week ending August 22, £315, increase £205; aggregate from January 1, £9,657, increase £5,475.

Brazilian Street.—Traffic receipts for the month of March, Rs. 42,144; increase Rs. 936.

Brisbane.—Traffic receipts for the week ending July 8, £2,382, increase £34.

British Columbia Electric.—Traffic receipts from July 1 to June 30, £672,882, increase £95,717. Net earnings £224,347, increase £39,172.

Buenos Ayres and Belgrano.—Traffic receipts for the week ending July 26, £2,893, increase £322.

Buenos Ayres Grand National.—Traffic receipts for week ending July 25, $41,187, increase $2,161; aggregate increase from April 1903, $6,722.

Calais.—Traffic receipts for week ending August 22, £209; increase £8; aggregate from July 1, £1,791, increase £17.

Calcutta.—Traffic receipts for week ending August 22, Rs. 32,361, increase Rs. 7,040; aggregate from July 1, Rs. 258,827, increase Rs. 61,094.

Carthagena and Herrerias.—Traffic receipts for the month of July, £4,307, increase £75; aggregate to July 31, £27,254; increase £3,536.

Lombardy Road.—Traffic receipts for the month of July, £1,356, increase £16; aggregate from January 1, £8,795, increase £144.

Twin City Rapid.—Traffic receipts for the month of June $347,744, increase $37,861; aggregate from January 1, $1,918,653; increase $252,214. Net traffic receipts $178,999, increase $483; aggregate from January 1, $996,281, increase $110,202.

COMPANY MEETINGS.

UNITED AFRICAN EXPLORATIONS.

The annual general meeting of the United African Explorations, Limited, was held on Thursday, August 27, at Winchester House, Old Broad Street, Mr. R. J. Price, M.P., presiding.

The Secretary read the notice calling the meeting and the auditors' report.

The Chairman: I must first apologise for the date of the meeting, which, I am afraid, is inconvenient to some of the shareholders, but there were two reasons for holding it now—one a kind of official reason and the other the real reason. The official reason is that the circular we sent to you in May last promised that the general meeting of the company should be held at the earliest possible moment after the audit of the accounts, and this is the earliest possible moment; but the real reason is that we are about to lose our able secretary for some little time, because he is, as you know, also the managing director of the Nile Valley Company, and he is going out to-morrow to the scene of operations in Egypt, so that we were anxious to get this meeting through before his departure, in case his services were in any sense specially required. The accounts have been in your hands for some days; they are simply drawn, and a few words from me will explain their position. In our balance-sheet we have 65,600 shares as our issued capital, but since the date to which it is made up we have issued, under the option, which you all know of, a further 5,000 shares, so that our present issued capital is 70,600 shares. The item of sundry creditors includes a provision for the income-tax on the profits that we expect to have to pay upon; and, although they are not creditors in the ordinary sense, I have no doubt the Income-tax Commissioners will take care that they share our prosperity to some extent. On the credit side you will see the item of investments. The auditors' certificate has explained that we have altered our Nile Valley holding from the amount at which it stood in our books, which was comparatively small, to the amount at which it appears in the present balance-sheet—that is to say, the sum of £80,346. We have valued the shares at £4 a share for our old shares and £1 a share for the new shares. With regard to the other investments, we have adopted the principle of valuing them at the market price for quoted stock, or at the price at which they stood in our books, but we believe these on the whole represent fair values. The item of loans, advances, and interest is a mere temporary investment of money, and we have written off a certain proportion of our preliminary expenses—some people may possibly think that we ought to have written off a little more—and we show that we do not keep much cash in the office, for it is represented in the accounts by one penny, while our general cash position was a very respectable one. It is indeed a remarkable position, and is due—I will not say entirely to good management, but to a good deal of good luck, because there is no doubt that in our Egyptian investment we were extremely fortunate. The net result, as shown by the profit and loss account, is that we have made in profit practically the amount of our issued capital; and assuming we are right in thinking that our shares are worth as much as we value them at, we have really doubled the value of our undertaking. On the whole, I think you will agree that the results, as exemplified by the balance-sheet and profit and loss account, are of an extremely gratifying nature. Perhaps some shareholders may say:—"That being the case, and as you are showing a handsome cash profit and have a good amount of marketable assets, why do not you distribute a dividend?" Naturally everybody takes that view, and likes to have a dividend, but we have to look forward somewhat, and, although it is obvious that we could distribute a dividend, and possibly without a great deal of inconvenience, still we are ambitious people. The fact that we are not asking you to declare a dividend to-day by no means precludes the possibility or the probability of a dividend later on in the year, or in a comparatively short time. We quite realise the fact that shareholders have not put their money into our company for us merely to look at it, but to return profits, and while they are willing to have a capital profit, they also expect to have an income out of it. We realised that position, we sympathise with the shareholders, and think it to be quite the proper view, but we think we can see our way to give them a large capital profit and ultimately a larger dividend, provided we do not distribute a dividend at the present time. That is the policy of the board. As regards our prospects generally, I would say a word about the Nile Valley Company. The circular we sent took you up to the end of May in the case of the Nile Valley Company. Since that time we have had a fire at the mine. I hope it has not done quite so much damage as we thought when we first got the telegram, but it will cause a large amount of delay in getting our mine really fit to work as a well-equipped affair. A considerable amount of electrical machinery has been interfered with, and although the consulting engineers think we shall still be able to continue our pumping and hoisting, at the same time we shall not be able to conduct the business as satisfactorily as we had hoped until the machinery is replaced. I recollect saying at a Nile Valley meeting, when we had a large quantity of water in the mine, that it was a blessing in disguise. Perhaps you will consider that is a common expression of mine, but I may say that the trial we have had, although perhaps not a blessing in disguise, will not ultimately be very much to our disadvantage. In the first place, the damage is covered by insurance—at least, I think we are fully covered—and there is no doubt that in the hurry of the water coming upon us to some extent our machinery was of rather too diverse a type—that is to say, we had different classes of machinery there, which perhaps had not been exactly planned as a whole. We shall now be enabled to have our machinery, generally speaking, as near one type, as possible and working as a harmonious whole. As regards the working of the mine, I have comparatively little to tell you. I have described the mine so often that you must all be acquainted with what it is believed to be by the professional advisers, and I have nothing to add to what I have said before. We have every reason to believe that the deposit is of a permanent character, and to hope that it is going to be somewhat abnormally rich. If that is the case, then the Nile Valley Company is going to be a very successful one, and we, as half-partners in it, shall get very great advantages from being members of that company. I beg to move, gentlemen, "That the directors' report and accounts be received and adopted."

Mr. F. M. H. Young seconded the resolution, which was unanimously agreed to.

On the motion of Mr. Young, seconded by Mr. C. E. Akers, the retiring directors, Mr. R. J. Price, M.P., and Mr. H. Duncan Christie, were re-elected.

The auditors, Messrs. Jackson, Pixley, Browning, Husey, and Co., were also reappointed.

On the motion of Captain Lapage a vote of thanks was passed to the chairman, and the meeting separated.

LANCELOT FREEHOLD TIN.

The statutory general meeting of the Lancelot Freehold Tin and Copper Mines, Limited, was held on Monday, August 24, at the offices, 1 and 2, Bucklersbury, E.C., Mr. F. E. Clotten presiding.

The Secretary read the notice convening the meeting, and also the directors' report.

The Chairman: This is the statutory meeting of the company which is held in compliance with the Companies Act. I propose first to give you some explanation as to the company's financial position and then give you some particulars as to the progress of the property taken over from the syndicate. The company was registered on May 24 to acquire, as a going concern, the assets and the liabilities of the Lancelot Tin Mining Company. The company was reconstructed, not as usually the case in order to get rid of its liabilities or to raise fresh capital, but simply to enable the Lancelot concern to be carried on by an undertaking capable of meeting Stock Exchange requirements. So far the company has not applied to the public for funds, all the capital having been supplied by the present shareholders, the bulk of whom are in Germany, but recently some English shareholders have taken an interest in the concern. According to the balance-sheet, the assets of the old company amounted to £25,757 on December 31 last. However, the value of the property is in consequence of great developments increased so materially that the old proprietors received six £1 shares in the new company for every £1 share they held in the old company. To bring the mine to its present stage of production £17,766 has been expended, but within the first eight months of production ore to the value of £11,000 has been raised, so that the actual cost of bringing the mine into its present producing stage has only amounted to £6,658. The whole cost of development up to date has been defrayed by the profits on the production up to date. The Chairman then gave a short history of the syndicate, and of the properties it had acquired which consisted of the Lancelot lease, the so-called Newellton freehold, and the Magnum Bonum lease. Continuing, Mr. Clotten said the cost of producing a ton of tin ore has varied in 1902 from £23 to £28 a ton laid down in Europe; but in future the cost will not exceed £25 on an average, as by means of a tramway connecting the mines with the mill and by other economies in the cost of production the expenses will be materially reduced. The price realised from the ore varied from £40 to £60 per ton, according to the price of Straits tin in London and assay results; but on the average a profit of at least £25 a ton may in future be expected for the entire production, even if the price of Straits tin should go down to £100 a ton, which does not seem at all likely. Lancelot tin ore being of a very impure, complex and refractory nature, it cannot be smelted or treated for its metallic contents in Australia, and has to be brought over to Europe for special treatment. With the exception of about 40 tons of ore which were sent to England for experimental treatment, the entire production has so far been treated in Germany, and up to the end of March, 1904, the entire production will be treated there. After March, however, the company will treat ore at its own metallurgical works. The Lancelot ore, containing a considerable amountof bismuth, which is recovered, the company has become, practically speaking, the arbiter of the bismuth market, as the cost of producing the bismuth from the by-product is so small that the richest bismuth mine cannot possibly compete. I may mention that the Lancelot mine has been opened up by three shafts sunk some 300 ft. apart, and No. 1 and No. 2 have reached a depth of 180 ftfl and No. 3 is 150 ft. deep. All these shafts are connected at the 150 ft. level. During the last few months the railway has come within eighteen miles of the mine, and in that way the cost of transporting the ore and machinery has been reduced to the nearest port, Cairns, by 30s. a ton. When the old Lancelot Company took over the property there was not a drop of water in the place, and, of course, no ore-dressing plant could be worked without water. The first necessity, therefore, was to construct a dam. The first manager of the company built a dam in 1890, but the floods of the spring of 1891 carried it away, and the consequence was that we decided to construct a massive masonry dam in the winter of 1902, and that dam has been able to withstand the most terrible floods North Queensland has experienced during the last six months. The company owns the sole right of the water of the Dry River for three miles up the valley, and in that way practically controls the whole water for over ten miles. The dam, when full, holds about 80,000,000 gallons of water, sufficient to keep a 40-stamp battery going. After comparing the Lancelot mine w— similar concerns the chairman concluded his speech by congratulating the shareholders upon the richness of their mines.

A vote of thanks to the Chairman, on the motion of Mr. May, terminated the proceedings.

BOOKS BY A. J. WILSON,

Editor of the "Investors' Review."

Price in cloth, 1s. 6d. net (post free, 1s. 8d.); paper over, 1s. net (post free, 1s. 2d.).

Practical Hints to Investors.

"The perusal of Mr. Wilson's handy book will repay those concerned in the matters treated of; and as an example in terse and incisive English it may be read by the student and admirer of style."—*Manchester City News.*

Now Ready. New Edition, Entirely Rewritten.

Plain Advice about Life Insurance.

"Pregnant with plain meaning, and hits hard, straight from the shoulder, as a work by Mr. Wilson usually does."—*Westminster Gazette.*

"Frank and out-spoken, and affords much useful information and guidance."—*Glasgow Herald.*

A Glossary of Colloquial, Slang, and Technical Terms,

in use on the Stock Exchange and in the Money Market. Edited by A. J. Wilson. Price 3s.

"A good deal of useful information is here presented in a very handy form."—*Times.*

"The work is a most useful one, and admirable in many respects."—*Pall Mall Gazette.*

"The book fills a gap among works of reference."—*Morning Post.*

"A book that will be found useful in the offices of a large class of business houses."—*Scotsman.*

"The explanations will be found helpful to all who wish to have a clear understanding of the language of the money and stock markets."—*Dundee Advertiser*

The English and the Dutch in South Africa.

A Historical Retrospect. By Hartley Withers. One Vol., crown 8vo, price 3s. 6d.

"Those who are prepared for a study of the historical conditions of the problem of the day will find abundant satisfaction in this modest volume."—*Daily News.*

"The salient facts of the English and Dutch occupation are set out in a very compact and impressive fashion."—*Liverpool Post.*

"Every one who desires in a small compass to obtain a strong and comprehensive grasp of the situation cannot do better than follow Mr. Withers in his rapid but careful sketch of the history of the Dutch Huguenot population, known to the man in the street as the 'Boer.'"—*Bankers' Magazine.*

The Investors' Review.

Our Abounding Wealth.

Much of the latest report of the Commissioners of His Majesty's Inland Revenue will afford deep satisfaction to those who insist that the wealth of this country is continually on the increase. The amount of capital brought under the shears of the estate, legacy, and succession duties was £277,920,000 in the year ended March 31 last. This shows an increase of £2,161,000 on the figures for the preceding year, and if we take the net amount on which duty was charged, viz., £275,584,000, the increase is £3,014,000 upon the previous year's total. This, in a year admittedly bad for many branches of business is a remarkable fact, and the duties yielded by this property came to £17,913,177. It may be observed in passing, that since the whole of this duty is capital, represents that is slices taken off the capital value of estates as they become chargeable, it ought not to be utilised as current revenue, but should in great part be devoted to the redemption of debt. No notion of such a thing, however, comes into the mind of the tax spenders. Each big estate is a windfall to be pounced upon and devoured, and there has been a tolerably steady increase in the capital value of estates taxed under the Finance Act of 1894. In the year ended March 31, 1896, the first complete twelve months of the new regime, the total value of the property taxed was £213,233,000, of which £183,262,000 was personalty and £29,971,000 realty. In the past year personalty came to £211,148,000 and realty to £64,436,000. These are the figures relating to estate duty alone, and it would endanger duplication of totals if we were to include the sums set against settlement, probate, legacy and succession duties, because many of the estates pay under several heads and some of them under all heads.

The only observation we should venture to make upon these growing totals is that they depend, especially so far as personalty is concerned, in great measure upon the market quotation for public securities. If a wealthy man dies when markets are high, or when they have been high for several years, the value of his property will naturally be greater than that of another rich man dying in a time of depression. From this we should draw the warning inference that coming years are likely to exhibit a diminution in the value of personalty, and that in proportion as the market values of investments decline the aggregate of estates must diminish, and along with that the amount obtained under the tax. The figures given above may be supplemented by others exhibiting the capital value of all property subject to estate duty every year since its imposition on August 2, 1894. Here also progression is shown, but by no means uniform progression. The gross capital of which the Inland Revenue Department had notice, for example, in 1897-8, was valued at £273,769,552. This total rose to £326,198,473 in the year ended March 31, 1900, and fell in the following year to £294,837,812. Again, however, the figure rose to upwards of £320,299,000 in 1901-2, but it fell again last year to £298,464,000. These fluctuations, however, depend upon accidents more than upon fluctuations in the market value of securities. Thus, a nobleman possessing large amounts of urban property in the form of real estate would swell out the totals, whereas the owner of poor agricultural land, even if he possessed a far greater acreage, would be of comparatively little value to the tax collector. None the less is there an indication in the later figures that personalty values are tending to contract, and a prudent Chancellor of the Exchequer would be watchful to avoid reliance upon continued prosperity in this branch of revenue.

The most satisfactory display, however, so far as the gross figures go, are those under income tax. From one point of view they unquestionably exhibit a highly comforting expansion in the wealth of the nation. Not only has the gross value of the revenue brought under the review of the department increased in a remarkable degree, but the yield of the income tax per penny has been not merely steady but progressive through all the fluctuations of the tax. It used to be said, and the fact supported the assertion, that in proportion as the poundage increased the yield of the tax per penny diminished. Recent experience, however, has belied this dictum, as an interesting table on page 176 of the report shows. In 1892-93 the income tax was 6d. in the pound and the yield per penny £2,239,856, but in the year ended March 31 last the tax was at the rate of 1s. 3d. in the £, and the yield per penny was estimated, the full figures not being ready, at £2,580,000. The 8d. rate was imposed first in the fiscal year 1894-95, and both then and in the preceding year, when the rate was advanced to 7d., the yield per penny was less than in 1892-93, when the tax was only 6d. For six years the 8d. rate remained in force, and each year exhibited an increase in the product per penny over the preceding one, so that in 1899-1900 each penny gave £2,353,619, and there was no decline either when the duty was raised to 1s. or when it was put at 1s. 2d. or at 1s. 3d. This is a remarkable fact, but whether it indicates increased wealth on the part of the taxpayer or augmented vigilance and skill on the part of the tax collector we have no means of deciding. It is beyond question, however, that the gross income from all sources has shown remarkable expansion during the last thirty odd years. Compared with 1868-69, for example, the net amount on which income tax was levied has risen by £263,000,000 to a total of £607,551,000. This is an increase of upwards of 76 per cent., and it may be said that all sources of income except profits from the occupation of lands have steadily increased during that period.

The profits from the ownership of land have risen between 1892-93 and 1901-02 by nearly £35,500,000. Then profits derived from British, Indian, Colonial, and Foreign Government securities have in the same period expanded by upwards of £59,000,000, and the profits from businesses, professions, employments, etc., assessed under Schedule "D" have increased by more than £120,000,000. In like manner the salaries and incomes of Government, Corporation, and public company officials have risen by nearly £27,600,000, to a total in 1901-02 to £79,151,495. These are not the assessed amounts, but the totals brought under the review of the department, and the aggregates of such totals in the last year for which figures are available, 1902-03 statistics not being yet ready, was £866,993,453, as against only £673,711,988 in 1893-94, which was a total less by about £5,800,000 than that for 1892-93. Incomes of all descriptions actually assessed rose from £537,565,400 in 1892-93 to £607,550,919 in 1901-02, and the total produce of the tax from £13,439,135 to £35,440,470, the latter figure being yielded by the 1s. 3d. poundage.

From another point of view the growing wealth is also illustrated with remarkable force. Profits from the ownership of lands, houses, etc., produced from 28.2 to 31.6 per cent. of the entire amount yielded by the tax in the years 1892-3, 1896-7, inclusive, but in the more recent years, down to and including 1901-2, the proportion fluctuated between 25.1 per cent. in the last year of the five to 27.3 per cent. in the first. That branch of revenue is consequently non-progressive compared with others. At the very best it is this, and profits from the occupation of lands have steadily declined, so that the proportion of the total taxes yielded by them has fallen from 1.3 per cent. in 1892-93 to 0.7 per cent. in 1901-2. In like manner the profits from British, Colonial and Foreign Government securities have fallen in proportion to the others, although the actual amount received is larger. That, indeed, is the characteristic of all these figures—except income from the tenancy of land. The return to the revenue is greater, although the proportion of each class to the whole is less, and it is only when we come to profits from business, professions, employments, etc., that we see steady expansion in the taxable totals. In 1892-3 this class, commonly known as Schedule "D," accounted for 54.7 per cent. of the entire revenue thus derived, and in 1901-2 the proportion has risen to 59.7 per cent., progress being almost uninterrupted throughout the ten years. Then, again, the class under Schedule "E," salaries of Government, Corporation, and public company officials, has expanded not only in the amount of the taxes paid in, but in its proportion to the entire yield of the tax. That proportion fluctuated in the first five years of the ten between 6.8 per cent. and 7.1 per cent., but in the last year, 1901-2, the proportion had risen to 7.8 per cent.

Can any inference be drawn from these statistics? Nothing of a strikingly definite description, but it may be observed that the unprecedented multiplication of joint-stock companies during the last twenty years, and especially during the last dozen, has enormously facilitated the collection of the income tax and broadened the basis upon which assessments are levied. Also the increase in public functionaries of all kinds has brought into existence whole armies of people now visibly liable to income tax who formerly escaped, or who formerly had no existence. The same influence has been at work in multiplying profits under Schedule "D," and we know from a prolonged examination of joint-stock companies' balance-sheets that in an enormous number of instances the profits brought out—and distributed—are in excess of the real earnings. Before, therefore, we can be sure that the wealth indicated in the figures quoted is real, we should like to know how much of the income returned arises from inflations of profit exhibits for market or other purposes, and how much from genuine expansion in business and business gains. Also it would be well to ascertain what proportion of the tax is paid by people who ought to be exempt.

We can see by another branch of the statistics what the tendency is. The amount of income from Colonial and Foreign Government securities struck for income tax has risen from £12,683,322 in 1882-3 to £19,245,888 in 1901-2. Now the bulk of the increase, so far as our own colonial possessions go, is unquestionably the product of capital. The interest on old loans and new is paid out of the capital of the new. It is unnecessary for us to elaborate that point, because we are always doing it. Stop creating fresh loans for these dependencies, and there will be no further growth in the income derivable from the money already invested, but probably a diminution. The same remark applies to Colonial and Foreign stocks other than Government and provincial—coupons, railways out of the United Kingdom, and other such sources of profit, the figure representing which has risen from over £12,000,000 in 1882-3 to £34,433,000 in 1901-2. How much of that income is really capital, how much genuine revenue, no man can say, but until some approximate valuation and sub-division of the component parts can be made we must not be too sure that the country's wealth is continually expanding at the speed the figures seem to indicate. From another point of view, the growth of incomes representing salaries of Government and Corporation officials, leaving out public companies, is not an indication of expanding wealth, but of expanding burdens upon the citizens. These notes are not made in any carping spirit, but only to suggest that caution should be exercised in dealing with the income tax returns. A continuous growth of spendable wealth such as the figures exhibit for the past cannot in the nature of things be expected in the future, and in proportion as recent figures have been swollen by what can only be described as unworthy devices will be the extent of the recoil. Has the recoil begun? Hardly yet, but the more the difficulties of loan raising and company capital creation increase the clearer will the drawbacks stand out.

The Rand Labour Commission.

The mail this week brings us further evidence tendered at the second week's sittings of the Rand Labour Commission, for whose momentous pronouncement the Kaffir market is fretfully waiting. Last week we printed a summary of the evidence given by the first witnesses examined, and to continue the story now add the second chapter. The first witness at the second sitting was Mr. Perry, chairman and manager of the Witwatersrand Native Labour Association, the recruiting intermediary between the mine bosses and the native. Mr. Perry became chairman as recently as February of the present year, and he appears to have recited an account of the work done only since his official appointment. In the six months the Association has been operating in the following districts:—Portuguese East Africa—excluding the territories of the Mozambique, Nyassa, and Zambesi Companies—the Transvaal, Orange River Colony, Cape Colony, Basutoland, the Bechuanaland Protectorate, and Swaziland. It appears the Association is prevented from working in Natal and Zululand by the Natal Law of 1901, which prohibits the engagement or recruiting in those countries of native labour for work outside Natal. Further, it has been prevented from operating in Rhodesia by an agreement made in 1900 between the Transvaal Government and the Rhodesian Government, which, of course, means the Chartered Company. This agreement, however, was denounced six months ago, and expired in the middle of June, but negotiations have for some weeks been afoot for its renewal on a modified basis. A similar agreement with the Barberton Chamber of Mines excluded the Association from recruiting in Swaziland till a short time ago, when a modification of the agreement was obtained. Recruiting in the territory of the Portuguese companies has, up to the present, been prohibited by these companies. So, for some reason or other, these various districts have put up verbal barriers against the encroachments upon their preserves of the agents of the Labour Association, and those agents have had to wander up and down the country in the effort to catch a stray native here and there. The pity is that the wily black will not be caught by any of the subterfuges and wiles the mine boss may conceive and hold forth. He has had a taste of them before, and the taste has not grown upon him; rather has he become sickened and nauseated with all the luxuries of mealies and kicks he has received without stint, and he relishes the more the humble joys of his own kraal.

"A great point," says Mr. Perry, "has been made of the statement that natives recruited for the mines are divided from their brothers and friends, and are not allowed to go to the mines on which they have worked before. The facts are," he declared, "that all the district managers have for some months had authority to contract natives for any particular mines if the natives express a wish to go there." "Some months?" How many months? And since what particular date has this authority been given them? Were the natives separated prior to this authority? At any rate, the inference from Mr. Perry's words is that the allegation is true, if the innovation has been in force but a few months. If, until recently, therefore the natives were separated from their relatives in this inhuman fashion, is it to be wondered at they refuse to have any further dealings with the companies? "As regards the splitting up of gangs, all pains are taken to avoid this," he added. "On arrival at the mines the natives are told to divide themselves into gangs, under their own headmen, and the gangs are allotted as a whole. In addition to this, in districts where the chiefs retain authority, the district managers have discretion to engage boys belonging to any particular chief in a body with their own headmen, on a promise that they should be kept together." In answer to questions, the witness tacitly, or, rather, indirectly admitted that there is room for improvement in food and physical comfort, for "improvements in the way of better food have been effected," he said, and "also more careful provisions for clothing for natives have been and are still being made." Why were not these improvements and conditions provided before? is the question that immediately suggests itself, though only the mine magnates can answer it. We may put it to them, however, until we are black in the face, and they will remain as silent as the Sphinx. Nevertheless it is not beyond the capacity of ordinary human intelligence to make a shrewd guess as to motives, and these are not likely to shed lustre and glory upon the enlightenment and humanity of civilised man. Mr. Perry was mindful to point out that the rate of wages now is higher than before the war, but evidently did not remind the commission that they were first lowered before necessity compelled them to be raised. "But the blacks won't come for all that," he said, in a dolorous voice. We should think not. This tardy and graceless yielding to necessity is not altogether incomprehensible to the native, barbarian though he may be.

The next witness was Mr. W. St. John Carr, deputy-chairman of the Johannesburg Town Council. He said he was acquainted with the number of natives employed by the Town Council, and the efforts to get labour for municipal work. Asked by the chairman how long a deficiency had existed, he replied, for four months. First, the Council's recruiting was done through the Witwatersrand Native Labour Association, but finding they could not get all the natives they wanted they appointed their own local agents. But even then they could not get sufficient. Why? "The reason given was the wages were not high enough." Surely, there is an easy way of getting over such a difficulty as this? Raise the wage. What could be simpler? Johannesburg is the golden Jerusalem. Millionaires fatten there, are as plentiful as hungry artisans in London, and where so much wealth abounds, where there are so many pockets overflowing with it, surely another copper or two could be spared to entice the native to come and get it. The Commission did not throw out any hints of this kind, and Mr. Carr seemed to labour under the conviction that the difficulty is insurmountable in such a place as "the golden city." Major Robert Thorne Coryndon, Administrator of North-Western Rhodesia, was next examined. He estimated that at present from 4,000 to 5,000 natives go south every year, a number that might be increased to 7,000. But Rhodesia has actually discovered some minerals herself—copper, coal, and even gold—so, says the Major, "we shall have a difficulty in supplying our own needs." It appears that the blacks in this part of Africa are an idle lot "and they found it extremely difficult to get them to undertake work on the mines at all." It is sad, indeed, to think that natives should be afflicted with defects common to us all, even the millionaires who run the Rand mining industry.

Another Rhodesian witness was Mr. Val Gielgud, one time Native Commissioner in Matabeleland and in the Zambesi district. He computed the adult male population of Southern Rhodesia at 114,674. Allowing 60 per cent. as available for work, then some 68,804 worked during some portion of the year, the duration rarely exceeding three months. "The majority are extremely averse to underground mining." Asked if there was any possibility of the Rand getting any additions to its labour supply, he considered the possibility a very small one. The last witness was Sir Godfrey Lagedn, Commissioner of Native Affairs for the Transvaal. He estimates the total black population of the Transvaal at 605,666, and the male adults at 143,239. He gave it as his opinion that the "rate of pay now prevailing throughout South Africa has done more than anything else to affect the whole native labour supply," and that was the gist of his evidence. Sir Godfrey is in a most favourable position to ascertain the real cause, a more advantageous position, probably, than any man in South Africa. The word of such an authority should, therefore, carry the greatest weight. And is not this the most reasonable opinion any observer of recent events can form? No sooner was the war ended than the magnates announced a reduction in the scale of pay. It was low enough prior to the war, but they evidently thought, under a tolerant English Government, they would have greater power over the savage than they had under the Boers, and would make the wretch slave his hardest during the brief term of his contract. If he died, so much the better, he could not go home and tell tales and scare others from coming. They find, however, they cannot work their will with the black, poll and hut taxes notwithstanding. But once get the Chinaman, a poor devil who they imagine cannot run away, and all will be well. No ship will take him home free gratis. Once he gets into the country, he will have to stay there until he digs his own grave, or is kicked into it by his humane task-masters. Or he will swarm everybody else out.

Indian Tea Companies.

Planters certainly had very adverse circumstances to contend against during 1902, and it is therefore gratifying to find that in spite of the unfavourable conditions many of the companies were able to improve their positions to the extent indicated by the figures given below. Bad weather was experienced in most, if not in all, of the districts throughout the greater part of the season, and what with hailstorms in March, the heavy rainfall later, and the early closing of the season, the output of very few of the companies came up to their estimates. In many cases there was a decided shrinkage even on the reduced crops of the previous year, while the quality, except in the case of a few gardens, was naturally below the average. Markets, too, were not all that could be desired. The demand fluctuated between the better class and the more common qualities in a somewhat spasmodic manner, and prices remained at low levels throughout the greater part of the year. An improvement, it is true, did set in towards the end, but it came too late to help the majority of the companies in any material fashion. Here and there our table shows that an advance was secured, substantial in some instances, such as the Assam Frontier, Balijan, Moabund, and Nedeem, but with these exceptions the rise in price was small, and by far the larger proportion showed decreases. In almost every instance where an increase in crop is shown the price obtained was smaller.

It does not appear, therefore, that the improvement in the position of the industry as a whole can be ascribed to any material progress made in the direction of production or better markets, and the cause must be sought elsewhere. The probability is that since planters awoke to the fact that their policy of reckless expenditure on extensions was not a profitable one, they have further learnt that economy was equally required in other directions, and many of them have been working on new lines, with the result that they have succeeded in bringing the cost of production down substantially. Old and unprofitable portions of estates have been abandoned, and the new ground opened up to replace them has been smaller in proportion, so that the energies of the managers have been devoted to the more remunerative areas. In some cases, though, we fear that

the saving in expenditure has been effected by the more simple, but dangerous, expedient of neglecting, or postponing, very necessary items in the care of the soil. With reference to this increase in profits, Mr. George Seaton's usual annual analysis of the results of forty-five representative companies shows that with a reduction of 0.17d., to 7.47d. per lb., in the average price realised, the net profit was 0.21d. higher, at 1.24d. per lb., the decrease in the cost of production having been no less than 0.35d., to 6.23d. Thanks to this saving, the average dividend paid is 3.7 per cent. higher, and, at the same time, the question of reserves has been duly attended to by some at least of the companies. Taking the individual results, however, as

shown by our table, it will be seen that this favourable showing is almost entirely due to a small leaven of highly prosperous undertakings, and that so far as the rest are concerned the progress made is in reality small, and is chiefly interesting for the promise of better times in the near future. The Aibheel, for instance, while raising its dividend from 4 to 5 per cent., has in the operation cut down the balance forward by £1,180, and the Attaree Khat has done much the same thing. Some of the other concerns found it convenient to trench further upon their accumulated reserves in order to maintain their dividends, alleging as their excuse that the outlook was now so much more favourable, while the Doom Dooma, in spite of taking nearly £5,000 from this source and £2,500 from its insurance fund to cover the loss by hailstorms, only managed to pay 9 per cent., as against 12 per cent. in the preceding year. The Jhanzie, too, while improving its position, was obliged to take £1,000 from reserve, and to rely upon the generosity of the managing agents for its dividend. On the other hand, the Lankapara did excellently, and, curiously enough, was the only company in the list which seemed to find the weather to its taste. Its crop of tea was about 280,000 lb. larger, and realised 0.14d. per lb. more, with the result that the net profits rose from £888 to £7,720, and, in addition to wiping out a debit balance of £1,302, it was able to pay a dividend of 10 per cent., and still carry forward £419. The Empire of India and Ceylon comes under a rather different category, as it possesses estates outside India, but it also had a more successful year, and not only made up all arrears of preference dividend, but gave the ordinary shares 3 per cent., while increasing the carry forward by nearly £1,700. In the case of the Dejoo, a shrinkage of over £1,100, to £151, in the profits did not prevent its again distributing 2½ per cent., although in the process the balance forward practically disappeared, but the most unfortunate of all was the poor British Indian Company. This concern managed to produce a profit of £280, compared with a loss of £651 a year ago, but the debit balance brought in was only reduced by about £110, with the help of the return of a portion of their fees and commissions by the directors and the managing agents, and still hangs a deadweight of £543 to be cleared off before even the preference dividends, which are now heavily in arrears, can be met. Much, therefore, still remains to be done before the industry, as a whole, can be considered in a thoroughly sound position, and the best that can be said is that present indications certainly give grounds for hope that in a year or two's time the tea planters will again enjoy some measure of their former prosperity.

Considering the great stress which has been laid from time to time on the importance of opening up new markets, and particularly of endeavouring to encourage a taste for tea in India itself, it comes somewhat as a surprise and a disappointment to learn that the Indian Tea Markets Expansion Commission is likely to come to an end after an existence of only three years for lack of adequate support. This commission was founded with the object of inducing the natives of India to drink tea by supplying it in very small packets and by the cup, and was fairly successful in its efforts. The second annual report, just to hand, states that during its existence it sold nearly four million pice packets and nearly one million cups, in addition to the quantities of brewed tea given away on State occasions, with the result that the ordinary trader was beginning to find a growing demand. Yet the companies apparently do not realise the importance of supporting the commission adequately, and it is to be allowed to collapse before it has had a proper chance. Really it would seem as if any prosperity which may come to the tea growing trade will be in spite of rather than because of its efforts to help itself outside certain well worn grooves.

Notes from New York.

New York, August 25.

A great disturber of the general situation is the corner in cotton, and the uncertainty about the new crop, which will not be terminated for another month. The maize crop is now certain to be a short one, even if the weather remains favourable, but a frost between now and the middle or September 20 would cause a serious shortage. Unusual conditions are also attending the moving of wheat eastward. The railways made, or pretended they had made unusual preparation for the transport of grain from the west, anticipating heavy foreign demand and anxiety on the farmers' part to sell. The result has been disappointment, for the foreign demand is not clamorous; the harvest of wheat and oats, as a whole, has been late and light, and farmers have stacked their grains, and will not thresh for several weeks, preferring to hold for a rise. A Chicago report says the grain traffic is 25 per cent. under the five-year average, and that a large quantity of the rolling stock coming east is running empty, the

small grain deliveries not giving enough return loads. This short movement of grain will naturally react on the money market, less currency being needed under the conditions described, and this brings me to the matter of currency legislation, which has become doubtful during the last few days. The Senate Finance Committee is said to be unable to agree on the terms of the Bill, and it is believed that it has been pretty plainly intimated to the President by leading western Republicans that the riders which Senator Aldrich, or the Standard Oil interest which is the same thing, want to fasten upon it are inadmissible. The east has been so long sole dictator of the currency and fiscal policy of the country that this revolt of the west in the matter of the currency, and the distinct indication that a free trade or reciprocity party is forming among the Republicans of the west, causes much disquiet among the old hacks of the party. A report just in, however, says that a bill embodying two or three amendments to the existing currency laws will be brought in at the coming session, which may pass Congress. That it will be pressed with the President's influence behind it, and will propose to place customs receipts in the national banks, and repeal the redemption clause in the National Banking Act which limits the amount of their notes that may be withdrawn from circulation to $3,000,000 a month.

Economic and Financial Notes and Correspondence.

Four Per Cent.

The directors of the Bank of England had no alternative but to raise the minimum rate of discount from 3 to 4 per cent. on Thursday last. For many weeks now the Continental demand for gold has been sufficiently keen to prevent any of the considerable amounts of raw metal coming into the open market from reaching the Bank's coffers, and the reserve has received no outside addition beyond a few parcels of sovereigns from South Africa, India or Australia. Under any circumstances, therefore, protective measures would soon have become necessary, and when it was found the German enquiry was so strong that heavy sums were actually taken from the Bank, notwithstanding an increase in its selling price of German gold coin by ½ to 76s. 9½d., an advance in the rate became imperative. Many causes are discernible to account for the urgent demand from Berlin. The German internal requirements are said to be strong in consequence of moderately active trade, and it is understood that America has been liquidating loans contracted in that centre through the London market. We know that of late large quantities of American finance paper have come here for discount, presumably in anticipation of the usual payments for cotton and wheat, and it is assumed that the credits obtained are being used to liquidate Continental indebtedness. Then there is an unusual factor operating in the shape of the payments for the Netherlands Railway, the bonds of which are mostly held abroad, and Germany doubtless finds it necessary to accumulate as much of the yellow metal as possible in consequence of a Russian demand on her market. We are glad the Bank directors acted with promptitude, because we are by no means sure that even a 4 per cent. rate will stop the drain. When the return was made up on Wednesday the reserve had been depleted by £750,000, owing to exports of gold and internal demands for currency, the total standing well over a million and a quarter sterling below the figure of a year ago. Since then almost another £1,000,000 has disappeared in consequence of Thursday's withdrawal, and we have not yet commenced to meet the usual autumn requirements. It is true that the liquidation by the London market of American Continental loans may lessen the probability of heavy exports across the Atlantic, but we must not forget that the English crops are very short, meaning that our wheat imports must be larger than usual, and there is the Egyptian demand to be met, certain to run into large amounts. South America also will doubtless call for considerable sums, and our own provincial needs are by no means unimportant. Under any circumstances, therefore, the stocks of gold must suffer rapid depletion during the next few months, and clearly the directors of the Bank did not act a moment too soon, if exceptional demands are to be averted. We dare not overlook the fact that already credit in all directions is strained to the uttermost, and it is not easy to discern what the consequences would be should withdrawals of gold reach serious dimensions.

An Echo of the War.

The minutes of the evidence taken by the War Commission disclose a far more scandalous state of affairs than its report. Incompetence mingled with a wilful disregard of the warnings given by experts characterises the whole conduct of the War Office both before the war broke out and during its progress. Time after time Sir William Butler, when in South Africa, tried to make the home authorities realise the true position and the true necessities of the situation they were creating, but his voice was as one crying in the wilderness. Lord Milner, then only plain Sir Alfred, checked the General at every turn, merely because his warnings if heeded would have interfered with the plans and schemes of the Uitlander party in the Transvaal. At least this is the only deduction we can draw from Sir William's evidence. In the end, weary of talking to deaf ears and sick of being thwarted by a man whose knowledge of the situation was one-sided, Sir William tendered his resignation to the War Office in the following words: "As the result of an interview which I had with Sir Alfred Milner to-day, little doubt is left in my mind that my presence in command here has been an increasing source of embarrassment to him or of hindrance to the prosecution of his views, I have in consequence lost no time in adopting the only course which appears possible under the circumstances. I am prepared to place in your hands the resignation of my present appointment to be dealt with as you think fit." This resignation Lord Lansdowne accepted, as he thought it essential for the High Commissioner and General commanding in South Africa to be on good terms. Quite so, but why was Lord Milner not asked to resign? Was it because another High Commissioner might not have been so subservient to the orders of the home authorities, and war, instead of being a certainty, might have become only a possibility? If war was inevitable Sir William's warnings ought to have been heeded, and if it was not Lord Milner should have been recalled. On the outbreak of hostilities, and after the early disasters, the whole of the Jingo press here turned on Sir William and reviled him for not having advised the authorities to send more troops to South Africa. He, like an honourable man, said nothing, and it was only when the war had ended and the nation demanded an enquiry, that he told the story of his repeated reports on the coming crisis which the War Office has passed over. "I am not a soldier," Lord Lansdowne told the Commissioners, and for this reason he could not see what good would be done by sending re-inforcements to the Cape before war actually broke out. Other men who were soldiers might advise him to take this step, but what he thought must be right for he was head of the War Office. Now he has become Foreign Minister his views have changed and he calmly admits that it was "obvious" the force in South Africa when war broke out was insufficient to stop the Boers crossing the frontier. All through the evidence the same hopeless incompetence, ignorance and obstinacy are apparent, costing the nation thousands of lives and millions of money. The war in itself was unholy, but the conduct of it was unholier. Of the men concerned the soldiers come out best, particularly Sir William Butler and Sir Redvers Buller, the two who were made the chief scapegoats to cover the War Office's delinquincies. Insufficient troops, no proper commissariat, inaccurate maps, and no instructions are heavy handicaps when fighting a whole nation, and the marvel is that our disasters were not greater than they were. However, the war itself is now ancient history, and the question is what is to be done to the men who, having forced on the fight, showed themselves incapable of managing it? Abroad their shift would be short and sharp, but here,

after a few grumbles and growls the country will cease to care, and devote its energies to spotting a winner.

Cope Brothers and Co.

The little band of directors into whose hands an unkind fate has placed the destinies of this once prosperous Liverpool tobacco business, consists of a famous Jubilee knight, one Sir John Willox, as chairman, and three faithful lieutenants, and it would be a task beyond our powers to say which is the most competent of the lot. Their combined efforts during the twelve months ended June 30 have produced a debit balance of £4,543, and they evidently would like us to believe that our magnificent Imperial Tobacco Company instead of directing all its energies to Yankee invasion annihilation has been wickedly engaged in competing with other English traders, its own flesh and blood. At least in the report which shareholders have just had the misfortune to receive, the board speaks of the continued and ruinous competition in the tobacco trade, and comes forth with the announcement that this has caused a large expenditure on advertising. Shareholders will readily recall the famous amalgamation referred to in last year's annual statement, so awe inspiring that the name of the firm could not be divulged at once, lest it caused too great a shock, and they are now told that the agreement for the fusion—it was with Messrs. Richard Lloyd and Sons, London—has now been carried into effect. Stock, assets, and goodwill of the concern have been paid for in ordinary shares and debentures, and Mr. William Jollyman, the senior partner, has entered upon his duties as general manager with a seat on the Cope board. Other changes in the staff and administration have been introduced "with a view to economy and increased efficiency in the conduct of the business," both of which are badly needed. These changes, we are told, now being gradually introduced, have not been in operation long enough to be felt in the last financial year, but the directors are satisfied with the results so far as they are known. Probably the board is easily pleased. Here the directorial nicely chosen phrases cease, but we fancy there is still much to tell. First we should like to hear how the Lloyd business, taken over with such a flourish of trumpets, has fared during the past year. Is it true that up to date the "acquisition" has involved the company in a loss of £2,000? The purchase of this concern, it will be remembered, was to be the saviour of the Cope wreck, and shareholders will probably wish to know its exact position when the directors displayed such anxiety to buy it, details of past performances, and all other particulars which should have been in possession of the board before the agreement was completed. In short, it is time shareholders were up and stirring if they wish ever to see a penny of their money again, and the moment seems opportune for some sweeping changes in the administration. The chairman's record in the company directing business is not one that inspires confidence in his ability to pilot the ship off the rocks, and we think he should be asked to seek obscurity so far as this company is concerned. It should be mentioned that the directors returned half their fees, but even £800 was quite enough to pay for the production of a debit balance of £4,543 after providing debenture interest and other charges. This sum has been withdrawn from reserve, reducing it to £4,072. We note Richard Lloyd and Sons' branch entered in the balance-sheet at £16,840, and, of course, goodwill still stands at £28,552. Plant and machinery, trade marks, copyrights and patents are valued at £67,366, and we should dread to look at some of these assets if it came to a realisation. Stock has risen to the terrifying figure of £167,341, being an advance of £12,000, and although there is a fair quantity of liquid assets over liabilities the position is such as to cause grave anxiety.

The Beginning of Dear Sugar.

On Tuesday the Sugar Convention came into operation and prices here promptly rose, while they dropped in France. The retailers so far have only added on a ¼d. per lb., but this is generally regarded as nothing more than a prelude to what will come later. Thanks to the prospects of an exceptional crop of beet this season, it may be some time before the full effect of the Convention is felt in this country. But we cannot look for exceptional crops every year, and when a lean year comes, our sugar will rise sharply. Jam-makers and confectioners are increasing their prices, and in their train will follow all the industries using or depending on sugar in any shape or form. Russia, meanwhile, considers her interests will be prejudiced by the Convention, especially in the exports of sugar to this country and India. To make matters square she proposes to place a heavy duty on tea, which is meant as an attack not on the other signatories, but on India and ourselves. We can hear the man in the street saying, "What does it matter if Russia does put a duty on tea? She must get it from somewhere, duty or no duty, while we have injured her far more by absolutely prohibiting Russian sugar." Quite so, but the duty will restrict an important market for Indian tea, a thing which India can ill afford, while we will suffer more than Russia by not being able to buy her sugar. It so happens, in the case of certain preserves, the best results are obtained from Russian crystals, West Indian sugar, for the benefit of which we entered the Convention, being absolutely unsuitable. So henceforth the quality of our jams will suffer until Russia comes within, or we get out of the charmed circle.

Our most serious complaint against the Convention is, however, not its evil effect on prices, but the principle it involves. Prices might, and possibly would have, risen if the bounty giving countries had of their own motive ceased to artificially foster their sugar industries. But this ill-conceived Convention, in addition to abolishing bounties, also restricts the markets in which we can buy our raw sugar. There lies the evil. At the command of a foreign body we must refuse to purchase sugar which we could get cheap, because the country from whence it comes has not laid on itself the yoke of the Convention. Suppose the growers of beet within the Convention countries agree among themselves to reduce the area sown until it is only sufficient to provide for the requirements of each country. If this were done we should either have to break away from the Convention or see one of our great industries absolutely ruined. That some such scheme may be hatched on the Continent is not beyond the range of possibilities. German producers are already seeking to find a method of restricting their output inside the rules of the Convention, and if they cannot find a way within they will take one without. In France the alcohol distillers buy more and more beet every year, and so leave less available for the sugar refiners. This is a natural cause of restriction, whereas the German is not, still they both affect the quantity available for export. Were we not bound to the Convention, we could in the event of these countries failing us, make good the deficiency from Russia, Denmark, or the Argentine. As matters now stand, we must either buy at the price which our co-signatories care to sell us or go without. For one thing is certain, the West Indies and all of our colonies combined will never be able to satisfy our wants. The only hope we have is that some day this Government, if it lasts long enough, may repudiate the Convention. It is capable of doing so when another might consider such a course dishonourable. But after the recent revelations concerning the war we are prepared to see this Ministry sink to any depth of national dishonour.

Calico Printers' Association.

The recommendations of the committee appointed in March, 1902 to inquire into the reasons for the deplorable collapse in the profits of this huge combine seem to have been accepted and acted upon in a proper spirit. The result is seen in a largely increased revenue for the twelve months ended June 30 last, bringing with it a first dividend for the patient shareholders. The return is meagre enough at 2½ per cent., but the need for strengthening the position is imperative, and there would be no justification for the distribution of a larger amount. Our statement given below sets out the profits estimated in the prospectus, and the performances to date, and it will be seen that the colossal combination is at last beginning to show some justification for its existence. Since the slump in the year to December 31, 1901, income has steadily improved, and for the six months to June 30, 1902,

the directors placed £75,000 to reserve and carried forward £99,561. Now we find that for the twelve months to June 30 last the trading profit was £698,416, and after providing £206,173 for depreciation, upkeep, and repairs, the balance remaining is £492,243. To this is added sundry small items of revenue, making a total of £498,783, from which administration charges absorb £37,466, and debenture interest £128,000. The directors then place £50,000 to capital reserve and £75,000 to general reserve, while the bonuses to employees in accordance with the recommendation of the shareholders' special committee draw off £25,000. Next a dividend is proposed of 2½ per cent., and the balance forward is increased from £96,532 to £154,179. The auditors' statement is a very interesting document, and from it we learn that the properties not depreciated are valued at £2,009,282, consisting of land, water rights, reservoirs, effluent works, warehouse property, etc., designs, engravings, and samplings, and goodwill. As the total capital expenditure now amounts to £5,975,927, this means that items in the balance-sheet at £3,966,645, are allowed certain sums for wastage. It seems that of the £206,173 set aside for upkeep and depreciation the former absorbed £164,272, leaving £41,901 only for natural losses, a sum clearly insufficient, particularly as the total allowance to date is only £208,918. But the sum of £50,000 put by as capital reserve is meant to be a provision against any possible deficiency in the amount charged for depreciation, and with a view to gradually making provision for closed works which stand in the books at the very heavy sum of £675,185. Not only so, but the auditors observe that of the amount allowed for maintenance not less than £35,000 might fairly have been charged to capital, and they therefore consider that the actual wastage allowance was £126,901.

		Actual Performances.			
	Prospectus Estimate.	Sixteen months to Dec. 31, 1900.	Twelve months to Dec. 31, 1901.	Six months to June 30, 1902.	Twelve months to June 30, 1903.
	£	£	£	£	£
Trading profit ...	455,826	463,448	213,825	321,182	698,416
Depreciation maintenance, repairs, &c.	100,000	219,334	191,685	99,614	206,173
	355,826	244,114	22,140	221,568	492,243
Debenture interest	128,000	99,747	127,982	64,000	128,000
Surplus	227,826	144,367	†105,842	157,568	364,243

† Deficit.

As to the financial position we find that the association owes £243,365 to sundry creditors, against debtors of £588,890, and of cash and bills amounting to £749,550, the sum of £500,000 consists of standing loans from bankers. Stock-in-trade valued on the same basis as at June 30, 1902, stands at £1,516,776, an imposing figure, and copper and other rollers are entered at £905,711, against £926,685. On the whole then, the position can be said to reveal improvement, but the reserve of £150,000 is still very small, considering the immense capitalisation, and shareholders must be content with very modest dividends until the company's finances are materially strengthened.

Yorkshire Wool Combers' Association.

Experience has taught us not to expect much from threatened actions against vendors of dishonestly conceived companies, and although it is eminently desirable that a real effort should be made to recover some of the promotion booty of the Yorkshire Wool Combers' Association, we fancy a good many shareholders will hesitate to respond to the latest circular. It seems that a body of Manchester and Leeds share and debenture holders in the concern despairing of a voluntary surrender of ill-gotten gains by the vendors, are inviting fellow-properietors, past and present, to join them for the purpose of instituting legal proceedings against those who sold the businesses at such monstrous prices. Law, however, costs money, and those who regard the latest move with favour must pay 6d. in the £ on their respective stock or share holdings. Now we have no wish to persuade anybody not to join in the action should he be so minded, but it is well that those who do should enter the business with their eyes open. It is right to point out that the payment of 6d. a share would not free the subscribers from further liability should heavy expenses be incurred, and it is questionable whether the risk of throwing good money after bad is worth taking. Even if a successful action be fought at moderate cost, the victors may discover a wide gulf between getting a verdict and obtaining a return of cash from the defendants. Besides, Messrs. Coats have actions pending against five vendors, and to the impartial observer it would seem desirable that these should be brought to a conclusion before any other litigation is embarked upon. Such facts as these must be considered. The statement issued to the shareholders is to the effect that the opinion of eminent counsel has been obtained as to the rights of the share and debenture stockholders, and the legal opinion is that "those shareholders and debenture stockholders on whose behalf the necessary proceedings are taken, will be entitled to recover the loss sustained by them in subscribing for debenture stock and shares from the directors and others responsible for the issue of the prospectus on the ground of various misstatements of facts in the prospectus, and concealment of other facts which ought to have been disclosed in the prospectus. The grounds on which it is intended to proceed are:—

Misstatements as to the profits made by the various businesses taken over by the company, and as to the condition of such businesses, and the plant, machinery, etc., and concealment of various facts in regard to the businesses, and the alleged profits, and the way in which the same were made up.

Misstatements as to the terms on which the businesses, etc., were purchased—the statements in the prospectuses as to the terms of purchase differing very materially from the real terms of purchase as set out in various contracts entered into with the vendors and others.

The non-disclosure of contracts with various vendors relating to the terms of purchase and amount of purchase money, etc., and of other contracts entered into under which various persons became interested in the promotion of the company, and the sale of the respective businesses.

This is a formidable indictment, and as there does not seem the slightest chance of any reasonable reorganisation scheme meeting with the vendors' favour, some of the bigger proprietors may feel disposed to stake a little more in an effort to come by their own. Should they, we wish them all possible success.

Butter and Cheese.

Our imports of foreign and colonial butter for the year ended June 30 last show the steady increase which has characterised them during the past ten years. From all sources we received a total of 200,186 tons, an advance of 12,279 tons on 1902 and 24,727 tons on 1901. But if these figures are compared with those of 1894, the comparison is even more striking. Then we imported only 12,054 tons, so that in the ten years we have added an amount to our imports equal to the whole of the estimated home production. Of the countries that sent us butter in 1894 only three sent less in the past year than they did then, the exceptions being Australia, Germany and Sweden, while the Argentine has come into the list. So far as Australia is concerned, the decline is due solely to the prolonged drought of the past three years, but now that has broken the country should show speedy signs of recovery. The falling off in the quantity sent by Sweden is probably more apparent than real, and due to the fact that more of its butter comes through Denmark than formerly, and therefore appears in our customs returns under the heading Danish. But with Germany the position is different. There, with an industrial population steadily increasing, the home consumption has expanded to such an extent that within the next few years the possibility is it will absorb the whole of the production, and we shall cease to draw any of our supplies of butter from this source. Of the countries which have increased their trade with us during the past ten years, the figures relating to Russia are perhaps the most remarkable. In 1902 it sent it 9,000 tons more than in 1901, but for the year just ended the trade instead of increasing has actually diminished 228 tons, being 22,180 tons, compared with 22,408 tons in 1902, being 13,016 tons in 1901. Doubtless the reason of this is the Russians are beginning to find out that the markets of the various continental countries are more profitable to them, an indication of this being the large quantities of Russian butter finding their way to Denmark to

be consumed there. Perhaps, though, some of it also comes here as Danish.

Splitting up our imports of butter into colonial and foreign, we find that in the past year our colonies sent us 23,866 tons against 176,320 tons received from foreign countries, or in other words the colonial trade was little more than one-seventh of the foreign. For this small proportion the effect of the Australian drought is largely responsible, as in 1901 the ratio was about one-fourth. However, what has been Australia's misfortune has been New Zealand's gain, the relative positions of the two in the past season having been completely reversed. Moreover, Messrs. Weddell and Co., in their annual review of the dairy produce trade, are inclined to think that New Zealand butter, now that it is better known, will in the future hold its own on merits with Australian, until the makers of the latter improve their quality. Cream separated in "private separators," Messrs. Weddell insist, ought never to be mixed with that separated daily at the creameries, yet the practice still exists in Victoria and New South Wales. This in itself lowers the quality of the butter more than any climatic conditions, and until it is stopped the quality of New Zealand butter will remain better than Australian. So far as prices were concerned the season must have been a fairly satisfactory one to the Australasian producers, the average price for the eight months being 105s. 3d. per cwt., or only 9s. 2d. below that of the best Danish.

Canada is, however, the greatest of all our dairy produce colonies, though it is only in recent years that it has turned its attention to the export of butter. But in spite of it sending more last year than Australia and New Zealand together, there is still much to be done to Canadian butter before it can successfully compete with the other two colonies, either in the methods of making or shipment. At present much of the butter arriving from Canada deteriorates during the voyage because it is made in the first place for rapid consumption, and before it is sent off is not properly frozen. Another detail to which Canadian shippers should pay attention is regularity in the arrivals of shipments, as until they do so they will be at a serious disadvantage in fighting their continental competitors, who have adopted the system of weekly arrivals to meet their customers' requirements. Of the foreign countries from which we receive butter Denmark is far and away the most important, both as regards quantity and quality. In the twelve months under consideration no less than 88,903 tons, about half our total foreign imports, arrived from this country alone. Possibly some of this may have come in the first place from Sweden, as we explained above, but the rest, for which the average price was 114s. 5d. per cwt., was undoubtedly of Danish make.

In cheese, the other great branch of the dairy produce trade, the relative positions of our colonies and foreign countries are the reverse of those they hold in the butter trade. Our chief source of supply of cheese is Canada, the imports from which, combined with the small amount we received from New Zealand were last season two-and-a-third times greater than all that comes from other countries. Moreover, the colonial imports in the past ten years have increased by 33,000 tons, while foreign have diminished by 13,400 tons Canadian is undoubtedly the most popular cheese we import, and if shippers would send over nothing but mature cheeses, the extraordinary difference which exists between English and Canadian cheddar would quickly grow smaller. Last year the quality was excellent and the result was that the average price of 59s. 9d. per cwt. was higher than obtained for nineteen years. The imports of New Zealand cheese have remained practically stationary since 1894, when they reached 1,902 tons, being only 2,617 tons in the year just ended. This is mainly owing to the quality which, though improving, is still far from equal to Canadian. Prices for the season, however, were the best obtained since the colony began to ship cheese to this country.

At home the production of butter and cheese has remained practically unchanged for several years past. The amounts, however, can only be estimated since it is not possible to obtain exact data such as exist in the case of imports. At the end of 1902 it was calculated that during the year the production of butter in the United Kingdom was 88,773 tons and of cheese 152,578 tons, the former being 2,540 tons, and the latter 7,137 tons above the five years' average. The chief cause for the non-expansion of home dairy produce lies in the fact that the numbers of cows per thousand inhabitants is gradually growing less. Last year it was only 97.3 per thousand while in 1892 it was 108.1. For while the population of the industrial centres has increased, the numbers of milking herds have remained stationary. Farmers therefore find it more profitable to sell their milk rather than to convert it into dairy produce which, varying in quality from week to week or from year to year, cannot compete with the uniform produce sent from the colonies or abroad. All this is very interesting and lucidly set forth in Messrs. Weddel's review, but it does not help "consistent Birmingham "at all at all, any more than Hoskins and Co., Limited.

Misused Generosity.

When the nation voted £3,000,000 towards the repatriation of the Boers, it was under the impression the whole sum would be devoted to that purpose. The following extract from the *Manchester Guardian* discloses a totally different state of affairs, and affords food for much thought:—

> Very little has been heard in this country concerning the report on the work of the Repatriation Board presented by the Transvaal Government to the Legislative Council. The *Rand Daily Mail* of July 29 contains some very extraordinary figures extracted from the report, figures which, as the *Mail* very justly remarks, are "not calculated to allay the general feeling of disapproval of the Board's methods of management." The report states that goods have been distributed to Boers of the Transvaal (against acknowledgments of debt to a corresponding amount, be it remembered) to the value of £1,000,278. The expenses of management in connection with this distribution are given in the report as amounting to £1,400,638. Advances have been made amounting to £502,112, and the transport of the Boers, and presumably of the goods, to the farms is stated to have cost £1,553,459. Thus a sum of over £3,000,000 has been spent in all, of which £1,400,638 represents expenses of management. For each pound expended for the benefit of the Boers, therefore, nearly ten shillings have gone in expenses of management. On June 30 last—the date to which the return extends—the department had in hand goods to the value of £859,736. The "expenses" column is therefore not yet complete, as the *Mail* points out.

In some of the districts the "expenses of management" exceeds the total spent on goods and transport, while in two only were they less than the value of the goods distributed. It seems as though the idea was that the management should get as much as possible, and the Boers what was left. But no doubt the Colonial Secretary will be able to give a plausible explanation which will set matters straight.

F. Steiner and Co.

It is in a subdued tone only that we can speak of the improvement which has apparently set in in this company's affairs. Profits in the twelve months ended June 30 last recovered rapidly from the disastrous slump experienced during the previous two years, but much of the gilt is tarnished by misfortunes in other directions. As our first statement shows, the trading revenue for the period recently closed was £66,279, and shareholders will find a comparison between this profit and the revenues of the four preceding years exceedingly interesting. It must be a little trying to the nerves to observe profits falling from £132,582 to £7,404, and then shooting up to £66,279, but as the outside public is interested in the debenture stock and preference shares only it has not so far been affected by these hurricane changes. Adding £6,904 brought forward, the total income was £73,183, a sum which would have provided the preference and debenture interest with ease, and left a substantial amount for other purposes. But the company was involved in a loss of no less than £35,716 through failure of agents, and in order that the cumulative preference dividend should be kept up to date it was necessary to withdraw the remaining £5,000 from the reserve fund. The balance carried forward is £1,966. We have no wish to use hard language, but, remembering the circumstances responsible for the collapse in 1901 and 1902, the latest calamity that has befallen the undertaking seems to point to an absence of watchfulness and efficient control in certain departments

of the business. The directors would do well perhaps to overhaul the administrative machinery, and try to discover where the weakness lies. The company does an immense trade, much of it abroad, and necessarily depends upon a variety of agents for the conduct of its affairs. Therefore it is very essential that the selection of representatives should be most carefully supervised, and the business entrusted to men only of the highest standing. We have not yet had an opportunity of learning the chairman's explanation regarding the failure of the agents whose insolvency involved the company in the loss of more than half its profits, and we are anxious to know whether it is in any way connected with the stock over-valuation referred to in our last two analyses of the position. Did those agents overvalue the stocks held by them, and was it the realisation of the inflated goods which brought about their failure? We cannot have too much light upon this subject, because of the admission in last year's report that serious depreciation of stocks had occurred, and the statement made by Mr. R. H. Gill, the managing director, two years ago, that the quantities of goods held abroad were too high.

Years Ended July 31.

From the subjoined statement of liabilities and assets it will be observed that the stocks are down £42,748, but otherwise the financial position has not been materially strengthened. Liabilities on bills payable, it is true, are £21,666 smaller, but sundry debtors and investments are lower, and land buildings, etc., have once more advanced, and are now valued at £754,246. Cash and bills between them aggregate no more than £7,723, and it is evident that much remains to be done before the concern can be considered solidly re-established. The directors must not forget that the reserve fund has been entirely exhausted, and if the future is to be contemplated without misgiving a substantial sum should be accumulated before the resumption of dividends upon the ordinary shares.

Some Aerated Shareholders.

The gentlemen who preside over the destinies of the popular A. B. C.'s are doubtless past masters in the art of providing light, if occasionally somewhat doughy, refreshments for an always hungry public, but when it comes to the more serious business, of finance, we fear they have much to learn. As is well known, the shares of the Aerated Bread Company have long been maintained at a fancy level by the pernicious system of issuing new capital at a price enormously below current Stock Exchange quotations. Each year, in addition to their dividend, shareholders have had the privilege of subscribing for a certain number of shares at par in proportion to their holdings, and accordingly as the market value was high or low this constituted a bonus of greater or smaller amount. As an example. For the year to September 30, 1902, the shareholders received a dividend of 8s. 6d. per share, or 42½ per cent., and the opportunity of subscribing for one new share for every forty-five held, which at the current market price of over £13, meant a bonus of about 6s. Now, while the Aerated Bread Company remained in almost undisputed possession of the light refreshment field, the dangers of this kind of finance escaped notice, because the company was easily able to maintain its position, but lately competition has sprung up in all directions, working expenses have increased rapidly, and there is not now the same scope for the employment of fresh capital. This foreshadows not only a possible decline in the dividend, but a further reduction in the number of bonus shares issued. Already a considerable drop has occurred, as the proportion has gradually expanded from one share for every thirty held to last year's one for each forty-five. The inevitable result has been an alarming decline in quotations, and since new capital cannot be expected to earn so much as the old, and the field for its employment must become more limited, we do not see how the slump is to be permanently stayed. Unfortunately the kindred business of J. Lyons and Co. has recently followed the bad Aerated example, and it is to be hoped that the present illustration of the serious consequences of the system will induce the directors of that company to at once bring it to end. Subjoined is a list of the principal Aerated shareholders :—

Owing to the pressure on our space this week we are compelled to hold over a note on the mineral resources of Western Australia.

Answers to Correspondents.

[*A Fee of Five Shillings per query is charged for replies under this heading. Letters, Five Shillings extra per letter.*]

Yorkist.—1. Only at par or a very small premium. Issue liable to drawings.

2. High enough at present prices.

3. Ordinary not worth touching. Preference very risky present condition of trade.

4. Seem a fair speculative purchase, but market fluctuates sharply. If you are thinking of buying wait for a dull day.

5. Afraid financial position unsatisfactory; leave them alone.

6 and 7. Should be left alone.

Passing Events.

The political deadlock at the Cape has ended in Parliament being prorogued until the 15th inst., when the House of Assembly will dissolve by effluxion of time. This step involves the issue of Governor's warrants to meet the necessary expenditure until the new Parliament meets, as the Appropriation Bill is one of the measures abandoned, although the Bond offered to pass it if the Government would not drop the Railway Bill. The root of the whole crisis lies in Sir J. Gordon Sprigg's refusal to grant the enquiry into martial law demanded by the Bond, and his declaration that if the resolution was put he would regard it as a vote of censure. It was put and carried, but the Bond having gained their victory did not press it home. Meanwhile, the so-called Progressives anxiously watch the fight between the Government and the Bond, and licking their lips in hopes that it may end in their having a chance of office.

Negotiations between Russia and Japan on the Manchurian and Korean questions are said to have been in progress ever since August 12, though of what character no one seems to know. Japan, however, has refused to allow a British ship owned by an American to enter a Korean harbour, which seems to point to some arrangement by which that country is to be regarded as a Japanese sphere of influence. Quite so, but what about the other Powers?

It is said the Mullah has been getting most of his rifles and ammunition from British firms. This has been done, we imagine, solely in the interests of trade, for if the Mullah can prolong the fight, more of the taxpayers' money will be required to fit out expeditions to smash him. Still, though this may be business, it is scarcely patriotic in the old-fashioned sense of the word.

Daily the situation in the Balkans grows worse, and the whole country from the Black Sea to the Adriatic is now a seething cauldron of anarchy and strife. Last Tuesday was the anniversary of the Sultan's accession to the throne, and it was rumoured that the Macedonians intended to celebrate the occasion by a general rising. So far this has not come off, but should it happen, Bulgaria will be almost certain to join in, and "civilised" war give place to massacre and pillage. If the Powers would for once agree to act honestly towards each other, they could do much to put an end to the disorder. But so long as they remain mutually jealous and distrustful they will limit their interference to diplomatic protest, until some act of atrocity such as the threatened attack on all the consuls in Salonika forces them, through fear of their own people, to actively intervene.

The United States Consul at Beyrout was not assassinated, but only shot at—some reports say by accident. But the States still mean to squeeze that indemnity out of Abdul if they can.

The meeting of the Iron and Steel Institute at Barrow-in-Furness gave its president for the year, Mr. Andrew Carnegie, an opportunity to piffle patriotically with much unction. He lamented the existence of the Atlantic Ocean, by which the complete ascendancy of the "Anglo-Saxon" race is interfered with, but seemed to have strong hopes still for the Morgan shipping combine. And he was great, smugly great, on steel in the States, and forgot not to puff the United States Steel Trust. Do not you buy the shares on his tip, wise reader, even though you should thereby acquire the right to participate in a sixty years' supply of iron ore. The great endower kept silence about the effects of greed engendered over-capitalisation, of dishonest tariffs, of predatory operations in many directions upon the steel industry. And he was wise. Has he endowed a hospital at Pittsburg yet for his sick and wounded?

Colonel Colin Harding, late Acting Administrator of Barotseland, asserts that the present system of treating the black labourers in the Transvaal and Rhodesia is doing incalculable hard to the native races. Men who go south, tempted by the high wages offered at the mines, return to their villages with all the vices of civilisation and none of the virtues. Lewanika, King of Barotseland, recognises this, and does not encourage his subject to travel south of the Zambesi in search of work, of which there is plenty in the country itself. This corruption of native morals is, in Colonel Harding's opinion, one of the great causes of the labour difficulty in South Africa. The remedy lies in the employment of a better class of whites to superintend the compounds and workings in the place of the irresponsible and undignified men so frequently found at the present time on the mines.

Though Mr. Chamberlain could not see his way to raise a loan for the assistance of the Jamaican planters—for which we do not blame him—he has consented to the Colonial Bank advancing them money to restore the damage done by the hurricane. The loans, to the extent of £5,000, will be guaranteed by the Government, so the planters should be happy, especially as the Sugar Convention is now in operation.

The revenue of the New South Wales railways in the year ended June 30 was £3,314,893, compared with £3,668,686 in the previous year, while working expenses amounted to £2,266,299, or only £1,070 less than in 1901-1902. There was, therefore, a gross profit of £1,048,594 on the year's working, but as interest charges required £1,474,473 the net result was a deficit of £425,879. This can scarcely be described as successful working. The drought, that curse to the country but godsend to the Government, is blamed for the loss, yet from other quarters we hear that the drought is not solely to blame. Bad management, high freights, inefficient rolling stock, and neglected permanent way have all had their share in bringing down receipts, and there is a strong feeling growing, not only in New South Wales, but throughout Australia, that the railway boards, if they are to continue, must be placed outside the range of political influence.

Since Dr. Lardy and Professor Matzen have refused to act as arbitrators on the Venezuelan question, the Tzar has informed Italy that he will appoint in their place an Austrian and a Portuguese, these being the only two countries left which have no claim against Venezuela. In the meantime Castro is trying to raise a loan to clear off all the claims.

The final accounts of the German Empire for the financial year 1902 have just been issued, and show a deficit of about £1,536,120. Receipts, instead of being equal to the estimates, fell short by £1,099,400. In only one department, the Customs, did the revenue increase, and this did not benefit the Empire, since all surplus revenue above the fixed sum of £6,500,000 belongs to the federated states. The excise duty on sugar dropped £836,550, post and telegraphs £169,850, and banking receipts diminished by £169,850, while the new duty on sparkling wines brought in only £137,000. Expenditure, on the other hand, exceeded the estimates by about £436,719, every department spending a little more than the amount allotted to it. Of these sums, the largest was the £96,650 required by the army, while on the navy and foreign office the excess amounted to £36,400 and £34,650 respectively.

Dr. Krause was released on Saturday last, after serving nineteen months of the two years' imprisonment to which he was sentenced.

We are still a good way off the half-yearly meeting of the Grand Trunk Railway of Canada, and in the meantime a Toronto correspondent of the *Financial Times* suggests a few questions which might be put to the directors by any shareholder desirous of ascertaining the receptacles into which has disappeared the half-million increase in gross traffic earnings of the past six months:—"What sum has been paid in compensation for fatalities, personal injuries, and destruction of property, including damage to the company's rolling stock, etc., resulting from the casualties at Wanstead, Montreal, Merritton, Port Robinson, Newtonville, Niagara Falls, Paris, Oakville, Whitby, Battle Creek, Victoria Bridge, Dundas, Detroit, Hamilton, Port Union, and other parts? What is the loss on Chicago grain

shipped via Portland? What expense has been incurred in connection with the Grand Trunk Pacific project? What sums have been advanced to, or paid for the benefit of the Central Vermont Railway? Straightforward answers to these questions ought to afford much light.

The *Manchester Guardian* says that meat dealers are watching the Seddonic scheme for dumping low-priced New Zealand mutton on the home market with much interest. It appears to lean to the opinion that, if the project is really carried out, New Zealand will be beaten by Argentina, and perhaps by the colonies on the Australian mainland. We have no doubt about it, but what of that? Heavy losses on the Government mutton shops will serve as an excuse for a bankruptcy as well as could be desired. And meanwhile Seddon must find excuses ever new for borrowing money.

By a majority of forty-six, the Canadian House of Commons has passed the Government's Trans-Continental Railway scheme, which, in addition to being costly, is, we hear, useless for practical purposes. Public opinion is almost unanimous in its condemnation of the proposed route, but this to these worthy legislators is a trifle not worth consideration. Any suggestion, if it promises plunder, is regarded, we are told, with a favourable eye by the majority of the members, whose motto in life is the new patriotic one of "Me and my country, but me first."

The 1902 accounts of the Corporation of London have just been issued, and show its finances to be in a shocking state. Excluding loans, the total receipts from all sources were £445,212, while the expenditure amounted to £514,273, or, roughly speaking, £59,000 more than income. Were the money spent on reproductive works, this deficiency would not be so bad, as there might be a chance of its being repaid. But when we see an item of £30,000 for entertaining the Prince and Princess of Wales, Lords Roberts and Kitchener, and Mr. Chamberlain, and Coronation expenses, we think it time that the Local Government auditors should have some control over the accounts. In Turtledom's own interests some such check is necessary, as at present it is not only an unreformed but irresponsible kind of corporation.

Mr. Chamberlain's memory must be failing. Otherwise he would never have told a correspondent that the Cobden Club "appears to be an institution mainly supported by foreigners, whose interest it is that we should maintain our present system of free imports." The Club, naturally, has demanded a withdrawal of this statement, and reminds the Colonial Secretary that he himself was a member for many years, and even presided at one of the Club banquets. Therefore we say Mr. Chamberlain's memory must be failing, for there can be no other explanation of his overlooking these facts, unless it is he has got to the stage of thinking everyone a foreigner who disagrees with him. But whatever the explanation, he owes the Club an apology.

Banks in all parts of the world seem ever restless to enter pastures new, and Canada is the latest country to catch the amalgamation infection. It appears that the Bank of Montreal has taken over the business of the Exchange Bank of Yarmouth, which will now be conducted as a branch of that institution. The bank has now nine branches in the Maritime Provinces of Canada, and we are told that the operation affords a further proof of the desire of important Canadian banks to enlarge their sphere of operations in the Eastern Provinces of the Dominion.

Our contemporary *The Critic* has drawn our attention to the existence of a New York financial paper calling itself *The Investors' Review*. So far we have not seen a copy, but it would appear to be a very strange kind of fowl, as it has annexed the cover and internal arrangement of *The Critic*, and added on our name. The reading matter, it seems, is also borrowed from different sources, with slight alterations to suit the American palate. Such acts of piracy are no doubt very annoying, but we think both *The Critic* and ourselves can afford to regard this one with amused contempt.

Notes on Books.

Le Marché Financier, par Arthur Raffalovich. (Prix 10 francs. Paris: Guillaumin et Cie.)—Once more this valuable and carefully executed resumé of the economic and financial year 1902-3 has made its appearance, and again we have to congratulate Mr. Raffalovich on his industry, the breadth of view in what he writes himself, and on the good fortune he enjoys in the trained capacity of experience of the collaborateurs he selects to help him with this really gigantic undertaking. As yet we have not had time to go through all its chapters, but we have read with no small interest and instruction his own resumé of the international economic situation and, what we judge also to be his work, most of the elaborate and fact-laden chapter upon Germany. Also we have glanced at the chapter on England, which is of the high quality to be expected from its author, and have no doubt that the rest of the book is of the same wise excellence. We shall hope to return to it at an early date, dealing with some of the individual countries embraced. These are, besides Germany and England, France, Russia, the United States, Austria-Hungary, Italy, Spain, Switzerland, Roumania, and Turkey. The book extends to more than a thousand pages, and is packed from end to end with facts, that much we have seen.

Le Programme de M. Chamberlain, par Yves Guyot. (Paris: Librairie Guillaumin et Cie.) Within the comparatively few pages of this little brochure M. Guyot has managed to set forth very clearly and concisely the absurdities of Mr. Chamberlain's protectionist schemes. We have not space to dwell on the arguments used, which, moreover, are familiar to us all, but it is interesting to note the view taken by an intelligent and enlightened foreigner. M. Guyot is decidedly "nasty" on one or two of Chamberlain's cheerful sayings, to wit that the duties on food will be favourable to a return to rural life. "Does he mean by this that the working classes will find themselves so miserable in the towns that they will be forced to retire into the country?" Again on the Colonial Zollverein and the cementing of the Empire: "Il est singulier que le Ministre des Colonies au lendemain de la guerre du Transvaal, déclare que l'Empire n'est pas solide." Particularly severe is the author on those monstrosities named preferential tariffs, pointing out the discord they will bring, how each Colony will want a tariff favourable to its own particular product, how one will declare the other has the best of it, all unite against Canada as the most favoured of all, and as a final result two alternatives, either the colonies will dictate to the United Kingdom their ideas of preferential tariffs, or, adopt the policy of "shan't" and refuse to send their goods on the terms offered. "Une singulière manière de travaille à la consolidation de l'Empire." However, we are showing fight against a return to protection, and that, as M. Guyot is good enough to remark, is better than in France, where in a democratic country possessing universal suffrage for more than half a century, working classes and socialists have always disclaimed this "petite question." But does not that indifference warn us what we should be in for were our King mob to become indoctrinated with the heresies of barbarism and international trade jealousy and exclusiveness.

This month's *World's Work* seems rather dull, or else it may be that the sudden spell of holiday weather makes the very word "work" objectionable. The articles on the Etiquette of Courts, and Ball Games, being in lighter vein, appeal to us most, but there is good reading in the accounts of the power and influence of Tammany Hall, the doings of the British Association, and the Progress of Italy.

The Wide World Magazine for September is a very good number, its tales of adventure not quite so lurid as usual, and sometimes even humorous. The *Captain* never disappoints, and this month's Lower School Yarn, the happy fate of the Long 'Un, and all the various "sport" elements will enhance its reputation. Of the two *Strands* the *Sunday* pursues the even tenor of its way, and appeals to the tastes of those who can appreciate a story with a not too obtrusive moral. The *Strand* itself, if not quite up to its usual excellence, contains a fair amount of good things. The "Iron Maiden," "Sovereigns I have met," "A Liar and an Elephant," and "The Ebony Box," are all excellent.

Company Reports and Balance Sheets

**** *The Editor will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Great North of Scotland Railway.

Gross receipts for the six months ended June 30, £247,680, increase £5,359; working expenses, £124,500, increase £1,290; ratio of outlay to gross income, 51.20 per cent., against 51.79 per cent. With the single exception of live stock, all classes of traffic gave an improved revenue, merchandise and minerals doing best, but there was a falling off of almost £1,000 in mileage and demurrage. On the expenditure side moderate increases were seen in locomotive power, carriage and wagon repairs, and traffic expenses, and the fact that the advance in outlay was not larger can be attributed to the absence of parliamentary charges, which a year ago were down for £1,174. Net revenue comes out at £123,180, and £5,704 was brought forward, making the sum for disposal £128,884, from which fixed charges absorb £36,529, leaving £92,355 available for dividend, or an advance of £3,504. Preference and guaranteed charges take the same or nearly so, and the directors are able to provide the preferred converted ordinary dividend, and increase the distribution on the deferred converted ordinary stock by ½ to 1½ per cent. per annum, carrying forward £2,573. Capital expenditure in the six months was £56,642, of which £37,729 was for land and compensation, and the outlay for the current half year is estimated at £32,000. Already the debit to capital account is £257,388, and not only have all the savings disappeared, but the company has been compelled to resort to temporary loans to the amount of £135,000.

Commercial Bank of Australia.

Gross profits of this bank fell away a little during the six months ended June 30, compared with the corresponding half of 1902, the total being £116,784, against £118,109. Balance from previous account was £29,730, making £146,514, and after providing all charges and taxes the directors have again to set aside a large sum to meet losses on the operations of the Special Assets Trust Company. The amount involved is £29,331, against £29,418, and another £5,000 is placed to the Special Assets Trust reserve, leaving £62,172. Out of this a dividend of 3 per cent. per annum is again proposed on the preference shares, with £30,413 carried forward. Government deposits are a little smaller at £432,111, while other deposits come to £2,985,687. Notes in circulation reach £146,003, and bills in circulation £375,152. On the credit side coin, bullion, and cash at bankers are about the same at £1,095,305, but money at call and short notice is up over £500,000 to £535,000. Total "cash assets" therefore show an advance of £578,859, to £2,124,814, and we find a corresponding reduction in bills discounted and other advances, which are £520,103 down, at £3,804,321. Real estate has fallen from £581,269 to £448,943, and we note that the item of shares in other companies no longer appears.

Bank of British North America.

For the half-year ended June 30 this bank earned a profit of £32,755, or £2,194 less than in the corresponding period of 1902, but the balance of £3,941 brought forward was a good real larger, and the sum for division is merely £712 lower, at £36,696. The directors first of all appropriate £1,290 to various pension and insurance funds, and after providing the usual dividend at the rate of 6 per cent. per annum, £5,406 is carried forward. Deposit and current accounts show a further small increase to £3,339,054, notes in circulation have risen £58,282 to £522,836, and bills payable and other liabilities are a trifle higher at £3,060,633. On the assets side the chief movement is in bills receivable, loans, etc., which have advanced £425,713 to £5,056,452, while cash at call and short notice is £268,250 smaller, at £1,658,668. Cash and specie at bankers and in hand shows a small increase to £920,326, and both British Government securities, £272,047, and other securities £292,125, are higher than at the corresponding date last year.

Bolckow, Vaughan and Co.

This company's profits recovered smartly during the twelve months ended June 30 compared with the preceding year, but they are still a long way from the immense revenue earned during the boom period of three or four years back. After providing depreciation, the profits are returned at £278,748, compared with £183,463 in 1901-2, and £618,297 in the previous eighteen months, the last-named being at the rate of £412,198 per annum. Balance brought forward, however, was £55,912 less, at £68,912, and the total sum for appropriation shows an expansion of £39,373 at £347,660. The directors, however, again restrict the dividend to 5 per cent., and provide £140,750 towards the capital expenditure for the year, leaving £45,991 to be carried forward. Total outlay was £328,916, of which £188,266 is charged to capital, and we note that the land, buildings, mines, and other properties are £123,930 up, at £3,047,294. Depreciation allowance, therefore, would appear to be £64,330, and is clearly insufficient. In other respects also the financial position is rather unsatisfactory. Floating liabilities reach £311,964, against debtors of £153,010, and owing to the important outlays on capital account, cash and bills show a reduction of £162,274 to £51,117. Reserve remains at £250,000, but the investments against it are £14,154 lower at £50,350, and either capital outlay must soon cease or some fresh permanent money raised. Perhaps the former would be the wiser course. Stocks are £22,586 up at £562,848.

Surrey Commercial Dock Company.

According to the interim report of this undertaking the tonnage of vessels entering the dock during the first half of 1903, was 592,033 tons, against 609,931 in the same period of last year, or a decrease of 17,898 tons. Declines occurred under the heads of wood, coals, and sundries, while grain and firewood increased, the latter substantially. The improvement in grain is regarded with particular satisfaction, because of the fall in the imports from European ports, and the directors are able to announce that the stock of grain in the company's warehouses at the present time is larger than that of the previous year. Preference is made to the Port of London Bill, and proprietors are told that the proceedings in committee were vigilantly watched with a view to the protection of their interests, and important amendments submitted by the dock companies were adopted. As is well known, the bill has been carried over to next session. The dock extension works are progressing satisfactorily. The new lock and the works connected therewith are rapidly approaching completion, and there is every reason to expect that the lock and entrance will be finished, and available for shipping in the early part of next year. The usual interim dividends at 5 per cent. annum on the ordinary and "A" preference stocks are declared.

Steel Company of Scotland.

The results obtained by this undertaking during the twelve months to July 16 last differ but little from those of the preceding year. Mills at Hallside and Blochairn were again well employed, and notwithstanding a falling off in some of the other departments, the total output of finished material again exceeds the previous highest, being several thousand tons in excess of 1901-2. Prices, however, were lower than in the previous year, and as raw materials cost slightly more, the maintenance of profits must again be attributed to economies effected in cost of manufacture. Foreign enquiries for the company's products continued throughout the twelve months, but some falling off has been recently experienced, notably from the United States. Canadian business fortunately has not suffered to the same extent. Balance from manufacturing accounts was £67,343, compared with £66,625, and as usual the amount expended on additions to and reconstruction of plant, £21,105 is deducted, leaving £46,238. Adding £1,868 brought forward, and other revenue of £1,168, the amount for disposal comes to £49,274. Deductions from this aggregate £30,606, including £15,183 for administration and rates and taxes, £13,088 for debenture and other interest, and £2,000 for directors' fees. Balance over is £18,668, so the reserve fund again receives £5,000, the 2½ per cent. dividend paid last year is repeated, and £2,517 is carried forward. The directors say that the amount spent in addition to and reconstruction of plant provides for depreciation, but it really does nothing of the kind, and even if it were a legitimate allowance, the sum is extremely small on properties valued at over £600,000, some of which we suppose are gradually becoming exhausted. Reserve now amounts to £70,000, all invested in the business, and trading accounts are well in favour, but cash is poor at £11,497.

London and Glasgow Engineering and Iron Shipbuilding.

Business was highly profitable for this undertaking during the twelve months to June 30 last. The shipbuilding and engine works have been fully employed on contract work and repairs, and plenty of orders came forward for the boiler works. Admiralty business seems to be the company's chief standby, and we are told that within the year H.M.S. *Monmouth* completed her steam trials, and has been handed over to the dockyard authorities. The first-class cruiser *Cumberland* is now so far as the building contract is concerned, completed, and running her steam trials on the Clyde, and will afterwards be made ready for sea at the company's yards instead of as formerly at one of the Government dockyards. The *Roxburgh*, another first-class cruiser, is also in a forward state. Outcome of the year's operations was a balance transferred from works account of £51,356, to which is added £4,056, brought forward, and £3 for transfer fees, making £55,415. General charges, interest, on mortgage debt, and fully paid up shares, income-tax, and £8,281 reserved for depreciation, altogether drew away £15,628, leaving £39,787 as net profit, which is an advance of £26,683, compared with the preceding twelve months. Therefore the directors are able to add a nice little bonus of £1 per share to the 5 per cent. dividend, with £6,000 to reserve, and £3,283 carried forward. Shareholders, however, will derive only indirect benefit from this windfall, as the directors have resolved to call up an additional £1 per share capital, making the £9 shares £7 paid. Plainly the capital account calls for adjustment. Amount issued on shares is £146,790, while net expenditure on properties is £217,878, and £1,000 has been invested in shares of other companies. Thus we get an excess of £72,088, and it has been necessary to mortgage certain properties for £26,000. When, however, the new money has set this matter straight, the position will be eminently satisfactory. Apart from a reserve now amounting to £80,000, there is a suspense account of £45,000, and although no separate investments are held, we find the company possessed of £56,752 in cah, and bills receivable for £44,197, while £18,552 is owing by sundry debtors, or total liquid assets of £119,501, against creditors of £36,953 only. Stocks are modest at £20,339, and with work in progress valued at £490,451, the amount received to date is £486,624.

Prince Line.

This undertaking does not make a very grand show for the year to June 30, and in their report the directors speak of the extremely

depressed condition of shipping business. The shrinkage referred to in the last statement became more pronounced, and in addition some of the trades in which the company is engaged have been considerably disturbed. Matters, however, are now said to be gradually adjusting themselves, and prospects for the current year are described as more encouraging. Revenue from passengers, freights, etc., came to £628,702, to earn which cost £553,334, and after deducting £24,179 spent on repairs and renewals, the net balance is £51,189. Transfer fees were £22, making £51,211, which is reduced to £42,720 by directors' fees, income-tax, interest, etc. If this sum were alone depended upon, it would not be possible to allow 5 per cent. depreciation, and pay a 5 per cent. dividend to the shareholders, but the board wishes to do these things, so £15,000 is transferred from the general reserve to depreciation account. The balance carried forward is £2,986. Additions to the fleet in the twelve months were £149,479, making a total of £961,955, but from this must be deducted steamers lost and sold, £49,615, and the wastage allowance £38,404, leaving the net value of the vessels at £873,936. As the issued capital is only £601,495, it follows that not only are the general reserve of £60,000 and the insurance reserve of £82,242 involved in the business, but heavy sums are owing besides. Thus the company owes £114,457 on bills payable and £30,542 to sundry creditors, and on agents' accounts, in addition to £12,461 in other directions. Against these liabilities, aggregating £157,460, sundry debtors and agents' accounts come to £10,369, and cash and bills to £26,838 and it is no easy to see how this position is to be adjusted as further capital would be difficult to raise under prevailing conditions.

United Horse Shoe and Nail Company.

This undertaking fared very badly during the six months ended June 30, and the South African war seems to have been directly responsible. During the pressure of work arising from that conflict the company's ordinary trade had to be set aside in order that its entire resources might be devoted to meeting the requirements of the Government. Therefore, at the termination of hostilities and the consequent cessation of War Office contracts, scarcely any orders were on the books, the regular business having been diverted into other channels. Under these circumstances until the support of the former customers had been recovered, it was necessary to accumulate stock, the consequence being the absence of the usual profit, and the locking up of a considerable amount of capital. Fortunately the company is rapidly recovering its former customers. Many additional ones have also been secured, and orders are now said to be coming in at a satisfactory rate. Trading profit fell almost £9,000 to £3,041, and with £8 for transfer fees, the total balance is £3,049, against £12,164. Nevertheless, administration charges rose £100 to £1,867, and although over £1,000 less, at £940, was allowed for depreciation, the provision of debenture interest, etc., left the company with a debit balance of £52. This reduces the amount standing to the credit of the preference shareholders to £8,307, but the sum is still substantial, and would have provided a dividend, as would the amount of £3,036 belonging to the ordinary shareholders. The directors, however, do not propose any distributions, and they are wise, because the company possesses very little in the way of free assets. Sundry creditors come to £3,556, and £2,000 has been borrowed from the directors, against which there are sundry debtors £8,910, bills receivable £200, and cash £1,995. Stocks are rather high at £21,823, and we must not forget that plant suspense account £9,788 is a fictitious asset, as it represents the book value of plant and material which have been broken up in consequence of the recent alterations at the factory.

Lawes' Chemical Manure.

Although the sales of this company increased during the year to June 30 the directors complain of higher prices for raw materials, and have to report a decline in profits. The revenue was £16,952, or £1,167 less than in the preceding twelve months, and with the addition of £1,200 brought forward, and £16 for transfer fees, the sum for appropriation is £18,168, a drop of £1,003. This means that after providing debenture and preference interest and £500 as a reserve for bad and doubtful debts, the dividend on the ordinary shares must be reduced ½ to 4½ per cent., with an increase in the balance forward of £1,345. No addition is made to reserve, and land, plant, leases, goodwill, etc., look like remaining at the old figure of £188,094 for an indefinite period. There is an enormous excess of debtors over floating liabilities, but cash is poor and lower at £4,501. Stocks show a considerable reduction to £67,926.

Woking Water and Gas.

During the half year ended June 30 this little company earned a gross revenue of £6,166, at a cost of £2,457, leaving a net profit of £3,709. Balance brought forward was £57, making £3,766, from which debenture and loan interest absorbs £667, and income-tax £122. The sum remaining admits of a dividend at the rate of 4 per cent. per annum, with £77 carried forward. Capital expenditure is some £10,000 in excess of the amount issued, and as the company is not the happy possessor of reserves, floating liabilities greatly exceed assets. A loan of £2,250 has been raised from bankers, and cash is insufficient to provide the dividend.

The London and South Western Bank, Limited, will open a Branch at King's Cross, opposite King's Cross and St. Pancras Railway Stations, on Monday, September 7.

A conference on the Spanish Army estimates has taken place between the Spanish Premier and the Ministers for War and Foreign Affairs. It is believed that the increased expenditure agreed upon will add 146,000,000 pesetas to the Budget figures.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1903, and August 29, 1903 :—

Revenue and Other Receipts.

—	Estimate for the year 1903-1904.	Total Receipts into the Exchequer from April 1, 1903, to August 29, 1903.	Total Receipts into the Exchequer from April 1, 1902, to August 30, 1902.

Treasury, September 1, 1903

The Investors' Review.

The Week's Money Market.

Bank Rate 4 per cent. (Advanced from 3 per cent. on September 3.)

Norfolk House, Friday Evening.

The market last Saturday was able to find the £2,000,000 required for the new Treasury bills without help from the Bank, and apparently without the least inconvenience. Rates remained round about 2 per cent. for day to day loans, and at 1¾ to 2 per cent. for weekly fixtures, and, except for the usual end of the month disturbances to credit, there seemed no reason why this cheapness of money should not continue for at least the first half of the current month. Monday, however, brought a rather different state of affairs, as, in addition to the calling in of funds by some of the joint-stock banks, the Crown Agents for the Colonies took between £1,000,000 and £1,500,000 off the market to provide for the repayment of the Netherlands South African Railway debentures, and a further £550,000 had to be found for the instalment on Brazilian bonds. The market's resources having already been greatly depleted by Saturday's effort, these demands proved almost too much for it, and a little assistance had to be obtained from the Bank, which charged 3½ per cent. for a week. Outside quotations, however, never rose above 2½ per cent., and were seldom more than 2 per cent. for over-night advances, and weekly money for the most part cost 2 per cent., and even on Tuesday matters remained much about the same, although the Consol market required more accommodation than was expected. With all this ease in credit, there was undoubtedly a growing current of uneasiness regarding the future, which found vent in unwillingness on the part of brokers to borrow money with any freedom, or to yield to the temptation of cutting discount rates afforded by the low charges for accommodation, and on the part of the joint-stock banks to take in bills from the market. None of the last named were disposed to work, and as the discount houses found it impossible to rediscount their paper there was little inducement to cut rates, which were consequently held fairly firm at 2⅞ per cent. for ninety day and 3⅜ per cent. for six months' maturities.

A very strong demand for gold on German account was experienced in the open market in the beginning of the week, and all the arrivals, amounting to some £700,000, were taken for that quarter, at prices ranging from 77s. 10⅞d. to 77s. 11d. per oz. So keen was the demand that resort was had to the Bank, and, in spite of the selling price of German gold coin being raised ½d., to 76s. 9½d., per oz., £102,000 was withdrawn for export, while there were rumours that more would follow. Even this drain, however, hardly prepared the market for Thursday's developments, as the export of coin was largely considered an isolated occurrence, due to the Netherlands Railway repayment, although there was also talk of its being due to a Russian demand on Berlin. The announcement, therefore, that the Bank had raised its rate of discount from 3 to 4 per cent. took the market completely by surprise, and thoroughly disorganised business for the time being. On the surface the Bank return, although by no means strong, gave no indication of any need for such urgency, as even with the internal requirements the reduction in the stock of gold was only £600,000, and the reserve was down by no more than £748,000. The other movements were fairly large, but readily enough explained by the Treasury Bill operation. A large proportion of this money had been returned to the market without delay, leaving other deposits £1,415,000 lower, while public deposits showed a reduction of £1,386,000, consequent upon the repayment to the Bank of £2,000,000 of Ways and Means borrowings. The Bank, however, was driven to take the step by a further heavy withdrawal of gold, amounting to £825,000, of which the greater portion was destined for Germany, and it is feared that even a 4 per cent. rate will prove ineffectual in checking the outflow.

The discount market immediately on the announcement raised its rates to 3⅜ per cent. for three months' bank bills, and to 3½ to 3¾ for four and six months' paper. Floating balances, however, continued plentiful, and even after the change in the Bank rate was announced, overnight loans could be obtained at 1½ and 2 per cent. The joint-stock banks had arranged their business early in the day, and, as no one had anticipated the advance, had been content with 1¾ per cent. for all they lent, but these rates are now things of the past. With the rise in discount quotations there is more inducement for the Continental buyers of bills to compete, and the short loan market will suffer from the transfer of funds, and then the Bank is certain to do all in its power to make its rate effective.

To-day the discount market was still more or less in a state of suspended animation. Rates were quoted at 3⅜ to 3½ per cent. for ninety day bills in the morning, but the joint-stock banks showed more readiness to work, and took in a few parcels at 3¼ per cent., and as at the same time the Continent was said to be nibbling, the quotation later in the day became easy at 3⅜ per cent. Money was not quite so abundant as yesterday, but supplies were still plentiful enough, and 2 per cent. was again the general charge for day or seven day loans. Advances overnight or until Monday could sometimes be obtained at 1½ per cent, and even 1 per cent., but this ease was largely due to efforts on the part of Stock Exchange dealers to place their balances over the holiday to-morrow, and meant nothing. The present low rates, however, for credit are not likely to last much longer, as there are already indications that the Bank is preparing to make is minimum effective by absorbing surplus supplies now in the open market.

The Bank's half-year ended on August 31, so that the item of "rest," or undivided profits in this return has been adjusted by the addition of £229,619. This brings the total up to £3,740,209, or sufficient to allow of the distribution of the customary 5 per cent. for the six months, or at the rate of 10 per cent. per annum, and still leave a balance of £12,559 over the irreducible minimum of £3,000,000. Calls in the coming week are unimportant, and the only one to be mentioned is the £750,000 due on Tuesday on London County 3 per cent.

SILVER.

The metal has moved up in rather sensational fashion since last week. Saturday witnessed an advance of ¼, and this was followed by further improvements of ½ for cash and 9-16 for future delivery, to 26¾d. and 26 11-16d. per oz., a level not reached since October, 1901. India was reported a good buyer, and several urgent orders also came into the market, which, being short of supplies, was quickly influenced. At the top figures, however, offerings were rather larger, and as India did not respond to the rapid rise here, prices soon began to fall away, closing uncertain at 26 5-16d. for cash and 26 3-16d. for forward delivery, or gains of 5-16 on the week. For the Rs.50,00,000 India Council drafts offered on Wednesday, the applications were Rs.33,84,40,000 in bills and Rs. 67,05,000 in telegraphic transfers. The amount allotted in the former was Rs.24,00,000, and in transfers Rs.26,00,000, tenders at 1s. 4d. and 1s. 4 1-32d., respectively, receiving in full.

The Secretary of State for India in Council gives notice that tenders will be received at the Bank of England on Wednesday next for £500,000 India Bills. These bills are issued in part replacement of an issue of £1,000,000 falling due on September 15, and will be for twelve months from that date.

Stock Market Notes and Comments.

To adopt the vernacular of Whitechapel, stock markets had the hump in the first half of the week, and got the needle on Thursday when the Bank Directors exploded their bombshell. There is no need to repeat that genuine business was at a standstill, that most of the "House" is not earning its working expenses, and that there has not been a market anywhere in the real sense of the word. These things have been commonplace for many weary months, and may be taken as going without saying until further notice.

Some attempt was made by one or two optimistic enthusiasts to argue that the carrying over of the Consols account had revealed a genuine reduction in the bull position, and that Home Government stocks looked cheap. Perhaps they did compared with the prices that ruled in the days when British credit was not at the mercy of Messrs. Lowther and Chamberlain, assisted by those eminent economic experts Sir Conan Doyle, Sir Gilbert Parker, and Professor G. S. Street; but it is no use jibbing backwards; it is not enough to know that Consols were once 114, what we have to discover is what they are going to be this day six months; and as to that part of the problem an instalment of the answer was given on Thursday to the professionals who had ventured to start a little flutter on Tuesday, when the deduction of the quarterly dividends made prices look so attractive. After all it is all a matter of common sense: on the one hand we are at the beginning of an autumn which is generally expected to be marked by an unusually severe squeeze for money, the first effects of which are already with us; on the other, investment securities are a commodity that are certain to be multiplied as fast as circumstances permit—we have Irish Land stock to come, Water Board stock, Docks Board stock (if the Government survives to carry its Bill), and plenty more Transvaal stock, probably with a British guarantee, not to mention dozens of hungry colonies and corporations. These things do not make Consols look cheap.

The only thing that is in favour of a recovery in gilt-edged securities is not a strong enough influence to resist at least for some time, the above considerations, and its other effects are so untoward that we must all hope that its operation will be delayed as long as possible—that is to say, growing trade depression. It is generally believed in the "House" that bad trade means that money comes into the Stock Exchange, making business there active, and causes a rise in well secured stocks. It certainly may have, and often does have, this effect; and anyone who looks on bad trade as a bull point for Consols may lay the flattering unction to his soul that trade prospects are not rosy. The Home Railway traffics of the last three weeks have been decidedly and increasingly bad, the surest possible sign that trade activity is diminishing. But if this is good for Consols, what will its effect be on Railway dividends? For years the railways have managed with the help of increasing gross receipts to make some headway against ever swelling capital charges and other cheerful accompaniments of extravagant and improvident finance. Some of them, such as the North-Eastern and Great Northern, have even succeeded in bringing to bear something like scientific intelligence on the problems of their administration. But even so, results have been by no means cheering to proprietors, and the prices of their stocks have suffered almost as severely as Consols under the withering blight which Imperialist tomfoolery has shed over standard British securities. And now if gross receipts are to show a serious falling off—it was serious enough this week in the case of the North-Western—the railway shareholder is only too likely to be subjected to a chastening process, which will be as beneficial morally as it will be materially unpleasant.

But all this is very parochial. Preferential tub thumpers tell us to look beyond the seas at our mighty Empire—what does it matter if the bottom falls out of Consols and Home Rails as long as Trunks are good? That mighty Imperial highway is benefiting from the results of the invasion of Canada by Uncle Sam with his capital and his enterprise; the July statement was good, the traffic for the last ten days of August was better; and Trunks were the only

market which hardly shivered when the Bank rate bombshell burst. So let us all take comfort, for the Empire is all right. Argentine traffics also have been most encouraging, but the Argentine is outside the pale, and what will happen to shareholders in South American railway and other companies—not to mention Government bonds—when a tariff wall shuts out South American produce from its best market is a matter which "Consistent, Birmingham" might tell us something about. As for foreigners and the fall in Turks, they do not now concern us: there was a day when Great Britain might have had something to say on the question of massacres by Turks or exasperated insurgents: now we look beyond the seas at our mighty Empire and listen to Mr. Seddon cooing about mutton depots—it is a high Imperial mission. With regard to Americans, we can leave them to Wall Street to play with according to its advanced methods; it is said that currency reform in the United States is to take the form of increasing the circulation of the banks on the German plan—and the German plan has a great deal to be said for it; it is automatic and so does not involve the dependence of the financial world on the collective wit of a body of well-intentioned "experts." The mining market was not, unless a fresh slump in West Africans constitutes a proof that it was, "in being."

The Week's Stock Markets.

No words of ours can adequately describe the conditions now prevailing in the Stock Exchange. Business, one may say, has been virtually suspended, and even when the holiday season, which is held responsible for the present idleness, is at an end, it is not easy to see in what manner markets are to be again stimulated into activity. All the forces discernible seem to point the other way, and we had an example this week of the many influences to be contended against in the altogether unexpected raising of the Bank rate from 3 to 4 per cent. A foreign drain of gold has set in that promises to create acute disturbance in the money market unless it can be checked, and certain it is that we shall get no Stock Exchange revival unless the credit machinery runs with exceptional smoothness. The raising of the official minimum caused quite a stampede among the few operators possessing sufficient courage to have accounts open for the rise, and markets close flat and gloomy, after keeping remarkably steady during the first two or three days. Last Saturday was contango day

in Consols, and owing to the ease prevailing in the short loan market, money was obtainable on rather better terms. The banks generally lent at 2¾ or 2⅞ per cent., and money dealers who secured more than 3 per cent. considered themselves lucky. There was unfortunately another difference against the "bulls," but they did not despair, and heroically tried to set things straight by marking prices up a fraction or so. The dividend was taken off on Monday, making quotations 90 3-16 for money, and 90⅜ for the October account, but whether they "looked cheap" or not, no one showed much desire to buy, and the rise in the Bank rate on Thursday quickly tumbled prices into the "eighties." They close 89 11-16 to 89 13-16xd for money, and 89 13-16 to 89 15-16xd for the account. Childers 2¾ and 2½ each fell back ¼, and the Transvaal loan, which had been ¼ premium, went back to ⅛ discount, meaning a loss of ⅜. War Loan and Local Loans stocks were dull, but India 3 per cent. did not lose an early rise of ½. Neither Home Corporation and County nor Colonial Inscribed stocks call for remark.

Movements amongst Foreign Government bonds were usually confined within a very narrow compass, and few words are needed to describe this section of the markets. Paris had her monthly settlement to deal with in the first part of the week, and therefore was disinclined for business, but the dark outlook in the Balkans exerted a rather unfavourable influence and caused a little selling from across the Channel, with chief pressure directed against Turkish issues. The two lower groups daily lost a fraction of greater or smaller amount, and the "C" bonds finish 1¼ lower, and the "D" 1⅜. Spanish "sealed" bonds recovered an early weakness and closed unchanged. Other Europeans, including Bulgarians and Russians, also held their ground throughout. Argentines see-sawed a little after the previous week's boomlet, but gave way towards the end and finish lower here and there. Uruguays were inclined to improve. In the Far Eastern division Chinese silver bonds advanced sharply owing to the rapid rise in the metal, and Japanese gathered a little strength, only to give way again towards the close.

Scotch railway dividends have been about the only topic in the market for Home Railway ordinary stocks, and of these the most important was the Caledonian. This company, the market anticipated, would be able to give the deferred stock a distribution at the rate of 1 per cent. per annum, whereas only ¾ per cent., or the same as a year ago, is paid. In the disappointment which ensued prices were marked down, and continued to sag, until the declines at the close amounted to 2 for the ordinary and 1 for the deferred. The Glasgow and South-Western divi-

dend, which was also announced on Tuesday, was at the rate of 3¾ per cent. per annum, compared with 4¼ per cent. last year, and the balance forward was also reduced, but quotations were not disturbed, nor had the Highland figures any more effect, although in its case a dividend change for the better was shown, and stockholders receive a dividend at the rate of 1 per cent. per annum, compared with nothing at all for the corresponding six months in 1901 and 1902. Traffic returns were generally considered

poor, and with the market out of heart the change in the Bank rate had a very depressing effect. The "heavy" lines suffered most severely, but the declines throughout the list were fairly substantial. North-Western fell 2, Midland deferred, Great-Western and North-Eastern 1½ each, Brighton ordinary and deferred were 2 and 1½ lower, South-Eastern ordinary declined 2, South-Western ordinary 1 and the deferred 2. Lancashire and Yorkshire and Great Northern deferred also relapsed 1 each.

The Yankee market experienced another disappointment with regard to the weekly figures of the New York Associated Banks on Saturday, which showed a further advance of over £1,000,000 in loans, but professed to find compensation in Mr. Shaw's plan for relieving the stringency during the movement of the crops by redepositing in the Banks, internal revenues of about £8,000,000. Business in Wall Street has been greatly restricted by the anxiety regarding the monetary outlook, and the uncertainty about the condition of the corn crop, and last week's dealings were said to be the smallest for thirteen years. This week's total will probably prove equally small when the figures come to be added up, as the holiday feeling has grown more and more pronounced each day, and even the more prominent operators have been content to do little, in view of the closing of the stock markets on Saturday and Monday. With Wall Street in such a listless condition, it might have been expected that our market would have been equally helpless, but although business was miserable enough there was perhaps a shade more interest shown. Prices went up in the beginning of the week, and fairly substantial gains were recorded in several stocks, which were further increased with New York help, but with growing indications of indisposition to work coming from that quarter dealers here gave up the effort, and the week ended with stagnation prevailing. Atchison issues were taken in hand on a belief that the Rock Island group was buying for control, and with bears closing prices finished 2¼ up for the ordinary and 1½ higher for the preference. "Coalers" were depressed on reports of a curtailment of production in Pennsylvania, but hardened on statements that the reduction in the demand for coal was less important than had been feared. Milwaukee were lifted 2, Louisville rose 1, Norfolk common lost an early gain, but the preferred have advanced 3. Wabash preferred and Denver ordinary and preferred improved ½ in each instance. New York Central appreciated ½. Baltimore issues and Ontario, however, fell fractionally, and Pennsylvania, after being higher, relapsed, and closed unchanged.

What little speculation exists at present appears to be devoted to Grand Trunk stocks, and the fluctuations in these has accordingly been comparatively rapid. Professionals both here and in Montreal have devoted their attention to them, and, helped by the monthly traffic return, which was better than had been expected, the junior securities went up with a jump. A slight setback followed on selling believed to come from Glasgow, but the support was too strong for this to be more than temporary. The traffic return showing an increase of

£31,476 for the ten days, exceeded expectations, and at the end the ordinary stock showed a gain of 1⅛, the second preference was 1½, and the thirds 2¼ up. The Canadian Pacific statement was also considered satisfactory, with an increase of 147,000 dollars, and the price jumped up a full point.

The little boom which set in amongst Argentine Railway securities on the publication of those fine-looking budget figures quickly spent itself, and by Monday last business had again sunk to insignificance. Prices nevertheless kept firm, and when a batch of excellent traffic returns was published on Wednesday prices were marked up in several instances. A final reaction did not eliminate all the gains, and we find Rosario ordinary stock up 1, and the deferred 2, Pacific ordinary 1 better, and gains of 2 in Argentine Great Western ordinary and 1 in the preferred stocks. Several Cordoba Central and Cordoba and Rosario issues were advanced 1 to 4, and notwithstanding the absence of business the market has a firm appearance. Mexican issues went up with a jump when silver mounted, but fell away before the close, and finish with little movement.

Extraordinary quietude prevails in the Miscellaneous market, and there is nothing of the slightest interest to record. Sweetmeats continue to recover and are now back to 2⅛, being a gain of ⅜ on the week. Most Catering things keep steady, Aerateds remaining at 11, but Harrods were a little dull and fell back a shilling or so. Iron and Steel shares generally held their ground, although Pearson and Knowles were rather heavy on the dividend announced at the rate of 5 per cent. per annum, making 4 per cent. for the year, against 6 per cent. for the previous twelve months. Textiles were inclined to improve, Coats coming in for modest support, while Calico Printers were bid for a little on the publication of the report. Gas Lights continue to be quietly absorbed and put on another 2, but South Metropolitans slipped back £1. Dock stocks were unaffected by the fire at the West India Dock, owing to the prompt statement by the company that its premises were very slightly hurt, and that the damage was covered by insurance. Oil shares picked up and Russians are once more at par. British Electric Tractions keep steady for the moment, and one wonders where the support is coming from. Waterworks started to move down again.

To-day's markets were still under the influence of the rise in the Bank rate, and consequently dull. Just at the end, however, a slight rally occurred, which left Consols unchanged, and reduced losses in other directions to small fractions. A few Home Railway stocks finish ¼ to ½ lower, Yankee Rails were also down on balance, although there was nothing doing in them here, and Foreign Government bonds were dull. Constantinople was said to have thrown Turkish Group "D" on the market in large amounts, but Paris and Berlin absorbed all that was offered, and they close only fractionally easier.

WHITAKER WRIGHT'S TRIAL.

The following resumé of the evidence taken at the Guildhall on August 25 brings down to date the summary of the proceedings against Mr. Whitaker Wright, as there will be no further developments until the 15th inst.

The first witness examined was Mr. W. J. Stephen Noah, 26, Mansfield Road, Guildford. Examined by Mr. Astory, he deposed that he was manager for Messrs. Stoneham and Messenger, stockjobbers, 70, Cornhill. At the end of November, 1900, his firm had an account opened with the London and Globe Finance Corporation in a number of shares, including Lake View Consols. The amount in which the London and Globe was indebted to his firm for differences at the end of December, 1900, was over £60,000. Failing to be paid, his firm presented a petition for the winding up of the company. The firm had also an account open with the Standard Exploration Company. In consequence of its default, the firm also presented a petition for the winding up of that company. Its indebtedness was much smaller, he thought under £5,000.

Did you know anything of the transfer of liability of the London and Globe Company to your firm to the Standard Exploration Company made on November 30, 1900?—No.

You had no nitce of it and never gave your consent?—No, we knew nothing of it, and never gave our consent in any way.

Cross-examined by Mr. Muir: Is it a fact that the greater part of the indebtedness of the London and Globe which existed at the end of December was incurred in the month of December?—In

November and December; the greater part might have been in December.

By Mr. Avory: Possibly there was £54,000 odd due on November 30. A lot of shares were carried over.

Mr. Waterlow, of Messrs. Waterlow, printers, Great Winchester Street, the next witness, stated that his firm had printed 10,000 copies of the report and balance-sheet of the London and Globe in 1899, the majority of which were posted to the shareholders. His firm also printed the official report of the meeting as well as the directors' report, and the balance-sheet in 1900, which were also sent to the shareholders, the envelopes for that purpose being supplied by the company.

Mr. Arthur Russell, senior examiner in the Department of the Official Receivers in Companies Liquidation, examined by Mr. Avory, said in that capacity he had had charge of the liquidation of the London and Globe, and the Standard Exploration Company, under the supervision of the Receiver. He had investigated the books of both those companies and the documents found in the office; and had made himself acquainted with the documents in the files from Somerset House produced on the previous day and with the agreements mentioned. It appeared that the defendant continued to act as managing director of the London and Globe, the Standard Exploration, and the British America Corporations, up to the date of the liquidation of those three companies; and that he received a salary of £2,000 per annum from each of these companies as managing director.

Mr. Avory: And in the case of each these companies, does it appear that he was also entitled as director to 5 per cent. on all dividends?

Mr. Muir (interposing): Mr. Wright did not get 5 per cent. for himself. It was a share of the 5 per cent. for all the directors.

Witness assented.

Mr. Avory: Then does it appear by the agreement under which the London and Globe was formed to take over the old companies that the defendant became entitled to 321,925 shares in the London and Globe?—Yes.

Mr. Avory: It was disputed yesterday that the defendant personally——

Mr. Muir: What I said, and I think what I said was accurate, was that Mr. Whitaker Wright appeared as shareholder only because he was a nominee of the liquidator, just as the other shareholders were the nominee of the liquidator.

Witness's deposition on this point was ultimately taken by Mr. G. H. Savill, the Chief Clerk, in these words:—"Under the agreement on the formation of the Globe Company, Mr. Whitaker Wright was entitled to 321,925 shares in the London and Globe Company."

By Mr. Avory: In addition to that he appeared to have acquired 67,650 at various dates.

At the date of the winding-up how many did he hold?—Two thousand five hundred. Soon after the London and Globe was formed the shares were at a considerable premium. They went as high as £2 10s., for the £1 share. His recollection was that this was in 1899. He could not say whether the capital of the British America Corporation was subscribed by the shareholders of the London and Globe, as that corporation had not been under his control in the same way as the other two companies. The Standard Exploration Company, although it was registered in February, 1898, only issued in May, 1899, and its operations began then. Some of the directors of the London and Globe and the Standard Exploration were the same. Mr. Whitaker Wright, General Gough Cawthorpe, and Lord Edward Pelham-Clinton were directors of both.

He knew of the London and Globe balance-sheet of September 30, 1899. The previous balance-sheet had been made up to September 9, 1898. The defendant was empowered as managing director of the three companies to sign cheques countersigned by the secretary only. That was done under resolution of the companies which appeared in the minutes.

With regard to the item in the balance-sheet, "cash at bankers £534,455 17s. 3d.," is it a fact that of that sum £359,176 appears to have been received by the London and Globe from the Standard Exploration Company on September 29 and 30, 1899?—Yes.

Of that £359,176, does £180,000 appear to have been borrowed by the Standard Company on September 30 from Messrs. Vertue, Lubbock, and Co., Robarts, Lubbock, and Co., and the defendant, Whitaker Wright?—Yes; £40,000 of it from Vertue, Lubbock, and Co., £100,000 from Robarts, Lubbock, and Co., and £40,000 from the defendant.

Does a further sum of £25,000 appear to have been borrowed by the Standard Company from the British America Corporation on September 30, 1899?—Yes, in two sums of £19,000 and £6,000.

Was a further sum of £88,365 obtained from the British America Corporation on September 29?—Yes.

Under an arrangement for the making-up of certain London and Globe shares with a firm of brokers, Haggard, Hale, and Pixley?—Yes.

That arrangement appears by the books to have been made on September 29?—Yes.

Was the effect of the arrangement that the British America Corporation became liable to pay the Standard this sum of £88,365?—Yes.

Do these sums make up a total of £293,365 out of the total sum of £359,176 which was made over by the Standard to the London and Globe?—Yes.

He had heard the evidence of Mr. Harding, of Robarts, Lubbock, and Co., as to the securities that were pledged with them for the purpose of that loan. They included certain shares in Lake View Consols. Of those Lake View shares, 3,048 were handed over by the London and Globe to the Standard Company immediately before that loan. The other 2,938 Lake View shares were handed over on September 29, 1899, by the defendant to the London and Globe, and from the London and Globe to the Standard. The Standard having borrowed £100,000 from Robarts, Lubbock, and Co., on September 29, he found that on October 6 the London and Globe advanced to the Standard Company £105,000. On the same day, according to the books of the Standard Company, they appeared to have repaid that loan. On October 9 there was an entry recording the fact that the Standard Company returned the 2,938 Lake View shares which had been handed to them by the London and Globe. And by the books of the London and Globe these shares appeared to have been on the same day handed back to the defendant. Entries in the books of the Standard and the Globe under date of September 29 and 30 showed how the £359,176 paid by the Standard to the Globe was accounted for. There was £84,000 odd of it accounted for by an alleged indebtedness of the Standard Company to the London and Globe existing at that time. There was £102,000 of it accounted for as the price of certain shares alleged to have been bought on September 29 and 30 by the Standard from the Globe. In the first instance £90,000 of this £102,000 appeared as a loan by the Standard Company to the London and Globe. On the next day this was followed by an item of £12,000 on account of shares. This was followed by the sale of shares—International Nickel and Victorian Gold Estate shares. The rest of the £359,000 was accounted for in the books by the making-up of British America Corporation shares with Haggard, Hale, and Pixley and Lake Views with G. A. Phillips. The result of the arrangement being that, as in the other case, the Standard undertook the liability of the brokers to the London and Globe.

Looking at the minute-books of the Standard and the Globe do you find any minutes at all, at or about that date, regarding these transactions between the Standard and the London and Globe?—No.

He had examined the books of the London and Globe to see what the position of affairs was at the end of September, 1900. The books appeared to have been balanced to that date, and taking the entries in the books he had prepared an approximate balance-sheet showing the position. In doing this he followed the lines of the accountant of the London and Globe in a previous year. He valued the shares by taking the middle price at the time where quoted, or where not quoted at their par value. The result showed a gross loss of £1,645,748 for the period September 30, 1899, to September 30, 1900. After deducting £500,000 available to meet loss, there was a net loss of £1,145,748. The £500,000 had been set apart in the 1898 balance-sheet as a reserve to meet loss.

Mr. Avory: There was a loss of over a million in any case?—Yes.

Further examined regarding the balance-sheet of December 5, 1900, and the item "shares held in sundry companies £2,332,632," witness said he had taken out from the books a list of the shares forming that item. (The list was put in.) Of that total £560,929 was represented by shares in the British America Corporation and the Standard Exploration Company. The British America shares had been taken for the purpose of the balance-sheet at a value of 18s. 7d., and those of the Standard Exploration Company at £1 0s. 3d. At or about the date of the balance-sheet (December 5) the London and Globe were dealing in the shares of those two companies, and between December 3 and December 5 inclusive they were dealing in British America Corporation shares at prices from 14s. 2d. to 16s. 3d. Between the same dates inclusive they were dealing in Standard Exploration shares at prices from 8s. 4d. to 10s. In the list, Loddon Valley shares were valued at £214,285, Moorlort Goldfields at £300,000, and Columbian Proprietary shares at £271,875. At that date the Moorlort shares had not been issued, and so far as he knew they had never been publicly issued. No capital had been subscribed on December 5, 1900. The same answers applied to the Columbian Proprietary. He had investigated the books to see what amounts had been written off for depreciation in the value of shares.

Is the total sum written off for depreciation of shares held by the London and Globe Company at that time £179,922?—Yes.

But do you find included in the books under the head of depreciation the actual losses which had been sustained by the company on the sale of shares?—Yes.

Is there a total sum entered in the books of £1,383,849 under the head of depreciation of shares?—Yes.

With the exception of the £179,922 which you have already mentioned is the whole of that an actual loss sustained on shares which have been sold?—Yes.

Witness further said that he had investigated the market value of the shares at the time, and he was able to say that many of them had no market value at all. This applied to shares nominally amounting to over a million. He marked on the list for the convenience of the Court the shares which he said had no market value.

On the debit side of the balance-sheet of December 5 he noticed the item, "Sundry creditors, £137,446 15s. 5d.," and also an item "Loans, £434,868 7s. 6d." But at the end of November, 1900, the London and Globe was indebted for various sums to brokers and jobbers on the Stock Exchange for share purchases amounting to a total sum of £1,603,456. These liabilities did not appear at all in the balance-sheet of December 5, 1900.

In what way do these liabilities appear to have been dealt with in the books of the Globe at the end of November, 1900?—They had been transferred to the Standard Exploration Company.

Was that by entries made in the books of both companies?—Both companies. A small portion of the shares was transferred to the British America Corporation.

That was entirely transactions in the Standard Company?—Yes.

Transactions in the shares of the Standard Company were transferred to the British America?—Yes.

Are you able to say in whose handwriting those entries are?—In the handwriting of Mr. Anderson, but the writing was not the same all the way through. Some were in the writing of Mr. Butchart, and Mr. Berrin. Some were of the date of December 5, 1900, and others of November 26 and 30, and some were without a date.

What came of these entries?—They were written back. In the case of the Standard Company these entries retransferred the liability on December 13. In the case of the London and Globe they were retransferred on the 29th, the day after the refault.

Do you find that the balance-sheet for December 5, 1900, appears to be audited on December 14, 1900?—Yes.

So that these liabilities according to the books had been retransferred before even the audit of this balance?—Yes.

The examination of the witness was here suspended during the interval for luncheon and was resumed after the hearing of the application concerning the bail already referred to.

Witness was next examined on the item in the profit and loss account. "By securities realised, etc., £479,399 15s. 4d." In the books that was arrived at by taking credit for a profit of £564,285, profit on Victorian gold shares, made up by conversion of 200,000 Victorian Gold shares of £1 each into Loddon Valley Goldfields and Moorlort Goldfield shares of £5 each, and cash agreed to be paid by these two companies to the Victorian Goldfields Estate. There were 62,000 odd of Loddon Valleys and about 80,000 Moorlorts. Of the 200,000 Victorian Gold shares, 40,000 had been acquired at antecedent dates, 35,000 from the Standard Exploration Company in November, 1900, and 125,000 from the British America Corporation on or about December 5, 1900. This profit of £564,000 was arrived at in this way. On the winding-up of the Victorian Gold Estates they would have been entitled to receive as return on their capital so many shares of the Loddon Valley Goldfields and so many of the Moorlort Goldfields, together with a certain proportion of cash in respect of each share. As holders of the 200,000 Victorian gold shares they became entitled to a large number of Moorlort and Loddon Valley shares and a certain sum in cash. At December 5, the winding up of the Victoria Gold Estates Company had not commenced.

In arriving at that profit were the Loddon Valley shares taken as of the value of £5 each?—Yes.

You have said that on December 4 or 5 125,000 of those Victorian Gold Estates were acquired from the British America?—Yes.

Were they transferred by the British America in part repayment of a sum of £250,000 alleged to be payable by the British America to the London and Globe?—Yes.

And for the purpose of that repayment where these Victorian Gold Estate shares treated on December 4 and 5 as being of the value of £1 only?—Yes. There were entries in the books of November 30, 1900, by which the London and Globe purported to sell to the British America Corporation 20,000 Loddon Valley Goldfields and 20,000 Moorlort Goldfields at £5 each, but it was only from the minute books that he got the date for that alleged sale. There was a similar minute in the British America book of December 13. The minutes in the London and Globe book purported to confirm the arrangement under which the liabilities of the brokers to the London and Globe were transferred to the Standard. The meeting appeared from the minutes to have taken place at 18, Park Lane, which, he believed, was the private residence of the defendant, who seemed to have been present at that meeting.

As to the £250,000 which the British America repaid to the Globe on December 4, do you find that in the balance-sheet of the London and Globe to September 30, 1899, the London and Globe take credit for £500,000 as a payment by the British America to the Globe for property sold to them?—Yes.

On November 16, 1899, do you find that the London and Globe returned one-half of that—£250,000—to the British America?—Yes.

With the result that the British America was able to show in its balance-sheet a profit of £225,000?—Yes.

What is the earliest date that you find any trace of any resolution that that £225,000 shall be repaid to the British America?—December 13, 1900.

Do you find on the same date in the minute book of the British America a resolution to the same effect?—Yes.

That meeting being also held according to the book at No. 18, Park Lane, on the same day and the defendant being present?—Yes.

Mr. Muir: You do not know that he was present.

Witness: It is in the minute book.

Mr. Muir: That is not evidence, and my friend knows it.

Witness found no record in the British America minutes of any subsequent meeting at which these minutes were read. He produced a letter from Messrs. Burne and Berridge, solicitors, which he found among the papers of the London and Globe. It referred to this £250,000. (At Mr. Muir's request the letter was put in but not read.) The documents handed to him appeared to be typewritten minutes of the meetings of the three companies on December 13.

Do any of them appear to be altered by the defendant in his own handwriting?—Those of the London and Globe and the British America Company are, I think.

Are those documents signed by any of the directors?—By some of the directors.

As they appear on the minute book do they correspond with those documents as altered?—They agree with the minute book.

Mr. Avory: With one exception I think Mr. Russell. According to the typewritten minutes the meetings appear to have been held at 43, Lothbury?—Yes, at 43, Lothbury, and according to the minute book at 18, Park Lane.

On December 5, had the London and Globe possession or control of 250,000 Victorian gold shares?—No, there were 135,000 in their possession.

Out of their posession you mean?—They were in their possession, but they were pledged.

I call that out of their possession. With whom were they pledged?—With the bankers, Messrs. Robarts, Lubbock, and Co. By the stock-book of the company it appears that a large number were pledged with the brokers.

We have heard that the London and Globe made default on December 29, and was first of all in voluntary liquidation. On what date was the order made for compulsory liquidation?—October 30, 1901. The Official Received became official liquidator. Up to the present the admitted claims of creditors of the London and Globe were over £2,000,000. The assets of the London and Globe had been practically all realised. There was very little outstanding. The total estimated dividend that would be paid to the creditors of the London and Globe was 1s. 3d. in the pound.

To the Alderman: The admitted claims of the British America were over 700,000.

By Mr. Avory: The estimated dividend on the British America would be 3s. in the pound. £242,000 claims were admitted in the case of the Standard, and the estimated dividend was 7d.

Is the total loss to the shareholders in the three companies of nominal capital five millions?—Yes.

That is without taking into account any premiums that may have been paid by shareholders?—Quite so.

In realising the assets of the London and Globe, did you sell certain property called the option blocks which had belonged to the Victorian Gold Estates?—Yes; it was sold after two advertisements both in Australia and England. The Victorian Gold Estates had paid £10,000 for it. The London and Globe received that property as consideration for underwriting the Loddon Valley. When sold by tender, by the Official Liquidator, it brought £500. In the profit and loss account the London and Globe took credit for £100,000 as promotion profits. It was also purported by the books to have been sold to the Standard Company on December 5 for £100,000.

The Alderman: The last evidence he gave was that there was a purported sale to the Standard Company.

Witness explained that by order of the Court the option blocks were sold by the Official Receiver.

In reply to Mr. Avory: The profit and loss account of the London and Globe took credit for £150,000 promotion profit in connection with the Columbia Proprietary. The alleged sale of 20,000 Moorlorts and 20,000 Loddon Valley shares by the London and Globe had also been rescinded by order of the Court. Witness further proved the dates affecting the present proceedings as given in the opening of Mr. Avory's speech on the previous day.

Cross-examined by Mr. Muir, witness said that apart from the shares Mr. Whitaker Wright took at the date of the reconstruction, the 67,650 shares was the total number that he ever had. Mr. Wright bought and sold shares, and he could not say without referring to the books that he ever had that number standing in the books in his own name at one time. He would have to look at the book and the transfers to say whether he had ever bought shares at a premium. Referred to the agreement of May 28, 1897, witness said the defendant was liquidator.

In that capacity would he hold all the shares of the company which was about to be reconstructed in his name?—They would be allotted to him as liquidator.

That is what I say. In that capacity he would hold all the shares of the company about to be reconstructed in his name as liquidator?—Yes.

As liquidator he would be entitled to receive shares for distribution, and they would be under his control for that purpose?—Yes.

And that agreement, therefore, is an agreement which provides for the distribution of the shares which he so held?—It is so.

To his nominees?—Yes.

Is the approximate balance-sheet which you prepared for September 30 here?—Yes.

I call for it to be put in. (It was handed in.)

You spoke of the prices of the British America and Standard Exploration shares at 18s. 3d., and £1 0s. 3d. Have you ascertained by looking at the books whether these were the average prices at which they were purchased or not?—Either the average prices or in some cases less, for something had been written off.

You spoke of missing dates. Do you find from your examination of the books that a good many entries had been made during liquidation of transactions prior to the liquidation?—I cannot say that.

Can you say that entries were made at a date after the transactions took place?—They may have been.

And may they have been made some time after the commencement of the voluntary liquidation?—I cannot say.

You put the acquisition of the 125,000 Victorian Gold shares about December 4 or 5. How do you get the date?

Witness said he must look at the books, and was doing so when Mr. Muir, after eliciting that the witness did not get the transfers and had not got or seen the dates of the certificates, said he would not detain the Court as he did not propose to go thoroughly into the question at this stage of the proceedings, and he only wanted a few dates for his own information, and then he would not trouble the witness to come again. If he wanted him no doubt Mr. Avory would bring him back.

The witness having found February 5 and 21, 1901, as the dates of the resolutions winding up the Victorian Gold Estates, Mr. Muir

asked whether these were resolutions of the shareholders pursuant to an agreement arrived at between the directors.

Witness: I take it so.

Do you know what the date of that agreement was?—I do not know.

Can you give me approximately the date of the order of the Court, which was made in the liquidation, rescinding the sale of the option blocks?—I cannot without referring to the books.

Was it made on the ground that it was *ultra vires*? What was the ground on which "the order of the Court was made rescinding the sale" of the option blocks?—The ground was that the London and Globe could not give delivery to the Standard.

As to the sale of the 20,000 Moorlort shares and the 20,000 Loddon Valley shares, was that rescinded on the ground that these sales were *ultra vires*?—The ground there was that the contracts were really null and void.

Was that not *ultra vires*?

Mr. Avory: Not necessarily.

The Alderman, remarking to the witness interrogatively that he was not a legal witness, and receiving a reply that he was not and did not wish to be, suggested that legal questions should not be put to him, but that the information Mr. Muir wanted should be got from others.

Mr. Muir said that the way the questions had been put to the witness about the rescinding by order of the Court conveyed the covert suggestion that it was made on the ground of fraud. It was the ambiguity of this language put in the mouth of the witness of which he complained.

At this stage the defendant was further remanded to September 1, with an intimation that he would have to appear on that date, and on September 8, but that further evidence would not be taken until September 15.

MINING NOTES AND NEWS.

It is not one of the easiest of tasks to find language with which to describe the state of the Kaffir and other mining markets in these dreary times. They can all be dismissed with one adjective —stagnant. There is nothing visible anywhere that can be described as business. The public are still far away from the market, and most of the professionals are holiday making, as they cannot find sufficient trade with which to occupy their time. Prices have again been drooping daily, but there has been nothing in the nature of a heavy slump, the recessions being merely fractional in amount. No development in the labour situation has occurred to cheer the hearts of the impatient bulls, though they are glad to hear that the report of the Commission will probably be published in a few weeks' time. This is not exactly new; they have been told it before, but they don't mind having their memories jogged from time to time. It reminds the world, at any rate, that a Labour Commission has been sitting, that its preliminary task, in the way of hearing evidence, is over, and that all it has to do is to draw up its report and recommendations. It will be a terribly exciting moment for the punter when that event comes off, for he will know whether or not the mine bosses are to have their Chinese, and whether or not these benevolent gentlemen will make a great effort to lug in the gullible gudgeon.

The commissioners appointed some months ago by the Transvaal Chamber of Mines to travel over the world to see the conditions under which Chinese work in other countries, have returned to London, and last Saturday took ship for South Africa. Whilst here, interviewers sought to pump out of them what they are likely to say in their report, but the gentlemen were not drawable. They intend to divulge nothing, they say, until they present their report to the institution which employed them—the Chamber of Mines —so the market is not likely to hear anything of the contents of this momentous document for some three or four weeks.

Further meetings have been held during the past few days at several of the mines on the Rand in order to discuss the labour situation. One of these was held at Boksburg, another at Klerksdorp, and another at Heriot, at all of which resolutions were passed favouring the importation of Chinese. A cable states that it can be authoritatively stated the Transvaal Chamber of Mines has obtained permission to recruit in the Nyassa and Zambesia districts. "This," it adds, "is the result of lengthy negotiations, and should materially improve the labour supply."

De Beers shares have again been mysteriously active this week, but an explanation may be found in the news cabled over by the Johannesburg correspondent of the *Financial Times*, with which we deal in a separate note.

The directors of the Crown Reef Gold Mining Company—a prominent member of the Wernher-Beit group of companies—have declared a dividend of 100 per cent., which will require £120,000, for the half-year ending the 30th inst. This is at the rate of 200 per cent. per annum, and compares with 55 per cent. for the six months preceding and 75 per cent. at the corresponding date last year. So profits have been jumping up lately, despite the shortage in the native labour supply. Nevertheless, the market regards the event with its customary indifference.

The West African market has been fairly interesting during the week, by reason of the developments connected with the Wassau company. In our mining notes of last week we gave some figures of reef values in the lower levels of this mine, showing a considerable deterioration in quality. On Wednesday there was a rumour in the market of good developments in the mine, and the price of the shares advanced sharply. This rumour was substantiated by categorical statements that the company had received a cable from the manager to the effect that the fault met with in the reef at the No. 6 level had been passed through, and that on the other side the workings were in 3 oz. stuff. It was recognised that if this were true, then there had been a leakage of news, as has been very common with Jungle companies ever since they came into existence. On the following day this surmise was to some degree confirmed by the publication of a circular by the directors informing the shareholders that a letter had been received from the manager dated the 11th inst. This circular was dated Tuesday, so it is to be presumed the directors mean the 11th ult. The letter states that the reef has been picked up again in the 6th level, the assay value being 61 dwts. Upon the publication of this the shares fell, the inference being that the buyers of the previous day promptly took their profits. This is how shareholders are played with. Good news is known to the market before it is communicated to them, and they never get a chance. If they have any regard for their own interests they will have nothing to do with this West African market, and they will take some steps to question the directors as to how this news leaked out a few hours prior to their receiving it, and how some persons were able to take profitable advantage of it. A grave matter of this kind should not be hushed up, for it will only encourage culprits to repeat the offence. Surely some of the officials should be able to form an idea of how the news got to the market with such speed?

Though no business has been transacted in the West Australian department, there have been one or two interesting developments. As we show elsewhere, the directors of the Associated Northern Blocks have convened a meeting on the 10th inst., in reply to the requisition of the shareholders. It will be recollected that the directors did not wish to hold a meeting before the return from the colony of Professor Liveing, but as the shareholders show they desire one before then, in order to have the mystery of Mr. Landau's dismissal cleared up as soon as possible, the directors have had to comply with their wishes. This is in accordance with the advice we tendered in our last issue. Another important event has been the steady decline in the shares of the Smelting and Refining Company of Australia, as the effect of adverse rumours. The principal story was that the negotiations between a syndicate and the company whereby the former offered to guarantee a sum equal to the interest on the debentures, 7 per cent. dividend on the preference shares and 20 per cent. on the ordinary shares, had fallen through. These rumours have been officially denied. To an interviewer the secretary says that though an absolute agreement has not yet been entered into it will be concluded shortly. The accounts of the company are made up to the end of June. When these are completed, two gentlemen, one of whom is a director, will put up the money for the first instalment. The syndicate concerned control large ore supplies, and the object of the agreement is to work in harmony with the Smelting and Refining Company rather than resort to competition. The officials say they know of no development in connection with the company to account for the relapse in the shares. Prices in this section of the mining market have shown but few fluctuations, and these are of no importance, with the exception of the company above-mentioned.

Irregularity has been the characteristic of the miscellaneous department. Copper shares have been weak, Indian shares firm, and others unsteady.

Kyebi Lands Corporation.—This West African company was incorporated as recently as May 22, 1901, when it took over the mining rights of the Kyebi Lease from the Birrum Valley Gold Mining and Dredging Company. The directors have issued a statement of receipts and expenditure from the date of incorporation to March 31 last. In West Africa the outgo totalled £4,181, and in London £1,689. At the date of the balance-sheet the company had only £968 in cash, and another asset in the shape of 100 shares in a company called the Caucaus Minerals Syndicate, Limited. Out of an authorised capital of £150,000, 105,000 shares have been issued, and it is apparent that fresh resources will have to come from somewhere. Judging from the reports issued with the directors' statement, it will be a very long time before the company can expect to get any appreciable revenue from the winning of gold. The directors announce their intention, as soon as the Birrim Valley Company's steam dredger has been erected, to arrange for the erection of a similar dredge on their own property, capable of treating 1,500 cubic yards of gravel per day. It has been ascertained that a reef formation runs in a north-east and south-west direction through a portion of the property, and the directors decided for a time to confine their operations to prospecting this. The work was commenced in October, 1901, but owing to a scarcity of native labour, little progress was made until the beginning of the following year, since when, it is stated, work has been pushed on with all possible speed. On what has been christened the Clearing Reef five shafts have been sunk, varying in depth from 35 to 13 ft. An assay made in June, 1902, of samples of ore taken from each of these five shafts gave an average of 6 oz, 8 dwts. 1 gr. per ton. "It is to be regretted," says the report, "that the value of samples tested subsequently is very much lower." We hardly see how this is to be "regretted," as it is opposed to all mining experience that phenomenally rich ore of this description lasts permanently. Such ore suggests merely rich pockets and are too treacherous to invest money in.

Ivanhoe Gold Corporation.—The progress report issued by the directors of this West Australian company for the period ending July 16, contains information of a decidedly favourable nature. All the drives and winzes are showing ore of a payable grade, and the manager, it is not surprising to learn, considers the results satisfactory. He says the stopes throughout the mine have opened out much better in width than anticipated. In a letter dated July 25, he says:—"We have at last got a good start on both east and west cross-cuts at 1,014 ft. level. The value of the east lode at 865 ft. level, also middle lode in both faces, has been a little below the average during the past week. We account for the lower values on the east lode by slight disturbances passed through in both drives. In connection with the middle lode, we consider

it is a matter of stoping, when higher values will be obtained. We are sinking winzes on each of these lodes in section 8 so as to be well down by the time we drive on the No. 9 level. The south drive on east lode at 707 ft. level continues to show up well; also we would draw your attention to the winze being sunk on this lode from 200 ft. level in section 7, this would be above the big slide and shows higher values down to 36 ft. Of course, we expect to strike the slide soon, which will impoverish it, but it affords an illustration of the amount of ore which can be rooted out in aftertimes." The statement with regard to the ore reserves may likewise be considered satisfactory and reassuring. At the end of June last these totalled 449,135 tons, of 1 oz. 1 dwt. 11 grs. value. Compared with the reserves on December 31, 1902, there has been an increase during the first half of the present year, excluding the ore at grass, of 52,465 tons, and the value estimated compares with 1 oz. 4 dwts. per ton at the end of December.

Tasmanian Consols.—A lengthy circular has been issued by the directors of this company to the shareholders, announcing that the payable reef struck at the 1,200 ft. level is being opened up and that search is being made for the same reef at the 1,100 ft. level. It is intended to have a trial bulk crushing of ore extracted from these levels as soon as it is practicable. Negotiations are pending with a view to the formation of a subsidiary company to take over and develop two or three of the fourteen leases owned by the company, and in the event of their being satisfactorily completed, the Tasmanian Consols is to retain a large interest in the new company. We should hardly have thought the mother, on giving birth to its first offspring, would have nothing further to do with its destiny, but would abandon it to the tender mercies of a cold and heartless world. "O, yes, we shall have a parental care for it; we shall ever keep a watchful eye on it to see how the youngster turns out," is the gist of their public proclamation. It only remains, when it is brought into the world, that those who have any superfluous cash will rush forward in eagerness to give it assistance to battle with the trials and difficulties it may be assumed it will hereafter encounter. The circular is accompanied by an interim report from Mr. Moon, who, in summing up his opinions of the property, says:—"I have now to express considerable satisfaction in the developments that have taken place in the short interval since my previous visit. So far as can be seen the reef gives promise of continuing on gold for a considerable distance yet, and I see no reason why it should not continue payable. Everything about the mine was in good order and the machinery working well."

New Primrose Gold Mining Company.—In the quarterly report of this Barnato Company the following "general remarks" appear:—"During the past quarter 120 stamps worked regularly with satisfactory results. The quantity of ore developed was slightly behind that milled, but as the ore reserves at this mine stand at a very high figure, this is a point of no significance. The greater part of the ore milled came from the western section of the mine, and as it is desirable that the central and eastern sections should contribute more largely than they are doing at present to the output, it will be necessary before long to put the Moss Rose shaft into efficient working order. However, before recommending any detailed scheme, your consulting engineer is going very carefully into the life and average value of the mine, so as to base any proposals he may make on a reasonable business footing." What does this mean? Another increase of capital? Last year this company increased its capital largely, in order in this manner to recoup the losses it suffered through the war. Out of the premiums received dividends were distributed, after the well known manner of Barnato finance. Should the capital be further increased, instead of taking the money out of revenue and thus sacrifice dividends, the directors will be able to pay another good dividend out of premiums and cry:—"Look how wealthy and prosperous we are!"

Dolcoath Mine.—In our note on this company last week we said:—"The company's financial position could do with some propping up. . . The dividend alone will absorb all the cash." The directors have decided not to distribute the dividend they recommended, and looking at the company's weak financial position we consider this wise policy. According to the chairman's statement at the ordinary general meeting, the directors received so many communications from shareholders deprecating the payment of a dividend, that they deferred to such wishes, although the advice was not opposed to their private opinion. It is rarely we find shareholders so farsighted as to prefer the strengthening of a company's finances to weakening them by pocketing a dividend. The example of these Dolcoath shareholders is one which other mining shareholders should take due note of, and imitate, especially in regard to the building up of reserve funds. This is what the majority neglect, and accordingly they suffer in many ways, though they may not think so. Where directors neglect such essential principles of finance the shareholders should insist upon reform.

The Sheba Gold Mine.—The Johannesburg *Star*, to hand by mail, contains a very important article on the position and prospects of this one-time famous South African mine, written by one who has just paid a visit to it. Within the past few years a great change has come over the mine; it is not what it was, and various explanations have been offered by the directors, who are, nevertheless, still hopeful that its present troubles are only temporary. For that reason the views of this outsider have a special importance and will tend to excite much apprehension amongst the shareholders. As this mine is situated in the Barberton district, where so much English money has been sunk never to be recovered, it will help to teach the world how treacherous and unreliable that district still is. "One of the great gold mines of the world," says the writer, "from which about 2½ millions of gold have been produced, it has proved anything but a profitable investment to shareholders, and from being one of the richest mines known has become a low-grade proposition, which only the most able management and careful economy may succeed in working at a profit. The extraordinary extent of the ore-body and the eccentricity of the gold occurrence make it a most difficult matter to determine the value of the developed rock until it is actually broken out. The great width of the gold carrier and the manner in which the gold is distributed in it, do not permit reliable deductions to be drawn of values based on development rock, and to put in cross-cuts at short intervals across the lode, which is over a hundred feet thick at its widest, would be too expensive to justify its being adopted as a practice. In the light of returns obtained from the mine during the past few months the cost of production cannot leave any, or at the very best but little, margin for profit, and, therefore, only the most necessitous work can be carried on. In the absence of authority from his board of directors, the general manager, Mr. W. T. Pope, did not feel himself at liberty to disclose the financial position of the company, but several signs point to the probability that it is not robust. Locally the air is rife with talk of projected schemes of amalgamation and reconstruction, and, while some advantage might be gained by placing the company on a sounder financial basis, it is difficult to perceive how the position could be improved by the addition of ground when it has already more than it is able to work. . . On the present capital and the present value of the mine, as far as it can be ascertained, the prospect of its paying dividends on a reasonable basis is remote. If a steady return is to be made to shareholders the company must be placed on a different footing." The writer thinks the company's huge capital should be reduced, the debenture debt of £175,000 retired, a reasonable amount of working capital provided, new parts of the property opened up, its increased reduction plant completed, and some additions made to equipment, which would enable more economies in working to be observed. He points out, also, that at the present time the management is hampered by the scarcity of native labour, being some 400 natives short of its complement. The rumours of amalgamation have been denied.

Central Chili Copper Company.—During 1902 the rise in the Chilian exchange was favourable to this company, consequently it is able to exhibit a surplus of £11,724. If shareholders think they will share in this they will be disappointed, for the directors consider it prudent not to divide any of it, but to devote the greater portion to writing off some accounts and sundry depreciations in value, carrying forward £1,131. The directors say they retain in hand the necessary capital to enable the business of the company in Chili to be carried on with its own resources, "thereby saving the heavy commissions and interests hitherto paid for advances or loans." Cash in hand amounts to £9,221, against liabilities of £1,885. Of the three water-jacket furnaces capable of smelting about 50 tons of ore each, one has been pulled down in order to make room for the erection of a furnace of about three times that capacity. This furnace was started about the middle of July, and is said to be working satisfactorily. During the year the mines produced 31,565 tons of ore, the total amount of copper sold in regulus being equal to 1,571 tons of fine copper. The directors consider they have worked so hard during the year that they want their fees raised. Accordingly, the report proposes that the chairman and Mr. Upfield Green, a director, shall be entitled to draw as salary for 1902 the sum of £150 and 100 respectively, modest sums asuredly. Furthermore, "the board is of opinion that the management of the company demands the continuance of such increased and constant attention by the board, and the devotion of much more time to its affairs, and suggest that from January 1, 1903, the directors shall be entitled to draw at the rate of £500 per annum on account of their remuneration under article 155 of the articles of association of the company," this amount to be divisible amongst them as they may appoint. The adoption of the report, likewise the remuneration to himself, were opposed by Mr. Green, one of the directors, who severely criticised, at Thursday's meeting, the administration of the company. On a show of hands the report was rejected, but was stated to be adopted on a poll. In like manner, Mr. Green's re-election to the obard was rejected, and another was elected in his place. We think the shareholders should look very critically into the affairs of this company.

Coal Mining in Shantung.—The report of the Chinese Customs Office of Tsingtau for 1902 contains some information respecting the production of coal in the German protectorate district of Kiao-Chou. As quoted by the *Deutsch-Asiatische Warte*, the output of coal, which was raised for the first time in 1902, amounted to 3,300 tons by the end of December. The daily production at the close of the year had reached 55 tons, and it is expected that this will be increased to 200 tons per day in the course of the present year. At the moment the output of coal scarcely suffices for the requirements of the railway and the local consumption, and the question of exports can, therefore, not be thought of for months to come. The quality of the coal has, so far, fulfilled anticipations, and the prospect exists of finding a better quality with the progress of the work at greater depths, whilst the question of establishing a briquette factory has already engaged attention. In addition to this work boring operations in the Fang Tsu district have led to the discovery of a new coal measure of extensive area and favourably situated, and it is intended to sink a second shaft for working the seam and to provide plant for the raising of large quantities of the mineral. The boring works in the Poschan district are still in progress, and it is expected that the first shaft will be formed in the autumn. This will coincide with the commencement of the construction of the branch railway to the Poschan valley from Changtien, a station on the main line about twenty-eight miles westerly from Ching Chou.

Broken Hill Proprietary Company.—During the six months to the end of May last this company received the sum of £567,329

net from the proceeds of silver and other products sold, and an additional £62,427 from ore and concentrate sales, wharfage, etc. Expenditure on working account absorbed £543,684, leaving a gross profit of £86,071. A balance of £550,091 is brought into the profit and loss account, which is credited with smaller sums from interest, transfer fees, etc., and after deducting administration outgo and £20,302 for depreciation, a credit of £553,753 is carried to the balance-sheet. A dividend of 1s. per share, requiring £48,000, was distributed. There is no comment to pass on the balance-sheet, which, as usual, exhibits a strong financial position. With respect to the mine, nothing of importance has occurred in regard either to the underground or open cut operations. Development and exploratory work in the lower levels has been pushed ahead, close upon £20,000 having been expended in that direction, an amount equal to 1s. 4d. per ton raised from underground. "This expenditure," says the report, "although an apparently heavy item, is a necessity in order to obtain satisfactory and economic results in raising the ore in the future." During the half-year the general manager revised the estimates made in 1900 of the ore disclosed and available for treatment remaining in the mine, so far as the present developmental work has been carried. These estimates show there are approximately 4,250,000 tons of sulphides existing to the 500 ft. level in blocks 12 and 13, and to the 800 ft. level in block 11, which figures compare favourably with the previous estimate prepared in 1900 of 4,558,000 tons, since which date the extraction has been over 1,250,000 tons. Improvements have been introduced into the concentrating plant, whereby its efficiency has been increased, both with respect to recovery and costs, the quantity of ore treated by the mill remaining almost the same as that of the previous six months.

Associated Northern Blocks.—According to a circular issued by the directors of this company this week, the shareholders, as we advised them to do, have signed the requisition, drawn up by six of their number, asking the directors to convene an early meeting in order to give an explanation of their action in dismissing Mr. Landau. Readers will call to mind that the directors promised to give such explanations at the meeting they intended to hold in a few weeks' time on the return of Professor Liveing. Shareholders are naturally unwilling to wait so long, accordingly the directors have had no choice but to convene an earlier meeting. This is what they say in their lengthy circular:—"Since the issue of the board's circular of the 19th ult., they have received from the six shareholders who have recently circularised you, a requisition for an extraordinary general meeting, signed by holders of the necessary number of shares, and they have accordingly convened the required meeting, although they still think that the interests of the company would have been best served, and expense saved, if the proposal made in their circular of the 19th ult. had been carried out, and the holding of the meeting deferred until the return of Professor Liveing, who is expected to be back in London within only a few days of the time fixed for the meeting, and who would, of course, be in a position to give the shareholders full information as to the position and prospects of the company's property." With respect to the appointment of Sir Bartle Frere and Mr. J. H. Curle to the board, they now explain:—"My directors beg to state that before the receipt of the requisition they felt the desirability of strengthening the board, and it was on that account and at the request of a large body of shareholders, Sir Bartle Frere and Mr. J. H. Curle were recently elected as directors. The board has since been advised by their solicitors that, having regard to the articles of association, the election of these gentlemen requires to be made by a general meeting. These gentlemen, however, desire it to be clearly understood that they take no part, either on one side or the other, in the question at issue between the late chairman and the board. The board cordially recommend their election and feel sure that all the independent shareholders of the company will see the advisability of voting in favour of their appointment. If the appointment of a third new director is deemed desirable, a fit and proper person can be elected at the meeting." The directors also say they will welcome the appointment of an independent committee to investigate and report on any matter germane to the issue, if after the explanation given the shareholders deem such a course advisable. The meeting is convened for the 10th inst. A Mr. Mahon, who has had considerable mining and engineering experience in Canada has, we hear, been nominated as a director of the company.

Rapacious De Beers.—That De Beers and its satellites are determined to run the whole Government show in South Africa, or, rather, that the Empire is to be run solely for the benefit of De Beers, is becoming more and more evident every day. During the past fortnight the shares have been remarkably active, a most striking phenomenon in times of stagnation, and the source of the movement has been mysterious. Some explanation, however, may be found in the cable from the Johannesburg correspondent of the *Financial Times*, who says that the new line from Fourteen Streams, which interested parties wish to see diverted to the western portion of the Rand, is being built for and financed by the De Beers Company. This is the first intimation that any such agreement with De Beers had been come to. Naturally, it is urged locally that as the Transvaal community must ultimately pay for the new lines they ought to be built in consonance with the requirements of the colony, but that is not how our boss-dominated government are likely to look at it, as they have recently displayed in their attitude on the Premier Mine business. If the Transvaal Executive are thus forced to go to the De Beers company for cash, oppositionists think the new railway should have been postponed and the labour employed on its building set free for the mines. As if we dare oppose the wishes of lordly De Beers.

TRADE AND PRODUCE.

Wheat.—The unexpected summer weather has once more raised hopes of a better harvest, and where the corn has not already been beaten down, a warm September may work wonders. Meantime the cereal year is at an end, and there is no old wheat left and no new on the market, or very little, and that of poor quality. Farmers' deliveries were 13,143 qrs. last week, for which an average price of 30s. was obtained, sometimes as much as 36s. being given, while for the new wheat 32s. and 33s. has been paid. The markets have been quiet, and fairly steady, only fluctuating about ⅛ or so either up or down. The effect of good cables counteracted better weather reports here, and vice versa. American markets at first were easier with lower prices, then hardened on receipt of bad weather reports in the North-West, and a good export business, but went down again later. Bradstreet estimates put the supplies in sight east of the Rockies at 21,558,000 bushels, against 2,252,000 in the previous week, and 32,366,000 a year ago.

Wool.—Bradford and Leicester, the two principal country markets for raw wool, are cheerful in tone, and doing a fair amount of business, though a waiting tendency, previous to the London sales, is beginning to show itself. Cross-breds keep to the stiff prices which have prevailed for so long, merinos have recovered their slight drop, and home grown wools are moving at very good prices. Too good in fact to please buyers, who are suggesting a new basis of prices. Manufacturers are not so happy, and with merchants and retailers complain of a lack of business and money. Repeat orders for winter cloths and commissions for next spring are not coming forward very freely. Export trade, too, is dull, though it is recovering here and there. The continental market remains sluggish, the United States trade, except as regards a better enquiry for piece goods, is smaller, and Canada alone of the Colonies is transacting much business. The American Consul's return of trade from Bradford to the United States for August give the values at £142,632, compared with £157,067 in August last year. Dress goods showing a substantial increase, but linings a heavy drop. The total value of exports for the first eight months of this year is £1,376,299, or £172,067 more than for the same time last year. Huddersfield exports were £15,528 less than in July last year, and £5,546 less than in August, and were only £15,500. Worsted goods show a decrease of £2,999 upon August, 1902, and woollens £4,513.

Linen.—Activity in the various markets is now perceptibly increasing. High prices may check business a little, but as the flax crops do not indicate any possibility of cheap raw material, it is not likely that buyers will hold out long against them. The yield of Irish flax is not very promising, decrease in the acreage sown is over 10 per cent., and the yield is expected to show a reduction of 25 per cent., compared with last year. The quality of the Russian crop is said to be better than last season's, but the quantity disappointing. Yarn spinners are all oversold, taking fresh contracts daily, and are holding out for an advance in prices. In linen goods there is little change. Manufacturers are more fully engaged than is usual at this time of the year, and are looking forwarn to a busy autumn. The steady increase in the export trade to most countries is also a hopeful sign, and the slack season is now thought to be over.

Cotton.—The report of the Agricultural Bureau published in New York on Thursday has had an alarming effect. It showed an improvement of 1.5 per cent., or an average condition of 81.2, the highest for the last ten years, and though a good yield was hoped for, nothing like this was anticipated, and panic ensued. Prices broke all round, and to make matters worse the bulls who control the stock of cotton in New York were said to have sold futures as a hedge against spot cotton held. The cotton corner was said to be practically at an end. After the first collapse the market steadied itself a little, but closed in a feverish and unsettled state. In Liverpool, until Thursday evening's excitement over the American news, the week has been dull, and business restricted owing to the poor selection. According to Sir J. Behrens and Sons' report, spinners will soon need to stop for want of raw material. They have done little as it is this week, there being no demand for yarn either at home or for export, and prices are not remunerative, though some spinners seem able to secure better rates than others. Egyptians have been in fair demand, and for old crops prices have had a hardening tendency, whilst new crops have been easier. In cloth the buyers and sellers have not yet bridged over their differences, and there is still great difficulty in arranging business. What trade there is has been done chiefly with India, though China is increasing her offers to a point nearer that which makers can accept.

In spite of the panic of Thursday in America the Liverpool market closed quiet last night. For spot middling American the price was 6.52d., or about .30 of a penny below that of a week ago, while Egyptian fair remained the same. Futures also were steady, September being quoted at 6.16d., September-October at 5.80d., and December-January at 5.25d.

Coal.—Except on the London Exchange, where a definite rise of 1s. per ton on all classes of fuel except coke has been agreed upon, prices will not show any change until the latter end of September. It was hoped that these higher prices would stimulate buying, but so far it has had a contrary effect. Coal owners are grumbling a good deal at the state of trade, which they say is not up to their expectations. For all that a good deal is being done in steams, with values well maintained for home and export, and gas contracts are heavy.

Copper.—Without any stimulating influence, the markets have been quiet and dull. On Monday it is true a firm tone prevailed,

as there was fair demand, and prices hardened. Since then they have fallen a little each day, and business has been restricted, the tone of the market at the close yesterday being dull, cash being quoted at £58 2s. 6d., and three months at £57 7s. 6d.

Tin.—Home markets were depressed early in the week by the labour troubles in South Wales, and also by an absence of support from America, and poor advices from the East. Prices dropped, and the markets became weak, but rallied later, though still keeping below last week's closing quotations. Yesterday saw business quiet, £123 15s. being asked for cash, and £122 15s. for three months.

Iron and Steel.—The Glasgow warrant market feels certain American prices have reached bed-rock or thereabouts, and that production must soon be further reduced unless a big demand springs up for new iron. In addition stocks of British iron are low owing to the big shipments, making a rise in prices almost a certainty should any sudden demand arise. The general tone of the market is therefore decidedly bull. Cleveland warrants have been dealt in at 46s. 10d. cash, and 46s. 11d. one month, while for Scotch the prices quoted are 51s. 6d. to 51s. 9d., although the warrants are very scarce, and business in them practically nil. Of the trades locomotive engineers are the busiest, several heavy shipments having been dispatched to Canada in the past few days. Shipbuilders, in spite of the output from the yards last month being the largest for about a dozen years, are in by no means a flourishing state. Fresh contracts are conspicuous by their absence, and enquiries few, so when a launch takes place there is nothing to fill its place on the slips. In the north of England the only business which shows any improvement is pig-iron. Shipments of this continue good, in spite of none being sent to the States, while prices are steadily improving, especially for Nos. 3 and 4 Cleveland, for which the quotations are 47s. and 46s. 7½d. respectively. The manufactured iron and steel trades are, on the other hand, very dull, though as yet makers refuse to lower their prices, which for steel plates, the most depressed of all the trades, remains at £5 12s. 6d.

At Barrow the trade in hematite pig-iron is fairly busy, though disturbed by one or two more furnaces being blown out. The reason for this is that some of the iron works have accumulated large stocks, which they cannot clear at the present moment, and are therefore compelled to reduce their output. Makers of steel rails are still well employed, but prices are low, at £5 10s. per ton. Shipbuilders are trying hard to get hold of the few contracts that are going, and unless they secure some of them their autumn prospects are the reverse of rosy.

Tea.—Indian auctions were heavy this week, 39,500 packages being offered, including a quantity of low priced teas, but demand was strong for all kinds, and prices, except in the very poorest sorts, very steady, the average price for the week was 8d. against 8⅞d. last week. In Ceylon teas the quantity offered was 28,200 packages, medium grades were a trifle dearer, and all the lower grades steady, prices for the week averaging 7¼d., against 7⅛d. a week ago. The quality in these teas is now beginning to show an improvement. About 2,500 packages of Java teas were brought into the market and sold steadily at full prices, and more business has been passing in the China market, though 900 packages offered at public rates were mostly withdrawn. The London August statistics which we take from Messrs. W. J. and H. Thompson's circular, are interesting. They show that stocks of all kinds are 14 millions less than last year, while deliveries for the past three months show an increase of five million pounds, which consists almost entirely of Indian tea. Ceylon shows a decrease of a million pounds, counterbalanced by heavier clearances of China teas.

Sugar.—Refiners have not paid so much attention to business this week, as they were busy making arrangements for working in bond, in order to comply with the rules of the Brussels Convention. The market, however, was steady, though towards the close of the week prices slipped back a little under the influence of favourable weather and crop reports. Offers from the Continent, Mr. Czarnikow states, were not pressing, producers wishing to see what effect the new legislation is likely to have, and wanting more reliable information as to the probable yield of the new crop before entering into important commitments. In France the retail price has been reduced fully 1¾d. per lb., or slightly more than the actual reduction of 35 francs in the excise duty, while German consumers are buying for about 20s. 9d., what was formerly quoted at 29s. 6d. We are the only country that is going to pay more. August beet during the week moved down from 8s. 6d. to 8s. 4¾d., while October-December first rose from 8s. 11½d. to 9s. 0¼d., and then fell back to 8s. 11d. For cane the demand has been on a larger scale, and prices, especially for the softer grades, showed an advance of 1½d. to 3d. The American market continues firm at the same quotations as last week, though transactions have been limited, importers looking for a further rise in values for cane. Stocks are down to 238,000 tons the meltings for the week being 48,000 tons, against 35,000 tons landed at the three ports.

Freights.—On the whole the outward market this week shows a slight improvement, and in some cases a slight advance in rates. Although less tonnage is offering, there is still ample to supply all the demand even for prompt shipments. Baltic fixtures continue on the basis of 3s. 9d. Tyne-Cronstadt, at which figure an average number have been made. Bay and Mediterranean ports have been favourably affected by the large number of vessels sent out in ballast to the Black Sea, and quotations show a decided tendency to improve, the current rates offered being: Cardiff-Lisbon 4s. 6d., Barcelona 6s., Venice 5s. 9d., and Constantinople 5s. 6d. To the Western Islands freights show no alteration, and are steady at 6s. Cardiff-Madeira, Las Palmas, or Teneriffe, and 6s. 6d. Cape Verds, charterers being well supplied with tonnage for early positions. For South American ports prompt vessels can still obtain 9s. Cardiff-Buenos Ayres, though for later dates the best rate offered is from 8s. 6d. to 8s. 9d. The outward market to the East is practically at a standstill, the week's transactions being only two in number. In the homeward market things also look a little brighter. What real activity exists is, however, confined to Black Sea ports, where prompt vessels are in good request at better prices. From the Baltic and the White Sea there has been a little more enquiry, and rates show a tendency to rise, but from Bay and Mediterranean ports there is little doing. American charterers seem more inclined to operate, and here also rates will improve as soon as genuine business comes forward. Vessels, however, are scarce, and quotations will require to go up considerably before owners will be tempted to send over ships in ballast. South America is dull, though prompt vessels, handy size, can still obtain fairly good charters, but in the East the market is steady but quiet.

MINING RETURNS.

Anchor Tin.—Crushed 5,000 tons; yield, 8 tons 10 cwts. of black tin.

Associated Northern Blocks (W.A.).—63,219 tons, 820 oz. Net proceeds, £2,765. Output, 470 tons, 2,313 oz.

Balaghat Gold.—3,070 tons of quartz, produced 2,074 oz.; 2,160 tons of tailings (cyanide process), produced 191 oz.; total, 2,265 oz.

Brilliant and St. George United Gold.—Crushed 2,257 tons of quartz for a yield of 1,647 oz.; value of bullion produced at cyanide works, £3,880; approximate value of this return, £9,080.

Burbank's Main Lode (1902).—245 oz. from 448 tons crushed.

Cecil Syndicate.—Crushed 380 tons, 400 oz.; value, £1,350.

Champion Reef.—14,750 tons of stone produced 14,708 oz.; 20,298 tons tailings (cyanide), produced 2,796 oz.; total, 17,504 oz.

Chinese Engineering.—Output of coal, 12,500 tons.

Collie Proprietary.—Output 7,390 tons.

Day Dawn Block and Wyndham.—3,020 tons crushed, yield 1,109 oz.; from the company's works at Burdekin River and Old Wyndham Mills, 4,560 tons of tailings for bullion valued at £3,600; total value, £7,500.

Day Dawn P.C.—Cyanide works, 1,980 tons of tailings treated, produced bullion value of £1,377.

Dundee (Natal) Coal.—Output, 11,539 tons.

Durban-Roodepoort Gold.—Quartz milled, 6,390 tons, 3,200 oz.; tailings treated, 4,810 tons, 958 oz.

Eaglehawk Consolidated.—740 tons crushed, 372 oz. realised, 101 oz. obtained from cyanide.

Elandslaagte Collieries.—Output, 11,040 tons.

Great Eastern Collieries.—Output of coal, 11,300 tons.

Hyderabad (Deccan).—Output of coal from the Singaremi Collieries, 21,033 tons.

Lloyd Copper.—Production, 180 tons copper.

Malacca Diamond Mines.—134 loads washed, producing 156 carats diamonds and 3,644 lb. of tin.

Menzies Alpha Leases.—420 tons for 460 oz.; cyanide: 405 tons of tailings have yielded 167 oz.

Mount Yagahong Exploration.—280 tons of ore crushed, yield 197 oz.; tailings treated yielded 168 oz.

Mysore Gold.—15,000 tons of quartz, produced 14,805 oz.; 10,400 tons of tailings (cyanide process), produced 1,398 oz.; total, 16,203 oz.

Mysore West.—1,187 oz. from 1,900 tons of ore crushed.

Natal Navigation Collieries.—Output, 13,733 tons.

Natal Steam Coal.—Output, 4,400 tons.

New Queen.—No. 5 Formation (1,270 ft. level), 487 tons, 357 oz.; No. 2 Formation, 50 tons 65 oz. mullock; heap, 27 tons 9 oz.

Ooregum.—12,502 tons of stone produced 5,688 oz.; 10,120 tons of tailings (cyanide process), produced 1,416 oz.; total, 7,104 oz.

Nundydroog.—5,800 tons of quartz, produced 5,547 oz.; 5,211 tons of tailings (cyanide process), produced 476 oz.; total, 6,023 oz.

Queensland Menzies.—Crushed 598 tons, 1,022 oz.

St. George's Coal.—Output, 8,436 tons.

San Ramon Gold.—Four bars, containing 49 oz. gold, 3,890 oz. silver, realised £637.

Sulphide Corporation.—8,192 tons of ore milled at the Central Mine, producing 1,529 tons of leady concentrates, and 3,563 tons of middlings treated, producing 1,799 tons of zinc concentrates. At Cockle Creek 790 tons of leady concentrates, 1,679 tons of residues, and 2,382 tons of purchased ores smelted, yielding 779 tons of lead, containing 68,552 oz. silver, and 7,322 oz. gold.

Tyee Copper.—Smelted: Tyee ore, 4,787 tons; Customs ore, 473 tons; total, 5,260 tons; matte produced, including 160 tons low-grade matte, 682 tons; gross value of contents (copper, silver, and gold), less costs or refining, $68,885.

Waterson Gold.—16 bars, containing 325 oz. gold, 15,423 oz. silver; realised £3,071.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Caledonian.—Dividend for last half-year of 3¾ per cent., carrying forward £20,000; this gives 3 per cent. for the year on the preferred ordinary and ¾ per cent. on the deferred; for the corresponding half of the previous year the dividends were the same, with a similar balance.

Glasgow and South-Western.—Dividend for past half-year at the rate of 2½ per cent. per annum on the preferred ordinary and 1¼ per cent. on the deferred ordinary, carrying forward £5,985; for the corresponding half of last year the dividend was 2½ per cent. on the preferred and 1¾ per cent. on the deferred.

Great North of Scotland.—Dividend at the rate of 3 per cent. per annum on the preferred converted ordinary and 1½ per cent. per annum on the deferred converted ordinary, carrying forward £2,572.

Highland.—Dividend for past half year on ordinary stock at the rate of 1 per cent. per annum, carrying forward £4,450.

BANKS.

British of South America.—Dividend on account of 3 per cent. (6s. per share), payable 25th inst.

Ionian.—Interim dividend of 12s. 6d. per share (5 per cent. per annum) for half-year ended July 13.

INSURANCE.

Indemnity Mutual Marine.—Interim dividend of 6s. per share.

Ocean Accident and Guarantee Corporation.—Interim dividend at the rate of 15 per cent. per annum for the half-year ended June 30, payable September 30.

Scottish Accident, Life, and Fidelity.—Interim dividend at the rate of 10 per cent. per annum for half-year ended June 30.

MINES.

Brilliant and St. George United Gold.—Dividend of 6d. per share and a bonus of 6d., making a distribution of 1s. per share, payable on September 22.

Brookfield Gold.—Dividend at the rate of 12 per cent. per annum for quarter ended July 1.

Crown Reef Gold.—Dividend of 100 per cent. (being at the rate of 200 per cent. per annum) for half-year ending September 30, 1903.

Mount Morgan Gold.—A dividend of £12,500, being 3d. per share, for August, payable September 1.

MISCELLANEOUS.

Brighton and Hove Supply.—Interim dividend of 3d. per share on 10s. fully-paid ordinary shares.

Cassell and Co.—Interim dividend for half-year ended June 30 at the rate of 4 per cent. per annum, payable 21st inst.

Charles Kinloch and Co.—Interim dividend for half-year ended June 30 at the rate of 6 per cent. per annum, payable 21st inst.

Commercial Cable.—Quarterly dividend of 2 per cent., payable on October 1.

Ellerman Lines.—Interim dividend on the ordinary shares at the rate of 7 per cent. per annum.

Glasgow District Subway.—Dividend of 1¾ per cent. for the half-year, carrying forward £1,263.

Hove Electric Lighting.—Interim dividend at the rate of 7 per cent. per annum, payable October 15, for half-year ended June 30.

J. and P. Coats.—Quarterly dividend of 1s. per share, on the ordinary and 5 per cent. on the preferred ordinary.

Leigh Mills.—Dividend of 6 per cent. on the ordinary shares for past year, after allowing for the preference dividend, carrying forward £1,678.

Linkwood-Glenlivet Distillery.—Dividend of 2 per cent. on ordinary shares, carrying forward £427.

Locket's Merthyr Collieries.—Interim dividends for half-year ended August 31 at the rate of 5 per cent. per annum on the ordinary.

London and Glasgow Engineering and Iron Shipbuilding.—Dividend of 5 per cent. and bonus of £1 per share, and carrying forward £3,282.

Maple and Co.—Usual interim dividend at the rate of 10 per cent. per annum on the ordinary shares.

Metropole Hotels (Ireland).—Interim dividend for half-year ended June 30 on ordinary shares at the rate of 4 per cent. per annum.

Palmer's Shipbuilding and Iron.—Final dividend of 2½ per cent. on ordinary shares, carrying forward £5,654.

Pearson and Knowles Coal and Iron.—Dividend at the rate of 5 per cent. per annum on the ordinary shares, making 4 per cent. for the year ended June 30; placing £5,000 to reserve; and carrying forward £7,191.

Pyle and Blaina Works.—Final dividend of 2½ per cent., making 5 per cent. for year ended June 30.

Staveley Coal and Iron.—Dividend of £3 per share on the "A" and "C" shares, and 10s. per share on the "B" and "D" shares.

Steel Company of Scotland.—Dividend of 2½ per cent., carrying forward £2,517.

Stewart and Lloyd.—Dividend of 9 per cent. on the ordinary shares.

Surrey Commercial Dock.—Interim dividend of 2½ per cent. on the ordinary stock and on the preference stock "A" for six months ended September 30.

Theatre Royal, Drury Lane.—Year's dividend is brought up to 20 per cent.

Woking Water and Gas.—Dividend at the rate of 4 per cent. per annum for past half-year, carrying forward £77.

NEXT WEEK'S MEETINGS.

Monday, September 7.

Dover Gas.—Dover, 3 p.m.
Hannan's Main Reef Gold Mining.—18, St. Swithin's Lane, 3.30 p.m.

Tuesday, September 8.

City of York Tramways.—York, noon.
Commercial Bank of Scotland.—Edinburgh, 1 p.m.
Great North of Scotland Railway.—Aberdeen, noon.
London and Glasgow Engineering.—Glasgow, 11.30 a.m.
Motor Manufacturing.—Winchester House, 3 p.m.
Offin Syndicate.—5, Fenchurch Street, 3 p.m.
Sheffield United Gas Light.—Sheffield, 3.0 p.m.
United Horse Shoe and Nail.—Winchester House, noon.

Wednesday, September 9.

Calico Printers.—Manchester, 11 a.m.
Prince Line.—Station Hotel, York, 12.30 p.m.
Steel Company of Scotland.—Glasgow.

Thursday, September 10.

Associated Northern Blocks.—Cannon Street Hotel, 11.30 a.m.
Bolckow, Vaughan.—Manchester, 3 p.m.
Homocea.—Winchester House, noon.
Surrey Commercial Dock.—106, Fenchurch Street, 1 p.m.
Waterford and Tramore Railway.—Waterford, 1 p.m.

Friday, September 11.

Argentine Meat Preserving.—Winchester House, 12.30 p.m.

The Committee of the Paris Municipal Council which was appointed to inquire into the condition of the Metropolitan Railway after the recent catastrophe has completed its report. The report recommends that the present system of motor cabs on each train shall be abandoned, so that in case of fire the engine can be isolated immediately, and that the carriages shall be made of incombustible material. Several minor improvements are also recommended.

Investment Inquiries.

It ought to be unnecessary to put private queries regarding new issues. These are always fully and faithfully dealt with week by week in our Critical Index. No one at a distance from markets or in doubt should ever respond to the invitation of prospectuses without consulting that Index. Had this rule been generally adhered to by the public during the past four years, it would not to-day be lamenting over the loss of many millions—gone never to return.

Questions about public securities, and on all points in company law, as well as on the position of life insurance offices and their promises, will be answered week by week in the Review on the following terms and conditions:—

A fee of five shillings must be remitted for each question put, provided they are questions about separate securities. Should a private letter be required, then an extra fee of five shillings must be sent to cover the cost of such letter, the fee then being ten shillings for one query only, and five shillings for every subsequent one in the same letter.

Questions will be answered by quoting the numbers 1, 2, 3, and so on. The Editor has a rooted objection to such forms of reply as—"I think your Timbuctoo Consols will go up," or "Sell your Slowcoach and Draggem Bonds," because this kind of thing is open to all sorts of abuses. By using a fancy name each query can be kept absolutely private to the inquirer. Detached syllables of the inquirer's name, or initials reversed are best.

Correspondents should *number* the questions, keeping a copy for reference.

nquiries should reach the office of the Investors' Review, Norfolk House, Norfolk Street, W.C., not later than Thursday morning if reply is required in same week's issue.

RAILWAY TRAFFIC RETURNS.

FOREIGN.

Argentine North-Eastern.—Traffic receipts for the week ended July 31, $11,369; decrease, $45. Aggregate from January 1, $371,581; increase, $9,299.

Assam Bengal (Chittagong Section).—Traffic receipts for week ended August 1, Rs. 27,656; decrease, Rs. 2,381. Aggregate from July 1, Rs. 1,41,426; increase, Rs. 3,039.

Assam Bengal (Gauhati Section).—Traffic receipts for week ended August 1, Rs. 8,202; increase, Rs. 3,065. Aggregate from July 1, Rs. 41,425; increase, Rs. 15,918.

Bengal Central Railway.—Traffic receipts for week ending August 8, Rs. 29,869; increase, Rs. 7,367. Aggregate from July 1, Rs. 122,051; increase, Rs. 1,144.

Canadian Northern Railway.—Traffic receipts for week ended August 21, $57,800; increase, $31,200. Total, from July 1, $426,700; increase, $212,700.

Lucknow Bareilly Railway.—Traffic receipts for week ended Aug. 1, Rs. 18,355; decrease, Rs. 1,612. Aggregate from July 1, Rs. 97,875; decrease, Rs. 6,044.

Quebec Central Railway.—Traffic receipts for the 3rd week of August, $15,060; decrease, $991. Aggregate from January 1, $430,286; increase, $19,000.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended Aug. 1, Rs. 8,437; increase, Rs. 210. Aggregate from July 1, Rs. 41,970; decrease, Rs. 1,478.

Salvador Railway.—Traffic receipts for week ended August 29, $9,000.

White Pass and Yukon Railway.—Traffic receipts for the week ended August 14 amounted to $53,718.

ENGLISH.

Cleator and Workington.—Gross receipts for the week ending August 29, £1,148; increase, £6. Total receipts from July, 1 £9,181; decrease, £352.

Cockermouth and Keswick Railway.—Receipts for week ending August 29, £1,104; decrease, £229. Aggregate from July 1, £10,050; decrease, £742.

East and West Yorkshire Union Railway.—Traffic receipts for the week ending August 29, £379; increase £40. Aggregate from July 1, £3,129; increase, £151.

Liverpool Overhead Railway.—Traffic receipts for week ending August 23, £1,716; increase, £46. Aggregate from July 1, £13,894; increase, £756.

TRAMWAY AND OMNIBUS RECEIPTS.

HOME.

Aston Manor Urban.—Traffic receipts for week ending August 29, £552, decrease £6; aggregate from July 1, £4,957, increase £172.

Belfast Street.—Traffic receipts for week ending August 29, £2,691, decrease £74; aggregate from July 1, £25,909, increase £1,496.

Birmingham and Midland.—Traffic receipts for week ending August 28, £836, increase £1; aggregate from July 1, £7,611, increase £270.

Birmingham City.—Traffic receipts for week ending August 29, £5,039, increase £42; aggregate from July 1, £46,628, increase £2,168.

Blessington and Poulaphouca.—Traffic receipts for the week ending August 30, £25, decrease £15; aggregate from July 1, £303, decrease £31.

Bristol Tramways and Carriage.—Traffic receipts for week ending August 28, £5,029, decrease £32; aggregate from July 1, £48,002, increase £1,189.

Burnley Corporation.—Traffic receipts for week ending August 29, £870, increase for week £112; aggregate from July 1, £7,894, increase £1,309.

Dublin and Blessington.—Traffic receipts for week ending August 30, £175, decrease £9; aggregate from July 1, £1,606, decrease £24.

Dublin and Lucan.—Traffic receipts for week ending August 30, £166, increase £3; aggregate from July 1, £1,334, increase £61.

Dublin United.—Traffic receipts for three days ending August 29, £6,097, decrease £16; aggregate from July 1, £51,077, increase £6,463.

Edinburgh and District.—Traffic receipts for week ending August 15, £4,304, increase £323; aggregate from January 1, £142,790, increase £18,701.

Edinburgh Street.—Traffic receipts for week ending August 29, £563.

Harrow Road and Paddington.—Traffic receipts for week ending August 29, £291, decrease £6; aggregate from July 1, £2,728, increase £47.

Isle of Thanet.—Traffic receipts for week ending August 29, £1,671; decrease, £216; aggregate from July 1, £13,540, decrease £161.

London General Omnibus.—Traffic receipts for week ending August 29, £22,524, decrease £423; aggregate from July 1, £227,071, increase £842.

London Road Car.—Traffic receipts for week ending August 29, £7,047, decrease £385; aggregate from July 1, £69,644, decrease £2,479.

Rossendale Valley.—Traffic receipts for week ending August 28, £179, increase £9; aggregate from July 1, £1,678, increase £19.

FOREIGN.

Anglo-Argentine.—Traffic receipts for week ending August 3, £5,872, increase £1,648; aggregate from January 1, £178,596, increase £39,701.

Barcelona.—Traffic receipts for week ending August 29, £2,322, decrease £13; aggregate from January 1, £79,902, decrease £1,543.

Barcelona, Ensanche y Gracia.—Traffic receipts for week ending August 29, £306, increase £200; aggregate from January 1, £9,963, increase £5,675.

Brazilian Street.—Traffic receipts for the month of April, Rs. 36,899; decrease Rs. 127. Total receipt from August 1, 1902, Rs. 364,004, decrease Rs. 5,763.

Brisbane.—Traffic receipts for the week ending July 15, £2,174, decrease £64.

British Columbia Electric.—Traffic receipts from July 1 to June 30, £672,882, increase £95,717. Net earnings £224,347, increase £39,172.

Buenos Ayres and Belgrano.—Traffic receipts for the week ending Aug. 2, £2,899, increase £189.

Buenos Ayres Grand National.—Traffic receipts for week ending Aug. 1, $39,065, increase $5,088; aggregate increase from April, 1903, $9,810.

Calais.—Traffic receipts for week ending August 29, £197; increase £3; aggregate from July 1, £1,988, increase £20.

Calcutta.—Traffic receipts for week ending August 29, Rs. 31,935, increase Rs. 7,631; aggregate from July 1, Rs. 290,762, increase Rs. 68,725.

Carthagena and Herrerias.—Traffic receipts for the month of August, £2,915, decrease £863; aggregate to July 31, £30,169; increase £2,673.

Lombardy Road.—Traffic receipts for the month of July, £1,356, increase £16; aggregate from January 1, £8,795, increase £144.

Twin City Rapid.—Traffic receipts for the month of July $364,471, increase $27,019; aggregate from January 1, $2,283,124; increase $279,233. Net traffic receipts $200,433, increase $5,351; aggregate from January 1, $1,196,715, increase $115,564.

The Investors' Review.

India's "Moral and Material Progress and Condition."

I.

The thirty-fourth number of this curious publication was recently issued and constitutes the fourth decennial review of the affairs of our Indian Empire. It forms a bulky folio of over 350 pages, and is throughout saddening reading. The further we got in its perusal the more depressing was the effect on the mind, and we are more than ever puzzled to account for the curious perversion of intellect that renders a work of this kind possible to any Indian official. In a way the compilation is well and ingeniously written, and we have not the least doubt that the author of the present one, Mr. Francis C. Drake, has done his duty honestly and carefully according to his lights. His lights, however, are those of the precise writer, not of a statesman in any sense or a man capable of looking beneath the surface with a view to discover what the arrays of facts and figures he gathers together really mean. On the very first page we strike against a statement to the effect that the increase in population for the whole area embraced by the census of 1901 was 2.1 per cent., and Mr. Drake goes on to say that "if for purposes of comparison the population of tracts enumerated for the first time in 1901 be deducted from the total shown in that year, the actual rate of increase appears as 1.3 per cent., compared with 11.2 per cent. in the decade just preceding." The figures in the native states have fallen off at 4.34 per cent. in the last ten years, while those in British India proper have increased by 4.44 per cent. No comment is made upon this startling fact, a fact which, as that excellent and too little read weekly journal *India* promptly pointed out, implies a "shortage," to use the Bishop of Ripon's phrase, of some 30,000,000 in the population of India now compared with ten years ago. How much of that shortage is due to devastation by famine we do not know. The truth has never been even approximately ascertained; but between famine and habitual starvation leading to physical degeneration and increased infant mortality, India is poorer to-day by quite 30,000,000 inhabitants than it should have been. That, indeed, is a moderate estimate, for had the increase been on the same scale as in the United Kingdom, the population would now have been larger by 40,000,000 at least than it was a decade ago. Measuring the natural increase merely by the standard furnished by the decade 1881-91, and the result is the disappearance of something like 30,000,000 of "should have beens." Surely if a fact of this kind had been brought out and emphasised, it would have struck the mind of the reader in a manner calculated to excite a spirit of investigation. In the interests of England such an investigation seems to be urgently demanded, for if population continues to shrivel in this manner there cannot be any security worth ten years' purchase for a single British investment in the Peninsula. As for "moral" progress amid such conditions, is it not time to have done with cant?

That is but one example of the defects displayed in slipping past awkward facts, but the whole paper is governed by the same spirit, and because it is so the information conveyed is nearly always inadequate and frequently misleading. Naturally a great deal is said in a smooth official way about the prolonged famine by which India was afflicted in the end of the past decade, but there is never a hint that famine may be due to the exhausting magnitude of our demands in the shape of taxation or to the "enlightened" policy of development followed by India's overlords, far more than to "Providence" or natural causes, or that the people by tens of millions remain hungry though "famine" is officially ended.

We get another very striking example of the inadequate and beguiling fashion of handing Indian statistics in the writer's treatment of India's debts. Mr. Drake merely follows the established bureaucratic fashion, and we do not blame him as an individual. Were he to take an independent line and to frankly set forth the truth regarding the growth of India's debts, it is probable that his fate would be that of men like Sir Henry Cotton, Sir George Robertson, Mr. S. Thorburn, Mr. Donald Smeaton, and others who have ventured to act and speak in the interests of the native population of India, and more or less out of line with the established bureaucratic hypocrisy. His chance of promotion would not only be gone, but probably his term of service abruptly cut short. Never under any Viceroy has the habit of crushing out independent minds been so ruthless or so frequently indulged in as under Lord Curzon of Kedleston. What, then, is the method employed in dealing with the debt? The debt of India as a state is made to appear as if it were becoming less by transferring slices of it from time to time to what is called the "reproductive" portion. In this way the burdens of India are represented as if they were lightening whereas in actual fact they are continually growing heavier. Never a year passes but what additional money is borrowed to the tune of several millions by the Simla Government, and over and above that millions more by the railway companies more or less completely the property of, or under the control of, that Government. Even by the figures set forth on page 143 of this long rigmarole we see that the debt of India increased within a period of eleven years by no less than £74,000,000, and that is not by any means all the story, because money is raised in a variety of ways with Government sanction and approval, which the public accounts do not treat as a portion of either the state railway or the political debts. Do these bureaucrats really mean us to infer that because some portion of the debt more or less arbitrarily fixed is computed to yield interest, product of

the works in which it has been, or is alleged to have been, sunk, therefore the burden upon the Indian people is so much less? It is quite probable that this is their view, nevertheless the fact remains that each pound borrowed in England for India implies an additional burden upon the labour of India's native populations. The truth is actually in some measure stated in the volume before us, where we are told that of the 17⅓ millions sterling spent in England against revenue in 1901-2, no less than £9,500,000 were for interest on ordinary and public works debt and on the guaranteed companies, or for railway capital, or for annuities and purchase of railways. This figure we believe is not the whole truth, because the railways bring home what are called the "surplus profits," which some of the important companies transmit, at their own charges, but anyhow this £9,500,000 is a dead weight upon the people of India and upon the foreign commerce of India, a dead weight always augmenting, and which, together with the other burdens imposed by the Government and payable here is slowly but surely stifling the country.

The entire amount transmitted from India to England on Government account was in 1901-2 £30,337,283, and only £18,539,000 of this was met by drafts from London upon the Indian treasuries. Every form of home burden is continually on the increase, and nearly £12,000,000 of the load imposed in 1901-2 was fended off or shored up by operations of credit. How found we do not profess to fully know. The accounts published so far as they have reached us or as we can follow them give no reliable exhibit of the sources, but we do know that the borrowings of the English Government in India have been continuous, and it is recorded in this very essay that the interest bearing debt, funded and unfunded, was increased in 1900-01 by something like £6,000,000 net: In all £12,000,000 was raised but nearly £6,000,000 of this represented what is in the spirit of illusion called "the redemption" of other liabilities falling due. Even so the debt was raised in that year by the net amount of £6,000,000. So hard up is the Indian Government that not only does it borrow continually in Europe, for its debts nominally raised in rupees in India are to a large extent subscribed for here or held by alien institutions and firms within India, but it actually has the meanness to borrow from such of the native states as are wealthy enough to lend it the money. An instance is given in Mr. Drake's essay of the treatment accorded to the "very rich" state of Gwalior. That state accumulated a fund of £4,000,000 under the rule of the late Maharajah, and £2,333,000 of this was borrowed by the Simla Government in 1887 at 4 per cent., repayable by yearly instalments of £80,000 beginning in 1895-96, so that the money seems to have been borrowed for ten years without interest. Then two further sums aggregating £1,000,000 were advanced by the state for the construction of the Gwalior-Agra and Indore-Neemuch Railways. This, of course, is never to be repaid, the railway is to be the equivalent, and whether the railway pays or not does not concern the Simla Government. Then in 1900 the Simla Government borrowed £300,000 worth of silver "temporarily" from this same state. On the other hand, the same supreme Government makes large advances to impecunious native states, and thus contrives to make them its slaves, to get a bond over them of the Shylock type which may be foreclosed upon whenever convenient pretexts can be found. A striking example of that method of dealing with native states is furnished by the history of Rerar, a territory indubitably within the dominion of the Nizam of Hyderabad and containing a population in 1901 of 2,752,000, or that of a quite respectable European state. This dominion has been held by the supreme Government since 1853 as security for a debt of the Nizam's, a Hyderabad military contingent charge, questionable in its origin, and which we have often been told has long ago been either liquidated or "faked," as the late Baron Hirsch of revered memory used to fake the accounts of the Turkish railways in Europe. Now, however, the whole territory of Berar is annexed and made a portion of the British dominions in exchange for a paltry annuity or perpetual rent of 25 lacs of rupees per annum, say £167,000 on the present artificial computation of the rupee. But this annuity or rent does not accrue until the outstanding indebtedness of the Hyderabad State of Berar to the Government of India has been liquidated, and for the first fourteen years approximately the net amount payable to his Highness is to be 10 lacs of rupees, or the odd £67,000, rising from that for about fifteen years longer to 17 lacs or £113,000. Therefore, a whole generation must elapse before the full rent becomes payable. The thing has not a sweet smell.

The Rand Labour Commission.

In preceding issues we have given a summary of the evidence tendered by various witnesses at the early sittings of the Rand Labour Commission. That evidence, as readers have noted, has concurred in bearing testimony to the dearth of labour, that is to say, to the scarcity of it for the mines. Witnesses do not exactly mean that the black population of South Africa is dying off and will in time become entirely extinguished because none are reborn to take the places of those who go to the "happy land," where there are no mines and mine bosses, but they mean that in the midst of abundance of labour the mines are starving. There is a multitude of natives, to be reckoned by the millions, countless like the sands on the seashore, and though they are willing to toil for their daily bread, and do toil, they refuse to slave for the kind men who run the mines. There must be some reason for this strange reluctance, a reluctance that is called a "scarcity" by subtle minds. Whilst witnesses—at any rate, those whose evidence has so far come forward—are practically unanimous on the scarcity, they differ greatly in their opinions as to causes. Many of these opinions it is impossible to reconcile, because, being extremes, they are irreconcilable. Many put it down to low wages, others ascribe it to high pay; some assert the native is well treated at the mines, others opine the contrary. The evidence given at the third sitting brought out one or two fresh points that are worth reflecting on. Sir Percy Fitzpatrick, who is not exactly a disinterested personage, gave his evidence at considerable length. But he said nothing new, nothing that the world has not heard before in his published writings and speeches. It can be summed up in a few sentences. "Gentlemen, many months ago, I felt convinced Africa would be able to supply all our needs. I was willing to wait, though I knew others were not. I was not in love with Chinese, for I felt the remedy would be worse than the disease. Africa had not been scoured thoroughly enough, and I was anxious that the recruiters of the Native Labour Association should go into all the by-ways and hedges of the land before giving up the search. If they failed in their labours then would be the time—and only then—to think—only to think, mind you—of Asiatics. Well, these men have searched. They have gone far and near, they have spent money, energy, and brains unstintingly, and what is the result? They have found no blacks; I mean they have seen them, have had evidence of their existence, but—but—the native simply shakes his head at 'em. He absolutely refuses to work. He'll work for other people, but he won't work for us. And it's no use reasoning with him; no use trying cajolery. He's proof against it all. That being so, what is the alternative we must face? We cannot run the mines without labour. That is self-evident. If we cannot get labour we must hang up our stamps. And the consequences would be serious, as I need not attempt to describe. You can vividly imagine them. If we cannot get labour in South Africa we must get it elsewhere. But it must be cheap. That is the first essential. White labour is dear; yellow labour is cheap, therefore, it must be yellow labour or—I won't mince matters—stoppage and ruin." That is the gist of what this mine boss said, and such arguments are not new.

Now let us contrast this with the opinions of Messrs. Breyner and Wirth, the agents of the Native Labour Association on the East Coast. Mr. Breyner stated that with the expenditure of time and money 60,000 natives could be obtained from the Northern Portuguese territory, while before the war 80,000 or 90,000 were available in the

southern territories. He could not suggest anything better to increase the number of natives coming to the mines than a continuation of the present system, which might possibly be improved. Recruiters are working very well now, but they could work better if they were paid better. According to the report, it is said he adhered to the statement that he could send the mines 80,000 natives a year. Recruiting had only been going on in the northern territory for about a year and that was not long enough to afford a basis for an accurate judgment of results. Mr. Wirth, his partner, said that the number now recruited from Portuguese territory is 3,700 a month, compared with 1,700 at the best time before the war. Supposing the Native Labour Association got permission to recruit in the whole of the Northern territories (north of latitude 22), he could scarcely say what number of boys might be available in 1904. So much depended upon what the Zambesi company might do, but he estimated that in the Lower Zambesi alone 119,347 boys might be available. As to the question of pay, it is evident that old boys will not return to the mines, after once working there, for the low wages. This is the evidence of those who have had direct dealings with the natives, and it goes far to confirm the opinions of others who believe plenty of labour would be available were the proper methods adopted, the native treated humanely and paid adequately. But once they have worked for the bosses they are unwilling to repeat the experience and this is the principal cause of the so-called scarcity. This was supported by the evidence of Mr. David Forbes, a farmer and landowner in Swaziland, another agent of the Labour Association, who said Swazis objected to working on the mines because there was so much sickness and so many died. A large number have come into the Transvaal this year to work, but not to the mines. Mr. Hugh Brentano, a Frenchman, giving testimony with respect to Somaliland and Abyssinia, believes the reason boys desert is because they have to work underground, which is not explained to them when they are engaged. He feels convinced he can get 20,000 natives from British Somaliland, and if he were allowed to recruit in French Somaliland he could get 50,000 in two years. Major Colin Harding, C.M.G., Commandant of the Barotse police, said: "The popularity of a mine or any other work depends mainly upon the white men in charge of the natives employed. One native going to his home with complaints and generally dissatisfied will do more harm in the way of discouraging natives from seeking work than fifty, who return to their kraals satisfied, will do good."

At the fourth sitting Mr. Douglas Fraser, of Wepener, examined as to the native labour capacity of Basutoland, while admitting that the Basutos have never freely gone to the mines, said there is still room for improvement in the food, and the rate of mortality is too high. However, it is his firm conviction the Rand will not get a larger supply of natives from Basutoland than it is getting at present, even with improvements. Mr. W. Holterhoof said the natives of Gazaland look upon the Native Labour Association as a "forcing" institution, and that thousands more would be available were it not for the restrictions and military inspection with which they associate this institution. He opined that if the blacks were freed from Government restrictions 6,000 per month, to the extent of 120,000 to 150,000 in all, could be recruited by free recruiters. Free recruiting, he held, is the best method of obtaining large supplies. The latter is also the opinion of Mr. Lionel Cohen, F.R.G.S., who has acted as a recruiter for the Consolidated Gold Fields Company. He advocates free recruiting, by which means greater success would be possible than those obtained by the Native Labour Association. Natives, he said, look upon the latter as responsible for the reduction in wages, and are annoyed at the deception practised upon them in regard to what they can earn at piece work. Another deterrent is the return of boys who have become paralysed through standing in water in the deep levels. But by far the most important evidence yet given, testimony that should make a deep impression on public opinion in this country, is that of Mr. Frederick Ingle, a man of thirty-three years' practical experience. "It is, in my mind," said he, "the wastefulness that has been engendered by the so-called cheapness of the native labour that has resulted in every man in the country feeling he cannot work without being attended by one or two boys to assist him." With proper care and economy in the use of white labour, he thinks there is plenty of black labour in the country. Then came his revelation with respect to terrorising witnesses. It appears that a great number of men would be willing to give evidence if they did not fear they would suffer by losing their situations. He contended, in accordance with the dictates of common-sense, that this state of fear has kept from the commission a considerable amount of valuable evidence. Mr. Ingle gave no names, but the Commission expressed the hope that names of witnesses would be furnished by him, that their evidence might be heard in camera, and that they might be fully protected. Is not all this in true accord with the characters of the mine magnates as we know them? Is it not additional, striking proof that they will have Asiatic labour by foul means if they cannot get it by fair? They do not want black labour. Their longing for it is merely a subterfuge to deceive the public. Several witnesses have declared the right methods have not been adopted, and that they will do nothing, in regard to improving habitable conditions, to make the native comfortable and to keep him in health. They see they can no longer work their will with the black; they cannot tyrannise over him as they did of old, they cannot use him as a mere machine to throw on the scrap heap when he is used up, for human—even black—tongues spread the news abroad. All this, however, they hope to be able to do with poor Ah Sin—until he, in time, brings a quite other kind of retribution.

A cable this week gives a resumé of the statement furnished to the Commission by the Transvaal Chamber of Mines. The latter, the representative institution of the mining industry, estimates the total permanent available supply of labour at 235,600 from Cape Colony, Orange River Colony, Bechuanaland, Swaziland, Basutoland, and the Southern Provinces of Portuguese East Africa. Present requirements are computed at 350,700 labourers, inclusive of the labour needed by the Central South African railways. The shortage to-day is 115,100. Five years hence, it is estimated, 650,000 natives will be required, including 368,000 for the Transvaal mines. The annual loss in dividends, on the basis of the present stamping power, is put at £2,925,000. What a tale of heartrending woe could be penned on the miseries of the poor mine magnate.

Notes from New York.

New York, September 1.

The Stock Market during the past week was occupied with little else than professional dealing; the bargain-hunter has not yet appeared, though he may turn up later when he comes back from the summer resorts, which will not be for another week or two yet. In the meantime there are rumours of all kinds of giant combinations being formed that will be to the Steel and Shipping Trusts what they were to the pigmy ten or twenty million dollars companies of the past. What are wanted now, we are told, are institutions that can finance a $10,000,000 deal at short notice without outside assistance; the small company is out of date as their resources are inadequate to meet the more urgent demands of corporate finances. "The demand for the very large trust company is based on sound business principles, and the need will be satisfied," is the dictum of "a prominent exponent of the consolidation idea who ranks among the best equipped trust company officers in the United States."

You have already noticed the formation of one of these great mergers, that in which W. C. Whitney and T. F. Ryan, of New York, and T. Dolan and P. A. B. Widener, of Philadelphia, take over Kuhn, Loeb, and Co.'s holdings in the Metropolitan Securities Company. None of these celebrities mentioned in yesterday's papers as having been interviewed on the subject, would say anything to enlighten the public, but the impression is that they are about to take possession of and consolidate all the great municipal franchises of New York, Philadelphia, and probably part of

the State of New Jersey. The Standard Oil "people" are said to be in the deal, but the four gentlemen whose names I have mentioned object to their being dragged into the case as "it is misleading"; and the Standard Oil "people" themselves are sensitive on the subject. The magnitude of this scheme almost takes one's breath away, but the people over here are such worshippers of size that they will feel rather proud than otherwise of being handled and fleeced by this merger, like those droves of millions of sheep we used to read about in Australia. It is supposed that the whole trolley system, gas works, and electric light and power works, of the localities and district named will fall under the control of the men mentioned, of others affiliated with them, and of the numerous institutions they represent which will form the largest merger yet imagined and organised in the country.

This business is a revolution of a wide and far-reaching kind; how much so probably none of its organisers conceive or understand. Large areas and populations will pass under their irresponsible control, for they form a section of that millionaire and multi-millionaire syndicate which is now in absolute control of the national government, and owns nearly every State Governor and legislature in the country. The only thing that can bring about a change is a great financial catastrophe, but steps are being taken to avert it, or mitigate it if it should come. The Government at Washington is in league with the syndicate, for the Secretary of the Treasury has decided that he is empowered, under existing laws, to transfer from the Treasury into depository banks certain government moneys which previously had been passed direct into the Treasury. This information is said to have been received at first with incredulity, then with amazement, and finally with the question as to how it was that this had never been discovered before. No one, I think, who understands the relations between the money power and the administration can have felt incredulous, or amazed, or found it necessary to ask any question. The situation explains itself. It obviates the necessity of bringing before Congress and the country on the eve of a presidential election, in which all the fortunes and potentialities for plunder of the Republican party are at stake, any intricate and contentious currency bill; and may avert any discussion on the tariff.

A few weeks ago I foreshadowed the beginning of fresh coal troubles as the winter approached. They seem to have already begun, for a despatch from Shamokin, one of the great coal centres of Pennsylvania, of three days ago, says that to-day four of the principal collieries will be shut down indefinitely, and some 3,000 men and boys thrown out of employment. The pretext is that the collieries are blocked, and that the company does not know what to do with the coal it has got out.

Some comment has been caused by the fact that a great industrial company in the south has had to pay something like 18 per cent. for a year's use of $6,000,000, on the ground that the terms were excessive and out of proportion to the risk involved. The excuse of the negotiators is the danger averted, the good done, and the loan having to be advanced on the "double-quick" basis. From this one is inclined to ask how many other double-quick deliverances have had to be negotiated of late.

Economic and Financial Notes and Correspondence.

Our Foreign Trade in August.

The figures for the past month again seem satisfactory, as imports of merchandise were £2,348,885, or 5.8 per cent., better, at £42,761,456, and exports of British and Irish produce came to £25,664,884, representing an increase of £1,365,058 or 5.6 per cent., while re-exports of foreign and colonial produce also showed an improvement of £156,272, or 2.7 per cent., at £5,854,272. Of the imports, however, a very large proportion of the improvement is due to sugar, which showed increases of 1,532,434 cwt. and £821,611, or 119.5 and 123.4 per cent., in refined, and 902,988 cwt. and £475,968, or 113.7 and 174 per cent., in unrefined, owing to the anxiety of the market to get in as large supplies as possible before September 1, when the Sugar Convention came into operation. Grain and flour also showed a fairly large increase of £472,057, grain and oats being £474,777 and £117,060 up, against a decrease of £292,432 in maize. A considerable falling off in wheat supplies from the United States was more than offset by the larger quantities received from Russia, Argentine and the East Indies, and to a smaller extent from Canada, while oats came in more freely from all quarters. The reduction in maize was almost entirely due to Roumania, which sent only 295,472 cwts., valued at £79,910, compared with 1,870,381 cwts., valued at £465,952, a year ago. Increases in cattle for food were shown by Canada, and in sheep by Canada and the United States. Fresh beef showed a small increase, due chiefly to the Argentine, as the United States only sent £42,160 more, and New Zealand's supplies fell off by £20,889, but mutton was £78,745 lower, on account of a drop of £28,885 in the imports from New Zealand. Australia was again unable to send us either beef or mutton, and so far this year has supplied only £15,455 of beef and £224,998 of mutton, compared with £36,234 and £514,426 in 1902, and £84,012 and £873,013 in the previous year. Bacon and hams were smaller, and butter, lard, cheese and eggs likewise showed considerable reductions in both quantity and value. Of dutiable articles, the principal increase was in sugar, as mentioned above, but tea also was substantially higher at £1,664,410, wine and spirits were less in quantity but higher in value, and both unmanufactured and manufactured tobacco showed substantial declines, amounting

† Not included under following heads.

in the case of the former to 11,448,680 lb. and £353,681. Imports of raw cotton were smaller in quantity but higher in value, on account of the manipulation in America, shipments from that quarter, although amounting to only 85,858 cwts., compared with 160,628 cwts., being valued at £269,425, against £383,354. Part of the shortage, however, was made up from the British East Indies, which sent 71,440 cwts. more, at an increase in value of £174,408. Sheep or lambs' wool came to hand more freely from South America, Australia, and the East Indies, resulting in an advance of 3,102,970 lb. and £165,857, Russia supplied considerably more flax and China more silk, but hemp was down, thanks to a large reduction in the Philippines, and jute also fell off substantially. Oil, seeds, etc., show large increases in most sections except tallow, and hides and undressed skins other than sheep skins were all down. Manufactured iron and steel articles were higher by £99,550, the imports of rails being heavy, and as this demand arose largely through the inability of our own manufacturers to supply the requirements of corporations and others for tramways, etc., the Protectionist can hardly find much ground for his arguments in the item. Copper, unwrought and part wrought, pig and sheet lead, and tin all exhibit large increases, the last named showing advances of 2,236 tons, or 78.2 per cent., and £299,985, or 85 per cent. Cotton yarns and textile fabrics, jute manufactures and linen yarns were all higher, but woollen and silk goods show decreases.

Visible Balance of Trade.

	Eight Months ended August 31.			Inc. (+) or Dec. (−) as compared with 1902.
	1901.	1902.	1903.	
Imports	369,943,187	366,899,888	372,702,416	+ 5,802,528
Exports	246,488,927	242,983,546	260,961,694	+ 17,978,148
Excess value of imports over exports	123,454,260	123,916,342	111,740,722	− 12,175,620

In the case of our exports, nearly all classes of British and Irish produce show increases, and those of articles wholly or mainly manufactured, in particular, are substantially higher. Iron and steel and manufactures thereof, however, were 54,618 tons and £102,379 lower, owing mainly to a reduction in the demand for tinned plates and sheets, which was almost universal. In other metals, unwrought copper was £28,010 up, and tin also shows an improvement, the net result being an increase of £49,499 in this section. Cutlery, hardware, implements and tools, etc., were £63,235 up, but in telegraph cables and apparatus there was a heavy falling off, probably due to the change of classification for telegraph wires, which until this year were included. In machinery driven by steam, a large decrease in the value of locomotives shipped to British South Africa was only partly offset by increases to the East Indies, Australia and other countries, agricultural and other machinery were better on increased shipments to South Africa, East India and South America, and in other machinery, not steam or electric, all sections contributed to the substantial advance shown, textile machinery leading with an increase of £68,888, chiefly to European countries, although India took £11,344 more. Ships exported continue to dwindle, only fifty-seven vessels with a gross tonnage of £9,997 tons and a value of £296,721 having been sent abroad, compared with seventy-one of 33,768 tons valued at £716,613 a year ago. In yarns and textiles good progress was made, cotton manufactures showing a total increase of £639,104, woollens and worsteds of £376,117, and linens of £43,731. Cotton yarns were lower in both quantity and value, India having taken considerably less, but piece goods left the country to the value of £5,290,659, against £4,807,901 in the corresponding month of 1902, thanks to a largely increased demand from Belgium, China, foreign West Indies, Venezuela, Chili, Brazil, the Argentine Republic, and India. The requirements of Turkey, Egypt, Japan, British West Africa, and Australia, on the other hand, were decidedly smaller. Woollen yarns were higher, and woollen and worsted tissues of all kinds also showed increases, with the exception of damasks and flannels, which show a small shrinkage in quantity and value. Jute yarns were less wanted for Brazil and Spain, and the decreases thus produced were not regained by improved trade in other directions, but jute piece goods were in better request for the United States, Argentina, New Zealand and Canada, and linen yarns and piece goods, although reduced in quantity, show an increase of £43,731 in value. Yarns and textile fabrics of other materials were also higher, the increase in this section amounting to £1,117,958, and the total increase in goods wholly or mainly manufactured came to £1,186,887. Amongst re-exports of foreign and colonial merchandise, raw cotton stands out prominently with an increase of 121,447 cwts. and £410,696, a movement traceable to the manœuvres of the engineers of the corner in the States, which resulted in the shipment of 97,759 cwts., with a value of £271,590, against only 8,097 cwts. valued at £27,954 in August last year. Copper unwrought and part wrought fell from £115,224 to £15,800, but iron and steel rails increased by £17,864, and tin by £31,036.

Is it the Turk's Hour?

Between thirty and fifty thousand Bulgarians are reported to have been massacred by the Turkish troops in the vilayet of Monastir. Yet the Powers stand idly by doing nothing to check the Sultan's misrule, except threaten Bulgaria with all kinds of pains and penalties if she makes a move to help her kindred in Macedonia. That the report of this appalling atrocity is true there is, we fear, but little doubt, in spite of Abdul's assertion to the contrary. For all the evidence contained in the consular reports, the tales told by fugitives and the little news which escapes the censor supports the rumour, but the most damning evidence of all is furnished by the Sultan himself. He has ordered all correspondents to leave Macedonia. This alone would raise grave suspicion of evil, had there been no whisper of the Monastir atrocity. It also forecasts worse and blacker deeds which Abdul wishes to prevent reaching Western Europe. Even now there are dark stories about of the Turkish troops firing the forests to drive out the wretched peasants who have hidden there to escape slaughter in the villages, only to find a worse fate when flying from the flames. The Turk no doubt is primarily responsible for these awful scenes of murder and rapine, but does no share of the blame attach to the Powers? The trouble in Macedonia is not a matter of an hour, it has been brewing for years, and Europe knew it. So jealous are the nations, however, and so distrustful of their own and each other's motives, they have preferred that whole districts shall be ravaged and depopulated rather than one should gain an inch of advantage over the other. The Turk is an anachronism in the twentieth century, and to keep him in Europe merely because to support an imaginary balance of power is a crime against humanity. Were he driven out of Constantinople the balance would quickly right itself, and by peaceful means since none of the Powers can afford to engage in a European conflict in these times of depression. For a war might be the forerunner of a revolution. Perhaps this massacre at Monastir, the vilayet where Abdul boasted he had restored order, and he had, for dead men cannot revolt, may stir the Powers into taking some decisive action. If not Bulgaria will treating warning notes with the contempt they rightly deserve. She is mobilising and her rulers daily find it more difficult to keep the nation from flying at the throat of the Sultan, who knows this well, and is calling up his reserves in readiness for the coming struggle. When war comes it will be fierce and bloody, one side fighting for revenge and the other for its life. And where will it end?

German Finances.

Most countries with a leaning towards Imperialism are finding their finances in a rather disordered condition just now, and it causes no surprise to learn that the German Empire winds up the fiscal year 1902-3 with an uncomfort-

able looking deficit. According to the Imperial Treasury statement, the shortage is 30,722,500 marks, a large part of which was caused by the Venezuelan blockade. One day the nation will doubtless discover that bullying even small states is not cheap entertainment. The Postal Telegraph department returned a deficit of 3,397,000 marks, due to decreased revenues from postage and telegraph fees, and the Imperial State Railways produced 644,000 marks less than the estimate. Customs and tobacco duties showed a surplus of 8,404,800 marks, but the revenues from banking were 9,093,000 marks to the bad, and the Bourse taxes were also 2,203,000 marks below the budget estimates. These unsatisfactory results are attributed to the adverse effects of the Bourse law on the German Bourse and banking affairs, and certain it is that practically all German bankers and financiers of standing have protested strongly against its enforcement. It is rather interesting to note that during the first six months of 1903 the total amount of new issues of stocks and bonds quoted by the German Bourses amounted to 923,180,000 marks face value, with a market value of 923,990,000 marks. Of this total 804,780,000 marks were German home securities, and 118,400,000 marks foreign securities. During the opening half of 1902 the new issues placed on the German market amounted to 1,483,390,000 marks, and the heavy decrease during the past six months is a significant illustration of the absence of business enterprise now prevailing in all parts of the world. The power of the investing classes is gradually becoming lessened by the constant growth of imperial burdens, and we can see small chance of a better condition while rampant militarism holds sway.

Anchor Line (Henderson Bros.).

We dealt briefly with the annual report of this undertaking some few weeks back, but the position of the company has become so serious that a more detailed examination of its affairs seems to be called for. As will be remembered, the flotation took place in 1899, and of the purchase price of £900,000 the vendors took £650,000 in cash and the balance in ordinary shares, the whole of which passed into their hands. This at first might convey the impression that the vendors had supreme confidence in the future, but we fear the reason for their action was very different. During the seven years prior to the conversion, when the owners of the fleet had only their own resources to depend upon, but one vessel was added to the fleet, and many of the boats when sold were not exactly of the latest pattern. As soon, however, as the responsibility could be shifted to other shoulders, a lavish building programme was entered upon, and debts were piled up in the most irresponsible fashion. Now, if business had continued to flourish all the benefit of this new tonnage would have gone to the ordinary shareholders, while the company took all the risk of matters turning out badly. Thus the action of the vendors in taking all the ordinary shares begins to wear a very different aspect, especially when we consider that the company's latest achievements conclusively prove that in cash alone the original owners received very full value for the property sold. What makes the business more unpleasant still, is the fact that practically all the new vessels were built by the firm of D. and W. Henderson and Co., and, although the Anchor Line secretary denies any relationship between the two companies beyond an ordinary business connection, it is significant that so many contracts went to the family controlled shipbuilding business. Thanks to the South African war, the shipping company did very well during the first year or two of its existence, and the accumulation of a reserve fund of £100,000 made the concern appear quite prosperous. But we know what a disastrous slump followed the boom, and this undertaking now finds itself with rapidly diminishing profits, and a burden of debt that threatens to overwhelm it. Within three years a credit trading balance of £166,602 has been converted into one against the company of no less than £373,872, and on April 30 last the "debts due by the company on open accounts, balance on current accounts and bills payable" amounted to no less than £434,351. Meanwhile, profits have steadily fallen away, and the allowance for depreciation, although larger in amount, has dropped from about 7 per cent. to near 4¼ per cent. owing to the increased value now set upon the fleet. The extent of the revenue shrinkage will be seen from the subjoined statement:—

	Years ended April 30.			
	1898.	1899.	1902.	1903
	£	£	£	£
Profit	136,185	143,665	118,973	99,440
Depreciation ...	34,444	35,375	50,000	60,000
Net profit ...	101,741	108,280	68,973	39,446

This alarming collapse would have been serious enough had the fleet remained the same in extent as when the concern was incorporated, but it is in face of immense additions to the number of vessels, and the profits of the original steamers must have approached the vanishing point. After deducting from the above profit of £39,446 for the past year a sum of £9,500 paid to the debenture trustees, and also debenture interest, the balance over was £16,235. Such amount would not meet the preference dividend by £522, but it was paid alright, because £34,528 was brought forward. With the business moving so rapidly on the downward path no further appropriation should have been made from this credit, but the vendors pay themselves a 5 per cent. dividend, that distribution being recommended on the ordinary shares, and carry forward £21,506. This brings us to an important point. By the terms of the trust deed, £32,500 was to be paid each year to the trustees for the debenture holders, half of which might be applied in renewals or in acquiring additional ships. Therefore at least £16,250 should have been handed over instead of the £9,500 shown by the accounts, and the matter calls for immediate explanation. Preference shareholders had better be up and moving, because already their capital is seriously depreciated in market value, and another year or two of retrogression may render the shares almost unsaleable.

Spain and Its Finances.

The question of the depreciation of silver, and its effect on the position of the foreign exchanges, has reached a point where it requires very serious consideration by the Spanish Government. Spain is now practically the only country in Europe using silver as its monetary standard, and the steady falling away in the price of the metal has seen a gradual rise in the premium on her currency, with the result that her trade has suffered severely. The gravity, however, of the present situation, is not entirely due to the fall in the value of silver, nor even to the fact that Spain is a silver standard country. For many years the Government of the time has got over any deficit in its Budget by the simple expedient of issuing or causing the Bank of Spain to issue fresh notes, a large proportion of which were secured on Government debt only, and this plan has been adopted so frequently as to flood the country with a fiduciary currency far beyond its requirements. In 1874 this fiduciary currency amounted to 67,468,675 pesetas, ten years later it reached a total of 383,276,250 pesetas, by 1894 it had risen to 909,678,275 pesetas, and at the end of 1902 it stood at 1,623,321,900 pesetas—a total which can only be described as appalling. A large proportion of this issue is not, and cannot be, convertible even into silver, for the simple reason that it is not based on anything more realisable than State debt, and it is to this cause, as much as anything, that the depreciation in the value of the currency is due. Don Raimundo F. Villaverde, the present prime minister, has devoted a good deal of time and thought to the study of the position, and to devising an effective method of remedying the unfortunate state of affairs. A large part of the pamphlet he has issued is historical, and another portion is devoted to an examination of the methods adopted by other countries to convert their monetary standards to gold, but the chief interest just now lies in the suggestions made by Senor Villaverde for improving the financial position of the country, and in his proposed new law.

Briefly put, Senor Villaverde proposes to withdraw from circulation and cancel as much of the paper currency as possible, and to replace it as far as is proved necessary by a new gold coinage. By these means he hopes to secure an improvement in the foreign exchange, and by the resulting steadiness in the premium to benefit the nation's credit and to stimulate trade. As a basis for the new

coin, Senor Villaverde calculates that the average rate of exchange for the past ten years, leaving out of consideration the abnormal year of 1898, was about 25 per cent. premium, that is to say, each peseta was worth no more than 0.80 franc, or a loss of 20 per cent. Taking these figures, therefore, as a starting point, he suggests that the new law shall provide for the free coinage, either by Government or by private persons, of gold pieces equal in size and value to the existing 20 peseta pieces—viz., with a total weight of 6.45161 grammes, and containing 5.806 grammes of fine gold—and to give these a nominal value of 25 pesetas. In other words, he proposes to issue the new coins at a premium, with the intention, apparently, of inducing holders of paper to exchange it for the new medium without incurring appreciable loss. Further, in order to attract gold from abroad, a suggestion is made that the public offices throughout the country should be obliged to accept at the same valuation of 25 pesetas French, Belgian and Swiss 20 franc pieces, Italian 20 liras, Greek 20 drachmas, Russian half imperials, and, in fact, all gold coins of whatever description containing 5.806 grammes of fine gold.

As for the law by which Senor Villaverde hopes to render his plan effective, he proposes first of all to select a date after which the gold coin will be the unit and monetary standard of Spain, and to fix the amount up to which silver shall be legal tender. Secondly, he advocates the creation in the Bank of Spain, under the Governor, the general director of the Public Treasury, and the Minister of Finance of an office of exchange which will through the Bank and its branches, but on account of the Treasury, sell and buy at every favourable opportunity, and at a price to be made public in its announcements, cheques, bills, and all classes of drafts, etc., payable in gold, and while this department is operating the bank is not to buy or sell gold or instruments of exchange except in agreement with it. If the Bank requires to increase its stock of gold, it will do so under the above conditions, and on depositing bonds of the perpetual debt, shares in the Tobacco Company, or other securities held, without increasing the note issue. After the passing of the law all import and export duties will be made payable in gold. The Minister of Finance is to be authorised to issue on the security of the customs' receipts a floating debt represented by Treasury bills at 90 days, bearing a rate of interest fixed by the Government, and within a total of 100,000,000 pesetas gold, the service of which will be covered by the proceeds of the export and import duties in each financial year. In addition to this a sum not exceeding 94,000,000 francs may be raised, on the security of the Almaden Mines, and repayable in 20 years. Yet another loan may be raised in 5 per cent. bonds under equal conditions of guarantees as the existing issue for the nominal sum of 700,000,000 pesetas, and expenses.

This debt is to be raised in the form and at the prices to be fixed by the Cabinet in the following manner:—100,000,000 pesetas in 1904 and 200,000,000 each in 1905, 1906, and 1907, the whole amount to be redeemable at the same date in order to avoid having different quotations for each portion. The proceeds are to be handed over to the Bank of Spain for the purpose of paying off the Colonial Treasury bills, and the expenses connected therewith. Part of this last loan may be raised abroad so long as it does not lose its character of an internal loan payable in pesetas, and a rate of exchange is fixed for receiving the sum in gold, and under certain conditions the amount may be increased by another 200,000,00 pesetas. During these four years the Bank of Spain is not to reduce its rate for discount or loans without permission from the Treasury, and in no case is the interest on loans to be below the rate on the irredeemable interior debt. The Minister of Finance will, in conjunction with the Bank of Spain, take the necessary steps to insure the reduction of the fiduciary circulation, and it is further provided that in the event of money being required on floating debt by the Treasury the security given shall be such as can be dealt with in the market. Finally the proposed law contains a clause appointing a commission, presided over by the Minister of Finance, and composed of two senators, two deputies, and two other high officials to be nominated by the Cabinet, which will help the Government in framing the necessary rules, for carrying into effect the law, and will also watch the course of the exchanges, and of the monetary circulation.

Apollinaris and Johannis.

When forming this undertaking for public consumption, the promoters evidently thought that the best method of whetting the investors' thirst was to make liberal use of the company's manufactures, and put quite a deluge of water into its capital. Including debenture stock, the concern is capitalised at the tidy little sum of £3,230,000, and distinguishes itself by issuing about the most meagre balance-sheet we have ever encountered. The accounts were analysed in these columns in July last, and we have no intention of traversing the ground again, but feel sure the subjoined list of principal shareholders will afford instructive study. It contains quite an imposing display of well-known names, and you may be sure the Scotch banks are well to the fore. When examining the register of companies whose shares stand at a heavy discount, finding the English and Scotch banks rather heavily involved, we often pause to wonder how all these losses are made good. Probably they are not, the institutions trusting to luck to pull them through, should the necessity for realisation occur. But how about the balance-sheets in which these securities must find a place? Is mention ever made that certain investments on which losses appear are entered at cost price? Such candour, we suppose, it too much to expect, and noone will trouble about these things until some unexpected development drives them to the surface:

TURKISH UNIFICATION DROLLERIES

The Turkish Unification burlesque continued to be played last week as vigorously as ever, and it seemed certain that the curtain was not yet to be rung down on this highly amusing entertainment. In fact there was every prospect of the entire show being performed again from the very beginning, because Wednesday's intelligence from Constantinople told us that the Sultan had ordered his Council of Ministers to consider whether unification of the public debt would be really of advantage to his fascinating empire. With most of the history of this conversion project those interested are quite familiar, and we need do no more than briefly recapitulate the most recent events concerning it. It will be remembered that in June last a Council of Foreign Bondholders committee was appointed to consider the scheme, and commenced work by inviting representatives of the Continental syndicates to a kind of round table conference. Needless, almost, to say, the invitation was politely declined, so the committee decided to draw up certain modifications of the proposal on its own account, with the idea of rendering the scheme more acceptable to the British holders, and after mature deliberation put forward the following amendments:—(1) An undertaking from the Turkish Government that they will make good the sum required for the service of the debts in the event of the assigned revenues proving insufficient and the reserve fund being exhausted; (2) the rate of exchange for series "C" not to be less than 42½; (3) Article 8 of the draft decree to be amended so as to secure that the repayment of any sums taken from the reserve fund should constitute a first charge on the whole of the surplus net receipts in the following year or years before any division of such surplus between the Government and the debt takes place; (4) the period of eight years fixed by Article 2 of the draft decree for the prescription of bonds of the series not presented for exchange to be extended to fifteen years, as in the case of the drawn bonds." These demands were communicated to the syndicates representing the Continental bondholders, who were invited to co-operate in securing their acceptance by the Turkish Government. But the said syndicates were not disposed to have much to do with the Council's committee and the Ottoman authorities promptly declined to accept the amendments. However, a conference of delegates of the various syndicates was held in Paris, and after a protracted discussion it was agreed that M. Auboyneau, who had negotiated the unification with the Government on behalf of the French banks interested, should be asked to return to Constantinople, and that our able and energetic representative, Mr. Babington Smith, should be requested to co-operate with him in endeavouring to find a solution of the difficulty. He did so to such purpose that most of the amendments were agreed to, the principal exception being that 41½ instead of 42½ was offered to the "C" bonds. The committee attempted to compromise on 42, but while negotiations on the point were proceeding, the Sultan suddenly altered his mind and declined to agree to the third modification which provided that any deficit in the receipts should be made good by repayments from the 75 per cent. which, under the scheme, the Government receives of any excess over and above the anual income required for the service of the new debt. So the interminable discussion was continued, and at last Mr. Smith cabled the following terms agreed to between himself and the Council of Ministers:—

"(1) That in lieu of giving a guarantee, the Government should bring a revised Stamp Law into force immediately. (2) That the rate of exchange for series C should be fixed at 42, the Government to find the money for the additional ½ per cent. (3) That should a deduction from the reserve fund be necessitated, owing to a delay in the payment of the fixed assignments, the arrears should, when paid, be preferentially devoted to the repayment of the sums so deducted, and not be regarded as surplus receipts. The Government also undertakes to augment the reserve fund by £T150,000, payable in ten annual instalments. (4) That the period of prescription should be extended to 15 years, as desired."

With regard to the first point, Mr. Smith stated that it had proved quite impossible to induce the Turkish Government to guarantee the service of the debt, their main contention being that the assigned revenues were not administered or controlled by them, and that, therefore, they could not be held responsible for any deficiency in their net yield. It was estimated that the revision of the Stamp Law would add at least £100,000 per annum to the assigned revenues, and as Mr. Smith urged the bondholders not to reject the concessions, the committee recommended the acceptance of the scheme, provided the modification was accepted by the Sultan. Bondholders readily enough agreed to the compromise, but it seems that the mazbatta approving the new arrangement was signed by the Minister of Justice only under protest, and the Sultan used this as a pretext for sending back the scheme to the Council of Ministers with orders to consider whether unification would really be of

advantage to his rapidly decaying empire. M. Auboyneau, after delaying his departure for ten days, then left Constantinople in disgust, and the whole thing appeared hung up for an indefinite period. But to the surprise of all concerned, almost immediately came the announcement that the Iradé sanctioning the unification had been signed, and there is doubtless much in the suggestion that the hesitations of the Palace have been turned to good account by persons behind the scenes.

What the Ivory Furniture Really Was.

At the time the *Daily News* published Mrs. Smeaton's letter about the Maharajah of Benares' suite of ivory furniture, which she declared Lord Curzon had "collected," we felt there must be another side to the story. This is now given by the Maharajah himself in a letter which appeared in Wednesday's *Daily News*. The "suite," His Highnes states, consisted not of a lot of valuable furniture, but of a few old ivory chairs kept in a side-room of his guest house. These the Viceroy in 1899 saw and wished to buy, provided the price was reasonable and that no sentimental value attached to them. Until Lord Curzon came no one had paid any attention to the chairs, and the Maharajah at once expressed his willingness to part with them if the Viceroy would accept them as a present, since the idea of selling such things was contrary to his notions. But Lord Curzon could not agree to this, for if selling was repugnant to the Maharajah, he, by the rules and regulations, could not accept presents. To get over the difficulty His Highness suggested a compromise, in the shape of an exchange of presents, and agreed to take for the chairs a new rifle which he was on the point of ordering from England. This suggestion was practically adopted, and the chairs sent to Calcutta, in the dilapidated condition in which Lord Curzon found them, as he refused to let the Maharajah do them up. Mrs. Smeaton appears, therefore, to have been misled by the native gentleman who showed her round Benares, and who was not, the Maharajah declares, his Diwan, that official being far too important and busy to look after guests. Moreover, her visit was not paid until some two years after the chairs had been sent to Calcutta, and there is some mystery about that portion of her letter in which she says she was in Benares immediately after the dispatch of the furniture. The Maharajah is sarcastic on the subject of the chairs being sent carriage paid, and remarks that if it is the modern custom to make the recipient of a gift pay for its carriage he was not aware of it. Altogether His Highness distinctly scores, and we are glad, as his letter clears up a very nasty story concerning the Viceroy. For Mrs. Smeaton we are sorry, since she has undoubtedly been the victim of a native with a talent for romance which is quite wasted in his present sphere.

Market Values and Kaffir Dividends.

We have taken the trouble this week to compile a table of the issued capitals—from last balance-sheets—and the market values of the principal South African mines, in order to show how much will be required to pay a respectable dividend on the latter. The figures, in their vastness, will doubtless greatly astonish those who do not trouble to think on these matters, and who are unaware of the extent to which Kaffir shares are inflated ,despite the prolonged liquidation. How many mines in the list we have drawn up are returning 10 per cent. on their market values? Not one, unless we except the Crown Reef, which has recently declared 100 per cent. for the past half-year, at the rate of 200 per cent. per annum. There may be one or two, with small capitals, yielding 5 per cent., but the majority are returning less than this, whilst a large number are, of course, returning nothing at all. The Barnato Consolidated, New Modderfontein, H. E. Proprietary, Cinderella Deep, Durban Roodepoort Deep, French Rand, Geduld Proprietary, and one or two others, have not yet paid their maiden dividend, and are not likely to do so for a long time to come. Then, some Barnato group companies, such as the New Primrose and Ginsberg, have lately issued new shares at a premium, and out of the premiums have indirectly distributed small dividends. Even with the aid of Chinese labour, the companies are not likely to earn profits large enough to return 10 per cent. on market values. The controlling houses may be trusted, even if such profits were possible, not to allow any outsider to purchase a share which will yield him, as a maximum, over 5 or 6 per cent. Permission to employ Asiatics is likely to be used as a pretext to put prices still higher, so the public will have no chance of getting in at a reasonable figure, or to pick up any paper at its intrinsic value. They would be wise to dwell upon this and sell, as we have advised for a long time past, on every opportunity. We will now leave the figures to speak for themselves, which they do forcibly enough. They will be found useful for study, will furnish food for reflection, and will be found to possess value for referential purposes.

Company.	Issued Capital. £	Market Value. £	Amount required to pay 10 per cent. on Market Value. £

United Indigo and Chemical Company.

The size of an up-to-date combine has no influence on its destiny, and large and small sooner or later reach the verge of collapse. We had a good deal to say about this one twelve months ago, and the position of affairs which the annual report then disclosed made the prospects of an immediate substantial revival seem a very remote possibility indeed. A profit of some sort was evolved during the year to June 30 last, but each successive

balance-sheet only emphasises the fact that the businesses conglomerated and sold to the public were monstrously overvalued. Trading profits (including revenue of all subsidiary companies), after providing depreciation, bad debts, and £2,065 for the directors' remuneration, were returned at £9,456, and, as income tax was refunded to the amount of £435 and £14 came in from transfer and registration fees, the entire revenue was £9,905. But shareholders do not handle a penny of it. First there are the general charges to be deducted, which absorb £1,586, and income tax draws off £653. Then we find that the loss on the London branch was £279, and on the Boston branch £318, while one-third of a deficit arising from closed works is also written off, making away with a further sum of £778. Thus, the net profit is reduced to £6,292, and as there was a debit of £5,292 brought forward, due to the fact that the directors paid the preference dividend for 1901-2 without earning it, the credit balance is just under £1,000. The balance-sheet items are now given in greater detail than at one time, but we are still without knowledge regarding the allowance for depreciation on the land, buildings, plant, machinery, etc., valued at £177,032, and of course there is nothing in the shape of reserves. Formation expenses, £2,340, is an asset which would not realise a fortune, and two years must elapse before the whole of the closed works account debit is cleared off, but in other directions some little improvement is to be noted. To sundry creditors the company owes £5,848, against sundry debtors and bills receivable £31,480, and cash £14,288, so that a fair excess of liquid assets is visible. Stock in trade is valued at £24,408, and seems moderate, but at best the latest statement is very unsatisfactory, and with a fine contempt for those whose interests they are supposed to safeguard the directors give not a word of explanation in the report to account for the past year's wretched display. Shareholders, however, showed fight at the annual meeting, held rather more than a week ago, and although the Press were refused admission proprietors revealed sufficient information to show that the proceedings were lively. The chairman seemed to think because other dyestuff and chemical businesses had done badly this company was excused from showing even passable results, and laid all the blame on the heavy importation into Great Britain of synthetic, or artificial indigo, from Germany. So these things must be kept out by means of a nice little protectionist tax, and encouragement thus given to the real indigo grown in India. Fortunately shareholders were not to be bluffed by this rubbish, and gave expression to their feelings in no uncertain terms. They refused to pass the report and accounts, and in demanding a committee of investigation asked for knowledge regarding the sum of £1,716 owing to the company by the directors and vendors. This, it seems, represented losses upon contracts of lemon juice and other articles taken over at the time of formation, and is strikingly illustrative of the unsound foundation upon which the whole structure was reared. Opposition was also raised to the re-election of the auditors, Messrs. Armitage and Norton, but, unhappily, the board was well fortified with proxies, which it threatened to use if the motion for the appointment of a committee of investigation were persisted in. So shareholders were forced to be content with the selection of three shareholders to confer with the directors, these gentlemen to select a director from the general body of shareholders, and to present their report six months hence. Future action will doubtless largely depend upon the committee's statement, but it seems to us that the circumstances surrounding the company's inception call for the closest investigation.

The Mineral Resources of West Australia.

Shareholders in West Australian mines will learn, probably with much surprise, that the output of gold in the colony in 1902 showed an appreciable increase compared with 1901. Those who have kept an eye on our monthly tables have, it is true, noted a gradual advance, but it has been nothing to speak of, and they will doubtless be astonished to see what the aggregate accumulation for the year was. "Where has it all gone?" they will naturally ask, "for we have not had it in dividends." That is true, and we cannot supply the solution to their conundrum except to say that probably much more gold has been needed to get that gold out than the mines have totally produced. Three or four mines have been paying large and regular dividends, concurrently with steady increases in capital expenditure, but the majority have found expenses so heavy that, after making provision—not, by any means, adequate in every instance—for depreciation and redemption, they have found themselves without surpluses sufficient to distribute to the waiting shareholders. Other mines have had their "eyes" picked out, and when there were no longer any "eyes" to pick out, the output has suddenly fallen, so that the aggregate increase has been to this extent forced and misleading. The Mine Department of the Colony has issued its report earlier than usual, an exhibition of energy which, it is to be hoped, has not exhausted it too much. It is a decided progressive step, which may encourage the Department to improve upon its efforts a year hence. The following table of output and value will serve to show the improvement at a glance, and will prove useful as a referential record:—

Description of mineral.	1902. Quantity.		Increase or Decrease.	Value at the mines.		
	Tons.		Tons.	£		£
Black tin	620	–	114 ...	39,783	–	217
Coal	140,884	+	23,048 ...	86,188	+	17,627
Cobalt ore	2	+	2 ...	41	+	41
Copper ore	2,262	–	7,698 ...	8,090	–	61,810
	Oz.		Oz.			
Gold	1,871,037	+	167,620 ...	7,947,662	+	712,009
	Tons.		Tons.			
Ironstone	4,800	–	15,769 ...	2,040	–	11,206
Limestone	5,080	–	13,130 ...	1,340	–	11,206
Plumbago ore	1	+	1 ...	6	+	6
	Oz.		Oz.			
Silver	83,293	+	22,424 ...	9,190	+	1,581
	Tons.		Tons.			
Silver-lead ore	36	+	15 ...	277	+	125
Total value				8,094,617	+	654,148

The East Coolgardie has for years past been by far the principal and most prolific gold-producing district, as it is here where the richest mines are, and, as usual, more than half the gold came from this field last year, the increase on 1901 being 12.8 per cent. In the second place, but a long distance to the rear, comes the Mount Margaret Gold Field, with an output of 211,309 oz. Third on the list is the Murchison, where, in the early days of the industry, vast quantities of capital were sunk and lost. Last year, however, it made a big stride forward by yielding 64,222 oz. more than in the preceding twelve months, or nearly 44 per cent. North Coolgardie likewise appreciably progressed, with an increase of 36,711 oz., whilst a higher production is yielded by each of the other districts—the Coolgardie, East Murchison, North-East Coolgardie and the Pilbarra. There is a new field which is producing an increasing quantity of gold, though still in comparatively modest measure, namely, the Phillips River field. In 1900 only 39 oz. were reported, increased in 1901 to 713 oz., and to 8.494 oz. in 1902. Nor do the above exhaust the places where the precious metal is being turned out, for there are the lesser known districts of Kimberley, Gascoyne, and Ashburton, but the gold from these is principally alluvial and dollied. At Donnybrook crushing is delayed pending development work.

As regards quality, this has but slightly deteriorated, and it may be only a temporary falling off, the percentage of decrease being .05 oz. The number of producing mines is greater by fifty-two than in the preceding year, when the latter showed a lesser number by thirty than those working in 1900, the principal increases being in the North Coolgardie, Mount Margaret, Philips River and North-East Coolgardie fields. As regards the other minerals, it will be seen there has been a considerable falling off both in the quantity and value of copper ore. This decline is accounted for principaly by the fact that the smelters at the Anaconda mine, in the Mount Margaret gold field, were closed down during the greater part of the year. The Phillips River gold field produced copper ore to the value of £1,238. The absence of any local smelting works and the high cost of carriage to the coast and conveyance to smelting works in the eastern states, combined with the low price of copper during the greater part of the year, have rendered the mining of any but the highest grade ore unprofitable, and, consequently, the development of copper properties has been practically at a standstill. It is said that in the West Pilbara field some of the most valuable

properties have been stripped of their high-grade surface ore, with no thought to the future of the mines, while others have been worked without sufficient capital to provide the pumping machinery necessary to cope with the large bodies of water found at a comparatively shallow depth. Little work has been done during the last few months, but there is every reason to suppose that this part of the State has a promising future as a copper producer. The quantity and value of the output of black tin slightly decreased, coal appreciably augmented, and there was likewise substantial progress made in silver mining.

Critical Index to New Investments.

*** *To assist subscribers of* The Investors' Review *in deciding how to act when new issues of capital appear during the early part of the week, and lists close before the critical examination given in this Index can appear, the Editor has decided to reply by telegraph to all enquiries referring to such issues. A letter sent to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, Strand, and enclosing a shilling for the reply, or a reply-paid wire to "Unveiling, London," will bring a prompt answer whether to subscribe or leave alone.*

Weston-super-Mare and District Electric Supply Co., Limited.

The issue of a prospectus at the present time is a pretty clear indication that the company is in very pressing need of funds, and the fact that the British Electric Traction Company is responsible for this one adds yet another proof to those we have already given that it is desperately hard up. Out of a share capital of £80,000, in equal proportions of ordinary and preference shares of £1 each, 35,000 ordinary, with £34,992 10s. paid up, and 70 preference with £32 10s. paid, have been issued, and the company now offers for subscription 34,930 6 per cent. cumulative preference shares and £35,000 4½ per cent. first mortgage debenture stock at par. The undertaking was formed in 1899 by the Electrical Power Distribution Co., Limited, to take over the Electric Lighting Order, 1891, for which it paid £554, and has since obtained Tramways Orders in 1900 and 1901, authorising the construction of some four miles of line. Up to December 31, £98,446 had been spent on capital account, of which £43,831 was on the traction section, and since that date another £4,489 has been expended, and the present issue is made in order to discharge the liabilities on capital account of £68,618, including £11,462 borrowed from the B. E. T. Company. Under an agreement dated November 1, 1899, the company paid to the Electrical Power Distribution Company, now merged in the B. E. T., £2,800, and is liable to pay a further sum of £43,872 for work done and profit thereon, in addition to which £36,685 is due to the B. E. T. for the construction of the tramways. Profits for the year ended December 31, with £202 brought in, were £3,680, out of which a dividend at the rate of 4 per cent. per annum was paid on a portion of the ordinary shares, and £2,930 was carried forward. These figures are not particularly encouraging from the investors' point of view, as to meet debenture interest and preference dividend will require £3,675, and the business will have to grow considerably before there is any margin even for the insignificant allowances for depreciation and reserve usually considered necessary by the parent concern. The balance available for the ordinary shares is not a question of much moment as the B. E. T. holds all that class of shares so far issued. There seems, therefore, to be every probability that the B. E. T. will have to earn its underwriting commission of 2½ per cent. and fee of £2,000 by taking up the shares and debenture stock now offered.

Kalk Bay Municipality.

In publishing their invitation to subscribe for £36,000 of 5 per cent. debentures, issued by the above municipality, which hails from Muizenberg, near Simon's Town, South Africa, Messrs. Davis and Soper, London Agents, do not err on the side of providing sufficient particulars to enable intending applicants to judge of the security offered. All such are referred to their offices in St. Mary Axe, where statements as to the present position of the municipality may be seen, and this action in itself puts the debentures out of the range of the ordinary investor.

Passing Events.

How long is this country going to close its eyes and ears to what is taking place in South Africa? The following is an extract from a letter written by an Englishman in Johannesburg, and shows the feeling with which the misrule of Milner and the mine magnates is regarded by those British and Dutch who are not time-servers or office seekers, but who have the real interests of the country at heart.

"We are practically living in a reign of terror, and there is no knowing what the end will be, for the English and Dutch are now fully convinced of the villany of the late war. I see no reason to alter my opinion, viz., that under the Republic we were going to hell in a wheelbarrow; under the British we are bound for the same destination in an express train, going 90 miles an hour. All other industries are made subservient to the gold mines, and the British authorities are squeezing the country for all it is worth."

Such a state of affairs cannot last much longer without the formation of a powerful Afrikander party, embracing Boer and Briton, whose object will be to turn out the present rulers and govern the country for the country's good. Therefore unless the nation desires another South African war, far more serious than the last, it should take steps to remedy the flagrant evils existing not only in the new colonies, but in the old.

Had war not broken out in South Africa we should have had another raid, engineered by Lord Milner, with Mr. Chamberlain behind him, and led by General Baden-Powell. Sir William Butler let this information out in his evidence before the War Commission, and it shows how complete the bonds are that bind Chamberlain and Milner to the car of their masters, the mine magnates.

Even the present Cabinet has something to learn in the way of political tactics from our Australian Colonies. In the Commonwealth House of Representatives a Labour amendment to make the Conciliation Bill apply to railway servants was carried against the Government. But Sir Edward Barton and his friends do not consider it necessary to dissolve for such a trivial defeat as this, so they propose to drop the bill until the coming elections. Then, minus the obnoxious amendment, it will form a plank in their platform, to be torn out or not, we presume, as they think advisable.

Russia has promised to evacuate Niu-Chwang and to restore the Muhden province of Manchuria on October 8. At first this would seem to be a climb down on the part of the Bear until the conditions of the evacuation are examined, when it is found that if not at the top of the pole, she still remains very near it. For while generously giving up the shadow, Russia has retained a firm hold on the substance, and is still the actual mistress of the provinces. China may administer them, but must not cede any portion to a foreign power or grant a concession to this country without giving an equal one to Russia. The tariff on goods entering by the Manchurian railway is not to be increased, and should an epidemic break out at Niu-Chwang a Russian health officer is to be appointed to deal with it. The military telegraph line along the railway is also kept by Russia, and the agencies of the Russo-Chinese Bank in Manchuria are to be guarded by Chinese soldiers. So it really means that Russia, while throwing a sop to the other Powers, hopes now to be able to push on her military preparations free from disturbance, and when the time is ripe seize the provinces.

Brother Arthur prophesies failure for Brother Joseph's scheme for taxing the food of the people. The prophesy was uttered to a representative of the *Manchester Guardian*, to whom Mr. Arthur Chamberlain also made some caustic remarks on the subject of protection generally. "With protection many of us would make our fortunes. In my own selfish interests I am not afraid of Protection. It would make the rich richer and the poor poorer. Give up protection and we manufacturers will show you something in the way of rings and trusts and syndicates that you little dream of." "I could make more money in an evening in the House of Commons by arranging for the taxation of my opponents' necessities and arranging a free

market for myself, than I could make by honest industry in a month." Aphorisms such as these, though, hardly suitable for "Consistent" Birmingham, are worth circulating in leaflet form. But why does Joseph not answer his brother? Is it because he fears that instead of converting he will be converted?

By an overwhelming majority the Labour Congress at Leicester emphatically condemned Mr. Chamberlain's fiscal policy, there being only two dissentients among the delegates. A telegram was sent to the Colonial Secretary to let him know what the representatives of the workers of the country, the men at whom he has jibed and sneered, think of his new scheme to ruin the country. What a pity a reply was not pre-paid, as it might have elicited a crystal, instead of the formal acknowledgment sent by his secretary.

The Victorian Ministry in its reconstructions, resembles a bubble company. By the latest shuffling of the pack Mr. Irvine, of strike fame, generously gives up the portfolio of Attorney-General, but retains the Premiership, and that of the Treasury. This permits Mr. Davies, the present Solicitor-General to become Attorney-General. But what we would like to know is why has Mr. Irvine given up one of his portfolios and its attaching salary?

"Consistent" Birmingham has been circulating its misleading pamphlets in Sir Michael Hicks-Beach's constituency without his wish or sanction. Such a proceeding, Sir Michael considers unjustifiable, and in unpleasant contrast to the course adopted by the Unionist Free Food League, which does not distribute its leaflets in a constituency without the assent of the sitting member. Mr. Vince, on the other hand, says the objectionable leaflets are only sent when asked for, and therefore Sir Michael's attitude is preposterous. But then the Birmingham Tariff Reform League is so thoroughly imbued with Chamberlainism that its ideas of courtesy are somewhat warped, and its notion of a request is like the veldt, illimitable.

Sir John See, Premier of New South Wales, is very angry with the *Times* for having dared to criticise Australian finance. The men in the State Parliaments, he declares, are just as capable as members of the Federal Legislature, which is not saying much if some of the latter's recent performances are any criterion of statesmanship.

The Texan oil industry is beginning to bear a very close resemblance to opera bouffe. According to the latest story the independent firms working the wells in the Beaumont district have found salt water coming up with the oil. Naturally this greatly depreciates the output, and we are told that many firms and companies are ruined, some having been compelled to sell their properties at a very cheap rate. This tale affords very entertaining reading, but the intelligence bearer reserved his tit-bit until the end. Terrible to relate the allegation is made that one of the large oil companies has deliberately pumped salt water into particular wells held by rival concerns. Detectives are now gathering evidence with a view to making arrests. The distressing news comes via New York.

The damage done to the crops by the weather and the delay in harvesting are shown by the small sales of home-grown wheat during August. Only 66,475 qrs. were put on the English market during the month, this quantity being about half the septennial average, and the prospects for September are by no means encouraging unless the weather makes up its mind to mend its ways. If England is bad Ireland is worse, the downpour and high winds having a disastrous effect on all crops in the west, south and east. Hay, an important crop in every part of the country is ruined. Fears are entertained for the potato crop, the tubers are small and moist, and though blight is not yet general, it has appeared in some districts. Turf also, the principal, in fact, only fuel of the peasant, is everywhere saturated beyond curing. Altogether a melancholy outlook.

The annual meeting or F. Steiner and Co. held a week ago, did not throw much light on the real cause of the serious loss incurred during the past year through the failure of two of the company's Eastern agents. Mr. H. K. Gill, the managing director, thought it unwise to go fully into the details of the affair, and as no protest came from shareholders, it is really no concern of ours. Nevertheless, is it satisfactory to find the board recognising the gravity of the position and taking steps as we suggested last week to safeguard the company from any similar misfortune in the future. The directors will do well to insist upon the agents invariably carrying out the best and safest system of trade, and also, through members of the staff, to keep in closer touch with the various markets than they have hitherto done. We are glad to note arrangements have been made for closer supervision of all foreign agencies, and trust that the board's anticipations of entirely satisfactory results in the future will be borne out.

Two years ago the Glasgow Corporation undertook to provide the municipality with a telephone service, and in its usual fashion has made it pay. In the first year there was a net surplus of £398, and in the second, which has just ended, one of £1,694. These have been earned not by the imposition of heavy rates such as London has to pay the National Telephone Company and the Post Office, for the maintenance of the former's monopoly, but by cheap charges and an efficient service. Up to the present the Corporation has spent £270,938 on the installation, 9,122 instruments being completed, while there are 7,387 partially completed lines not yet earning revenue. The total surplus of the two years has been added to the sinking fund to form what is practically a depreciation account, which on the capital spent works out at 4 per cent. As the Postmaster-General has laid down the rule that 2½ per cent. is sufficient to set aside for depreciation, taking the life of telephone plant to be thirty-six years, the Corporation need fear no criticism on this point from the Industrial Freedom League or any one else. But we must confess we envy Glasgow and its enterprise in municipal matters when we remember how our County Council is thwarted and baulked at every turn by the Government's love for the vested interests that have seized on everything which should belong to the Londoner for his own use and benefit.

It is recorded that on a certain historic occasion the Sultan of Turkey replied to a message from his agents that a new loan had been applied for ten times over by instructing them to "take the lot." The story has evidently impressed the directors of the Glasgow King Shipping Company, and they have decided to follow such an excellent example in regard to their own company. It appears that an issue of shares recently offered was oversubscribed, and the sad spectacle of the unsuccessful seekers after a really sound industrial investment having to go emptyhanded away has proved too much for their tender hearts. The managers accordingly announce that the board has decided to recommend that the capital should be increased from £50,000 to £100,000 by the creation of 5,000 new shares of £10 each, and have called a meeting to consider the question! Surely such a proposal was never heard of outside the realms of farce, and as something more than an apparent demand for shares in a company is needed to produce a good investment the present shareholders will be prudent enough to put a check on their directors' generous instincts.

The Crown Agents for the Colonies again remained bondholders of the Netherlands South African Railway that they will on November 13 next be prepared to purchase the 4 per cent. debenture bonds of 1,000 florins, or 1,690 marks each, of the issue of 1897 at 1,128 florins, or 1,906.32 marks respectively. Bonds must have all unpaid coupons attached, and it should once more be pointed out that holders who do not accept this offer and surrender their bonds on November 13, or on such later date as the Crown Agents may appoint in special cases, will receive no further consideration from either his Majesty's Government or the Government of the Transvaal. Shareholders of the railway are also notified that they are required to send in their share certificates as soon as possible to the Crown Agents for verification. Forms for listing, which must be made out in dupulicate, can be obtained at Downing Street and Tokenhouse Buildings. Particulars of the further requirements of the Crown Agents in respect of the ownership of shares will be published at a later date.

The Investors' Review.

The Week's Money Market.

BANK RATE 4 PER CENT. (Advanced from 3 per cent. on September 3.)

Norfolk House, Friday Evening.

Early in the week the Bank took steps to render its minimum rate effective by coming into the market as a borrower, and was so far successful in mopping up the surplus balances that the charge for accommodation has risen in a substantial fashion. Day to day money continued for a time comparatively plentiful, and remained so even after £750,000 had been taken off the market by the call on London County Council stock on Tuesday, but this was due more to the absence of any important demand than to abundance of supplies, and as the week went on even this superficial ease disappeared. That is to say, loan rates increased steadily, and less was heard of lenders seeking employment for balances at nominal interest. As the pressure exerted by the Bank's action became more appreciable so rates went up, until as much as 3½ per cent. was paid for overnight loans, and even at the best the lowest figure was 2½ per cent. It was, however, in weekly fixtures that the pinch was felt most, and bankers raised their rates gradually from 2¼ to 2½ per cent. to 3, and in some cases 3¼ per cent., being influenced by the fact that the week included pay day on the Stock Exchange, and with the later loans, the Transvaal loan instalment, amounting nominally to £4,500,000, due on the 15th. For various renewals into October the India Council at first asked 3¼ per cent., but towards the end of the week increased its charge to 3½ per cent.

Considerable movements of credit were shown by Thursday's Bank return—owing largely to the borrowings above mentioned. These apparently amounted to £2,300,000. or thereabouts, as Government securities were reduced by £1.200,000, and other securities by £1,255,000, this figure including about £150,000 repaid to the Bank by the market on Monday last. As in addition to this the market had to face a reduction in the reserve of £801,000, caused by the withdrawal of £1.215,000 gold coin and bullion, of which £1,030,000 was taken for abroad, against a return of £413,000 in notes, it follows that "other deposits" were reduced by £3,102,000, to a total of £38,770,000. This item is now back to the level it touched in the latter part of April, and is small enough for the market's requirements, so that it is possible assistance will have to be obtained from the Bank to meet the instalment on Tuesday next. The return, taken as a whole, is far from being strong. and its publication gave rise to further discussion regarding another advance in the rate in the near future. It is hardly likely that such a step will be necessary this month, although the stock of gold is too low for further withdrawals of the metals for the Continent to be regarded with equanimity. especially as the drain to Egypt has already commenced, and will continue, no matter to what figure the rate may be raised It is impossible to judge. however, how long the change can be delayed. Continental exchanges, it is true, are now moving in our favour, and it is hoped that with the end of the quarter the demand from Germany will either cease altogether or be very much reduced, while as far as American requirements are concerned it seems to be doubtful if that country will have the power to withdraw gold from this country. For one thing, the indebtedness here which has to be met within the next few months is fairly heavy, and for another it is by no means certain that the new cotton crop will come forward at a sufficiently rapid rate to create a strong enough demand to give her an opportunity to take gold in any large quantities.

The discount market has been an exceedingly trying one to work in, as the measures adopted by the Bank have produced a corresponding amount of uncertainty as to the future, and with money growing daily harder to come by brokers have shown an increasing reluctance to take in bills. Four months maturities, owing to the date on which they fall due, have been regarded with much less favour than ninety-day, or even six months, paper, and have consequently been quoted at a slightly higher figure; but rates for remitted bills of all currencies have been advanced day by day, until they now stand at 3¾ per cent., and even at this figure sellers have found it somewhat difficult to place their parcels. The £500,000 India bills issued on Wednesday in part replacement of £1,000,000 falling due on the 15th were placed at an average discount of £3 11s. 6d. per cent., but although this was slightly below anticipations the result had no effect whatever on rates.

This was expected to be a very troublesome day in the market, owing to the small resources, as indicated by the other deposits, and to its being the wind up of the account on the Stock Exchange. Loans consequently were in strong demand during the morning, and rates frequently touched 3½ per cent., whether for the day or week. Later, however, supplies came out, no one seemed to know from where, although the ease was no doubt to be partly accounted for, at any rate, by money brokers in the House finding that they had overprovided themselves, and seeking employment for the surplus outside. Whatever the source, funds were more plentiful, and the charge for overnight accommodation dropped to 2½ and 2 per cent. Advances over the 15th and for a week still cost 3¼ to 3½ per cent., and the India Council asked 3¾ per cent. for the fair amount lent to the beginning of October. Quotations for discount, on the other hand, were firm all day, and hardened still further on the result of the allotment of the £2,000,000 Treasury bills being announced. For three months' bank paper, which could be melted in the morning at 3¾ per cent., the rate hardened to 3 13-16, and here and there was quoted 1-16 per cent. above that, while for four months 3⅞ to 4 per cent. was asked, and for sixes 3⅞ per cent.. The price of bar gold in the open market has further declined to 77s. 10½d. per oz., but it is, of course, still much too high to allow the Bank to obtain any of the considerable supplies coming forward, and the whole of the amount due this week, estimated between four and five hundred thousand pounds. will doubtless go to Germany.

Apart from the Transvaal loan instalment of £4,500,000 on Tuesday, calls falling due in the coming week are not of great importance. On the same day about £480,000 must be found, including £200,000 on Liebeg's Extract of Meat preference shares and £100,000 on County of London and Brush Electric second debenture stock. On Monday £375,000 is payable on India 3 per cent., and on Thursday £200,000 is due in small items. On the latter date £2,000,000 Treasury bills have to be paid for, against a similar amount maturing, and Liverpool Corporation bills for £500,000 will be paid off.

SILVER.

Supplies of silver have been very scarce throughout the week, but for the first day or two inquiries were limited to the ordinary trade requirements, and quotations declined a little, to 26¼d. per oz. for cash and 26 1-16d. per

oz. for future delivery. India, however, then came forward as a moderate buyer, and with the assistance of a few special orders, said by some to be on account of the mint, prices advanced sharply to 26 9-16 and 26 3/8d. per oz., respectively. At this level the Eastern support ceased, and quotations fell back to 26 7-16d. and 26 3-16d. per oz., closing dull. For the Rs.50,00,000 India Council drafts offered on Wednesday, the applications were Rs.4,02,85,000 in bills and Rs.50,00,000 in telegraphic transfers. In the former Rs.44,00,000 were allotted, and the balance in transfers, tenders at 1s. 4 1-32d. and 1s. 4 1-16d., respectively, receiving about 40 per cent.

BANK OF ENGLAND.

AN ACCOUNT pursuant to the Act 7 and 8 Vict., cap. 32, for the Week ending on Wednesday, September 9, 1903.

Stock Market Notes and Comments.

Nothing is more dreary than the spectacle of markets dominated by monetary and political apprehension, and this has been the condition of every department of the House during the week. Last Thursday's bombshell from the Bank hit the speculator between wind and water, and he has shelled out stock ever since. Of course Consols broke a new thirty years' record: we are used to that as part of the weekly programme in these "spacious days of Arthur and Joseph"; and the weakness of Consols is the key to the whole position. Some say it is "all money"; others, that it is "all politics"; it seems to be really a good deal of both, with the cumulative results of months of idleness, dulness and disappointment thrown in. With Bank rate up, the Bank borrowing, and discount rates rising, Consols had no choice but to fall; equally cogent reasons are the spread of the prairie fire in Eastern Europe, war between Bulgaria and Turkey inevitable, the Sultan's own position more precarious and contemptible, and a daily tale of massacres, burnings and unmentionable horrors that must some day rouse the conscience even of Christian Europe to active measures that may lead anywhere. And with Consols falling steadily, how is any other market to show a firm front? Consider what the fall means, not only to speculators who see ever increasing differences against them, and rising rates for the wherewithal to carry their commitments, but to genuine holders who have invested money in Consols as the finest security that the world could provide. Consider what it means to shareholders in banks, who will have to see reserves and profits drawn in to write down the stock that used to be a reserve in itself when written in at 90 in the balance-sheet. And all who have suffered may remember that this disastrous fall is the direct and inevitable outcome of the South African war. It is the huge addition to our national debt that has made the market so surfeited as to be sensitive to the point of panic; it is the payment of the enpropriated Netherlands Railway bondholders that gave Germany her hold over our gold supply, which she used with such effect as to necessitate the sudden stiffening of the Money Market. Such are the fruits of Imperialism, and it is a pretty picture for the contemplation of a people that once thought itself businesslike and sensible. As for the speculative markets, their positions and prospects appear in most cases to be reasonably sound in themselves; certainly they have very little sail up, and money lenders last "carry over" day often had to deliver stock because they could not get a rate on it. Home Railway securities have fallen to a point

at which they yield a buyer something like a rate on his money; the various boards have most of them shown a certain glimmering appreciation of the fact that their functions are not finely ornamental, and that much may be done to improve and cheapen transport facilities; the Board of Trade returns show a steadily expanding and well distributed prosperity, which must be very annoying to the new economists of the school of Mr. G. S. Street; and if we accept the outlook in the cotton trade, it may be said that everything is in favour of Home Railway Stocks, save the sins of the past, in the shape of extravagant capital expenditure. Nevertheless, down they go, inevitably under the weight of the war created bull account in Consols. As for Americans, they are worked up and down in Wall Street, and he would be a bold man on this side of the water who would venture to write positively about their merits; but it is at least obvious that the market has had a most drastic purge, which leaves it less unhealthy if not yet in a state of ideal sanitation; that Congress is going to do something towards currency legislation; and that the Secretary to the Treasury has forty million dollars in hand, for Panama Canal purposes, which he is said to be going to put in the hands of the banks. On the other hand Wall Street has a plague spot of its own which is just as insistent and pestiferous as our diseased Consol market, namely, the hopelessly inflated "industrials"; Steel stocks have also broken record downwards.

The Foreign market shows an indifference to affairs in the near East which indicates at any rate soundness in the condition of the Paris Bourse; Turks have fluctuated in accordance with the prospects of the Mazbata and the Iradé, totally ignoring the state of things on the Bulgarian frontier; and when the Iradé was actually signed, there was quite a little boom. Great steadiness, too, has been shown by South American Government bonds, especially Argentine issues, and the fine railway traffics certainly give evidence of growing prosperity in this part of the world, if only the politicians will refrain from playing the fool. Argentine Rails, in fact, have been the steadiest market in the "House" this week, except, perhaps, the Grand Trunk department, which also has been assisted by a big traffic return. Altogether the general outlook is by no means discouraging, always barring the dangers which are inseparable from such a serious breach in the power of credit as has been caused by the downfall of Consols. If this corner were turned, we might look forward hopefully; but who can say how long it will take to get round it? The least sign of recovery in the market for first-class stocks would inevitably be the sign for a rush of new issues. Some will have to come anyway. The colony of Victoria has £5,000,000 bonds falling due on January 1, and will have to renew them or raise the money to retire them with; and the price that she will have to pay for doing so is not likely to stiffen the colonial market. Then the Irish landlords are beginning to condescend to sell their land under the Act, so an issue of Irish land stock is one of the pleasures of the near future. And Sir Norman Lockyer wants to spend twenty-four millions on brain power. That would be something like an investment, especially if he sent the present Government to attend lectures on a few elementary but essential matters of behaviour. But we spend so much nowadays on bombast and boobies that we cannot afford brains.

The Week's Stock Markets.

Another week of depression and stagnation, unrelieved by a single bright spot, has been experienced on the Stock Exchange, and without doubt the outlook is very disquieting. The continual loss of gold abroad and the uncertainties surrounding the monetary situation, to say nothing of the ominous appearance of political affairs, are causing many to become really apprehensive regarding the course of events in the coming autumn. All thoughts of the promised boom have been entirely banished for the moment, and most people will consider the Stock Exchange exceedingly fortunate if the next few months are surmounted without bringing about the long threatened collapse. Members had the adjustment of the account to deal with during the week, but despite the advance in bankers charges to 4 per cent., owing to the rise in the Bank rate, contangoes were not appreciably higher than a fortnight ago, and everything went off comfortably enough. The account now current, however, is for the dreaded period of nineteen days, and already it has fully lived up to the evil reputation possessed by its predecessors.

Consols commenced fairly well, but soon began to fall away under the influence of a gradually hardening money market and the terrible news from the Balkans. Each day a substantial fraction was lost and prices again touched the lowest figures reached for more than thirty years. Not many of the present generation, we fancy, who remember the premier security only a few years back at 114, ever thought to see it at 89, but it has got there, and despite a rally at the end due to "bear" closing, the fall is not finished yet. How about the big English banks now, with their important holdings of Consols standing in the books at 90, and in some cases at 95 even? When they were written down to the lower figure it was fondly imagined that every possible contingency had been provided against, but the directors reckoned without their South African war. It is significant that already the Bank of Australasia has written down its reserve fund Consols to 85, and the home institutions had better hurry up and do likewise. Closing figures were 89 5-16 to 89 7-16 for money and 89 7-16 to 89 9-16 for the account. Transvaal scrip fell away rapidly closing at ½ dis., or a loss of ⅜, and even the War Loan, steadiest of stocks, could not resist the depression, and lost ¼, India 3½ per cent. receded 1, and in Home County and Corporation stocks, Liverpool 3 per cent. dropped 1½. Colonial Inscribed stocks showed weakness, and Queensland, Cape, and New Zealand, and British Columbia 3 per cent., Natal, and Victoria 3½ per cent., and New South Wales and Canada 4 per cent. all declined 1.

Apart from a good deal of excitement and some rather wild fluctuations in Turkish issues, the Foreign bond market has supplied little of interest, and dealings continue exceedingly narrow. The progress of the unification scheme is referred to elsewhere, and it need only here be said that Constantinople alternately bought and sold the two lower Turkish groups with considerable vigour, a final outburst of buying on the news that the Imperial Iradé sanctioning the scheme has been actually signed, leaving them 1¾ up for the "C" and 2⅜ higher for the "D" groups. Other Europeans occasionally received a little support from Paris, and Spanish "sealed" left off ¾ better. Hungarian Rentes were also firm, but Portuguese lost an early fractional rise, and with Italians and Greeks were unchanged. In the South American division Argentines and Brazilians hardened a little here and there, but the improvement was not always maintained, and most issues close without movement. Costa Rica "A" bonds declined 1½, but the "B" were ½ higher, and Columbian External put on 1. Far Eastern bonds generally showed weakness towards the end of the week. Contangoes on this market, although a little higher than a fortnight ago, were again easy, rarely if ever rising above 5 per cent. South Americans were "taken in" at 3 to 5 per cent. and sometimes less. Turks were carried over at 3 to 4 per cent., Spanish at 2½ to 3½ per cent., and Italians and Russians at "even" to 2 per cent. Making up prices for European stocks were mostly against the "bulls," Turks being ¾ to

1⅜ down, and Servians 3 lower, while Greeks, Spanish, Portuguese, and Russians all lost fractions. On the other hand, Argentines were substantially higher, thanks to the budget boomlet, the gain reaching as much as 2⅜ in one instance, and Brazilians and Uruguays were also better. Chinese silver loan showed a gain of 2 and most Japanese issues were ¼ to ⅝ up.

Prices sagged in the Home Railway market, partly in sympathy with the depression in Consols, but also due in some cases to the closing of accounts by "stale" bulls, who feared that continuation charges would be stiff. The stocks of the heavy lines suffered most severely during the first few days, and in spite of a little rally later North-Eastern closed with a loss of 1½, North-Western was 1 down and Great Western ½ lower, Midland deferred being unchanged. Great Northern preferred declined 2 and the deferred 1¼, Brighton ordinary and deferred were 2 and 1 down respectively, Great Eastern receded 1, Hull and Barnsley ½, South-Eastern deferred 1. South-Western ordinary advanced 1. Underground issues, with the exception of Central London, which went out ½ higher, were as weak as the rest, City and South London relapsing 1, and Metropolitan ½. Scotch stocks were adversely affected by the Caledonian report issued last Saturday, which indicated that fresh capital would shortly have to be raised, and the ordinary and deferred stocks of that company finished ⅜ and 1 lower. The North British dividend at the rate of 1¾ per cent. per annum on the ordinary stock, with £6,000 carried forward, compared with 1¼ per cent. and a balance of £10,000 a year ago, was about what the market looked for, but the announcement had only a very temporary effect on quotations, and at the end the preferred showed no change, while the deferred was ¼ higher. Carrying over rates were in no case high at from 5 to 7 per cent. as a general rule, and from 7 to 8 on such things as Brighton deferred and Chatham ordinary, when it is remembered that money was dearer outside, and that the charges cover a nineteen day account. Making up prices were mostly in favour of the "bears," and in many cases show large changes. North-Western suffered most with a decline on the fortnight of 5½, but Great Western was 3½ down, South-Eastern declined 3, Caledonian ordinary 3 and the deferred 2½, and Brighton ordinary, South-Western ordinary and deferred 2, and Midland deferred 1¾, while falls of 1 were fairly numerous. Against these the only improvements were 1 in Caledonian preferred, ½ in Midland preferred, Taff Vale and Central London ordinary, and ¼ in Metropolitan.

With Wall Street closed on Saturday and Monday last for Labour Day celebrations, the Yankee market can hardly be said to have existed during the first part of the week so far as business was concerned. The return of the New York Associated Banks was unsatisfactory with decreases in every item except the one of loans, where a reduction was most important, but because New York closed with a firm appearance on the eve of its holiday, professionals declared that this had been fully discounted, and proceeded to mark prices up all round. Further advances were recorded in the hope that Wall Street would resume operations in the same cheerful spirit, and some substantial improvements were recorded. These expectations of support, however, were doomed to disappointment. Uncertainty regarding the weather in the cotton belt, rumours of financial troubles amongst the supporters of the Brown corner, and fears lest the extensive commitments of the Rock Island group should end in disaster, all combined to render the New York market uneasy and disinclined to buy with any freedom, and quotations slipped back almost as rapidly as they had risen. The monetary outlook both here and in America also had a depressing effect, although the signs of hardening credit rates on the other side of the Atlantic were to some extent ignored in the belief that the Treasury would be able to avert any real stringency when the outflow of currency begins in connection with the movement of the crops. Quotations since Tuesday have moved downwards persistently until at the close many of them are fractionally below those of a week ago. Atchison ordinary offered most resistance to the decline, and although they are said to have been heavily oversold in the belief that the recent purchasers are none too strong financially, they finish with a gain of 2. Movements in other shares were more irregular and less important, the changes being mostly fractional in either direction. Movements on the fortnight were nearly all favourable, and in one or two instances showed substantial improvements. Atchison ordinary, for instance, were 5¼ higher, Milwaukee and

Louisville 2 up, and New York Central 1½ better. The account open is still very small, and contangoes were again light at 3½ to 4½ per cent.

Grand Trunk stocks were given a rest by the speculative element this week, and the movements from day to day were consequently infinitesimal. A little fillip was given to prices on Thursday by the publication of an increase in the weekly traffic of over £28,000 against an estimate of about £18,000 only, but the general air of gloom which hangs over all markets told against any real improvement being made, and after a slight spurt the market settled down again, with the result that movements on the week consisted of trifling fractions. The ordinary stock managed to

close with a gain of ⅛, but the guaranteed and the third preference showed no change. On the fortnight, however, the ordinary recorded an improvement of 1¼, the first preference rose 1, the second preference 2½, and the thirds 2¼. Carrying over rates on the principal counters ranged from 5½ to 6 per cent., and in the other stocks were practically nominal at 1¼ to 1½ per cent. Canadian Pacific shares dropped ½ on the week, but were unaltered for the fortnight.

Very little went on in the Foreign Railway market, but prices are wonderfully well maintained, considering the depression in other sections, and leading stocks, when they moved at all, went upward. Rosario ordinary stock continues the chief speculative favourite in the Argentine group, and it closed ½ better, while the deferred rose 1, and Argentine Great Western, and Buenos Ayres Great Southern stocks were likewise about 1 stronger. Cordoba Central issues were marked up here and there, and Nitrates coming in for modest support rose 1. Mexicans were moderately traded in and left off higher. Money was easy enough at 5 to 6 on leading Argentine things, but the "bull" account in Mexicans seems to have broadened a little consequent on the improvement in silver and the continuation charge was rarely less than 8 per cent.

Nearly all the business in the Miscellaneous markets was of the selling order, and prices moved almost universally downward. James Nelson and Sons shares were pressed for sale and dropped 3-16 to 1⅜, and other Meat shares eased off in sympathy. Aerated Breads declined another point, and Sweatmeat Automatics, after keeping fairly steady, fell away, and are finally ⅛ down. Gas Lights went back 2, but Welsbachs are unaltered, and dealing is unlikely to revive until the new stocks are marketed. Oil shares were dull, Textiles just held their ground, and Iron and Steel descriptions had an improving tendency. General Hydraulic Power stock was heavy and relapsed 3. Breweries were somewhat irregular, and it may be noted that dealings have ceased in Allsopp preferred and deferred stocks. The new consolidated security is quoted about 57-9. Waterworks stocks fell substantially in a few instances, Docks continue dull, and Shipping issues were as before. The carry over on Wednesday was easily arranged with rates much as before.

The gale interrupted communications with the country and tended to still further restrict business, which was already meagre enough as members were occupied with pay day arrangements, but markets, nevertheless, after opening dull, soon assumed a cheerful aspect, and all went on merrily. Consols jumped ¼ and Home Railway stocks naturally followed this lead, with the result that substantial advances were recorded in several issues. Kaffirs, too, expanded a little in the brighter atmosphere, although gains at the close were not very important. In the Foreign market business was hampered by the absence of telegraph and telephone facilities with Paris, but Turks again improved on the signing of the Iradé authorising the unification of the debt, and further support from Constantinople. The Yankee market was likewise troubled by the irregular manner in which cables were received, and only a small proportion of the moderate improvements recorded were retained to the end.

A Gale in the City.

The first thing to strike an impartial observer of that exhibition of unrestrained passion which will pass into mining history as the meeting of the Associated Northern Blocks, was that it was purely and solely a faction fight. Before many minutes had passed it was evident that the supporters of Mr. Doolette and his co-directors had packed themselves on one side of the press table, and that Mr. Landau's supporters had taken up their station on the other side. For three and a-half hours it was a strenuous contest of lung power, and the lung power of Mr. Doolette's supporters prevailed. Reason and commonsense were ignored; the efforts of the contestants were directed, not to a calm, logical, judicial weighing of evidence, but to a literal shouting down of opponents. Only one or two were allowed to speak for a few moments without being hounded by cries and cat-calls, derisive laughter and conduct more befitting unruly children than those presumed to be men of the world, with really serious affairs to tackle. From one point of view the exhibition was comical in the extreme, richer in genuine humour than any comedy conceived by living comedian; from another view it was painful and depressing.

It was to be presumed shareholders were eager to know what sins Mr. Landau had committed to merit summary dismissal from his official position. The meeting was held ostensibly for those charges to be categorically formulated, and for Mr. Landau to defend himself in person. It is plain now that the hundreds who turned up were predetermined on a certain line of action, that they did not assemble as impartial, just judges, but merely as units composing two sections, each resolute to fight the other without surrender, come of it what might. What were the charges made against the late chairman? "He used bad language to us, gentlemen," said Mr. Doolette, not exactly in a pathetic, unctuous tone, but with a vigorous, expressive gesture of indignation. "Yes, he did, gentlemen, language rarely heard in the business parts of this city. Indeed, he has even told us to go to a place associated with a degree of warmth of more than tropical intensity. How could we stand it, gentlemen? We couldn't. But, thank goodness, the articles of association enabled us to checkmate him. It has been apparent that Mr. Landau has largely operated in the shares of your company; he has said himself in the press he acts solely for himself and his friends; he has opposed us time and again when we have wanted a certain plant erected at the mine; we wanted the mine examined by another engineer, but he said he would not allow strangers to have anything to do with his company; Mr. Landau may have a genius for finance and market engineering, but he is a mere tyro in conducting the affairs of a mining company; it has become impossible to work with him; he and his friends have sold largely; I daresay many of you have come under his hypnotism; rumour after rumour have been spread about the mine; but your directors could get no information about the true state of things; they have every reason to believe that correspondence was passing between Mr. Landau and the mine manager; when the shares fell it was openly stated in the press that a member of the board was in the secret, and that was presumably your chairman; the press clamoured for information; we were powerless to supply it; the man in the street said the rich ore was exhausted, and that the chairman knew it; gentlemen, we were not in the chairman's confidence; when Mr. Roberts was appointed it was openly stated his report would be damaging, and it was common report that Mr. Landau knew all about it; it was openly reported that he knew the contents of Professor Liveing's report, a report the directors should have had, and which should have been sent to you; Mr. Landau told Mr. Griffiths he had received a private communication from the professor; in a word, Mr. Landau has gone beyond his authority in circumventing the board's decisions, and we decided we could stand it no longer; for our own peace of mind we would have preferred to resign, but we felt it our duty to you not to leave him in sole control."

Though not the actual words, the above is the gist and substance of the indictment against Mr. Landau. It will be seen most of the charges are vague and paltry, are not specific, that their basis is mere hearsay and rumour. Mr. Doolette, whilst admitting Mr. Landau possesses financial genius, seems to think this no qualification, as though finance forms no phase of company administration. Mr. Landau, of course, denied that he used bad language, and poured ridicule on the confession that the directors were mere babies in his hands; he has never in his life sold a "bear" of a mining share, much less a Northern Block share; he offered £10,000 to any person who would prove it; he had never made use of any private information, etc. The head and front of his offence, he declared, was his opposition to the directors taking their commission on profits before letting the shareholders know what was provided by the articles of association, and mentioning the fact at a shareholders' meeting; he refused to take the cheques drawn for himself before informing the shareholders of the fact, and that was the principal bone of

contention, the cheque was an eye-sore. There was never a board meeting held at which the directors did not congratulate him on his able management of the company's affairs; and then in a tragic, Adelphian manner he offered to refund any profits he had made on share selling if the members of the board would refund theirs. Of course, his supporters applauded hysterically.

Such was the childish exhibition; a personal, contemptible squabble. Resolutions were put for the appointment of a committee of investigation and for the election of new directors, and passed by small majorities. On each Mr. Landau promptly demanded a poll, which the chairman fixed to be taken six weeks hence. That, he said, is to enable the Australian and disfranchised shareholders to vote. So the quarrel is to hang on for six weeks. If the resolutions are carried, a committee of investigation will be appointed, and the whole thing will last for weeks, if not months, longer. In the meantime, the unfortunate shareholders and the press are likely to be flooded with more literature. It will, however, give shareholders time to reflect, and they would be wise, we think, to clear out the whole board—including, of course, Mr. Landau—and elect new directors. That would be the surest way of ending the unseemly snarling from which no one can benefit. It's a case of hard swearing on both sides, and is apparently six of one and half-a-dozen of the other.

In the fray most important matters were either designedly overlooked or unwittingly forgotten. The present manager in his last report—which we have already noted in our mining columns—stated in clear, simple, comprehensible language that the rich ore had been extracted; in a word, that the eyes of the mine had been picked out. Who picked them out? And under whose orders were they picked out? These are definite, grave charges against the company's management. Who are the culprits? This question was asked weeks ago; it is still unanswered.

MINING NOTES AND NEWS.

Another dreary account came to a close this week, and weary, impecunious punters are hoping that it has brought them a fortnight nearer to the money-making time when the Chinaman is to work on the Rand, and fill the pockets of the millionaires and gamblers at the expense of tax-laden Britishers and the lives of yellow barbarians. This vista of fortune-making, which will save magnates from the workhouse and push others into it, is a glorious one, quite befitting the high state of enlightenment and civilisation to which humanity has ascended, or descended, according to the point of view from which individuals regard evolution. Kaffir prices may be going down now, but there will come a time when means can be taken to send them up, advances in the bank rate, and dear credit, notwithstanding. If only we can last it through, though! There's the rub. Pockets are getting emptier with the dribbling out of fat differences each fortnight, and there is no foreseeing how long that dribble will continue. O that the Labour Commission will hurry up with its report! It is coming, friends. Bear the delay as heroically as you can, even though it may mean existing on bread and dripping meanwhile. You will have your Chinese, without a doubt, but it does not follow, logically, you will have your boom as well. For our taxes will not be lightened, nor shall we see Governmental thrift practised, so we shall not have much to gamble with, no matter what may be our inclinations.

Tuesday was contango day in the mining market, the account arranged being again of small dimensions. In one or two cases rates were higher on Kaffirs than at the mid-August settlement, especially on such things as Consolidated Gold Fields, South African Gold Trusts, Rand Mines, East Rands, Randfonteins, and Modderfonteins, on which the charges ranged from 4½ to 5½ per cent., or about ½ per cent. higher than a fortnight ago. A similar rate was exacted on Simmer and Jack Proprietary, which was exceptional. The general figure was, as usual, 6 to 7 per cent., De Beers and Jagersfontein being carried over at 3 to 4 per cent., whilst the Chartered rate, after opening at 1½d. to 2d. per share, dropped to ½d. to 1½d. The general charge on Rhodesian shares was the usual 6 to 8 per cent., and that on West Africans was 7 to 9 per cent. Rates were more irregular in the Westralian section; Great Fingalls were at first continued at 5 to 7 per cent., easing off later to 3 to 5 per cent.; Great Boulder Perseverance and Smeltings both opened at 6 to 8 per cent., but later were done at only 2 to 4 per cent. on the former, and 4 to 6 per cent. on the latter. On Lake Views, Golden Horseshoe, and Ivanhoes the rate was 5 to 7 per cent., and on others 6 to 8 per cent., the latter being also the general charge on miscellaneous assortments.

The South African making-up list revealed a few gains, such as 1⅛ in De Beers deferred, ⅜ in the preferred, ¾ in Crown Reefs, ⅛ in Tanganyika, ⅜ in Copper Trust, 5-16 in Zambesia Exploring, ¼ in Durban Roodepoorts, and 3-16 in New Comet. The principal losses were ⅛ in South African Gold Mines, ⅜ in French Rhodesia, ¼ in Golden Valley, and New Heriots, and 3-16 in Consolidated Gold Fields. West Australians made up better than for some time past, Great Fingalls advancing ¾, Golden Horseshoes 9-16, and Oroya-Brownhills 3-16. On the other hand Lake Views fell 5-16. Amongst Jungle things Wassaus lost 13-16, and Amalgamated 5-16, whilst in the miscellaneous list there were relapses of ¾ in Etruscans, ⅜ in Nimrod, ¼ in Nubia Props, and ⅜ in Rio Tintos.

Kaffirs have again been depressed all the week, prices tending all round to a lower level, and there is no joy to be felt in dwelling upon it. The market is awaiting the report of the Labour Commission, and no one feels encouraged to do anything until suspense is ended one way or the other. New Heriots have been conspicuously weak on the publication of the directors' circular, with which we deal in a separate note.

On Thursday was published the Rand output for August, amounting to 265,269 oz. for the Rand itself, and 9,349 oz. from the outside districts, a total of 271,918 oz., or over 20,000 oz. in excess of the July output. This was valued at £1,155,039, compared with £1,068,917, an advance of £86,122. At the same time the labour figures for the month were published, showing a net gain of 1,566. The production figures were regarded by the market as satisfactory, and an attempt was made forthwith to hoist prices, in spite of fears of a further rise in the Bank rate. The effect, however, met with no success, and prices at the close of the day showed another all-round decline.

A letter has been published in Johannesburg, written by Lord Milner, previous to his departure, in which he says his policy is to dispense with Asiatic labour if the mines can, but to introduce it if they must, and then only under a law which will provide for the return of the labourers at the expiry of the period for which they are engaged. But what if those labourers die? O, then it will be cheaper to bury them, without parson, than to ship them over the ocean. "They come for labour," says his lordship, "and can remain for nothing else." The majority will leave their carcases behind for irreverent burial.

Meetings of miners held at the French Rand Deep and Windsor Gold Mine, also a public meeting held at Florida, passed resolutions in favour of the introduction of Chinese under certain restrictions.

News is also to hand that a diamond has actually been found on the Premier mine. How did it get there? Here is a problem for idle minds to solve in these dull times. The *Financial Times* has announced this momentous fact in bold capitals, the news being cabled by its Johannesburg correspondent.

The Westralian section has been the most cheerful department of the mining market, but this is not saying much, for the public are still out of it. However, efforts have been made to hoist prices a little here and there, and with a fairish measure of success. Lake Views were at one time raided on rumours that the mine is becoming exhausted, but recovered on the publication of the half-monthly mine report, which belied the stories.

Jungle shares and miscellaneous lots have all been heavy, with losses predominating. The present account is one of nineteen days, of unhappy association.

Native Labour on the Rand.—Speaking at the banquet of the Transvaal Miners' Association, on August 15 last, at Johannesburg, Mr. Horace Weldon, the Government Mining Engineer, gave some important statistics with regard to the number of natives employed before the war, and at the present moment. Reliable figures have not hitherto been published, but these figures, though still approximate, come nearer probably to the exact number than any yet given to the world. We reproduce the figures as a record:—"Coloured persons on the Witwatersrand gold mines in July, 1899: 107,482 boys employed by 105 gold mining companies on the Witwatersrand; 2,167 boys employed by four gold mining companies at Heidelberg; 345 boys employed by four miscellaneous concerns; making a total of 109,994 boys in the employ of 109 gold mining companies and four miscellaneous concerns. Of these, according to the Government registers, 91,139 boys were at work on the 105 gold mining companies on the Witwatersrand; 1,714 boys were at work on the four gold mining companies at Heidelberg; 345 boys were at work on the four miscellaneous concerns; making a total of 93,198 boys at work on the 109 gold mines and four miscellaneous concerns during the month of July, 1898. These figures, which may be taken as the most accurate at present available, indicate that there were 16,796 boys, or 15.27 per cent., idle, sick, incapacitated through drink, or non-efficient for some other reason. Comparing these figures with the returns for June, 1903, and compiled on the same basis, we find that:—60,172 boys were employed by 113 gold mining companies on the Witwatersrand; 1,600 boys were employed by eight gold mining companies at Heidelberg; 387 boys were employed by seven miscellaneous concerns; making a total of 62,159 boys in the employ of 121 gold mining companies and seven miscellaneous concerns. Of these there were at work on the last full working day of the month (June of this year):—53,558 boys on the 113 gold mining companies on the Witwatersrand; 1,562 boys on the eight gold mining companies at Heidelberg; 382 boys on the seven miscellaneous concerns. This makes a total of 55,742 boys at work on the 121 gold mining companies, and seven miscellaneous mines during the month of June. There were thus 6,417, or 10 per cent., of the natives within the district referred to non-efficient through sickness or other causes." The above figures supplement those we published in our issue of August 22.

New Heriot Gold Mining Company.—Shareholders in this Rand mining company have for some time past been alarmed at the poor results shown month by month and the steady drop in the price of the shares. It is probable many have written to the directors asking for explanations, for this week a lengthy explanatory circular has been issued, which the directors call an interim

report. The company's troubles are attributed mainly to the scarcity of native labour, but the mine itself is not what it ought to be, and of this shareholders should take due note, and act accordingly. After dealing with the labour difficulty the circular says:—"The value of the ore now being mined is considerably below that mined before the war. Ore previously sent to the mill averaged 13 dwts., whilst the ore now being produced averages about 9 dwts. per ton. In dealing with this point the consulting engineer says:—"It has been abundantly evident that the changed condition of the deposit, viz., its being split up, instead of being compact, has altered all the conditions under which the high rate of profits have been earned, and since restarting work the difficulty of maintaining the past record of profits, which was beginning to be felt before the war, has been increased by attempting to run the full complement of stamps with about one-third of the underground native employees formerly available. The excessive introduction of air-drils has doubled the quantity of 'fines,' which never reach the sorting station, has increased the cost of getting the ore, and in every way decreased the grade of the ore going to the mill. This falling off in the ore grade has, in the opinion of the board, necessitated the immediate development of the western portion of the property upon which the company have a very large area of totally unexploited ground, and it is hoped that the reef on this section will prove equal to that on the eastern section of the mine exploited before the war; in fact, the manager has already reported a slight improvement in the reef on present workings, on the western section of the mine, and he hopes this improvement will be maintained. It has been felt for some time that we do not possess sufficient points of attack on the large western section. The necessity of having another shaft from the surface has been made more apparent during the last few months. The manager presented a scheme for putting down a new incline shaft on the western boundary, but, as there were financial difficulties in the way of the larger scheme, an expedient has been decided on which will meet the manager's requirements in the meantime. A subsidiary incline shaft will be started at the 8th level, at which depth a double-tracked drive will be used in connection with a mechanical haulage to the main incline shaft, in which a large storage bin will be constructed at that level. As the main shaft lacks 200 ft. of reaching the 8th level, and the bottom is 1,500 ft. off the section line of the proposed subsidiary incline shaft, it will possibly take two years before connection can be made. The work will be pushed on with the best speed possible, drives being laid off wherever convenient, and the present development faces also pushed. This will open up the mine at a greater number of points, and, as the work will mostly yield ore, a lot of useful knowledge will be required, especially as to the value of the property in the western section. The prosecution of this work is not intended to be in substitution for the plan of the proposed new shaft, that matter will come forward again at a more opportune time. For financial reasons the matter of increasing the stamping power has not been dealt with, but it is thought advisable that some increase should be made. The most favoured view is to provide an extra 30 stamps to bring the milling capacity up to 100 stamps." It is apparent, therefore, that shareholders will have to face an early increase of capital. The earliness will, of course, depend upon developments in the market. No fresh shares are likely to be issued whilst things are dull, for it might end in a fiasco. They must be issued, too, at as high a premium as possible, and that can be done only at a time of activity. Meanwhile the company must borrow. In the last balance-sheet there was a loan of £15,000, with other current liabilities totalling £13,845, against £19,000 in cash. How far will this go towards sinking shafts and increasing the battery? Dividend prospects, for a considerable time to come, look gloomy.

New Modderfontein Gold Mining Company.—This is a great Rand gold mining company, with a huge capital and a huge property, but it has not yet returned anything to shareholders in the shape of a dividend. The capital now stands at £1,200,000, in 300,000 shares of £4 each, and of these 290,000 have been issued. The company was engaged on development work during the twelve months to the end of May last, the date to which the report and accounts issued this week have been brought, and is waiting for labour to enable it to commence crushing. General expenditure for the year amounted to £35,318, of which £2,373 represents the balance on account of expenditure incurred during the war. Against this the company received £9,847 from claim licenses, interest, rents, freight rebate, and a small sum realised by gold recovered on the plates. On capital account £64,304 was spent, principally for machinery, shaft sinking, and mine development. The company is in a strong financial position, due solely to a fresh issue of capital in March, 1902. At that date 40,000 shares were issued at a premium of £6, so the company was able to put no less than £240,000 in its coffers from premiums alone. In the previous balance-sheet there was also a premium account of £215,772, so the aggregate is now £455,772. Liabilities are low at £6,766, and the company can exhibit as much as £145,473 in solid cash, so it is quite wealthy. The ore developed at the close of the financial year totalled 383,479 tons, the average milling value of which is put at 12,068 dwts., and the manager estimates that a general average of recovery of 35s. per ton may be expected. Much of the work, the directors explain, was done by white unskilled labour, "which added very materially to the cost, and the labourers in the majority of cases proved unsatisfactory." We offer our condolences. The manager states that the development is sufficiently advanced to keep the existing 60 stamps running as well as a further 60 stamps as soon as they can be erected. To pay a ten per cent. dividend on the market value of the shares will require £292,500, which it is impossible for the company's milling capacity to earn. If it can return five per cent. it will be an astonishing achievement. But labour must be got first.

TRADE AND PRODUCE.

Wheat.—Unfortunately the hot weather has not lasted, and now all hope of a fair harvest is practically given up. Here and there farmers managed to garner their crops during the temporary heat, but the majority were only in the midst of harvesting when the storms commenced again, doing greater damage than ever. A little new English wheat is now on the market, and, all things considered, is better than was expected, but it is not yet in sufficient quantities to influence prices. Scarcity keeps them up, and also during the latter part of the week good American cables, but trade is very quiet. Farmers deliveries for last week were 9,267 qrs., averaging 30s. 3d. per qr., against 11,639 qrs., averaging 29s. 9d. in the same week last year, and Dornbusch estimates the quantity of wheat and flour on passage at 1,890,000 qrs., against 1,960,000 last week. American markets were closed last Saturday and Monday, and since opening have been very quiet also. Prices were firm at the commencement, but tended downwards owing to the large crop movement and expectations of a bearish government report. Bradstreet places the quantities in sight east of the Rockies at 22,824,000 bushels, agaist 21,558,000 last week, and 33,579,000 bushels a year ago.

Wool.—Generally speaking the woollen trade is recovering very little, the process is slow, and complaints on the dullness from some parts still strong. The bad season has left such large stocks in the manufacturers' hands that they are unable to operate on the winter account. Even the bigger markets are quiet, the London sales next week checking speculation in colonial wools, as consumers wait for developments. Home grown wools are slowly hardening as to rates and increasing in favour, in spite of their high prices, and the strong demand for these keep their special markets in a cheerful state. Yarn exports are small, as merchants cannot place their orders without paying rates fully proportionate to the high prices of raw material, and in piece goods there is no change.

Linen.—A very fair average business is passing, and, as no abnormal activity was expected in the early autumn trade, the feeling of satisfaction is pretty general. The tone of the yarn market is specially good, prices are hardening, and spinners more inclined to pay them, reports of the flax crops not promising any cheaper rates. Line yarns are the principal lead, and low wefts of 38 in. are again sought after. Manufacturers reports give good accounts of the volume of business put through lately, brown and white drills, hand loom linens, dress linens, and even unions, demand a good deal of attention. The export trade is gradually expanding into autumn activity. The United States is slow in waking up, but reports from over there show that importers are giving way to the high prices demanded, and a good number of orders are being given at full rates.

Cotton.—The New York collapse last week caused a sharp fall here in American and Egyptian futures, and markets continue weak, but the "bulls" look for a substantial rise again after so sharp a fall, and already signs of a more steady market prevail. Nor, Sir Jacob Behrens and Sons remind us, must the difficulty of harvesting a large crop so late in the year be overlooked. The later the season the more likelihood of frosts and bad weather. Yarns are quiet, as spinners have had to contend with a seemingly easier market, when in reality they have to pay the old rates, and as a reduction is looked for shortly, they only buy for present necessities. Bombay and Madras have bought more freely lately, the latter at special rates for late delivery, and China has also purchased heavily, but there is no improvement in the Continental demand. Cloth rates were interfered with by the fall in cotton, many offers having been withdrawn, and others repeated at less money, but on the other hand manufacturers are not disposed to entertain any concessions, and maintain their prices. Bombay and China have here also been doing a little more in this line than lately, but the smaller markets still stand aloof.

The American markets were closed last Saturday and Monday, and owing to the damage done to the cables on Thursday night, news of the markets there this week is very meagre. A good deal of selling took place on Tuesday and Wednesday, and prices except for one break advanced. Reports on the crops are very conflicting, bulls and bears each putting forward statements calculated to suit their own ends.

Spot quotations at Liverpool on Friday displayed a tendency to harden, 6.3d. being asked for American middling, and 8⅛d. for Egyptian fair. Futures were quiet, but steady, September being quoted at 5.96d., September-October at 5.67d., and October-November at 5.37d., later positions ranging from 5.28d. November-December to 5.23d. for April-May.

Coal.—Trade showns no signs of real improvement, and seems rather more depressed than otherwise. The Lancashire districts still suffer from the state of cotton industries, and further north the depression in iron and steel trades is not likely to have an enlivening effect on coal. At present exports of steam coals continue good, as foreign countries want to lay in their winter stocks, but here again the stormy weather of late has interfered with shipments. Home coals are beginning to move off more freely, but it is too early yet for any briskness to be shown in them.

Copper.—Very little interest has been taken in copper this week. The markets have been flat and business small. On Monday the opening tone was dull, and prices eased off at first about 5s., but hardened a little towards the end of the day. On Wednesday they fell 7s. 6d. on the day, on Thursday remained steady at the same price, and yesterday closed quiet at £57 17s. 6d. cash and £57 7s. 6d. three months. Atlantic shipments for the week were only 1,545 tons.

Tin.—Business has been very restricted all the week, with a depressed tone in the market caused by continued weakness in America, and poor advices from the East. On Monday prices dropped 40s., but have recovered a little since, the end of the

South Wales strike having had a steadying effect. At the close on Friday the tone was quiet, £122 15s. being asked for cash and £121 15s. for three months.

Iron and Steel.—Business on the Glasgow market was very dull this week, and the few dealings in warrants that took place went through at much the same prices as those quoted last week. For Scotch hematite pigs, however, there was a steady demand, merchants asking 60s. 6d. per ton delivered in trucks at the steel works. In the manufactured iron trade no change of any importance has taken place, and though many of the works are fairly busy, the future is anything but promising. Steel makers, even those engaged in turning out structural work, for which there is a fair demand, are anxiously watching the unsatisfactory condition of the shipbuilding and engineering branches, the depressed conditions of which is beginning to affect the other departments. In the north of England there is no sign of any improvement in business, and in nearly every branch of the iron and steel industries the prospects for the autumn are decidedly gloomy. Instead of the foreign demand increasing as it usually does about this time of the year, it seems to have fallen off, and prices are weaker. Makers of hematite pig are having an unhappy time of it, and, like those on the West Coast, have had to reduce their production, not by blowing out furnaces, but by setting them to make Cleveland, though even the demand for this is far from brisk. Every department of the manufactured iron and steel trades is depressed, and what is worse, there seems no hope of a change for some time to come. Over at Barrow the hematite market is weaker, and prices have been put down to 57s. 3d. net for mixed Bessemer numbers f.o.b., at West Coast ports. In the steel trade only the makers of heavy rails are busy, and their orders are more for forward than immediate delivery. As for shipbuilders, whether on the Clyde, the Tyne, the Wear, or at Barrow, their difficulty is to find orders, for once these were found they could have the satisfaction of drawing up a tender even though they did not get the contract.

Tea.—The Russian retaliation against the Sugar Convention has come, in the shape of an increased import duty of about 1d. per lb. on Indian and Ceylon teas, which will give a preference of 1 1-16d. per lb. to China and Java over British grown product. Indian auctions this week were not so active, but demand continues good, for most of the 39,600 packages offered sold well at an average of 7.89d. per package, against 7.58d. a year ago. The finest invoices of Assam and Darjeeling realised full prices, but a falling off in quality is beginning to show itself in these teas. Ceylon auctions showed a still further slight improvement in quality, and competition, therefore, was good, the price for the 29,000 packages offered averaging 7.31d., against 6.46d. in 1902. Offerings of China and Java teas were small, 3,700 packages of the former, including 1,700 greens, and only 1,650 of the latter. The expansion of the exports of Java teas during the past three years has, however, but steady if small, increasing from 16,731,000 in 1900-1, to 17,370,000 in 1901-2, and 19,520,000 in 1902-3.

Sugar.—With the trade demand still slow, the quiet tone prevailing on the market last week continued through this, and refiners started by reducing their prices from 1⅛d. to 3d. per cwt. Sellers on the whole were indifferent, partly because producers offered so little and partly because the cold and wet weather in France and Belgium brought more buyers in on Thursday at prices slightly over last week's. During August our imports have been very large, viz., 225,000 tons, compared with 150,000 tons a year ago. Much of the increase came from Russia, Argentina, and Mexico, and will not recur until we have a new Convention or leave the present one. But with the abnormal imports from these countries, the January-August total is now nearly up to last year, which leads Mr. Czarnikow to think that some invisible stores must be filling up again. Only the Austrian figures for August are to hand, and these show heavy exports, counterbalanced by small consumption. The same thing has possibly taken place in Germany, but France has sent but little sugar here, and probably holds about one-third of the European stocks. Beet was quieter at first, but went up with the change in the weather on the Continent, Mr. Czarnikow giving the following movements for the week:—September 8s. 4¾d. to 8s. 4¼d., to 8s. 5d., October-December from 8s. 11d. to 8s. 10½d. to 8s. 11½d., and January-March from 9s. 0½d. to 9s. to 9s. 1¼d. In cane transactions were limited to the various parcels of refining grades, which arrived at the out ports, the price of which remained unchanged. The American market keeps firm, at 3⅞ cents, though refiners, notwithstanding the satisfactory meltings, have operated but sparingly. During the week the landings at the three ports were 25,000 tons, against 42,000 tons melted, bringing stocks down to 221,000 tons, and if this rate of reduction continues purchases will soon have to be resumed.

Freights.—Last week's improvement in the outward market was well maintained during this, and higher rates were got in several quarters. But there is still room for considerable improvement, especially to the Mediterranean ports, the slight advance made in this direction being but little better than sending ships out in ballast. With the approach of October, and the consequent increase in insurance premiums, shippers to the Baltic are anxious to get their goods through before the end of the month. This anxiety has lifted rates a little, and placed them on the basis of 3s. 10½d. to 4s. Tyne-Cronstadt. Bay and Mediterranean freights keep steady at 4s. 6d. Cardiff-Lisbon, 6s. 1½d. Barcelona, 5s. Genoa and Port Said, and 5s. 6d. Constantinople, but for the Western Islands there is little enquiry, and quotations are unchanged. Charters for South American ports are scarce, and business is limited, the rates offered being too low to have much attraction for owners. To the East the few orders available should command better rates than 9s. Cardiff-Aden, 10s. Colombo, and 13s. Cape Town, and it is possible the coming week may see some improvement on these quotations. In the homeward market the outlook is more cheerful, yet owners have still a lot of leeway to make up before they can recover the heavy losses they must have sustained this year. Both the Baltic and White Sea ports show an improvement, rates being increased nearly 2s. per standard, but Bilbao and the neighbouring ports continue inactive, rates remaining at the low level of 4s. Bilbao-Cardiff. Shippers of esparto have some difficulty in getting prompt vessels, for which they are offering 17s. 6d. Oran to Thames or Forth, the best quotation for later loading being 2s. 6d. below this. Business generally at the Mediterranean ports is dull, and rates show little tendency to improve. In the Black Sea there has been a general advance in quotations in spite of the Danube and Sulina being the only ports where there is any activity, and even this is confined to prompt vessels. The unprecedented scarcity of September tonnage has caused a sharp rise in freights from the States for this position, and some very high prices have been paid for special business. As there is also only a limited number of vessels available for loading, it is more than probable considerable activity will soon develop in this market. South America, particularly the Plate, is firmer, and the demand for September and October is better, at 17s. 6d. San Lorenzo, United Kingdom, or Continent, but in the East business is restricted, although rates continue steady.

Company Reports and Balance Sheets

*** *The Editor will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Caledonian Railway.

During the half-year ended July 31 this company's gross railway revenue was £2,039,763, an increase of £38,801, compared with the same period of last year. Working expenses were £4,447 up at £1,130,132, and the ratio of outlay to revenue was 55.41 per cent. against 56.26 per cent. From the canal the income was £670 higher, at £60,507, but expenditure rose £2,647 to £20,787, the proportion in this case being 34.40 per cent., against 30,28 per cent. Most of the improvement in receipts was due to third-class passengers and merchandise, which rose £12,530, and £21,901 respectively, but parcels, horses, etc., also did well with an advance of £6,699, and the only decline of any importance was in live stock, down £3,636. On the expenditure side we get an increased charge of £5,238 for maintenance of way, works, etc., while traffic expenses were up £8,830, carriage and wagon repairs £2,922, and compensation £5,269. On the other hand, locomotive power cost £11,062 less, owing to savings under coal and coke, wages, and materials, and shareholders will be very pleased to note a drop of £3,640 in rates and taxes. After adding special and miscellaneous receipts, the net balance is £992,653, against £960,529, but the balance brought forward was nearly £5,000 smaller, at £12,414, and dividends on shares held were less by £1,498, so that the increase in the disposable balance is reduced to £25,749, at £1,034,739. Debenture interest requires £7,000 more, but considerable savings were effected under temporary loan and general interest, and after again placing £15,000 to bridge renewal reserve there is £673,608 left for preference and ordinary dividends, an advance of £30,149. Many were disappointed because this did not lead to an advance in the ordinary stock dividend, but those who had anticipated a higher distribution must have forgotten the big issue of preference stock made last September, and which in the half year under review required £28,512 for interest. It is necessary, therefore, to restrict the distribution to 3¾ per cent. per annum on the ordinary stock, giving 3 per cent. per annum to the preferred converted ordinary stock, and ¾ per cent. per annum to the deferred converted ordinary stock, carrying forward £20,283, compared with £19,862. Heavy sums continue to be laid out on capital account, the past six months' expenditure being £770,207, but of this £364,910 was on new construction £92,777 on the Grangemouth Harbour Extension, etc., and £21,000 subscriptions to other railways. On lines open for traffic the outlay was £157,892, and on working stock £132,495, but doubtless part of the latter was on account of new lines. In the six months now current it is proposed to spend £689,500, and it is noteworthy that notwithstanding the receipt in October last of £1,860,000 from the preference stock issue, the financial position is not greatly improved. Debit to capital account is actually larger, at £1,552,676, but the temporary loans have been reduced to £518,870. Naturally all the savings in the shape of bank deposits and other funds have been used up, and we note from the report that the directors seek powers for raising still more money. The moment is not propitious for new issues, yet the position is such that the company has no alternative but to obtain funds on the best terms possible. Dividends payable October 1.

Glasgow and South-Western Railway.

Gross receipts for the six months ended July 31, £870,158, increase, £17,885; working expenses, £530,530, increase £16,836; ratio of expenditure to total income, 60.96 per cent., against 60.27 per cent. As with the Caledonian Company, the chief advances in revenue were in third-class passengers, up £12,537, and merchandise, which shows an improvement of £5,856. Parcels, horses, etc., and live stock did slightly better, but minerals fell away over £4,000. All important items of expenditure went up rather substantially, maintenance of way costing an additional

£4,899, and locomotive power £4,261 more. Then carriage and wagon repairs rose £4,075, and smaller increases occurred in traffic expenses, parliamentary charges, and the outlay connected with the steamboats. Including rents, transfer fees, balance brought forward, etc., the total for disposal is just over £1,000 higher at £367,888, but not only did debenture, temporary loan, and general interest all require more, but it was necessary to set aside £11,000 to a contingent fund, in connection with the accident at St. Enoch station. Thus the amount available for dividend is £13,629 down at £233,959, and after meeting preference charges, the dividend on the consolidated stock is reduced ½ to 3¾ per cent. per annum, giving 2½ per cent. per annum to the preferred ordinary and 1¼ against 1¾ per cent. per annum to the deferred ordinary stock, with £5,985 carried forward. Expenditure on capital account was £199,253, of which £99,657 was on new construction, £68,341 on lines open for traffic, and £20,750 on working stock, the division appearing reasonable. For the six months now current the estimated outlay is £219,044, and it is almost needless to say a heavy debit to capital account already exists. Its amount is £658 485, and we note that temporary loans for £226,597 have been raised. Undoubtedly the speed at which railway capital is devoured is becoming a serious matter, and it seems probable that a halt will presently be necessary through sheer inability of the investing classes to find the immense sums of money constantly being sought. Dividends payable September 30.

Canadian Pacific Railway.

The annual report of this great undertaking is just to hand from Montreal, and is as usual a very instructive document. The company's year finishes on June 30, and we find that the gross earnings for the twelve months amounted to $43,957.373, or $6,454,319 more than in 1901-2, but the working expenses advanced $1,703,386 to $28,120,527, so that the ratio of expenditure to revenue again creeps up, being 63.97 per cent., of the total receipts, compared with 62.44 per cent. Passengers gave $11,001,974, freight $28,502,082, mails $657,905, express $909,098, and parlour and sleeping cars $637,642. The balance of the revenue came from telegraph, grain elevators, and miscellaneous sources, including profit on Pacific Steamships, the total being $2,248 672. This is a very unsatisfactory method of setting out these items, and it would be very interesting to know the amount of net revenue earned by the Pacific steamships acquired, as we know at a cost of £1,417,500. What was the actual income of these vessels and the cost of working them? The directors are not imparting information of the slightest use in telling us that the ocean, lake, and river steamers, telegraphs, elevators, rents, etc., gave net earnings of $2,392,795 in the twelve months, or by the announcement that the expenses of lake and river steamers were $470,773. In fact the old policy of carefully hiding essential facts is still persisted in, and raises an uncomfortable suspicion that some branches of the company's business do not bear too close examination. Of the principal items of expenditure, maintenance of way and structures account for $6,723,241, traffic expenses $6 434,322, motive power $8,789,112, maintenance of cars $2,489,976, and general expenses $2,323,315. Passengers carried in the twelve months numbered 5,524,198, or an increase of 727,452, and the quantity of goods which the company handles in order to earn its big revenue is truly remarkable. The traffic in grain alone was nearly 64,000,000 bushels, and then we note 5,110,757 barrels of flour, 2,665,260 tons of manufactured articles, 2,942,736 tons of "other" articles, 1,103 636 head of live stock, 268,401 cords of firewood, and finally no less than 1,190,378,217 feet of lumber. Other statistics might be given did space permit, but the figures mentioned sufficiently indicate the enormous business carried out. To the net revenue of $15,836,846 must be added a further sum of $1,286.812 for interest derived from various sources, making $17,123,658, and the first deduction is fixed charges $7,052,197, leaving $10,071,460. Next $150,000 is applied against cost of steamships, and we do not pretend to understand precisely what this item means. In the condensed balance-sheet ocean, lake, and river steamships are valued at $3,835,199, Pacific Coast steamships at $956,150, and Atlantic steamships at $6,979.783, or $11,771,133 in all, or, say, £2,354,000. Surely, £30,000 or little more than 1¼ per cent. is not the only sum written off these rapidly depreciating properties. But we cannot tell, because everything connected with the company's fleets is wrapped in obscurity. Were a proper statement of income and outgo published, it might afford a little light, but as things are, no man can even guess the true position of affairs. After, however, deducting this tiny allowance, the revenue still available is $9,921,460, from which interim dividends of 2 per cent. on the preference stock and 2½ per cent. on the common stock. have been paid, and as already announced, the final dividends will be 2 per cent. on the preference stock and 3 per cent. on the common stock, making on the latter 5½ per cent. for the year, with a surplus remaining of $3,973 961. It is almost superfluous to say that the company has made itself responsible for many new obligations during the year. First, the directors "deemed it desirable" to acquire the control of the Kingston and Pembroke Railway, which accounted for $818 744, the Canadian Pacific receiving in exchange 22,602 preferred and 35,182 common shares, constituting about 83 per cent. of the entire capital. Then the board "thought it wise" to prevent the possibility of the Calgary and Edmonton Railway passing into unfriendly hands so entered into an agreement to lease the line for a period of 99 years, guaranteeing by way of rental 4 per cent. per annum on the consolidated debenture stock amounting to £1,217,000. All the capital stock was acquired for $600.000, and it now only remains for subservient stockholders to formally sanction the directorial action. Next in order is an agreement with the Lindsay, Bobcaygeon, and Pontypool Railway, followed by an announcement that the guarantee of the Canadian Pacific Company was endorsed on consolidated bonds of the Minneapolis, St. Paul, and Sault Ste. Marie to the amount of $2,454,000, representing the cost of 122 miles of additional railway constructed by that company. To meet the pressing requirements of settlers, the construction of a railway between Regina on the main line and Arcola, the present terminus of the Pipestone branch, a distance of about 113 miles, was authorised, and an arrangement has been made whereby the Manitoba and North Western Railway will be extended an additional distance of 33 miles. Shareholders will be asked to approve the construction of these lines, also to authorise the creation and sale of sufficient 4 per cent. consolidated debenture stock for the purpose, and they will not refuse. But all this business means an ever-expanding capital account. Balance of the preference stock amounting to £273,082 was created and sold during the year, together with £764,350 debenture stock, the proceeds being used to cover the cost of the Pacific Coast steamships, and for the acquisition of the bonds of other companies whose lines constitute a portion of the system, the interest on which had been guaranteed by the company. Of the proceeds of the sale of $19,500,000 ordinary shares, the directors had succeeded in spending $17,228,953, to the end of the fiscal year, to say nothing of incurring further liabilities to the extent of $4,221,865. Since then additional orders have been placed to the amount of $1,351,000, meaning that when the contracts have been filled, the whole of the proceeds of the issue of common shares, as well as $3,000,000 appropriated from surplus earnings, will have been absorbed. So the directors seek authority to expend $5,000,000 during the next year on various classes of equipment in addition to orders already placed, and also $4,500,000 for general purposes. The extra ½ per cent. dividend just declared on the common stock should ensure the granting of the necessary powers without a murmur. Land sales during the year amounted to 2,639,617 acres, for $9,695,673, being an average of $3.67 per acre. The original $25,000,000 of 5 per cent. land grant bonds having been satisfied the mortgage securing them has been cancelled. There remain outstanding $15,000,000 land bonds bearing interest at the rate of 3½ per cent. per annum, guaranteed by the Dominion Government. The proceeds of the sales of lands covered by the mortgage securing these bonds will be deposited with the Dominion Government in accordance with the terms of the statute. $500,000 have been thus deposited during the past year, and the amount due on deferred payments will do much toward liquidating the whole amount in the next few years, when the residue of the lands will be relieved of the mortgage, and the bonds will become a Government obligation. In the meantime the Government pays interest on the deposits at the rate of 3½ per cent. per annum. The agricultural lands now owned by the company amount to 12,081,776 acres, in addition to 3,759,418 acres in British Columbia, and 2,500,000 acres to be received through the Columbia and Western Railway. According to the balance-sheet the surplus revenue is $18,846,175, against which the cash in hand really amounts to $19,145,169, but $6.972,557 has been temporarily advanced for the purchase of the Atlantic steamships pending the issue of securities.

Manchester Liners.

This steamship company did not escape the universal depression which ruled during the past year, and in their report for the twelve months to June 30 the directors tell us that the Canadian and North Atlantic trades in which the larger number of the company's vessels are regularly employed suffered severely from the lowness of freights. Profits naturally fell away, the revenue on steamers' voyages, commission, subsidy, interest, etc., being £34,229, compared with £51,578 in the preceding year, and with £12 received from transfer fees, the total net balance is £34.241. Depreciation allowances on steamers was £21,516, and on office furniture £116, while debenture interest drew away £12,703. These appropriations alone took more than the year's income, and as £858 was written off debenture issue expenses and debenture trustees' and directors' fees required £1,600, there is an adverse balance on the profit and loss account of £2,552. Had depreciation been provided on the usual scale, such deficit would have been larger still, but the directors follow the rather unwise course of restricting the allowance to 4 per cent., instead of 5 per cent. charged in previous years. It is hard to have to say that this was done in order to allow an ordinary share dividend to be paid, but the fact remains that without the reduction, no distribution could have been made notwithstanding that almost the whole of the amount brought into the account is used up, and the equalisation of dividend fund of £10,000 as well. The sum from last account was £21,398, to which is added the mentioned amount of £10,000, making £31,398, from which must first be deducted the debit of £2,552, leaving £28,846. Then a year's preference dividend to December 31, 1902, is provided, ordinary shares receive 2½ per cent., and £464 goes to the debentures reserve fund. Balance still remaining is £4,980, which will just about pay the preference dividend to June 30 last, leaving the company with very few pounds in hand. Two vessels were lost, which were covered by insurance, and the directors saw fit to take advantage of the low prices prevailing for tonnage to contract for five new vessels, one of which was delivered in July. On completion of the other boats the fleet will consist of 14 steamers, aggregating 94,939 tons deadweight capacity, and we hope the directors see a prospect of being able to employ them profitably. Including £85,000 paid on account of new steamers, and after deducting depreciation, the fleet is valued at £601,378, being a considerable drop on the year, owing to the losses sustained. We are glad to see the unusual spectacle, with steamship companies, of a favourable trade account, and as cash comes to £50,102, the position is fairly comfortable. We must not forget though that there is no reserve fund, and debenture issue expenses are still carried as an asset to the extent of £13,733.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1903, and September 5, 1903:—

REVENUE AND OTHER RECEIPTS.

—	Estimate for the year 1903-1904.	Total Receipts into the Exchequer from April 1, 1903, to Sept. 5, 1903.	Total Receipts into the Exchequer from April 1, 1902, to Sept. 6, 1902.

Treasury, September 8, 1903

DIVIDENDS ANNOUNCED.

BREWERIES.

Alton Court.—A dividend of 10 per cent. for the half-year, writing off £800 for depreciation, and carrying forward £806.

Denver United.—A dividend of 16s. per share on the preference shares, being one year's dividend to June 30, 1902.

Springfield.—A final dividend at the rate of 8 per cent. per annum on the ordinary shares for the half-year ended May 31, making 7 per cent. for the year.

BANKS.

Bank of Africa.—A dividend at the rate of 13 per cent. per annum, with £20,000 to reserve, and £3,000 to pension fund, carrying forward about £23,500.

Bank of Australasia.—A dividend of £2 8s. per share, being at the rate of 12 per cent. per annum, placing £30,000 to reserve fund (raising it to £1,100,000) and writing £30,000 off reserve fund Consols (making them £85), leaving £16,353 to be carried forward.

Ulster.—A dividend at the rate of 18 per cent. per annum, and a bonus at the rate of 2 per cent. per annum, for the past half-year.

Yokohama Specie Bank.—A dividend of 12 per cent. per annum for the half-year ended June 30, 150,000 yen being placed to reserve, 200,000 yen reserve for silver business, and 550,000 yen carried forward.

MINES.

Kalgurli Gold.—An interim dividend of 2s. 6d. per share, payable on October 6.

Victoria and Queen Gold.—A dividend, No. 12, of 1s. per share, payable on October 1.

Duke United.—A 14th dividend of 6d. per share, payable on the 30th inst.

MISCELLANEOUS.

British and American Mortgage.—Interim dividend in respect of profits for half-year to June 30 last of 3 per cent. on the ordinary shares.

British Gas Light.—A dividend at the rate of 10 per cent. per annum for the half-year ended June 30.

Charles Bunting.—After transferring £1,500 to reserve, and writing off the contingencies account of £502, dividends and a bonus equal to 12 per cent. for the year are declared on the ordinary shares, leaving £133 to be carried forward.

Dailuaine-Talisker Distilleries.—After placing £1,000 to a contingent reserve fund to meet legal expenses in connection with actions against the company by the riparian proprietors of the River Spey, a dividend of 5s. per share is declared on the preference shares, carrying forward £1,665.

Eastman Kodak of New Jersey.—A dividend of 2½ per cent. (being at the rate of 10 per cent. per annum), on the common stock.

Hitching's.—A dividend on the ordinary shares at the rate of 13 per cent. per annum for the six months ended June 30.

J. and P. Coats.—Quarterly dividends of 1s. per share on the ordinary and 5 per cent. on the ordinary preference shares.

Johannesburg Waterworks Estate and Exploration.—Dividend of 10 per cent.

Jones and Higgins.—An interim dividend for the six months ended August 20 at the usual rate of 7 per cent. per annum.

J. R. Black and Co.—A dividend at the rate of 5s. 3d. per share.

National Explosives.—An interim dividend at the rate of 5 per cent. per annum on the ordinary shares, for the half-year ended June 30.

Ocean Accident and Guarantee.—An interim dividend at the rate of 15 per cent. per annum for the half-year ended June 30.

Tarapaca Waterworks.—An interim dividend of 3½ per cent. on account of the current year.

RAILWAYS.

Copiapo.—The 185th dividend, being for six months ended June 30, of five dollars per share, at 16¾d. exchange, equal to 6s. 11¾d. per share.

Electric Railway and Tramway Carriage Works.—A dividend of 8 per cent. for the year, with £2,000 added to reserve, and £5,427 carried forward.

North British.—The full dividend on the ordinary preference stock and at the rate of 1¾ per cent. per annum on the deferred stock, about £6,000 being carried forward.

TRUSTS.

African City Properties.—An interim dividend on the ordinary shares of 9d. per share, being at the rate of 7½ per cent. per annum, for the six months ended June 30, payable on the 25th inst.

American Investment.—Interim dividends for the half-year ended September 15 at at the rate of 5 per cent. per annum, on both preferred and deferred stock.

Foreign, American, and General Investments.—Interim dividends for the half-year ending September 15 at the rate of 5 per cent. per annum on the preferred stock, and 4 per cent. per annum on the deferred stock, payable on the 30th inst.

YOKOHAMA SPECIE BANK.—Mr. Y. Yamakawa, manager of the Kobe branch, has been elected a director, in place of the late Mr. Y. Nakai.

Messrs. Coates, Son, and Co. announce that they are authorised by the City of Quebec to renew the offer to holders of outstanding debentures of the various issues due between 1905 and 1925, on revised terms of conversion and redemption.

MINING RETURNS.

Angelo.—Tons crushed 8,220; ounces, 2,512; tons treated by cyanide, 7,460; ounces 2,577; total ounces 5,089.

Ashanti Goldfields.—Obuassi Mine—1,920 tons crushed for 4,080 oz.; Development—1,110 tons crushed for 420 oz.

Antenior (Matabele).—Tons crushed, 1,130; 873 oz.; cyanide—tons treated, 736; 130 oz.

Associated Financial Corporation.—Great Northern—Trial crushings 100 tons for 102 oz.

Australasian Gold.—Crushed 222 tons of quartz, 65 oz.

Barrett Gold.—503 oz.

Brilliant Gold.—480 tons of quartz crushed, 285 oz.

Broken Hill Proprietary.—Fine silver, 408,933 oz.; soft lead, 4,576 tons; antimonial lead (estimated), 49 tons.

Burma Ruby.—118,000 loads washed, producing rubies valued at Rs.1,26,000. Royalties Rs.25,000.

British Broken Hill Proprietary.—4,222 tons crude ore produced 814 tons concentrates, containing approximately 464 tons lead and 21,164 oz. silver.

Bonanza.—Crushed 8,300 tons, obtained 3,272 oz.; cyanide and slimes treated, 8,300 tons, yielding 3,068 oz. Total, 6,340 oz.

Cape Copper.—Ookiep, 1,475 tons of 17 per cent., equal to 233 tons fine copper; Nababeep, 3,360 tons of 6 per cent., equal to 187 tons of fine copper.

Chinese Engineering.—Output of coal, 13,500 tons; sales, 18,000 tons; consumption, 1,250 tons.

Cassel Coal.—Output, 12,662 tons.

Clitters United.—Ore stamped and treated, 2,757 tons, valued at £1,794.

Consolidated Gold Fields of New Zealand.—Crushed, 4,790 tons, yielding bullion value £9,187. Golden Fleece—crushed, 1,150 tons, yielding bullion value £2,310. Wealth of Nations—crushed, 1,048 tons, yielding bullion value £2,323.

Craiggiemore Proprietary.—Crushed 1,100 tons, cyanided 640 tons for 494 oz.

Crown Deep.—Tons crushed, 21,939; 4,910 oz.; tons of sands and concentrates treated by cyanide, 15,981; 3,011 oz.; tons of slimes treated, 6,012; 532 oz. Total, 8,453 oz.

Copiapo.—1,000 tons copper ores, averaging 17 per cent.

Crown Reef.—Yield from mill, 7,708 oz.; yield from cyanide, 4,087 oz.; yield from slimes, 334 oz.; total, 12,109 oz.

Cecil Syndicate.—120 tons for 169 oz.

Coetzees Froom Estate.—239 oz.

Cumberland Niagara Gold.—1,600 tons crushed produced 337 oz.; Tailings recovered 102 oz. from 1,550 tons.

Driefontein Consolidated.—Tons crushed 13,993; ounces 3,824; tons treated by cyanide 12,100; ounces 3,477; total ounces 7,301.

Duke United Mines.—1,030 oz.

Durban Roodepoort Deep.—Tons crushed, 7,540; 2,709 oz.; tons of sands and concentrates treated by cyanide, 5,320; 860 oz.; tons of slimes treated, 2,226; 219 oz. Total, 3,788 oz.

East Murchison United.—Tons treated 4,932; 1,258 oz.; tons of tailings treated by cyanide, 2,031; 346 oz.; total, 1,604.

Ferreira Deep.—Tons crushed, 9,311; 4,198 oz.; tons of sands and concentrates treated by cyanide, 6,850; 1,588 oz.; tons of slimes treated, 2,758; 244 oz. Total, 6,030 oz.

Ferreira.—Crushed, 14,775 tons, 6,281 oz.; concentrates and sand treated, 8,960 tons, 1,964 oz.; slimes treated, 4,445 tons, 679 oz.; total, 8,924 oz.

French Rand.—Tons crushed, 6,593, 1,590 oz.; tons tailings treated, 4,720, 1,014 oz.; total, 2,604 oz.

Fraser South Extended, Southern Cross.—549 oz. from 1,950 tons; cyanide, 620 tons; 133 oz.; total, £2,400.

Geelong.—Crushing, 2,839 tons, 1,150 oz.

Globe and Phœnix.—Crushed 6,338 tons, 3,547.85 oz.; cyanide, tons treated 3,400, 529 oz.; total 4,077 oz.

Golden Horseshoe.—Crushed 11,524 tons, 3,827 oz.; tailings treated 1,998 tons, 1,034 oz.; slimes treated, 9,126 tons, 3,856 oz. Shipped to smelters: sulphide ores, 1,142 tons, 6,853 oz.; concentrates 494 tons, yielding 2,028 oz.; total 12,666 tons, 17,598 oz.; value £65,167.

Great Boulder Main Reef.—1,648 tons crushed, 1,290 oz.

Great Boulder Proprietary.—9,349 tons, 13,739 oz.; tailings (old), 2,330 tons, 764 oz.; total, 14,503 oz.

Golden Links.—Mill, 1,950 oz. from 2,575 tons; cyanide, 334 oz. Total, 2,284 oz.

Great Fingall.—Tons treated 8,468, 8,941 oz.; tons of tailings treated by cyanide 7,548, 1,557 oz.; tons of concentrates shipped 92, 841 oz.; total, 11,339 oz.

Geldenhuis Deep.—Tons crushed 24,600, 6,072 oz.; tons of sands and concentrates treated by cyanide 16,940, 3,289 oz.; tons of slimes treated 7,152, 536 oz.; total, 9,897 oz.

Geldenhuis Estate.—Crushed 11,168 tons, 3,193 oz.; from tailings by cyanide, 1,729 oz.; from slimes, 566 oz.; total, 5,488 oz.

Geldenhuis Main Reef.—From mill, 618 oz.; cyanide works, 341 oz.; ore milled, 2,091 tons; tailings treated, 1,830 tons.

Glen Deep.—Tons crushed 13,320, 2,478 oz.; tons of sands and concentrates treated by cyanide 9,230, 2,227 oz.; tons of slimes treated 4,112, 286 oz.; total, 4,991 oz.

Great Boulder Perseverance.—17,951 oz.

Hainault.—Crushed 2,009 tons, 813 oz.

Half-mile Reef Mines.—491 oz. from 730 tons.

Ida H. Gold.—1,213 tons crushed, 1,245 oz.

Ivanhoe Gold.—12,280 tons crushed, 3,534 oz.; 6,370 tons of sands treated, 2,023 oz.; 5,170 tons of slimes treated, 2,551 oz.; 780 tons of concentrates treated, 2,150 oz.; 250 tons of telluride ore, 836 oz. gold; total 11,004 oz., value £47,094.

Imani Gold.—Crushed 1,865 tons, 608 oz.

Johannesburg Consolidated Investment.—New Primrose—6,476 oz. Ginsberg—3,481 oz. Glencairn Main Reef—3,716 oz. Jumpers.—Crushed 2,900 tons, 896 oz.; from tailings by cyanide 406 oz.; total 1,302 oz., value £5,531.

Jumpers Deep.—Tons crushed 16,143, 3,792 oz.; tons of sands and concentrates treated by cyanide 10,320, 2,333 oz.; tons of slimes treated 5,343; 421 oz.; total, 6,546 oz.

Kalgurli.—Treated 3,930 tons, 3,641 oz.; value, £14,109.

Knight's Deep.—8,759 tons crushed, yielding 2,230 oz., inclusive of 653 oz. from cyanide.

Lake View South.—Robinson: Crushed 464 tons, 192 oz.; value £670. Cyanide plant: treated 850 tons, 126 oz.; value £432. Lake View South: slimes plant, treated 500 tons, 78 oz.

Langlaagte Estate.—Crushed 22,960 tons, 5,627 oz.; concentrates—cyanide, 520 tons, 1,049 oz.; tailings—cyanide, 14,850 tons, 2,124 oz.

Langlaagte Deep.—Tons crushed 12,129, 2,486 oz.; tons of sands and concentrates treated by cyanide 10,566, 1,446 oz.; tons of slimes treated 2,620, 172 oz.; total, 4,104 oz.

Lace Diamond.—Loads hauled and washed—yellow ground, 20,367; blue ground, 7,639; yielding 2,850 carats.

Lancaster Gold.—Crushed 8,396 tons, 2,205 oz.; cyanide 6,103 tons treated, 812 oz.; value, £12,817.

Lancaster West.—Crushed 6,558 tons, 2,052 oz. Cyanide 4,446 tons treated, 758 oz.; value, £11,935.

Lancelot Freehold Tin.—Produced 33 tons, dressed 65 per cent. tin-bismuth ore, shipped 19 tons.

Le Roi.—Shipped to the Northport 11,940 tons, containing 4,435 oz. gold, 3,061 oz. silver, 191,000 lb. copper; profit $2,500. Shipped from the dump to Northport smelter 3,925 tons of ore, containing 1,412 oz. gold, 1,064 oz. silver, 44,274 lb. copper. Profit $12,250.

Matabele Sheba.—Crushed 803 tons, 498 oz.

Morven (Rhodesia).—Crushed 1,067 tons, 712 oz.

Mungana (Chillagoe).—1,839 tons, containing 75¾ tons of copper, 12,116 oz. of silver, and 360 tons of lead, shipped to the Chillagoe Company's smelting works.

Mount Usher.—Crushed 110 tons and treated 640 tons of tailings for 100 oz.

Mirrim Copper.—Matte containing 107 tons fine copper.

Meyer and Charlton.—2,383 oz., 9,090 tons crushed; 1,791 oz. from cyanide; total 4,174 oz., value £17,732.

Mount Boppy.—2,339 tons, 812 oz.; cyanide 1,971 tons, 691 oz.; slimes 637 tons, 453 oz.; total, 1,956 oz.

Mount Morgan (Queensland).—Tons chlorinated 20,588, 9,207 oz.

Mount Zeehan (Tasmania) Silver Lead.—420 tons silver-lead ore, containing about 250 tons lead and 42,000 oz. silver.

Mysore.—15,000 tons, 14,805 oz.; 10,400 tons of tailings (cyanide) 1,398 oz.; total, 16,203 oz.

New Unified Main Reef Gold.—3,077 oz.

North White Feather.—Crushed 735 tons, 527 oz.

New Chillagoe.—Chillagoe Co., 3,013 tons copper ore and 214 tons lead ore; Mungana Co., 598 tons copper ore and 1,228 tons lead ore; purchased 13 tons copper ore and 442 tons lead ore; total, 3,624 tons copper ore, and 1,884 tons lead ore. Producing 318 tons of copper matte and 435 tons lead bullion, containing 175 tons copper, 435 tons lead, and 30,879 oz. silver.

New Options.—Victory, 400 tons, 72 oz.; Lady Jane, 350 tons, 43 oz.; Crescent cyanide, 250 tons, 26 oz.

New Queen Gold.—Cyanide process, 710 tons, £400; from public crushing £150; tributers, £48.

Nundydroog.—5,800 tons, 5,547 oz.; 5,211 tons of tailings (cyanide), 476 oz.; total, 6,023 oz.

New Goch.—2,705 oz. from 9,050 tons crushed; 810 oz. from cyanide; 785 oz. from concentrates; total, 4,300 oz., value £18,250.

New Zealand Crown.—Crushed 2,926 tons bullion, value £6,012.

Nourse Deep.—Tons crushed 14,170; 3,744 oz.; tons of sands and concentrates treated by cyanide, 9,826; 2,080 oz.; tons of slimes treated, 3,798; 278 oz.; total, 6,103 oz.

Oroya Brownhill.—4,158 tons treated, 6,915 oz.; value, £29,320.

Obenemasi Syndicate.—135 tons crushed, produced 166 oz.

Peak Hill.—Crushed 5,190 tons; 2,718 oz., including cyanide plant, slimes, etc.

Queensland Copper.—947 tons ore treated, production 345 tons matte.

Rezende.—Crushed 3,200 tons, from mill 784 oz.; from tailings by cyanide 117 oz.; total 901 oz. In addition eight tons concentrates were produced, containing 36 oz. fine gold.

Rietfontein "A."—2,838 oz.

Roger's Golden Gate.—654 tons crushed, yielding 752 oz.; gross value £1,550.

Robinson Gold.—Crushed 18,318 tons; from mill 8,531 oz.; from tailings by cyanide, 2,878 oz.; from own concentrates (by chlorination), 699 oz.; total from own ore, 12,108 oz.; from purchased concentrates, 1,106 oz.; total 13,214 oz.

Robinson Deep.—Crushed 22,203 tons; obtained 7,487 oz. from mill, 4,156 oz. from tailings by cyanide, and 566 oz. from slimes.

Roodepoort United.—2,965 oz. from 7,714 tons crushed; 1,063 oz. from cyanide; total, 4,028 oz., value £17,067.

Roodepoort Central Deep.—Crushed 6,068 tons, 2,320 oz.; cyanide, 4,151 tons treated, 948 oz.; total value £13,883.

Rose Deep.—Tons crushed 20,085; 3,746 oz.; tons of sands and concentrates treated by cyanide, 12,800; 2,092 oz.; tons of slimes treated, 6,694; 409 oz.; total, 6,247 oz.

Sao Bento Gold Estates.—4,156 tons, producing 1,042 oz. of fine gold, valued at £4,376.

Star of the East.—Crushed 80 tons from Tumbulgum, 361 oz.

Simmer and Jack Proprietary.—Crushed 23,100 tons, 5,583 oz. from mill, 3,127 oz. from tailings by cyanide, and 440 oz. from slimes.

Santa Rosa Mining.—Gross value metals extracted from company's properties, $12,000. Leased properties $3,000.

Sons of Gwalia.—Crushed 8,094 tons, ounces, 4,080; tailings treated by cyanide, 4,800 tons, 1,265 oz.; total 5,345 oz.

Sons of Gwalia.—5,345 oz., value £22,707.

South Randfontein.—Crushed 10,874 tons; 3,406 oz.; concentrates (cyanide), tons treated, 270; 121 oz.; tailings (cyanide) tons treated, 7,726; 1,553 oz.; slimes, tons treated, 2,804; 360 oz.; total 5,440; value £23,120.

St. John del Rey.—Gold produce, £22,583; yield per ton, .57 of an oz. troy.

Surprise (Limited).—Crushed 3,212 tons, 1,217 oz.

Tomboy.—Crushed 8,900 tons, yielding bullion value $51,000. Concentrates shipped 1,150 tons, estimated to realise $18,000.

Twin Lakes Placers.—Cubic yards of gravel washed, 145,000; value of bullion, $6,000.

Talisman Consolidated.—4,216 tons treated, yielded bullion value £8,836.

Tyee Copper.—Tyee ore, 4,787 tons; customs ore, 473 tons; matte produced from same, including 160 tons low-grade matte, 682 tons; gross value of contents (copper, silver, and gold), less costs of refining, $68,885.

Transvaal Gold.—Crushed 5,660 tons, 1,907 oz.; cyanide treated 3,590 tons, 1,260 oz.; slimes treated 1,960 tons, 440 oz.; total 3,607 oz.; value £15,321.

Transvaal and Delagoa Bay Investment.—Output from colliery 37,500 tons.

Treasury.—Crushed 8,200 tons; yielded 3,829 oz.; value £16,070

Village Main Reef.—7,545 oz.

Vivien Gold.—785 tons milled, 551 oz.; value £2,338.

Van Ryn.—Crushed 8,550 tons, 2,928 oz.; cyanide 963 oz.; tons treated 5,600.

Victoria and Queen.—Crushed 768 tons for 1,743 oz.

Wanderer (Selukwe).—Crushed 10,788 tons; 1,815 oz.

Wemmer.—August workings: Crushed 7,240 tons, 3,262 oz.; 4,375 tons tailings treated cyanide, 677 oz.; 193 tons concentrates caught, average assay value 117 dwts.; total 5,070 oz.

Zeehan-Montana.—260 tons of silver-lead ore, containing about 150 tons of lead, and 26,000 oz. of silver.

INDIAN GOLD MINES.

The Indian return for August, which was a month of duration equal to July, fell to 50,286 oz., a decrease on the preceding month of 285 oz. Readers will call to mind, however, that the output for July, which attained record figures, was abnormally swollen by 1,221 oz. from the Champion Reef plates. This, therefore, was an exceptional item, and if it be excluded it will be noted that August really exhibits an improvement. For every mine in the list shows an increase, even the Champion Reef, after making allowance for the figures above-mentioned. The entire exhibit is, indeed, an excellent one.

NEXT WEEK'S MEETINGS.

MONDAY, SEPTEMBER 14.

Barry Port and Gwendreath Railway.—5, Gray's Inn Road, 3 p.m.

Caucasus Copper.—Cannon Street Hotel, noon.

TUESDAY, SEPTEMBER 15.

Caledonian Railway.—Glasgow, 1 p.m.

Callander and Oban Railway.—Glasgow, 3 p.m.

Glasgow and South Western Railway.—Glasgow, noon.

WEDNESDAY, SEPTEMBER 16.

Glasgow Harbour Tunnel.—Glasgow,

Horncastle Railway.—Horncastle, noon.

Manchester Liners.—Manchester, 2.30 p.m.

THURSDAY, SEPTEMBER 17.

Staffordshire and Worcestershire Canal.—Wolverhampton, 11 a.m.

FRIDAY, SEPTEMBER 18.

Central London Railway.—125, High Holborn, 2.30 p.m.

COMPANY MEETING.

EAST RAND GOLD MINES.

An extraordinary general meeting of the East Rand Gold Mines, Limited, was held yesterday, at the offices, 11, Abchurch Lane, E.C., Sir Frederick Frankland, Bart., presiding.

The Secretary having read the notice convening the meeting,

The Chairman proposed the confirmation of the following resolution, which was passed at the extraordinary meeting held on August 24 last:—"That the regulations contained in the printed document submitted to the meeting, and for the purposes of identification subscribed by the Chairman thereof, be and the same are hereby approved, and that such regulations be and they are hereby adopted in the regulations of the company to the exclusion of the existing regulations thereof."

The Hon. H. A. Stanhope seconded the resolution, which was unanimously agreed to.

The Chairman: Having completed the formal business for which we called you here to-day, my colleagues and I think this is a good opportunity to give you the latest information we have about some twenty-nine options, controlling the mining rights, which the company hold over properties in the Eastern Rand, aggregating approximately 80,000 acres. On August 28 last Mr. William Bleloch, one of our local directors, cabled a short abstract of a report by Mr. J. T. Hoffman. This condensed report gives us every reason to believe we have secured the control of most valuable mining rights. A map has been prepared showing the positions of the various farms, and we propose that this should be circulated among the shareholders. Its importance will be readily discerned by them when they notice that almost the whole of the surrounding properties have been brought under the control of the chief financial and mining groups at present operating in South Africa. The mining rights which this company controls have reference to farms situated mainly in the districts of Heidelberg, Bethal, and Ermelo on the Eastern Rand. In the Heidelberg district the farm Goedgedacht, in extent about 5,000 morgen, is controlled as to about 4,200 morgen by this company, and as to the remainder by the Federation Syndicate, a subsidiary of the United South African Association, which company also controls the surrounding farms, with the exception of Koppiesfontein Farm, which is in the hands of the Coronation Syndicate. The granite formation, which has been proved to underlie the banket series at Laagerspoort (Federation Syndicate), about five miles distant from this farm, offers great possibilities of finding the main reef or a reef similar thereto. As about seven miles west of Goedgedacht the properties of the Vereeniging Estates are situated, where a gold-bearing outcrop dipping north has been discovered, there is every probability that we have a valuable asset in our rights over this farm. In the Bethal district we have rights over farms and portions of farms amounting to about 10,000 morgen. The expert opinion generally is to the effect that the main reef formation continues from the Farm Holfontein (adjoining Welgedacht in the Van Ryn and Geduld areas), and this expectation has been verified by the boring on the Farm Vangatfontein belonging to the Oosten Rand Company. Further to the south-east boring has been done on that part of the Farm Winkelhaak, belonging to the New Transvaal Company, and the main reef formation has, I believe, been struck, but the reef itself has not yet been reached on account of the shortness of time which has elapsed since boring was commenced. The greater part of this farm is held by our company. Further east again in the Ermelo district we have mining rights over a large area, where developments are proceeding. We have mining rights over the Farm Bothashoek to the extent of about 3,000 morgen in the district of Lydenburg, and the Farm Mars and Kalkspruit in the Zoutpansberg district, which should be worth careful prospecting. These farms are, however, outside the Eastern Rand district, which is the main sphere of our company's operations. The railway extending from Springs, through Bethal and Ermelo, which has been authorised, and for which the necessary funds have already been appropriated, will give more facilities for transport, etc., and will make mining less costly in this region in the near future. We are in communication with Mr. Bleloch and Mr. Papenfus, our Johannesburg directors, with a view to immediately commencing boring operations at such points as they may advise, and it is our intention to proceed vigorously with the work outlined by them and tokeep shareholders informed from time to time of the progress made. In this connection I may add that the company has ample working capital for all present developments and for other purposes.

On the motion of Captain Williams, seconded by Mr. Miller, a vote of thanks was passed to the Chairman, and the meeting separated.

ROYAL ARSENAL CO-OPERATIVE SOCIETY.

According to the report of this concern for the half-year ended July 11, the sales amounted to £190,630, being an increase over the corresponding six months of 1902, of £2,087. In addition £13,252 was received on account of sales of houses, making a total revenue of £203,882, and after paying all trade expenses, there remains a disposable balance of £27,940. Adding £706 interest charged to the Bostall Estate, capital account, and the actual revenue is £28,646, from which £3,181 is allowed for depreciation on buildings. Interest on shares at 5 per cent. per annum takes £7,509, dividend on members' purchases £15,321, and on non-members' purchases £32. Employees' share of profits amounts to a further sum of £1,377, reserve fund receives £482, and after making various other allocations a sum of £213 is placed to the dividend equalisation, etc., fund.

RAILWAY TRAFFIC RETURNS.

Foreign.

Argentine North-Eastern.—Traffic receipts for the week ended August 7, $10,201; decrease, $1,152. Aggregate from January 1, $381,783; increase, $8,146.

Assam Bengal (Chittagong Section).—Traffic receipts for week ended August 8, Rs. 30,937; increase, Rs. 6,551. Aggregate from July 1, Rs. 1,72,363; increase, Rs. 9,590.

Assam Bengal (Gauhati Section).—Traffic receipts for week ended August 8, Rs. 8,670; increase, Rs. 3,734. Aggregate from July 1, Rs. 50,095; increase, Rs. 19,652.

Bengal Central Railway.—Traffic receipts for week ending August 15, Rs. 36,446; increase, Rs. 11,870. Aggregate from July 1, Rs. 158,497; increase, Rs. 23,311.

Canadian Northern Railway.—Traffic receipts for week ended August 31, $78,900; increase, $29,700. Total, from July 1, $505,600; increase, $242,400.

Lucknow Bareilly Railway.—Traffic receipts for week ended August 8, Rs. 21,960; increase, Rs. 3,598. Aggregate from July 1, Rs. 1,19,835; decrease, Rs. 2,446.

Quebec Central Railway.—Traffic receipts for the 4th week of August, $31,384; increase, $3,273. Aggregate from January 1, $461,670; increase, $22,273.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended August 8, Rs. 8,696; increase, Rs. 758. Aggregate from July 1, Rs. 50,666; decrease, Rs. 720.

Salvador Railway.—Traffic receipts for week ended September 5, $8,750; increase, $1,750.

White Pass and Yukon Railway.—Traffic receipts for the week ended August 31 amounted to $111,453.

English.

Cleator and Workington.—Gross receipts for the week ending Sept. 6, £1,221; increase, £67. Total receipts from July 1, £10,402; decrease, £285.

Cockermouth and Keswick Railway.—Receipts for week ending Sept. 6, £1,062; decrease, £82. Aggregate from July 1, £11,111; decrease, £828.

East and West Yorkshire Union Railway.—Traffic receipts for the week ending Sept. 5, £398; increase £38. Aggregate from July 1, £3,527; increase, £189.

Liverpool Overhead Railway.—Traffic receipts for week ending September 6, £1,714; increase, £106. Aggregate from July 1, £17,234; increase, £938.

TRAMWAY AND OMNIBUS RECEIPTS.

Home.

Aston Manor Urban.—Traffic receipts for week ending Sept. 5, £558, decrease £11; aggregate from July 1, £5,515, increase £1,161.

Belfast Street.—Traffic receipts for week ending Sept. 5, £2,704, decrease £148; aggregate from July 1, £28,613, increase £1,348.

Birmingham and Midland.—Traffic receipts for week ending Sept. 4, £859, increase £14; aggregate from July 1, £8,470, increase £285.

Birmingham City.—Traffic receipts for week ending Sept. 5, £5,199, increase £62; aggregate from July 1, £31,827, increase £2,230.

Blessington and Poulaphouca.—Traffic receipts for the week ending Sept. 6, £35, increase £4; aggregate from July 1, £337, decrease £27.

Bristol Tramways and Carriage.—Traffic receipts for week ending Sept. 4, £5,199, increase £221; aggregate from July 1, £53,201, increase £1,410.

Burnley Corporation.—Traffic receipts for week ending Sept. 5, £844, increase for week £89; aggregate from July 1, £8,738, ncrease £1,398.

Dublin and Blessington.—Traffic receipts for week ending Sept. 6, £188, increase £9; aggregate from July 1, £1,794, decrease £15.

Dublin and Lucan.—Traffic receipts for week ending Sept. 6, £165, increase £18; aggregate from July 1, £1,500, increase £80.

Dublin United.—Traffic receipts for three days ending Sept. 5, £5,505, decrease £186; aggregate from July 1, £56,582, increase £6,108.

Edinburgh and District.—Traffic receipts for week ending August 15, £4,304, increase £323; aggregate from January 1, £142,790, increase £18,701.

Edinburgh Street.—Traffic receipts for week ending Sept. 5, £538.

Harrow Road and Paddington.—Traffic receipts for week ending Sept. 4, £302, increase £28; aggregate from July 1, £3,030, increase £75.

Isle of Thanet.—Traffic receipts for week ending Sept. 5, £1,508; decrease, £193; aggregate from July 1, £15,048, decrease £354.

London General Omnibus.—Traffic receipts for week ending Sept. 5, £23,959, increase £1,466; aggregate from July 1, £251,030, increase £2,309.

London Road Car.—Traffic receipts for week ending Sept. 5, £7,555, increase £201; aggregate from July 1, £77,199, decrease £2,154.

Rossendale Valley.—Traffic receipts for week ending August 28, £179, increase £9; aggregate from July 1, £1,678, increase £19.

Foreign.

Anglo-Argentine.—Traffic receipts for week ending August 10, £5,902, increase £1,234; aggregate from January 1, £184,498, increase £40,935.

Barcelona.—Traffic receipts for week ending Sept. 5, £2,542, increase £81; aggregate from January 1, £82,444, decrease £1,462.

Barcelona, Ensanche y Gracia.—Traffic receipts for week ending Sept. 5, £327, increase £218; aggregate from January 1, £10,290, increase £5,893.

Brazilian Street.—Traffic receipts for the month of April, Rs. 36,899; decrease Rs. 127. Total receipt from August 1, 1902, Rs. 364,004, decrease Rs. 5,763.

Brisbane.—Traffic receipts for the week ending July 22, £2,213, increase £14.

British Columbia Electric.—Traffic receipts from July 1 to July 31, $61,845, increase $12,627. Net earnings $23,953, increase $8 395.

Buenos Ayres and Belgrano.—Traffic receipts for the week ending Aug. 9, £2,610, decrease £431.

Buenos Ayres Grand National.—Traffic receipts for week ending Aug. 1, $39,065, increase $5,088; aggregate increase from April, 1903, $9,810.

Calais.—Traffic receipts for week ending Sept. 5, £251; increase £21; aggregate from July 1, £2,239, increase £41.

Calcutta.—Traffic receipts for week ending Sept. 5, Rs. 33,760, increase Rs. 5,632; aggregate from July 1, Rs. 324,522, increase Rs. 74,357.

Carthagena and Herrerias.—Traffic receipts for the month of August, £2,915, decrease £863; aggregate to July 31, £30,169; increase £2,673.

Lombardy Road.—Traffic receipts for the month of July, £1,356, increase £16; aggregate from January 1, £8,795, increase £144.

NOTICES.

CITY OF QUEBEC DEBENTURES.

REVISED OFFER OF CONVERSION AND REDEMPTION.

Messrs. Coates, Son and Co. are authorised by the City of Quebec to RENEW the OFFER to HOLDERS of OUTSTANDING DEBENTURES of the various issues due between 1905 and 1925 to exchange their present holdings either for 3½ per cent. Consolidated Registered Stock of the City of Quebec, or for cash, upon revised terms of conversion and redemption.

Prospectuses and forms for listing the debentures to be lodged for conversion, or payment off in cash, may be obtained from Messrs. Glyn, Mills, Currie, and Co., 67, Lombard Street, E.C., and from Messrs. Coates, Son, and Co., 99, Gresham Street, London, E.C.

THE NORTH CENTRAL WAGON COMPANY, LIMITED,
ROTHERHAM.

Subscribed Share Capital - - £1,000,000
Borrowing Powers - - - - £1,000,000

The Company is prepared to receive Loans on the Security of its Debentures for 3, 5, or 7 years at 4 per cent. per annum, Interest payable half-yearly.
Copies of the Accounts, and any other information desired, may be obtained on application to D. W. REES, Secretary.

The Investors' Review.

A "Raging Tearing Propaganda" of Ruin.

It is really very amusing, and would be delightful sport were the interests of upwards of 40,000,000, nay perhaps of hundreds of millions, of human beings not at stake. For some weeks back we have been looking at the stramash and babblement from the outside, and it has been rare fun. Joseph outside working the brotherly love and dear bread magic, and Arthur inside proclaiming the wisdom of retaliation and revenge, and both counting on a victory, and renewed power to wreck and overturn. What amuses us always above everything is the portentious solemnity of those newspaper fellows, and the lumbering zeal with which they back any chance opinion, passing impulse, or topsy-turvy doctrines their chosen demigod, Mr. Joseph Chamberlain, may care to emit or manifest. If he said black was green, organs like the *Daily Telegraph*, the *Daily Mail*, the *Times*, and hosts of their imitators throughout the country, including that egregious caricature of reactionary owlishness, the *Scotsman*, might be trusted to hail the dictum as the perfection of orchidious wisdom. Had he any sense of humour Mr. Chamberlain could not fail to be hugely entertained every day in the week by the grotesque subserviency and rubber-like suppleness of these obsequious crawlers. As he orders the press and platform saltinbanques all obey, and if he were to tell us to-morrow that, after all, it is not worth our while to depart from free-trade principles, they would jabber in chorus "behold the embodiment of unmatchable statesmanship." The nation has paid away the savings of a generation for him and his masters, and still it admires (or so these fellows say).

It is diverting, and yet most serious. We have said again and again in these columns that, given the monstrous extravagance of the permanent services by which this country is ruled, whose tools are the political figureheads of the administration, and protectionism, a return to malarial customs duties, becomes inevitable. As we see no indication whatever of a revival of the love of thrift, of an abandonment of decadent arrogance, by the people, we are not too hopeful of the defeat of the latest Chamberlain-Balfour intrigue against the prosperity of the United Kingdom. The extravagance of their masters, the bureaucrats and the plutocrats, may yet beat all the free trade leaders of enlightened opinion can muster. Necessity, born of a profligate waste no one seeks to stop, is driving the nation downwards towards the gulf of insolvency and impotence, even as the devils drove the Gadarene swine into the sea. Unless we make up our minds to stop the unjustifiable and monstrous outlay upon the navy—an outlay insane not merely because of its intolerable magnitude, but because of the directions in which the money is expended—and if we cannot abate the corruption and incompetence of our army administrators, of our Woolwich and other masterless factories, so as to bring the expenditure on that branch also of our fighting apparatus within reasonable bounds, then a protective tariff—beginning small, growing monstrous—is inevitable.

Why cannot those who are zealously and ably fighting the economic sophistries of the battered and broken Government, and of the arch-upsetter in Birmingham, devote greater attention to this aspect of the subject? Their arguments are irrefutable when they deal with the comparative advantages of free trade and protection. They demonstrate the benefits of free imports in a manner so conclusive that lying and prevarication are alone left to those who profess to answer their arguments. Free trade has been enormously beneficial to the country, has indeed given to it the means by which recent extravagances have been made possible. But that kind of demonstration is not enough; there must be the advocacy of thrift, the exposure of corruption, the upholding of goodwill between nation and nation as preliminary to a general scheme of disarmament; a return to manlier conceptions of the relations between England and other peoples. Failing these, the country may as well go to the devil by the Chamberlain and Balfour way as by any other way, for as things are to the devil it must go.

What a delightful time we should have were those newspaper and pamphleteering worthies who oppress us with their effusions in support of every reactionary and life-stifling proposal, made by the ministry and its master, the orchid gardener of Highbury, Moor Green, Birmingham, to take a little turn at shopkeeping. We should all get such bargains as no householder ever enjoyed before. These worthy fellows, Varsity portents, we should judge, for the most part, evidently think that the only way to trade well is to trade at a loss. They are oppressed in mind by the horrible fact that the United Kingdom appears to trade at a profit by selling at a higher price than it buys, and it would be gloriously funny to see these scribes behind a counter, doling out groceries, measuring off webs by the ell, selling ploughs and harrows, spades and pitchforks, and chortling over the fact that for every £1,000 worth of goods they had bought they only received back £600 or £700. They say they want our national trade to be conducted in this fashion, and why not that of the individual? The United States trade in this way, getting back 65 to 70 cents for every $1 they expend. We should be the happiest of people, these academic philosophers tell us, were we to do likewise. It is the ruin of the country to sell at a profit, to get back 25s. or 30s. for every pound spent, and unless we put an end to this disastrous method of trading there is no knowing what will happen. The strenuous, Nemesis-haunted Joseph did not vend his screws on these terms, we fancy, but he was a Radical then, and contact with Dukes and Beits has since taught him better. Underlying fantastic trash of

the description these flash reformers treat us to, there may, though, be some modicum of truth. It is quite arguable and believable that we have been in recent years stocking up too much, buying beyond our means. That is only another consequence of the free hand given to our spendthrift bureaucracy, of criminal and corrupt waste in all quarters, but the true corrective for this madness of waste is a return to ways of thrift, to more modest conceptions of the nation's place amid other nations. Joint stock extravagance has also tended to temporarily swell the imports of the country beyond the natural limit representing the profits upon our exports, of our magnificent carrying trade, upon our numerous investments in all parts of the world, but there also the remedy is not a destructive and impoverishing customs tariff, but a return to sanity and honesty. Bah! let us play golf, and bid probity, hard work, prudence, economy, diligence and enterprise go hang.

But why treat this subject with gravity? The nation must fulfil its destinies. It has taken to build its Tower of Babel, in the form of a world-embracing empire, "the strongest and most magnificent" the earth was ever encumbered by, and it must take the consequences. Its religion, called Christianity, has gloried in bloodshed, the lust of gold has filled its heart, it has dreamed dreams of universal domination, and it has boasted in the faces of its neighbours. Its substance has been poured out without stint in a war of aggression and gold-greed, less merciful in many respects than that of the Turk in Macedonia, because it has left a portion of the population to die slowly of starvation, because we have coolly defaulted fraudulently upon our obligations to furnishers of supplies all over South Africa, and because the coronation peace has left the seeds of a war, wherein Briton will shed the blood of Briton. The Turk at least is thorough, he slays man, woman, and child, thus mercifully preventing them from perishing of want, roofless under the open sky, or from demanding payment of debts. But we glory in our superior righteousness, and thank some God or other daily that we are not as other men are, until our hypocrisy makes all observers ashamed. Why should we escape our fate? We have let 30,000,000 perish of hunger in India within half a generation, and think nothing of it, worship our gods, whatever they may be, with increased fervour, because of it, and congratulate ourselves upon our position as the chosen people designed to universal supremacy. Why should we escape the consequences of this madness? Could there be men more fitted to head us down the broad road that leads to destruction than these tariff reformers, war makers, wasters of millions, or screens of those who waste? Ah, the wild, whirling dance of doom they have led the country these last eight years, years during which our wealth has vanished like dew before the morning sun, wherein excitement has followed excitement, turmoil turmoil, until we hardly know whether we are on our heads or our heels.

The New Zealand Budget for 1903-4.

A more gorgeous loan prospectus than the Right Hon. Richard John Seddon's latest fathered effusion we never set eyes on. From first to last it glows with "prosperity," the prosperity engendered of much borrowing and cunning account keeping. Let us first give a summary of the figures relating to the past and coming years. In the year ended March 31 last the gross income of the colony came to £6,386,609, or £360,609 more than the estimate, and the expenditure was only £6,214,019, so that, after various adjustments, Mr. Seddon is able to glory in a surplus of £233,416. In the current year even these stunning figures are to be out-shone, although not quite to the extent which we should have expected in such expert conjurors as the Seddon administration. The estimated income, however, is put at £6,468,000, or an increase of £212,000 upon the past year, and the expenditure at a mere £6,255,857, which is but £41,838 up. For a population of less than 900,000 of all colours and sizes, these totals are really dazzling in their magnificence, and it is almost cruel to point out in conection therewith that the public debt of the colony was augmented during the past fiscal year by £2,932,572, or nearly £3,000,000. Its "gross" total is now £55,899,019, and adding in the indebtedness of local bodies, harbour boards, municipalities, and what not, the population of New Zealand now owes in a public way upwards of £60,000,000. What it owes privately we are not able to guess, but cannot forget that within the present generation some £10,000,000 to £15,000,000 of its private debts have had to be written off through bankruptcies. No wonder though it prospers.

The Seddon budget essay which rumour declares to be mainly the composition of the Right Hon. Dick's colleague, the Hon. Sir G. J. Ward, Minister of Railways and ex-owner of the Bank of New Zealand Farmers' Association, runs to thirty-five pages folio and is full of splendours. Everything is magnificently flourishing, according to this document, and there is no denying that the trade of the colony has expanded in a really gourdlike style. We at least have never doubted the capacity of New Zealand to produce. It has comfortable room for a population of 20,000,000 instead of less than one, and in time might not only feed that population and provide for all its wants, but endow it with a splendid foreign trade. Small as the population is it does a good trade now, but it is a forced trade in many directions, and it ill becomes the compilers of this Seddon budget to boast of the enormous development of their modest business seeing that, for one thing, it is depleting the stock of sheep, and that it is unaccompanied by any satisfactory growth in population. The production of wool has fallen off by over 10,000,000 lb. in the ten years 1892-1902 compared with 1882-1892. The Seddon budget maker however, glories in the expansion of business with South Africa, and trumpets like a jungle elephant about the splendid traffic now being conducted with that portion of the "hempire." The first ships put upon the subsidised line between New Zealand and Africa, it is admitted, did badly, but they are now doing a roaring business, going out crowded with cargo, and doubtless that will last as long as any portion of the moneys borrowed in England and of war spent moneys remain in the hands of the South African people. But it is purely a one-sided trade, as even the official figures reveal, for in the past year the imports of New Zealand from South Africa were worth only £4,378 as against £36,163 in 1883, when no stimulus whatever was applied. Exports to South Africa, though, in the past year came to £754,059, but a lopsided business of that kind is bound to come to an abrupt conclusion, subsidise it as the Seddon squad may.

One can never understand even the outside of New Zealand revenue and expenditure figures without taking into account the fact that the Government there is every year becoming more and more the fountain of all descriptions of "prosperity.",It does a banking business, having complete mastery over the Bank of New Zealand with which a "limited partnership" is now proposed, since the Bank cannot pay back any of the money guaranteed by the colony to keep it afloat. It is a gigantic land jobber, buying estates with borrowed money from private or corporation owners, splitting them up in holdings for what are called "free selectors," and lending these selectors the money to pay for what they purchase, lending also in some cases money to stock the farms and perhaps to furnish the interest upon the total advanced. It is the great insurance agent of the country, and it is on the way to become the principal miner of coal and precious metals. The Right Hon. Premier and Treasurer congratulates his stupendous country—population not much bigger than that of Glasgow—upon having acquired, presumably at a knock-out price, the plant of a bankrupt gold mining company, and in every budget considerable sums are set down to be spent upon mining development in various directions. All the railways are also Government property, and the document before us is careful to reiterate a statement, entirely unwarranted, that they are worth about half the total debt of the colony. The railways are really not worth much more than a brass farthing, if we may judge from their accounts and from the way in which the figures are juggled, but that must be dealt with on another occasion, that and other matters of amusing or suggestive interest in the papers before us.

One or two incidentals may be alluded to just now by way of making a memorandum, and chief amongst these

is the Seddonic idea about inter-himperial reciprocity. It is expressed with much clearness and force. Seddon and Co. want this country to establish preferential tariffs in favour of New Zealand mutton and wool, to the injury of Argentine and other, also the product mostly of British industry and capital, but there is not going to be any surrender on the part of the colony, nothing of the kind. "I should prefer," says the budgeteer, "the lines adopted by Canada, viz., to raise the total of the duties and then give a rebate to the British manufacturer." On this line no reduction of revenue is to be anticipated. "South Africa," it is added, "has declared for and Canada has already given preference, and this colony, I anticipate, will not hesitate to do the same." We know how South Africa adhered, it was bullied by Johannesburg and its Lord Milner ,and as for the Canadian preference the less said about it the better. But we must not be hard upon the Right Hon. Dick, who does not understand anything about economics, and therefore can spout *ore rotundo*, even as a bull of Bashan. He still grieves that we are conducting a losing foreign business, but does not carry his love of the mother country so far as to give English electrical engineers the preference when it becomes a question of utilising the water force of the colony to generate the electric current. American experts alone are to be consulted on that important question. Negotiations, he tells us, were entered into by the Agent-General with electrical and hydraulic experts on the Continent and also in America, and as a result of these negotiations, almost completed, a Mr. Handcock, "one of the best American experts," is to visit the colony. This is the gentleman who installed the system from West Country to San Francisco, and he has more recently "been engaged on the Niagara Falls installation." Had we no hydraulic engineer in the United Kingdom worthy of being consulted? Ah! we expect too much from these windy patriots with their stagey professions of blood friendship and their eagerness to get at our pockets. But they are not going to rifle our pockets easily any more, and it will be intersting to see how they get on when "no money to lend" is the answer to their appeals to the London market. Well, the Seddon Government is building some fine lunatic asylums with borrowed money.

Our Profligate Military Expenditure.

Is the country really as apathetic as it seems towards this devouring gangrene in the body politic? It surely cannot realise that on the army alone the expenditure out of taxation and loans in the current year will almost touch £40,000,000. The budget estimate, exclusive of expenditure on military works and on such adventures as the Somali war, comes to £34,590,000, the most monstrous "peace" figure any country ever faced. It has always been the case with us that a war has increased the subsequent peace expenditure upon the army, but never before was any such leap taken as the figures just quoted reveal. Before the Crimean war and the Indian Mutiny our army peace expenditure ranged from £8,000,000 to £10,000,000 a year, and was usually between £9,000,000 and £9,500,000. After 1857, however, the peace outlay never fell below £13,000,000, and was often more than £14,000,000. In 1868 it rose to £15,419,000, and hung around such figures until the outbreak of the Franco-German war gave pretext for a further augmentation of the public burdens in this wholly useless and malignant direction. So in 1872 the peace cost of the army, including redemption of officers' commissions, almost touched £16,000,000, and it never again fell below £15,000,000, in fact between 1880 and 1895 inclusive the average peace expenditure upon the army was almost £17,000,000 per annum. But even that is less than half the peace expenditure now laid upon the country without warrant, with nothing gained, simply as plunder and waste on the part of a permanent officialdom, hide bound in jobbery, incompetent and corrupt from top to bottom.

There can be no other explanation than corruption for this monstrous growth in our burden, for we get nothing at all for the money. The revelations, veiled as they are and obscure, made before the African War Commission, shows that the money drawn out of the taxpayer must be habitually wasted and habitually purloined in millions upon millions. When we commenced the Boer war we were in many directions without the means of fighting, without guns, without ammunition, without horses or accoutrements, deficient in all respects except the mere bipeds to be killed. Yet the Tory Government had had not only ample warning but ample opportunity to repair the alleged shortcomings of the Liberal Government it turned out in 1895. In our view neither Liberal nor Tory Governments count for much in a matter of this kind. They are equally helpless victims, if not like the present egregious Ministry, active tools or blatant apologists of the spending departments. Still it is interesting to note that between the year ended March 31, 1895, and the same date in 1899, a period of five years, the regulation or normal peace expenditure upon the army had been worked up from rather less than £18,000,000 to about £20,000,000, and that in the whole five years the Tories spent some £6,300,000 more upon the army, exclusive always of the military works and costly phantasies of that description, than the total amount disbursed in the five years immediately preceding. In those five years ended with March 31, 1894, the expenditure never reached £18,000,000. Going back still further to the five years ended March 31, 1889, we find the then outlay on several occasions in excess of £18,000,000, thanks to various pretexts for extravagance, but in the five years ended March 31, 1884, the outlay only once rose as high as £16,000,000, and the difference between the total ordinary army charges for that period and the total for the five yearly period ended March 31, 1899, was upwards of £17,250,000. What did the nation get for this continuous wealth-sapping expansion in the outlay upon its land fighting pawns? What did it get for the extra outlay in the years immediately preceding the war? The South African War Commission gives the answer. It got incompetence, unpreparedness, exhaustion of military stores, inefficiency of weapons, utter confusion everywhere.

Why should this be the product of the ever-mounting tale of millions, unless the War Office and all dependent thereon live in a permanent condition of moral crookedness and financial corruption? Lord Rosebery thinks that were Lord Kitchener placed at the head of the War Office all evils would be reformed. That shows the essential childishness by which this eminent and ambitious politician's intellectual activities are animated. No individual can cope with the infamies of that Office or with the, if possible, greater corruption in the administration of the Admiralty. What is wanted is to begin with a clean sweep, and then real Parliamentary control, and these reforms can never be attained while the present system of Parliamentary representation, and of canting volunteer patriotism satisfies the business instincts of the people. There ought to be a paid commission of M.P.s or other representative men sitting permanently and publicly to supervise the accounts, the contracts, every item of expenditure in connection with the army, and another with similar functions for the navy. At present our spending departments have no master. The Parliamentary chiefs are not seldom incompetent puppets, inflated to bursting point with their own vanity, and are as useless, even when able and earnest men, to check abuses as the first man picked up in the street. Many years ago the late Richard Cobden warned the country against the policy of establishing great factories such as Woolwich or Enfield, and advised the Government to depend upon private enterprise for its war supplies, its guns and ammunition. His advice was sound, therefore was it mocked at, and to-day we see a masterless Woolwich arsenal and groups of dockyards and explosives factories devouring millions of public money absolutely without check or supervision. This cannot go on much longer without bringing upon us national impotence. The country cannot for ever sustain this waste, and ought not to do so even if it could, for the corruption which has its root in the War Office and the Admiralty permeates all branches of the public service, and tends to degrade business morality in all directions. We shall deal with the figures of the Admiralty in a later article, meanwhile taxpayers might ponder over and try to grasp the meaning of the few figures

and points of view now laid before them. Well may the muddlers and Parliamentary wind-instruments hunt around for "new fiscal policies"—as old as chaos—for thus only can they draw off the mob's attention from their own impotence and the misdeeds of their masters.

Economic and Financial Notes and Correspondence.

The Personal Equation in Mr. Balfour's Dialectics.

When we read that curious pamphletted effusion of the Prime Minister in support of a war of tariffs, of retaliation and revenge, it occurred to us that the key to his degenerate philosophy might be found in his personal experience. His mind is just of that type, a type specially Scotch, which flies to transcendental metaphysics for relief from personal affliction, or as excuse for crookedness in faith or practice. That he understands anything about the actual principles governing our trade or about the secrets of its strength, no intelligent mind could for a moment believe. He knows nothing whatever about business in the ordinary sense, and obviously as little about the influences governing the growth of inter-dependence among nations. Of the pernicious consequences of their poverty-engendering tariffs to those countries smitten by the protectionist blight, he is also ignorant or indifferent, and he has no glimmering of perception of the lofty, humane and beneficent yet most practical idealism expounded by the late Richard Cobden. Sympathy with the trend of modern peoples towards harmony, mutual goodwill and a free exchange of the products of their industry could never be suspected in Mr. Arthur Balfour any more than pity for the downtrodden. He has, however, had a bitter experience of his own in connection with the two companies whose share lists are appended to this note, can feel for himself, and at the same time understand, in part at least, why he has lost his money. Both the Aluminium Company, which has now been absorbed by the Castner-Kellner Alkali Company, and this Alkali Company itself have suffered grievously at the hands of the foreign, and especially of the German competitor. The Aluminium Company had to reduce its shares from £5 to £1 each, writing off £4 per share as loss, in November 1893, and throughout its dreary life it never did much good, German makers of aluminium being able to beat it hollow. Little better has been the record of the Castner-Kellner Alkali Company, and we are genuinely sorry for the poor Prime Minister who has, as the appended lists show, staked an important part of his fortune in these two undertakings. Both were perfectly honourable and legitimate, if expensive and over-paid-for enterprises, and there is nothing but sympathy to be offered to the Prime Minister over his loss.

What we are disposed to complain of, though, is that Mr. Balfour's narrow and inexperienced mind should have reasoned from the particular to the general while brooding over losses, and taken to dreaming of inveigling the nation into a policy of tariff wars that can only end in disaster for it and for its "empire." It is a great pity that he should have speculated in dear-bought patents and lost, but no reason exists in his unfortunate experience that would justify the country in taking up quarrels such as his with its neighbours. To retaliate upon German aluminium and alkali makers might be sweet to him, but to us it would be bitter. The one obvious consequence of our adoption of an attitude of trade hostility towards foreign countries and, especially towards Germany, would be domestic misery and probably revolution. There would soon be an end of the comfortable and privileged landlord class, perhaps even of the plutocratic class, in this country were the Government presided over by Mr. Balfour, whatever the component items in that Government may be, to take up the trade-rivalry hatchet and endeavour by means of hostile tariffs, to, metaphorically, split the skulls of foreign industrial competitors, spreading hunger the while at home. It has always been the contention of this journal that the interests of England, busy, far-trading England, lay on the side of peace, peace not merely so far as the handling of weapons of murder is concerned, but such peace as is implied by an abstention from every form of provocation to our foreign customers, the peoples of other lands. What would be thought of the individual trader who kept a bludgeon handy with which to smite the customer who did not buy in sufficient quantity to gratify his desire for gain? Would not his place of business be deserted and his goods left upon his hands? The hostile tariffs of foreign countries are undeniably hurtful to us, but they are infinitely more hurtful to themselves, and our best attitude towards them is one of patience. Let us wait until the populations afflicted by the tariff curse have come to their senses, as the people of Germany are plainly doing now. A hatred of dear bread monopolists, "hunger trusts," a recent observer has told us, lies at the root of the success of the free trade socialists at the recent German elections. In a few years, therefore, the principles of free trade may triumph in Germany, especially if socialistic ideas permeate the army. Victory is with us therefore if we can only wait, and refuse to put on the fetters our neighbours may be about to fling off. But the following presents a mournful record:—

Aluminium Company.

Last share list filed before absorption by Castner Kellner Company, August 9, 1903.

Writing Down Consols.

We wonder if those responsible for the safe conduct of the great credit institutions of this country have yet realised the significance and far-reaching importance of the action of the Bank of Australasia's directors in writing down its reserve fund Consols to 85. Practically every bank in the United Kingdom has a more or less important holding of Consols, running into several millions sterling in some cases, and for balance-sheet purposes these are valued usually at 90, but not infrequently at 95 and even more. Fortunately all the leading London institutions adopted the lower figure as the safety mark at which to hold these securities, and when they were written down to that level it was thought, and not without reason, that all possible contingencies had been provided against. But we have since been taught, and the lesson is a bitter one, that the wanton squandering of a nation's substance brings ruinous consequences in its train, and we are now beginning to reap the fruits of the disastrous events of the past few years. During the week just closed the price of Consols touched 88⅛, thus reaching the low figure to which the stock fell during 1870, the year of the Franco-German war, and the question which presents itself is whether they will recover sufficiently to justify their continued inclusion in bank balance-sheets at 90. To do that they should be permanently established in the neighbourhood of 95 as a minimum value, and it may be well to examine existing market and other conditions to see what chances exist of an advance to that quotation in the proximate future. One of the principal causes of the heavy shrinkage has been the enormous new issues of the Government loans for war purposes, these issues in Consols alone amounting to no less than £92,000,000, practically the whole of which is hanging over the market unabsorbed, because although a large proportion was sold to the Americans for gold in order to strengthen the Bank of England reserve, at one time at a dangerously low point, events on the other side have resulted in the whole of this stock being sent back to us. Apart from this great addition to the funded debt, there have been the War Loan of £30,000,000, Exchequer bonds aggregating £24,000,000, Treasury bills varying between £10,000,000 and £15,000,000, and the Transvaal Guaranteed loan of £30,000,000, besides big creations of municipal and colonial securities, so that the "gilt-edged" market has become gorged to an unprecedented extent with loans of all kinds which have not yet found an outlet. Is there any prospect of an absorption of these securities by the ordinary investment channels, and thus opening the way for a recovery in values? We can see none. The investing classes are impoverished to an unparalleled extent by the ever increasing imperial burdens, the fall in the value of all classes of investments, and the paralysis of business in many directions, thanks in great measure to the fuliginous activity of Government political quacks, and they will become poorer still should the country be misled into the adoption of a protectionist policy. We must not forget that recent and prospective legislation in the shape of the Irish Land Bill and the Water and Port of London bills foreshadows further big issues of Government or civic guaranteed stocks, so that the present burden of undigested securities must soon be substantially increased. This brings us to the position of those at present carrying the enormous load of unplaced stock, carried, that is to say, on borrowed money, and without doubt that position is desperate to the point of being no longer tenable. Monetary conditions at home and abroad point to an early advance in the Bank of England rate of discount to 5 per cent., which means that those who are forced to borrow on their Consols, a 2½ per cent. security, must pay say 4 to 4½ per cent., and perhaps more for the accommodation. With the load gradually increased by fresh issues few will be able to hold on in face of circumstances such as these, and when we consider that the reduction in interest by ¼ per cent. to 2½ per cent. means a 10 per cent. loss in capital value, it becomes certain that no sustained revival in prices can be contemplated for a long time to come, if ever. Occasional spurts there may by, but in the end the weight of facts must prevail and bankers had best make preparations for following the example set by the directors of the Bank of Australasia. The reduction should not be accomplished by withdrawals from reserve but by the sacrifice of something in dividends which have as a rule been too high.

The Macedonian Butcheries.

The tales of masacre, violation of women, of every form of human devilishness, coming from Macedonia are enough to freeze the blood. We are glad, therefore, to learn that a public meeting is to be held by the Macedonian Committee next Tuesday in London to protest, and to call upon the Government to interfere. That, at least, will give people who retain sympathy and respect for the human race, who put righteousness above empire, and above gold and a boom on the Stock Exchange, to give vent to their feelings. But we have no hope in our present degraded and degrading administration. The jagged remains of the Balfour-Cecil troupe of performers on the political stage are even less disposed to assist the Macedonians, for whose deliverance from misgovernment and the tender mercies of the Bashi-bazouk, the honour of the nation was pledged by Disraeli, than they were to succour wolf-torn Armenia. They can only proclaim once more their impotence except to do evil, and their callous disregard of every human interest dissociated from capitalism and class privilege. But what are the leaders of the Opposition doing? On them also rests a grave responsibility. Will they come forward and lead the better spirit of the nation, and give it voice until it terrifies even the ruthless cowering tyrant in his palace on the Bosphorus, and induces him to stay his hand, to grant reforms amounting to deliverance? Alas! there is slender hope in that direction either. The memory of our own deeds, in rapine, in famine dissemination, in cowardly warfare on women, cannot but cause the words of remonstrance to die away in their throats. The "headmen" of the nation are paralysed, all but two or three. And is western civilisation going to escape the consequence of this indifference, this callousness, this encouragement of fiends in human shape? Oh, no, its day is coming as surely as the succession of years. But "Turks" are rising on the Bourses and "money" is being made by the friends of oppression.

Already the Sultan fears he has gone too far, and is trying to gain time to collect his strength and to create dissension among his adversaries. His latest move is to make overtures to Bulgaria for the amelioration of the lot of those unhappy Bulgarians still left in Macedonia, hiding in its hills and forests. But he played the same game in Armenia when he promised reforms which later on re-

sulted in worse atrocities, and means without a doubt to repeat the manœuvre in Macedonia.

Rand Native Labour Commission.

The Johannesburg press publishes the evidence given at the sixth sitting of the Labour Commission, and once again many of the witnesses testified to the general scarcity of labour. There were one or two important exceptions, however, and these were Mr. De la Rey and Mr. Piet Cronje. Appealed to for his advice, "as one of the leaders of the Boer people," the former said at present he could not see his way out. According to his conviction, there is now more labour available than ever before. It is difficult for him to understand why there is a scarcity of natives for the mines. True, they are scarce on the farms, but "that is only because they go to the mines." Mr. Piet Cronje generally agreed with these views. North of a line drawn from Natal, between the Boer population and Portuguese territory and along the line of the Crocodile River, there are so many natives that this witness is of opinion—in fact he is positively sure—more labour could be drawn than would ever be required in the Transvaal. It must be distinctly understood, however, he said, that they must be compelled to work. If no enforcing law can be passed, the only alternative would be to get hold of the chiefs, give them presents, and ask them to use their influence with the natives. He thinks wages of from £4 to £5 per month would attract natives voluntarily to the mines, but would not this bring inevitable ruin upon the millionaires, and make an inroad upon the profits of those mines that can pay colossal dividends? Rather than submit to so ruinous a sacrifice the mine bosses would shut down the mines, live upon their own comfortable incomes, and bring distress upon thousands of shareholders and others. Another witness, Mr. Muller, of Boksburg, sees no reason why the present number of boys from Portuguese territory should not be doubled. Important evidence was also given by Mr. H. M. Zeffert, a member of the Executive Council of the White League, an institution that contends there is an ample supply of labour in South Africa. He himself has offered 500 boys monthly to the Witwatersrand Native Iabour Association, but they have been refused. He has made a similar offer to the Municipality, with a like result. A Mr. Breytenbach, who has resided in Ermelo for thirty-nine years, expressed his firm opinion that the greatest encouragement to the native to turn out to work would be to remit 50 per cent. of his taxes on the production of a certificate showing he had worked six months for an employer. Those who worked for nine months should have 75 per cent. remitted. This, he declared, would have an excellent effect, since the natives know the hut tax is an imposition, which they regard as a great grievance.

There is one manager on the Rand who is evidently a very brave man, a man who will speak the truth and shame the—mine bosses. For he has told the Labour Commission, so a cable from the *Daily Mail* correspondent says, that his mine saved £5,700 during July and August by the employment of white labour. Whilst making this sensational confession, he went further, and declared that financiers at home view the use of whites with disfavour because of the probability of combining. It is easy to imagine the blank consternation this will arouse amongst the magnates, and how dearly they will love this man for letting the cat out of the bag in this dare-devil fashion. But truth always will out, sooner or later, and this is a startling truth, on which wise men will deeply reflect.

Latent Rebellion.

The picture of the Transvaal drawn by Mr. W. Mather, proprietor of *The Johannesburg Tribune*, in the interview published by several newspapers, is a far from enchanting one. The mining magnates continue resolutely determined to crush out all public control of the Colony's affairs, and to run it entirely in the interests of their own pockets. If this policy is allowed to prevail there can be only one end to it—rebellion. For, to quote Mr. Mather, "It is not merely the Dutch who are in rebellion against the present régime. The British, the men who have sacrificed everything during the war, and for whom nominally that war was entered upon, are more bitter against Lord Milner and the domination of the financiers than the Dutch themselves." Under the rule of De Beers freedom of public speech is a thing of the past, a relic of the maligned rule of the Boers. The authorities, almost to a man, are the creatures of the mine bosses, and at their head is the most subservient tool of all, Lord Milner. Ever since that sinister tool landed in South Africa he has been associated with the harpies of Kimberley and Johannesburg, basing his policy on their counsels and carrying out their commands in a fashion which has made him not only hated by the Boers but despised by the British. His famous increase in the gold duty was a sham, since to get it he surrendered the far more valuable dynamite tax, and threw the loss of the difference upon the working classes. The cost of living in Johannesburg since the end of the war has practically doubled, the greater part of the increase being in house rent. To find a reason for this is not difficult, since the aim and object of the financiers is to drive out independent white labour and get native or Asiatic, the latter for preference, living the life of slaves in a compound as they do at Kimberley. That a crash will come is inevitable unless Lord Milner is removed, and some form of representative Government granted. It is not the Dutch who are to be feared, they would be loyal if they had the chance, is Mr. Mather's opinion, but the British, who hate the polyglot oligarchy that misrules them.

Frederick Hotels.

We shall watch the career of this big undertaking with no little curiosity, because experience has taught us that the kind of finance indulged in by its board can have but one ending—trouble and losses for all concerned. It is indeed significant that as the business of the concern apparently grows, and the hotels begin to pay their way, the value of the preference shares gradually declines, and already proprietors are faced with a capital loss of 20 per cent. on their investments. Business done in the past year was £322,617, or £8,819 in excess of the previous twelve months, and with the addition of interest and transfer fees, both of which show decreases, the total revenue was £323,231. Nevertheless, wines, spirits, provisions, etc., cost £1,631 less, at £121,417, and as working expenses are set down at £112,601, compared with £121,825, up to this point the position looks decidedly promising; particularly as the expenses now include cost of advertising, whereas a year ago the outlay received a double credit on this account, the previous twelve months' expenditure being written back to be borne by the vendors, together with the outgo for the period then under review. Unfortunately, however, appearances are deceptive, and we find that repairs and maintenance previously included in the working expenses are now given as a separate item, which quickly puts a different complexion on affairs. The amount allowed for upkeep was £15,000, and although directors' and trustees' fees, etc., required over £2,000 less, at £4,916, the net balance, after providing debenture interest, one-third of special expenditure, £1,307, amortization of leases and stamp duty on new capital, is only £5,112 better at £31,313. Adding £1,306 brought forward, the sum for disposal is £32,618, from which the preference dividend takes £27,500, leaving £5,118. When it is reflected that not a penny piece has ever been written off cost of properties, goodwill, furniture, fixtures, plant, etc., standing in the balance-sheet at the immense sum of £1,907,734, it would naturally be supposed that a reserve fund would be commenced with this balance, but the directors apparently have not the slightest intention either of adequately writing down the properties or of making provision against possible adversity. Nor did we who have followed closely the history of the undertaking imagine for a moment that they would. Indeed our prognostications of a year ago regarding the course of events are borne out in a remarkable manner. As is known, the whole of the original ordinary shares were in the hands of the vendors, and it is equally common knowledge that twelve months back they were divided into 150,000 preferred ordinary and 400,000 deferred ordinary shares. Speaking of the conversion at the time we said:—"The motive dictating this move is obvious. Say the company has £5,000 free after paying the preference dividend of

5½ per cent. It would give less than 1 per cent. to the ordinary shares, a distribution hardly worth making, and the natural course would be to place the amount to reserve. But on £150,000 it would give well over 3 per cent., a much nicer looking distribution, which the vendors would doubtless be glad to have." Deducting the sum brought forward, we find that the free balance for the past year is £3,812. So the directors propose a dividend of 2½ per cent. on these preferred ordinary shares, and carry forward £1,368, against £1,302 brought in. A further examination of the balance-sheet shows the company to be badly impoverished, because a large part of the cash balance of £35,774 will be required for the final dividends, and trading accounts are £2,000 to the bad, so that even at £8 apiece the £10 preference shares cannot be considered a desirable purchase.

British Debt Repudiation in South Africa.

The repudiation of compensation claims in South Africa has become one of the ugliest scandals in our imperial history. Not only are the claims of "loyal" Dutchmen in Cape Colony openly repudiated, but loyal colonials of British descent, unless they have the privilege of the goodwill of the De Beers gang, are equally scurvily treated. Last Saturday Mr. George White, M.P. for North-West Norfolk, gave in the *Times* an example of the Government's behaviour, and of Lord Milner's method of keeping his word. That obsequious and unfailingly loyal servant of the African capitalist horde issued a proclamation in October, 1899, when he was playing military dictator and war demigod to our disaster, requesting the British traders to barricade all their stores, and refuse to do business with the Boers. This proclamation was obeyed in many cases, with the natural result that the stores were broken open by the enemy and looted. Promise was made by the Imperial Government that all claims arising from depredation of this kind would be met, and Lord Onslow, speaking as Under Secretary for the Colonies, announced early in the war that the Government intended to see that every loyalist was able to start business again and continue it under auspices more favourable than under the Republics. What has happened? Lord Milner appointed a "commandeering commission" nearly twelve months ago to deal with claims, which body has topped the record in repudiation, and Mr. White gives one instance within his knowledge of a claim amounting to several thousand pounds which has been disallowed. He also declares that he is personally aware of cases where full compensation has been given to wealthy individuals who could better afford the loss than others where it has been refused, and adds that many of the most respectable British merchants and traders in the Transvaal are cut off without a shilling of the money due to them. What did the Colonial Secretary say during his banquetting tour in South Africa, under the auspices of De Beers. "Every acknowledgment given by an officer of the British army for goods appropriated by him is as good as a bank note," or words to that effect. For fulfilment, the holders of these acknowledgments of indebtedness are often in even a worse position than that occupied by traders who have had their stores looted. Instead of getting their money, they are treated with contempt and derision. Such is the morality of the great British Empire, as illustrated by our administrative instruments, tools of De Beers, of the blood-smeared African mine company manufacturing gang.

Sir W. G. Armstrong, Whitworth and Co.

Although a further small decline occurred in the profits of this great shipbuilding and armament business for the year to June 30 last, compared with the previous twelve months, the revenue was still very imposing, and it is well for shareholders that the undertaking should do well while the present naval extravagance continues. One of these days the immense outlay must be considerably curtailed through sheer inability of the nation to find the colossal sums annually wasted, and then these huge profits, obtained at the cost of the country's well being, will commence to dwindle. After writing off a sum of £186,866 for depreciation, the actual net profit for the year was £538,910, to which is added £92,449 brought forward, £13,588 in dividends on shares and debentures held, and £10,450 balance of interest account, making a total of £655,397. For 1901-2 the net balance was £556,607, with £150,000 set aside as a special provision for renewal of plant, no actual depreciation allowance being possible owing to the revaluation of the properties carried out during the twelve months. Directors' fees and travelling expenses absorbed £4,747, interest and bonus on employees' deposits £11,980, and debenture charges £60,200, leaving the net income at £578,470, a decrease of £7,231 over the preceding year. After paying the preference dividend, the distribution on the ordinary shares will again be 3s. per share, or 15 per cent., with £81,576 carried forward, against £92,449 brought in, meaning that the dividends paid were not quite earned. The following table shows the results obtained during the past eight years:—

Year ended June 30.		Net Profits.	Ordinary Dividend. Per Share.	Carry Forward.
		£	s. d.	£
1896	...	356,404	2 3	5,709
1897	...	141,163	2 8	3,478
1898	...	496,041	3 0	2,625
1899	...	655,449	4 0	680
1900	...	662,966	4 0	6,252
1901	...	506,483	2 6	96,091
1902	...	493,252	3 0	92,449
1903	...	486,021	3 0	81,576

It will be noted that no addition is made to reserve, that fund remaining at £550,000, not a very great sum when we consider that the freehold and leasehold land, buildings, machinery, plant, and goodwill are in the balance-sheet at £4,512,499. On June 30, 1902, the item stood at £4,599,745, additions since being £99,621, and the depreciation allowance £186,866. The latter, representing less than 4 per cent., cannot be considered very lavish, but there is renewal of plant account of £125,401, and a special experimental fund of £68,000, these credits really increasing the reserves to £743,000. Goodwill, we know, to be valued at only £150,000, so that on the whole the position here does not give much cause for complaint. Floating liabilities, including loan creditors, and employees' deposits amount to £626,148, and the company has a fine show of liquid assets against these. Debtors alone amount to £501,665, cash and bills come to £757,180, and shares and debentures in other companies are valued at £314,180, or £1,573,025 in all. This means an excess of immediate assets over liabilities of almost £950,000, and the position at present appears very strong. Work in progress, less instalments received, stock, stores, materials, etc., are entered at £899,398, and that evidently the concern is well supplied with orders for the current year.

Germany's Trade for the June Half-Year.

The last six months of 1902 saw a marked revival of business in certain branches of German trade and commerce, which not only continued through the first half of this year, but spread to other industries. One sign of this return to prosperity is the decrease in the number of unemployed since many trades and manufactures, especially those engaged in textiles, in building, and in some classes of iron and steel works, have been able to considerably augment the number of their hands. Yet, though the volume of the work turned out has increased, prices have not advanced in proportion, and for this reason the collieries and electrical engineering shops have taken on but few additional workmen, though the output of the former has undoubtedly risen. In the case of electrical engineers, the trade has not yet recovered from the slump at the end of 1900. Till then business was in a very flourishing condition, and many of the shops laid down new machinery in the expectation of the boom continuing. When the reverse happened, and the demand instead of increasing slackened, the strain of keeping these large plants employed became severe, and the difficulty was not lessened by the cutting tactics adopted by different firms to secure such orders as were in the market. Since the beginning of this year several of the larger shops have agreed to combine, with the idea of reducing expenses and forcing up prices, but the combinations have not been in operation long enough to prove their utility. The

biggest of them is that of Siemens and Halske and the Shuckert Works of Nuremburg, which has resulted in the formation of a joint stock company with a capital of £4,500,000. It is not a complete amalgamation of the three works, since Messrs. Siemens and Halske retain the right to supply electric current in certain cases. Several other combinations have been arranged, some merely pooling agreements, but among them is one to work the two systems of wireless telegraphy invented in Germany. To the coalowners, particularly those in Westphalia, the burning question of the day is whether the Coal Syndicate will be as powerful in the future as it was in the past. At present it looks as though it will, but the whole position turns on the attitude of the independent collieries, of the so-called "Huttenzechen," i.e., the mines owned by the iron and steel works, and the checking of serious competition from the opening of new mines. Of the Huttenzechen, Krupp and Thyssen, two of the largest concerns of this class, are reported to have come to a satisfactory arrangement with the Syndicate, and if this is true the others will soon follow their lead. Negotiations are also pending with the independent collieries to induce them to enter the ring, but the most serious difficulty lies in checking the opening up of new mines. Many of the borings in recent years have been made by or on behalf of the International Boring Company, who have entered the Syndicate's territory by sinking trial shafts in the northern parts of the Westphalian coal district. The results obtained from these trials have on the whole proved highly satisfactory, and the Syndicate is therefore doing its utmost to obtain control of the International Boring Company's rights. So far the result of the negotiations between them has not been made public, but it is thought that it is now only a matter of price. In addition to restricting the output of coal and regulating the prices, the Coal Syndicate has absorbed the Coke and the Patent Fuel Syndicates, and they will in future form departments of the larger combination instead of being merely allies.

However, on the whole the economic condition of the country is, in the opinion of our Consul-General at Berlin, better now than it has been for two years. The railway receipts, both from passengers and goods, show a decided increase for the six months ended June 30, the absolute totals for each month exceeding those of last year. Also, the foreign trade is larger than it was either in 1902 or 1901. Imports of merchandise reached this year a total of 21,720,000 tons, valued at £153,400,000, against 19,660,000 tons in 1902 and 20,770,000 tons in 1901, the respective values of these years being £141,960,000 and £137,600,000. The articles which show the greatest increase are earths and ores, corn, wood and wooden wares, and cotton and cotton goods, while jute, rice and salt have all fallen off considerably. Exports in the six months are estimated to have reached 18,300,000 tons, valued at £120,500,000, or contrasted with those of last year an increase in volume of 2,500,000 tons, and in value of £9,400,000. Sugar is the only article which shows a drop of any importance, and this is attributed to the effects of the Brussels Convention. For the United States and this country, the two largest importers of sugar in the world, seized the opportunity of the low prices last year to buy large stocks from Germany, in anticipation of the high prices which must in the end be the consequence of the Sugar Convention. Among the articles exported that increased in value during the six months were cotton and cotton goods, since owing to the recent depression most of the spinners and weavers had large supplies of staple on hand, purchased before the American corner forced prices up. This enabled them to compete successfully with those mills dependent for their supply on the open market, but as soon as these stocks run short the German manufacturers will be in no better position than those of other countries.

Lyceum Theatre.

The report for the year ended March 31 has just made its belated appearance, and considering that for eight out of the twelve months the theatre was closed, it might very well have been brought out five months ago, but for the fact that accompanying it is a so-called reconstruction scheme, which the directors are anxious to lay before the shareholders next week. There is nothing in the balance-sheet calling for notice; the receipts, as already stated, are for four months, the expenses, directors' fees, rates and taxes, etc., are, needless to say, for the full period. The result is a loss on the year of £6,548, and the preference dividend is eighteen months' in arrear. So the directors calculate that the company will have got to the end of its resources by about this time next year. They are, therefore, suggesting that a new company be formed to take over the property, that ordinary and preference shareholders alike be called upon to find a further 5s. per share, and with the proceeds a new theatre of varieties would be erected and equipped. No explanation whatever is forthcoming as to why the directors refused the offer of £244,000 which was made for the site when it was put up to auction last April. "They regret that an acceptable offer was not forthcoming," and that is all. Considering that the sum offered was sufficient to have paid off the debenture stock and preference shares in full, and still have left enough to have given the ordinary shareholders a return of 6s. or 7s. per share, it is difficult to understand or follow the directorial sorrow. As a result of their latest move the ordinary and preference shares are kicking about at 6d. and 5s. a share respectively, not figures expressive of happiness. Profits have never reached anything like the figures set forth in the prospectus, and there seems to be no prospect of that giddy height being attained in the future. High prices are at present ruling for building sites in the Strand, and a speedy sale of the property would mean the recovery of a large proportion of the original share capital. As an unencumbered building site the old Lyceum is worth far more to the shareholders than it will be if the board is foolish enough to put more capital into a concern which was tremendously over-capitalised from the start. When the theatre was taken over in 1899, the freehold was valued at £120,000; possibly the present directors overlooked that fact when they refused to accept double that amount a few weeks back.

Sport in Ceylon.

The following letter tells another tale of a Ceylon tea-planter's life to that told by "A Suffering Shareholder" last week:—

To the Editor of the Investors' Review.

Dear Sir,—Will you grant me space to reply as briefly as possible to one who signs himself "A Suffering Shareholder" in your last issue? This gentleman has certainly a strange story to tell. He says he has just returned from Ceylon whither he went to try and ascertain why dividends in tea companies "had collapsed," and that his visit had not been in vain. He had made the great discovery that the present depression in the tea industry was due—not to over production, but to an excessive fondness for sport and play manifested by the managers of tea estates in Ceylon!

The reasons which have induced this belief in your correspondent are apparently that he visited the island at the period when the annual festivities—races, football matches, etc.—takes place. That the papers gave great prominence to the doings of their readers at that time is likely enough, but had "A Suffering Shareholder" paid a visit to the island at any other time I guarantee he would have found abundance of "planting news" in the papers—more than the business news he would get in his own.

When, however, he asserts that a "large majority of estate superintendents" are "frequently absent from their posts," it is time to contradict him flatly. It is a gross mis-statement of fact, calculated to do a hardworking body of men a good deal of harm. Tea planters in Ceylon work a great deal harder as a rule than the coffee planters of old, and I am confident put in as large, if not a much larger, number of hours of real hard work a week than most City clerks, and seldom in as good a climate. To judge of a year by the doings of a week is manifestly absurd.

It may be that I shall be held not altogether unprejudiced in this matter, but I have lived over a quarter of a century in Ceylon and perhaps know as much of the subject as your correspondent.

H. H. Capper,
Editor, *Times of Ceylon*.

But in spite of all Mr. Capper says about the hard work put in by tea-planters, is "A Suffering Shareholder" so very far wrong? To train a horse for a race or to get fit to ride it takes time, and should a man neither own nor ride a horse the chances are a friend of his does. This hint finds support from a Colombo correspondent of *Vanity Fair*, who, in describing the same race week, to which Mr. Capper refers, says, "A keen interest is taken in the racing here, partly owing, perhaps, to the fact that

they are all owners, trainers, riders, or at least friends of such. The horses are trained in the early hours of the morning, on the race course, and weeks before the meet there are groups of men, the majority with watches and pencils, eagerly timing and making notes on the morning's work." What with watching and studying form and arranging books, far more time must therefore be given up to racing than the week in which the meeting takes place. Also, in these days of strenuous sport a man cannot play a hard game of footer or tennis without some sort of training, nor can he keep his eye in at cricket without practice. So a year's play can, with all due deference to Mr. Capper, be measured to great extent by a week's gaiety. Ceylon follows home fashions well.

The Anglo-American Oil Company.

How many joint-stock companies Mr. John Rockefeller has created in this country in order to sell his murder-dealing low flash oil we do not exactly know. It occurred to us, however, to look up the share list of the most prominent of these companies and it will be found instructive. To give it in full would be wholly useless because thirteen of the members of the company hold only one £20 share each. There was a fourteenth but he has transferred his share. All the capital of the company with the exception of these thirteen shares is, we believe, in the possession of the Standard Oil Company, Rockefeller and Co.'s organisation and its supporters. That Standard Company itself holds 34,238 shares, representing £684,760, and another 15,750 shares of the nominal value of £315,000 is represented by share warrants to bearer. These also may be considered the property of the Standard Oil group, and we thus have aliens in possession of a large, and perhaps still remunerative, business, carried on under the English limited liability acts to the injury of the English people. Altogether £999,760 of the capital of £1,000,000 which the Anglo-American Oil Co., Limited, possesses, is in the hands of the Yankee Standard Oil group held by John D. Rockefeller, according to the list filed at Somerset House on June 16 last. What are our protectionists going to do in regard to enterprises of this description? Will they put a duty on American low flash oil in order to help the oil regions of Burma, or of Canada, the chosen of their affections? If not what is the nation to think of their "principles"?

Silver.

In January of the present year the price of bar silver declined to the record low price of 21 11-16d. per oz. for reasons, doubtless, quite familiar to those interested in the subject. By far the most important was the monstrous indemnity exacted by the powers from China on account of the Boxer disturbances, which, moreover, they insisted should be paid on a gold basis. This caused China to be a heavy seller of the white metal instead of, as heretofore, a considerable buyer. Other reasons of a minor character helped the downward movement and, failing the unforeseen, it did not seem probable that any sustained recovery could be brought about. So serious had the position become, that early in the current year China and Mexico, the two great silver using countries, made appeals to the United States Government seeking its co-operation in such measure as might tend to restore the fixed relationship between the monies of gold and silver using countries, or in other words to improve the gold value of the silver coins or bars forming the currency of the respective countries. Also a commission was appointed to enquire into the Straits currency question, the prosperity of the settlements having been seriously impaired, so it was said, by the continued shrinkage of exchange. President Roosevelt sent a message to Congress on the questions put before him, and the Straits Currency Commission has duly issued its report, but neither event can be said to have exercised more than a sentimental influence on the course of the silver market. But, as frequently happens when the outlook seems blackest, some bright spots appeared, and from the low level reached in January last there has been a gradual recovery, until in the week just ended the quotation for bars touched 27⅝d. per oz., or an improvement of over 6d. per oz. from the bottom price. Several causes have combined to bring about this advance. In the opening months of the year the announcement was made that the American Government would require to purchase large amounts of silver for Philippine currency purposes, and the buying soon began to influence quotations. Altogether the amount of metal taken for the Philippines has amounted to over 9,000,000 oz., a quantity immensely larger than at first seemed probable, and naturally enough the absorption of so much of the floating stocks restricted the supplies available for the London market. These have been artificially kept down as well, because we know that some of the largest American mine owners, those owning mines which produce silver in conjunction with copper, have reduced the output from their properties almost to a minimum. The precise object of their action is not very clear, because restriction in one direction is almost certain to stimulate production in another, and the theory is advanced that the real motive of the move is to limit the supplies of copper and thus maintain the price of that commodity, the lessening of the silver output being merely the inevitable corollary. But whatever the reason certain it is that the output has been greatly limited, so much so, indeed, that it is held that the heavy stocks with which American operators were always supposed to be encumbered, no longer exist. For some years past, however, the annual silver production of the world has amounted to something like 170,000,000 oz., and we should rather doubt the demand of late years being sufficiently large to absorb these huge quantities. We must not forget the limitation of the spending power of the Indian people, owing to the impoverishment caused by famine and plague, circumstances which have also resulted in a slackening in the Indian Government's requirements for the metal for currency purposes. The prospects of our Eastern dependency, however, now seem somewhat brighter, the last monsoon was on a more generous scale, and trade is said to be expanding. The outcome of such conditions will doubtless be an increasing demand for silver rupees, and as for some time the quantity in the currency department has been steadily decreasing—the fall within the past year being almost 5 crores—purchases were last week effected on Indian Government account, driving prices upward with great rapidity. There has also been witnessed within the past few months an increasing demand from China, and possibly, as the country is opened up and developed, exports of produce from the Celestial Empire will increase, thus once more putting it in the position of a large importer of the white metal. Good market judges consider the rise in quotations not nearly at an end yet, owing mainly to India's needs, but it must not be overlooked that advancing prices are certain to stimulate production, and should the existing restriction of supplies be from any cause removed the story may become very different. In other words, even as things stand there is a large element of speculation in the price now current.

European Petroleum.

A mild expression of regret at the outcome of the year's trading and a suggestion that the management should be changed were the only criticisms which the directors of this undertaking were called upon to face at the annual meeting held on Thursday, and if shareholders are not disturbed by the deplorable state of affairs disclosed by the latest report no one else need trouble. Without doubt the Russian oil industry has passed through a period of acute distress, and Mr. H. Pike Pease, the chairman of the company, played the fall in prices for all it was worth, but it is not the collapse in values alone that is responsible for the company's disastrous position. Most of the trouble is due to the capitalisation of the concern on a boom basis, at a time when prices were at a fancy level, never likely to recur, and we can see no hope of the company ever earning a fair return on its present capital. Of course a re-organisation should be effected by means of restitution from the vendors, but that is a contingency not to be dreamt of, and proprietors had best consider a large part of their investment irretrievably lost. To show how grossly the properties were over-valued, it need only be said that in the

best year, when prices were at the highest level, the ordinary shares received only 8 per cent., and would not have obtained even that had proper attention been paid to the question of depreciation. The subjoined table gives the company's record from the time of its incorporation: —

	Net profit.	Div. on Ord. Shares.	Production.
	£	per cent.	poods.
Six months to May 15, 1897 ...	17,485	8	2,990,769
Thirteen months to June 30, 1898...	27,400*	5	8,110,352
Year to June 30, 1899	54,604	8	14,926,221
Eleven months to May 13, 1900—Reconstruction period—no particulars.			
Year to May 13, 1901	71,312	5	13,428,478
Year to May 13, 1902	21,746	nil	15,605,166
Year to May 13, 1903	39,531†	nil	12,323,120

* Estimated. † Loss.

For the year under review the total revenue was £62,415, or £48,707 less than in the preceding twelve months, and after providing administration and other charges, and allowing £9,799 for repairs to steamers, the net balance is £38,606 down at £44,301. Sum brought forward was £5,941, making £50,241 from which debenture interest absorbs £30,617, and income tax £1,100. Then £32,115 is allowed for depreciation, to be used according to the provisions of the trust deed, in cancelling debentures, which means a debit of £13,591. The directors, however recognise that the sum set aside for wastage is quite inadequate, and add a further £20,000 to depreciation, and wells renewal, making the total shortage £33,591. For the second year in succession no dividend is forthcoming on the preference shares, and the arrears now reach £82,500, and clearly the finances cannot be set straight without reconstruction. Up to date £100,000 of debentures have been cancelled and the depreciation and renewal funds stand at £145,934, but the freehold and leasehold properties are valued in the balance-sheet at £1,498,485, and the provision made against them is hopelessly inadequate. Two of the company's six steamers are laid up owing to the unremunerative freights ruling, conditions which seem likely to continue, but naturally the vessels are still valued at their old figure. Liquid resources are a minus quantity, notwithstanding the raising of a loan of £16,220, and if the creditors could press for payment immediate difficulties would ensue. It is a miserable state of affairs, and the re-organisation, when it is taken in hand, must be very thorough if the concern is to survive.

A Big Canadian Failure.

It is only too much to be feared that the big Canadian industrial failure which occurred at the end of last week is merely the precursor of many others. The Dominion is no doubt making progress, but it is not yet the great industrial power that interested parties—Yankee speculators for the most part—would like the world to believe, and some of its industries have been reared on such slender foundations that their early collapse seems inevitable. The slump in the stocks of the Dominion Iron and Steel Company dealt the country a nasty blow, but that is quite put into the shade by the failure of the concern known as the F. H. Clergue Company, at Saulte Ste. Marie, and the closing of the various works controlled by it. The amount of capital involved is something like £8,000,000. No less than 3,500 persons are thrown out of work, and both the town of Saulte Ste. Marie and its population of 10,000 individuals are practically bankrupt. The originator of the enterprise was one of America's multitude of "millionaires," who went to Canada some ten years ago with the intention of "running the show" on Yankee lines, financial and otherwise, and the inevitable result has been disaster to all concerned. Up to a certain point all seemed flourishing, but the consequences of inflation prevailed in the end, and despite the fact that for over a year money was poured into the various enterprises in an effort to keep them on their legs it was of no avail. and the smash came a week ago. Attempts at resuscitation are to be made, it is said, but whether with any hope of success the details of the position at present available do not put us in a position to forecast. So much for "bounties" on the domestic production of steel.

Critical Index to New Investments.

*** *To assist subscribers of* The Investors' Review *in deciding how to act when new issues of capital appear during the early part of the week, and lists close before the critical examination given in this Index can appear, the Editor has decided to reply by telegraph to all enquiries referring to such issues. A letter sent to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, Strand, and enclosing a shilling for the reply, or a reply-paid wire to "Unveiling, London," will bring a prompt answer whether to subscribe or leave alone.*

Bulawayo Waterworks Company, Limited.

This company is one of the earliest of the brood produced by the Willoughby Consolidated Company, and is apparently not yet out of leading strings. The authorised capital is £270,000 in £1 shares, and the amount paid up is £200,000, of which £195,000 was allotted to the promoters for the purchase of certain lands and the concessions from the Chartered Company for the supply of water and electric light, and for work done, leaving only £5,000 for working capital. Profits have risen from £407 in 1898 to £7,685 in 1902, and for the six months ended June 30 they were £5,415, but no dividends have yet been paid. Further capital, however, is wanted, and the company offers £60,000 in 6 per cent. first mortgage debentures at par to repay advances of £30,000 to the parent concern, and provide the additional funds required. A glowing description of the progress and prospects of the company naturally accompanies the appeal for subscriptions, but the high rate of interest offered sufficiently indicates that the debenture stock is at best a highly speculative investment.

Grand Trunk Railway Company of Canada.

Subscriptions are invited for an issue of £750,000 4 per cent. guaranteed stock of the above company at the price of 97½, payable 10 per cent. on application, 25 per cent. on allotment, 30 per cent. on December 1, and 32½ per cent. on January 1. The object of the present issue is to provide for the extension of the double tracking of the system, for further extensive siding and yard accommodation, and for the purchase of additional rolling stock, all of which are urgently required to enable the company to adequately cope with the increased business. This new stock forms part of an authorised total of £10,000,000, of which £5,219,713 has already been issued. It ranks for dividend out of the profits of each year immediately after the debenture stocks, and for 1902 the net earnings, after providing for the fixed interest charges and dividend on the existing guaranteed stock, showed a surplus of £370,000, notwithstanding the special contributions from revenue for the improvement of the line. Thus the stock seems well secured, and at existing quotations the price at which it is offered represents a fair bonus.

Passing Events.

Ever since the world stood still on hearing the news that the great Joseph Chamberlain had actually condescended to resign, our newspapers have been deluged with "testimonials" to his grandeur, ability, statesmanship and the rest of it. The columns so occupied are unquestionably entertaining reading, but we shouul like to know who pays for them. In the case of New Zealand we know that Mr. Seddon charges the cost of his many messages to the Treasury of the Colony, but does the Australian Commonwealth pay for such stuff as Lord Tennyson's effusion, and even if it does was that gentleman acting within his province in wiring his patronising approval of the late Colonial Secretary's statesmanship? They are a funny lot these colonial politicians and governors, and the value of much of their word product can be estimated by the telegram addressed to Sir H. Campbell-Bannerman from New Zealand. Seddon's Chamberlain resolution, it said, was rushed through without notice at a Monday's sitting. many members being present. Some opposed, others present spoke against but declined to vote. This message was signed by George Fowlds and other members of the House of Representatives. Tricks of this kind are thoroughly in the line of colonial political morality.

But not only from our colonies has the stream of testimonials been flowing in, the Press of all the world and every politician or political wind-bag whose ear could be reached have been lugged in to sound the praises of our Brummagem tarradidder until the mere newspaper reader is led to infer that this stupendous quack occupies a place among the rulers of nations supreme above that of every other notorious political character.

The Panama Canal Treaty died at midnight of Tuesday last. Now the question is what will Chief-mourner Roosevelt do. Will he proceed under the Spooner Act and open negotiations to construct the canal by the Nicaraguan route, or will he allow matters to drift in the hope that after all the Panama scheme may come to life again? Whatever course he takes work on the canal is put off for another year, and before it has passed many things may happen. There is, for example, a report that the people in the isthmus, disgusted with the Columbian Congress, mean to form a separate State of Panama, and for this purpose have purchased large quantities of arms and ammunition in the States. How high-spirited of them! And how nicely they are playing the game of those Yankees who smell plunder in the canal scheme.

We have not taken much interest in the intrigue which has turned Mr. Witte out of the Russian Ministry of Finance. His expulsion is said to be a victory for Mr. de Plehve, the Minister of the Interior, and that is quite likely. Yet it was about time that Mr. Witte took a holiday and a rest. He is a man worthy of admiration in some respects, but his feverish activity in making addition to the debts of Russia, in building railways, in calling industries into existence which his impoverished country is in no position to support, and the continual chicane by which he sought to disguise the everlasting borrowings of the empire constituted defects of a very grave description. He is said to be still at his old trade and is now, it seems, touring through the capitals of Western Europe in order to raise yet one more Russian loan. That also does not surprise us. Without loans the gigantesque schemes for "developing" Russia without regard to the conditions of the people, for bolstering autocracy in spite of the tendencies of modern civilisation, demand a continuance of borrowing on an ever augmenting scale.

What a horrible story that is which comes from Gomel —345 Jewish houses wrecked and plundered, ten Jews killed and over fifty wounded, most of them very severely, a repetition on a more wholesale scale of the Kishineff disturbances. We do not wonder, on reading stories like these, that Russia is no longer inclined to move in relief of the population of Macedonia now in process of extermination by the valiant village burners and violators of Abdul Hamid. An empire that can treat any portion of its subjects as the Russian civil and military authorities are treating the Jews is outside the pale of civilisation.

A very interesting and suggestive essay on India's economic problem has been contributed to the current number of *East and West* by Sir Henry Cotton. He dwells with an intimate knowledge upon the decay of native Indian industries, and contrasts effectively the condition of the population a century ago or more and now. It is a saddening picture to look upon, but we are not at all sure that much can be done in the way of restoring the past. Indian industries in their old form have disappeared for ever, and cannot be revived, even were the alien Government of India to establish protection on the Canadian system with a view to their resurrection. To us the most interesting and apposite part of the essay is that which deals with the drain upon India imposed by "imperial home charges," as they are called. Sir Henry puts the total as £30,000,000, a figure we arrived at nearly twenty years ago, and which is now therefore quite a minimum. The actual sum cannot indeed be stated, but on the meanest estimate it amounts to about a rupee and a half per head of the population, and the bulk of that population does not earn an average of more than Rs.30 per annum. No country can possibly flourish, or even maintain its existing condition of poverty, subject to an exhausting process such as this implies. The essay is a most thoughtful one and full of a spirit of solicitude for the welfare of India, a spirit far too rare amongst the British governors of that country in these days.

The Right Hon. Dick, relentless upholder of the "cold shoulder" has this year adorned his New Zealand budget prospectus with a full length portrait group of King Edward VII and his consort, Queen Alexandra in their robes of state. We do admire "loyalty" out of place, and New Zealanders doubtless admire the bill of costs. But when is that peerage coming along.

A correspondent of the *Financial News* is seeking a little knowledge regarding certain financial transactions of Seddon's beloved colony. It is known that the New Zealand Government borrowed a large sum of money for the purpose of supplying water races to the farmers, and that the money was applied to this purpose, principal and interest to be repaid by the farmers in twenty-six years. Now that they have for the last twelve years and more paid back to the Government the instalments of principal due under this loan, it would certainly be interesting to know what proportion of the indebtedness that illuminating body has redeemed.

Quite recently the suggestion that the new Government propped Cunarders should be fitted with turbine engines was treated with derision, but it is now stated that at the suggestion of Lord Inverclyde a special commission has been appointed to investigate the economy of steam turbines, and their suitability for the latest boats. The commission comprises representatives of the Admiralty, Cunard Company, Lloyd's, and three shipbuilders. The work of designing the vessels will probably be deferred until the commission has reported, possibly in three months' time.

The Consolidated Gold Fields of South Africa publishes a warning regarding certain share warrants issued by a company called the Consolidated Gold Fields Rand, Limited. They are for five shares each, and state that the company is incorporated under the Limited Liability Companies' Law, with a capital of £2,000,000, but the date or place of incorporation or registration is not definitely stated, nor the address of the registered office given. It seems that share warrants of the Consolidated Gold Fields Rand, Limited, have been accepted under the impression that they were share warrants issued by the Consolidated Gold Fields of South Africa, and the public had better be on its guard. Is this Gold Fields Rand Company the concern which was recently offering shares by circular at a price slightly below that current for Gold Fields of South Africa shares?

The Dominion statistician, Mr. George Johnson, has been scribbling about Canada and her wheat. In a letter to the *Citizen* newspaper of Ottawa, after giving statistics, he announces that if we give Canadians the price they will give the wheat, and is graciously pleased to add that said Canadians would rather "feed wheat to men but if they cannot get the price they must feed to hogs." Well, so much the better for the hogs, but is not this policy suggestive? Raise the price of wheat artificially in England and Canada is ready to fill the market, though millions of bellies should here go empty.

Mr. Chamberlain's methods of conducting a controversy are like those of a little boy—he wants to make new rules whenever he finds he is losing. In his correspondence with Mr. A. W. Black, the member for Banffshire, whenever a point was scored against him, he at once declared it irrelevant, and when taxed with inconsistency said he couldn't see it. But all the same Mr. Black won the game in spite of the new newer newest rules.

Details of the Argentine budget have now reached this country, and are so satisfactory that we should not be surprised to see a new Argentine loan emerging upon our market. The Finance Minister is eloquent on the redemption of debt. Short term bonds bearing heavy rates of interest have been either merged in other forms of debt less costly or redeemed, and the payment of the Greenwood debt alone will leave, it is said, for the rest of the year a monthly surplus of $219,867 in gold. Most satisfactory of all are the figures regarding trade. Imports were a little down in the past year, but they recovered since so that the figures for the first half of the current year reach a total of $61,902,000, or $10,659,000 more than in the first half of 1902. Exports, however, leap forward always, and amounted in the past year to $11,771,000 gold more than in 1901, or a total of $179,487,000. In the first

half of this year the total is $23,616,000 more than that of the same period last year at $128,820,000. It is expected that the year's exports will exceed $225,000,000 gold. No wonder that New Zealand is jealous and anxious that the British Government should destroy the profitableness of British capital in Argentine for the benefit of its "universal provider" administration.

Hungary is thoroughly roused by the Chlopy Army Order and the Emperor's manifesto, though its tone is conciliatory, has not soothed her injured feelings. The Magyar party declares that it will neither vote recruits nor pay taxes until the control of the Hungarian army is vested in Hungary. What the outcome of the crisis will be, it is impossible to foretell, and it may be that even the Emperor's great popularity will be unable to save a disruption.

Sir Edmund Barton has resigned the Federal Premiership to accept a judgeship in the High Court. The pay of the latter may not be so big as that of Premier, but it is more regular, and politics are certainly not the profession they were in the Commonwealth. We therefore admire Sir Edmund's forethought.

Share and debenture holders of the Yorkshire Wool Combers' Association have received another pressing invitation to join the movement recently initiated with the object of obtaining restitution from those responsible for the company's inception. A circular has been issued signed by twenty-nine debenture and share holders which sets forth that sufficient support has been received to enable preliminary arrangements to be made to carry through the proceedings proposed to be taken, and it is now desired to ascertain who are now willing to co-operate in order that final arrangemnts may be carried out. The grounds of the action are alleged misstatements in the prospectus as to the businesses taken over, and the non-disclosure of material facts. Counsel's opinion is that persons subscribing for shares or debenture stock on the faith of the prospectus have a cause of action against the directors under the Directors' Liability Act and the Companies Act, 1867.

Does the circular issued by the directors of that energetic catering company, J. Lyons and Co., Limited, mean that these gentlemen have been warned by the experience of their rival the Aerated Bread Company, and have decided to abandon the unwise policy of issuing ordinary shares at par as a bonus each year? Powers are sought to make an issue of 5 per cent. cumulative preference shares, but no reason is put forward for this increase, nor is any amount stated. It seems, however, to be understood that the sum is £250,000, and that it is required for the new restaurant in Piccadilly and Jermyn Street.

The Annuity Trustees of the Great Indian Peninsula Railway have been advised by counsel that it will not be safe for them to distribute the money which has been refunded by the Commissioners of Inland Revenue, in respect of overcharged income tax, without the directions of the court. Application will be made immediately after the vacation for such directions, but the distribution of the money to those who may be declared entitled to receive it will consequently be delayed.

Rumours that a new issue of capital was imminent have been largely responsible for the alarming slump in Sweetmeat Automatic shares, and those who circulated the statements evidently had solid foundation for their assertion. It is now announced that 52,200 new shares are to be offered to shareholders at a premium of 10s. per share in the proportion of one new share for exery six at present held. At prevailing prices this means the highly attractive bonus of about 9d. a share, and we imagine most proprietors will want to see what explanation the board has to give for the collapse before embarking fresh money in the concern.

Answers to Correspondents.

[A Fee of Five Shillings per query is charged for replies under his heading. Letters, Five Shillings extra per letter.]

W. H. C.—These shares seem to be at their full value. I think you would be acting prudently in selling when the next report is out. It will probably show a satisfactory year's trading, but I doubt if a bigger dividend will be paid. The much vaunted prosperity of the country is not so great as would appear on the surface.

TRADE AND PRODUCE.

Wheat.—The average price of farmers' deliveries last week was lower even than the week before, 45,165 qrs. obtaining 27s. 5d. per quarter, against the average of 28s. 6d., the average for the corresponding week last year being 28s. 2½d. This decline in price is partly due to the poor quality of some of the new wheat, but partly to the evident desire of the farmers to rush all their available supplies upon the market, as they did early in the year. This week has been dull all along, with values declining. The spot trade has been poor, futures indifferent, American advices depressing, and shipments large, all of which, together with a fine spell of weather, has tended to lower the market. American business has shown no liveliness either. These Bradstreet's estimates of the quantity in sight east of the Rockies as 26,046,000 bushels, or over two millions more than the week before, together with an increased Western movement, fine weather and favourable crop reports, have been the principal bear elements.

Wool.—Competition at the London sales continues without abatement, and in the same direction merinos as usual going chiefly to the Continent, and cross-breds to the home markets. Selections have been large and varied, and prices generally have hardened 5 per cent. or more, some parcels of merinos which were withdrawn last week being disposed of this at a decided advance. The country markets generally have strengthened in consequence, this year prices showing a higher rate than those ruling at the same time last year, and yet trade cannot be said to be good. Bradford and Leicester, the biggest of the markets, even while admitting that the tone is more cheerful and more business doing, say that new orders are neither large or good. A hand to mouth tendency is noticeable all through, and Lancashire depression and war payments are great factors of the trade at present. In yarns spinners have to take unremunerative rates, and in self-defence have advanced quotations in export trade to the disgust of the merchants. Shipping business keeps up a fair average, except to the United States.

Linen.—The hopes entertained of a good autumn trade are now being justified. True, stiff prices still act as a check upon business, but any offers of easier rates are promptly refused, and the turnover is even now above the average. Home markets particularly are increasing their orders, domestic linens, such as towellings, sheetings, etc., finding most favour, but unions and dress linens both have a good sale. Cross-channel movements are still slow, the United States gradually improves, and South America, Canada, and Cuba are active. The yarn market is very firm, spinners stand out for an advance in prices, and manufacturers therefore withhold their orders as much as possible, but the requirements of the trade will prevent any cheapening of raw material as yet, though the foreign flax crop now promises fairly well. Home crops are not much to the fore, but, judging by the specimens offered, fine fibre will be scarce.

Cotton.—The two failures in the Egyptian market which we mentioned last week had a far-reaching effect, and sent prices down with a run. September futures, which, on the 7th inst., were quoted at 11½d., went as low as 8⅛d., and only managed to recover ¼d. per lb. during this week. The fall in spot was not so marked as in futures since at the time the smash came it was at a lower figure, but, in view of the heavy discounts in the later months, Sir Jacob Behrens and Sons say a further shrinkage in old crop is generally looked for. Americans have fluctuated daily, but only within narrow limits. There are, however, signs that prices are steadily giving way under the influence of larger receipts and poor trade reports, and this is shown by the quotations for old crops months falling more and more into line with the new. Spinners of American yarn keep up their prices, since there is no prospect of staple becoming really easier for at least a month. Also the decision to continue short time for another four weeks has helped to stiffen the market, as the supplies now available are readily absorbed, and stocks are practically unknown. The oversea markets have not yet made up their minds to buy, but there are more frequent enquiries for forward delivery which may end in business. In the cloth market there is no change, the actual business booked being far below the average. For this the firmness shown by manufacturers is principally responsible since there are plenty of enquiries at a price. China and India cannot, however, make up their minds to improve their offers, which are still too low for manufacturers to entertain.

On the whole prices in America have declined this week, though every now and again they rallied under pressure from the bulls, and purchases to cover contracts. Still, the better weather and larger crop receipts were always in evidence and checked the upward move before it had time to gain strength. There are also rumours current to the effect that some of the bulls have changed their camp and gone over to the bears, and these also have helped to upset calculations. For the moment therefore the position is decidedly uncertain, and will possibly remain in the same condition until the total of the new crop can be exactly gauged.

At the close on Friday spot American was quiet in Liverpool, the quotation for middling being 6.20d. For Egyptian fair prices were down ¼d., at 6.28d., the market still being depressed. American futures were steady at 5.72d. for September, 5.36d. for September-October, with later positions ranging from 5.16d. October-November to 5.5d. for April-May.

Coal.—The gloom is lifting a little, and a livelier business is hoped for with the coming winter, always excepting in Lancashire, where the depression seems likely to be indefinitely prolonged. Gas and house coals are both selling well in view of the colder days and longer nights, and deliveries in steams are still heavy, though the railway deliveries have fallen off, and exports in them continue good.

Copper.—This week has again been dull, with quotations slipping down. American advices have been very discouraging, prices

for refined metal further reduced, and outside support still withheld. On Wednesday values were down to £55 7s. 6d. for cash, and £55 5s. for three months. On Thursday some offers of forward dates, quickly taken by bears anxious to cover their open commitments, steadied the market, and hardened prices to £55 15s. for both cash and three months, but Friday saw values quiet again and down 5s. to £55 10s. cash and three months.

Tin.—In sympathy with poor advices from the Straits the market opened easy, but a fair amount of business was put through at fluctuating prices. Better advices from the East in the middle of the week caused a rally, but at the close on Friday, though prices were £118 10s. cash, and £119 for three months, or slightly in advance of those of the early part of the week, the tone of the market was decidedly feeble.

Iron and Steel.—At the beginning of the week the Glasgow pig-iron market was depressed, but cheered up a little when the statistics of the American trade were found to be more favourable than had been expected. Cleveland warrants were quoted at 45s. 3d. cash, or 45s. 2½d. to 45s. 3½d. delivery in seven days, and Scotch at 51s., but in the latter and Cumberland, the price for which was 55s. 4d., there was little doing. The stocks of Scotch pig-iron in the warrant stores are being steadily reduced, and now amount to little more than 12,000 tons, which, it is said, represents about three days' output of the furnaces now in blast. Among iron and steel manufacturers a more hopeful feeling prevails, those engaged on bridge and other structural work having orders on hand which will keep them employed for some months to come. The Clyde Shipbuilders have also managed to secure a few decent contracts, but there is still plenty of room for improvement in this direction. In the North of England the pig-iron market has turned against sellers, but why it is hard to say. At first holders showed they were anxious to get out, and the bears kindly assisted them by running prices down, until at the close of the week Cleveland No. 3 was being sold for 45s. 3d., and in some cases 45s. The slump is the more unsatisfactory and inexplicable because at this time of the year an upward movement in prices usually takes place. With quotations so unsteady, consumers are only buying from day to day, and then only if they cannot help it. Possibly one reason for the depression is to be found in the news from America. No maker of Cleveland can hope to sell a single pig of iron to the States under present conditions, while it is more than probable that they may begin sending their surplus here, since stocks there are rapidly increasing. The manufactured iron and steel industries are dull, rails being the only department that shows any signs of activity. At Barrow the hematite pig-iron trade is quieter than it has been for some time. Quotations for mixed Bessemer numbers, however, still keep at 57s. 6d. f.o.b., simply because this business is governed almost entirely by the state of the steel trade. At the present moment this is fairly busy, especially the heavy rail department, but much of the work is for present delivery, and when these orders have run off things may become quieter. The Government has dealt out repairing orders with a lavish hand to the Barrow shipbuilding yards, and, in addition, a contract for a 7,000 ton Indian troop-ship has been secured.

Tea.—A little uneasiness prevails in the Indian market, on account of the reported increase in the crop and the official telegram due next week is anxiously awaited. Private cables show, however, that the increase has not continued in proportion to the early part of the season, and in the meantime, according to Messrs. W. F. and H. Thompson's circular, importers are keeping the market firm by only offering sufficient quantities to satisfy trade requirements. This week nearly 42,000 packages were placed on the market, some of indifferent quality, and selling only at a decline of ¼d. per lb. Medium tea also sold at cheaper rates, but the best sorts have been firm. The average price for the week was 7.87d. The Ceylon market was steady, quotations for all but the lowest grades well maintained, and the average for the week practically the same as last—7.33d. against 7.34d. Supplies are short from Ceylon, as was pointed out last week, and the light auctions and increasing consumption will help to check any fall in the prices of the heavier Indian supplies. Javas offered were 2,100 packages and met with a steady demand at steady prices, averaging 6.59d. per lb., and in China good low grades have been chiefly asked for, both old and new seasons.

Sugar.—When the thermometer goes up at this time of the year, prices in the Sugar market go down, so the warm weather this week has caused a decline of 1½d. to 2¼d. per cwt. The chief pressure was, however, not on the old or the growing crop, but on the 1904-5, which was sold from Austria down to 9s. 4½d. For a time it looked as though sellers were scared by the reports that visible stocks a year hence might not show much decrease, but, in Mr. Czarnikow's opinion, it was not the figures but the weather which had the most influence on producers. The most uncertain element in the situation is the present rate of consumption. Is it above or below the admitted figures? The market is inclined to think it is above, and this, combined with the lower continental duties, should result in an appreciable depletion of our visible supplies, since the invisible stores are just now low. During the week prices for September beet moved down from 8s. 5d. to 8s. 4¾d., October-December from 8s. 11¼d. to 8s. 10¾d., and January-March from 9s. 0½d. to 8s. 11½d. Cane has been steady in tone, and prices were well maintained whenever business was done. The American market keeps firm, and the demand for refined grades seems to have improved under the influence of more seasonable weather. For raws on the spot the quotation of 3⅞ cents. centrifugal remains unchanged, and at this parity beet imports from Europe should be possible were any of the new crops promptly available, and were the countervailing duties officially abolished. During the week stocks were reduced to 177,000 tons, only 27,000 tons having been landed at the three ports, while meltings amounted to 45,000 tons.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1903, and September 19, 1903:—

Revenue and Other Receipts.

—	Estimate for the year 1903-1904.	Total Receipts into the Exchequer from April 1, 1903, to Sept. 19, 1903.	Total Receipts into the Exchequer from April 1, 1902, to Sept. 20, 1902.

The Investors' Review.

The Week's Money Market.

Bank Rate 4 per cent. (Advanced from 3 per cent. on September 3.)

Norfolk House, Friday Evening.

In the beginning of the week dealers in banking credit felt sure that the Bank of England would raise its rate on Thursday. This conviction gradually became weaker until by Wednesday the betting was at best even that no change would take place. Those who doubted a movement all along proved to be right, for the rate remains at 4 per cent., but the market is none the better for the Bank's inaction. Short credits have been scarce all the week, and yet there have been perplexing elements in the market for which known facts afford no adequate explanation. Most people, for instance, anticipated that the Bank would have to lend a considerable sum to the market on Thursday to enable it to pay for the £2,000,000 of additional six months' Treasury bills sold last week. Many put the amount the Bank would have to furnish as high as £1,000,000, but in reality it lent very little, whether by way of discounting bills outright or in the form of short loans for a week at 4½ per cent. Where did the money come from with which the market met this large obligation? The joint-stock banks must have reduced their balances in order to furnish the means, and they could perhaps do this the more easily because they have been buying bills from the brokers very sparingly, preferring to lend some of the free money on bills for seven days to investing it outright.

All week in spite of anomalies such as these Treasury bill payments disclosed short credits have been scarce, and seven day advances never cost less than 3½ per cent., occasionally rising to 3¾ per cent. That rate indeed became rather usual when the seven day loan carried the borrower into the new month. Call money, on the other hand, has fluctuated from 2 per cent., obtainable on afternoon spare balances, to 3½ and even 4 per cent. The week finishes with rates hard at 3½ to 3¾ per cent. for one day or seven day loans. On Monday it is quite probable that the Stock Exchange will find bankers generally asking 4¼ per cent. for advances to the mid-October settlement.

Discount has also been firm all week at 4⅛ to 4¼ per cent. for four and six months' remitted paper, and 4 to 4⅛ per cent. most days for three months' bills of the same quality. No appreciable easing in the strain occurred when the Bank rate was left at 4 per cent., for the market remains apprehensive of it knows not what, and the Bank return issued on Thursday revealed continued poverty in market resources. Other deposits were, it is true, up £909,000, but the total is still little more than £38,000,000, and when it is borne in mind that the great banking amalgamations of recent years have forced joint-stock banks generally to maintain much larger reserves than were formerly provided, a figure of that kind means that credit users of all descriptions are on the confines of scarcity. Some people this morning quoted the discount rate easy at 4 per cent. for three months' bank bills, but that amounted to nothing, for we could not find anybody working below the figure, and the market left off to-night firm. There was perhaps less surface indication of incipient terror, but that was all. Borrowings were considerable at the Bank, and must increase from now till the new month comes in. It discounted bills at 4 per cent., taking mixed parcels up to three months' usance, at any rate from its own customers, and also did a considerable business in seven day loans at 4½ per cent. There can be no easing of the discount market in the face of these charges. The Paris cheque exchange came distinctly weaker at 25.19½.

The reserve was also larger by £379,000 in spite of a net export of £276,000 in gold during the six working days ended on Wednesday evening, but the improvement can only be temporary because next week will see the beginning of the quarter day outflow, and early in the week following the dispersal of National Debt dividends may tend to further deplete the reserve. In the matter of foreign demands upon our stock of gold, the outlook is momentarily less alarming, the demand for the metal in the open market having slackened sufficiently to cause the price of bars to relapse to 77s. 10½d. per oz. We shall all the same continue to see sovereigns disappear abroad, and such is the state of credit in the market that both a domestic and a foreign drain upon our stock of the metal might spring into existence any day.

SILVER.

As we explain elsewhere in this issue, the Indian Government has been forced by the reduction in its silver reserves, to come into the market for considerable quantities of the metal, with the result that a considerable impetus has been given to prices. This demand caused a certain amount of "bear" covering, and the Indian bazaars have also bought with some freedom, and as American holders have not appreciably increased their offerings, quotations show a substantial improvement on the week. On Monday they jumped to 27¼d. per oz. for cash and 26⅞d. per oz. for delivery two months' forward, but this advance caused a little realisation, which brought about a slight reaction on the following day. Since then, however, the upward movement has been uninterrupted, and the final values stand at 27 9-16d. and 27⅛d. per oz. respectively, or gains of 1⅛d. and 15-16d. per oz. compared with last Friday's figures. Applications for the Rs.50,00,000 of India Council drafts offered last Wednesday amounted to Rs.2,58,75,000 in bills and Rs.10,00,000 in telegraphic transfers. Of these Rs. 48,14,000 were allotted in bills and Rs.1,86,000 in transfers, tenders at 1s. 4 1-32d. and 1s. 4 1-16d. per rupee receiving about 18 per cent. Another Rs.50,00,000 will be offered next Wednesday.

BANK OF ENGLAND.

AN ACCOUNT pursuant to the Act 7 and 8 Vict., cap. 32, for the Week ending on Wednesday, September 23, 1903.

Stock Market Notes and Comments.

Frequently it has been remarked to us of late that the condition of stock markets now existing bears a strong resemblance to that prevalent just before the Baring crisis of November, 1890. This observation is true with the difference that the present dark cloud has lasted much longer than the Baring crisis one and that the flabbiness, not to say impotence, of the Stock Exchange is much more extensive and much more deadly to first-class securities of all kinds now than it was then. The inference we must draw from existing market symptoms is therefore that the rottenness slowly coming to the surface and revealing itself in falling prices for Consols, Colonial Government stocks, Home Railway debenture and preference stocks, Home Railway ordinary stocks, American Railroad shares, and to some extent bonds, and for Industrial securities of every type is far more deep-seated and dangerous than it was in 1890. This slow wasting away, in short, is what drives the observer almost to despair. The mind becomes oppressed by daily contact with a depression from which there appears to be no relief. The strain upon the Consol market, as it is called, must alone be now the most tremendous it ever had to endure, and the wonder is that the fall in prices has not brought about before now a disruptive credit cataclysm. To-day's price for the stock means that the Post Office deficit is now quite £10,000,000. What must the country's deficit on the total of its investments now be?

Most heartily do we wish that the occasion for this kind of writing were at an end. It is indescribably painful when the thoughts turn towards the multitude of investors throughout the world who have day after day to sit silent and see their property wasting away. Much, however, as it is to be desired that a more cheerful note could be sounded that is still impossible. We cannot see where improvement is to arise until the dishonest inflation that has been growing worse every year, one may say since 1891 or 1892, has been swept away. There are hundreds of over-capitalised enterprises in our market alone whose finances will have to be put on a healthy footing before their securities can again form the basis for a healthy market, and it is plain that in the United States nothing like the end has yet been reached of the painful liquidation begun in May, 1901. The rottenness there is more sensational and credit devouring, even than ours, and what hope can there be even for a revival of activity in the markets for the leading Continental Government debentures while budget deficits are the order of the day in both France and Germany, while politically the Continent of Europe is seething with discontent from the Urals westward?

Kaffir magnates, we are always being told, are playing a great game, one purpose of which is to squeeze out the small holder of Kaffir shares by forcing him to sell his possession at rubbish prices, and the other to equally eliminate the white element from the mining industries of South Africa so as to open the door to Asiatics. These two purposes accomplished the cosmopolitan ruling spirits will rapidly increase the output of gold and reinvigorate the public demand for their mine shares which will be traded off again, as in 1894 and 1895, to a new generation of dupes at a profit of countless additional millions to the master players. Probably there is much truth in this outline of the boss' ideal, but if it does adequately sketch the designs of the cosmopolitan adventurers who hold South Africa in the hollow of their hands, it also indicates that they are amongst the most short-sighted of mortals. They will be beaten and proved foolish, just as they were over their raid and their war, and the flatness in Kaffir shares at the present time is assuredly not entirely the product of their machinations. Much of it is to be ascribed to the general impoverishment of share gamblers of all classes. Never a day passes but what we hear of forced selling, and we heartily wish all holders of these treacherous market counters had years ago taken the advice so insistently tendered in this paper, and sold every share they possessed so as to let the magnates play the game entirely by themselves. There can be no healthy recovery, that is to say no durable rally, in this section of the market more than elsewhere, until the wreckage has been consumed. But it is a hateful business to have to go on saying this.

The Week's Stock Markets.

Unrelieved depression, a further heavy fall in prices, and complete stagnation of business is the Stock Market story for the past week. With the exception of a few speculative Foreign Government stocks, at present under special influences, everything was sold, and the question now is not when will a boom come to operators' relief, but how long can the present liquidation continue without bringing about a crisis of unparalleled magnitude. Persistent raids on the stocks of the Steel Trust seem to have been chiefly responsible for the collapse in Yankees, Consols fell beneath the weight of dear money and because their true value is certainly not more than 85, Home Railways followed the premier security, and Kaffir shares were thrown out by the Scotch banks in rather alarming fashion. The absence of the Jews in the early days of the week was held to be responsible for the

exceptional inertia, but business would have been no better had they been in attendance, and this was merely a fresh excuse, which jobbers were eager to grasp. The Consol market was quite destitute of investment support and prices crumbled under the smallest offerings of stock. "Bears" covered a little when it became improbable that a further advance on the Bank rate would take place this week, but the maintenance of the 4 per cent. minimum was merely the signal for fresh selling, and prices finish no less than ¾ down for money and the account at 88 1-16 to 88 3-16. The monthly settlement begins on Tuesday, and unless prices can be substantially pulled up in the meantime the difference against the "bulls" will be severe, and we fear money will not be borrowed under 4 per cent. Childers 2½ per cent. went back 1, Transvaal scrip closed 7-16 down, at 1 5-16 discount, and Exchequer bonds and Local Loans dropped ¼ to ¾. India 2½ per cent. slumped 2. owing to the closing of a deceased account, and the other issues declined 1 to 1½. Bank of England stock fell 1, but Bank of Ireland stock was marked up 2. Home County and Corporation stocks were frequently put down, Metropolitan 3½ per cent., Birmingham 3 per cent., Edinburgh 3 per cent., Middlesex County 3 per cent., London County 3 per cent. and 2½ per cent., and several more all finishing about 1 lower. Colonial Inscribed stocks followed the same course. and a pretty general fall of 1 to 2 has to be recorded.

Foreign Government bonds made a brave effort to break away from the prevailing gloom, and with some success. Paris introduced the new Turkish Unified stock at 84½ to 85, which justified higher prices for the old issues, and some rather brisk buying ensued, particularly from the Continent. Quotations were advanced with quite startling rapidity, and the "B" bonds closed 1½ better, the "C" up 1½, and the "D" 1¼ firmer. The unified stock also went forward, but the old priority issue was flat, and fell 4. Spanish recovered an early fractional loss, while other Europeans were somewhat heavy throughout, although leaving off as before. Very little went on in the South American division, and, after being fractionally higher, leading Argentine and Brazilian issues eased off. Chinese Silver loan went up with the metal, but lost the improvement before the end, and Japanese closed dull.

The Home Railway market has had another idle week on the whole, with hardly a crumb of comfort to be gathered anywhere. In its present condition very little is required to move quotations downward, and the necessary impetus was supplied by the traffic returns, which were almost without exception of an unsatisfactory description. Great Western, Metropolitan, Midland deferred, Caledonian deferred and Brighton deferred all lost 1½, and North-Eastern and Central London dropped 2. South-Eastern deferred was also 2 lower, Caledonian ordinary receded 1, and there were other losses of about ½ scattered throughout the rest of the list.

Dealings in New York are still left entirely to the professionals, and the market has sunk to such a state that even the publication of favourable news is received with apathy. Some encouragement might have been gathered from the fact that the return of the Associated Banks was less unsatisfactory than had been expected, as it showed a decrease of £904,000 in loans, but the rally which followed the publication of the figures was trifling and temporary. The course of prices was dominated more by the position of United States Steel shares, which have fallen ominously. Day after day the story told was a mere repetition of what went before. Our market would begin by marking prices at or a fraction over parity, and would then leave them alone until outside influences were felt. Nor were these lacking, as, apart from Wall Street operations, there have been sales either from the Continent or the provinces to depress values, and but for the existence of a fair sized "bear" account on this side, which induced a certain amount of covering on each fall, it is difficult to say what low level might have been reached. New York tried every now and then to infuse a little life into the market, but the attempt was at best a half-hearted one, and the announcement that Mr. Shaw, the Secretary of the Treasury, intended to refund $20,000,000 Government bonds, with the object of easing the monetary position, only stimulated the "bears" into further activity. New York Central shares were hammered, on a report that the company was trying to raise a large loan, and a reassuring statement by the president of the company was ineffectual in checking the decline, which amounts to $5½ on the week. Southern issues were also the object of an attack by the "bears," and finished 3¼ lower for the ordinary and 5 down for the preferred. Baltimore ordinary receded 4½, Denver preferred 5½, and Erie, Union Pacific, Louisville, Illinois Central, and Chesapeake all lost 4. Norfolk common went back 3½, and Atchison issues, Denver ordinary and preferred, Pennsylvania, and Wabash preferred and income debentures receded from 2 to 3.

Canadian Pacific shares went back with Americans in the early part of the week, but rallied a little on the statements made in the Canadian Parliament by the members for Manitoba and the North-West Territories that the damage done to the crops by the recent storm does not

exceed 5 per cent. They went back again however later, and at the close show a loss of 3. Grand Trunk stocks were heavy under the influence of the news that an issue of guaranteed stock was to be made immediately, and prices were further adversely affected by the traffic return for the past week. The market looked for an increase of £19,000, whereas the actual gain was just under £13,000, and quotations were promptly lowered considerably. The ordinary fell 1¾, the guaranteed and

normal conditions, but in the present state of mind of both market operators and public these had not the slightest effect. Buenos Ayres Western ordinary closed 3 down, Buenos Ayres and Pacific ordinary and first and second preference, and Buenos Ayres Great Southern ordinary were 2 lower, Buenos Ayres and Rosario ordinary dropped 2½, and Argentine Great Western first debentures fell 1. Cordoba Central debenture stock (Central Northern) closed 2 down. East Argentine was the only exception to the rule, and advanced 2 on a little buying. Amongst other South American securities, Southern Brazilian debenture stock improved 1, and Salvador 5 per cent. first mortgage debentures declined 1. Nitrate Railway shares were rather wanted, and rose ½. Mexican issues were not influenced appreciably by the improvement recorded in silver, and the first preference stock, after marking a gain of ½, finished unaltered on the week, together with the ordinary. It is reported that negotiations for currency reform are still proceeding, and although a plan for establishing a fixed exchange has had to be abandoned owing to the impossibility of securing the co-operation of the whole of the twenty-five banks of issue another scheme is now under consideration.

Miscellaneous markets continue idle and dull, and there is little of interest to record. Sweetmeats flattened on a further heavy drop in the weekly receipts, and the announcement of the new capital issue, closing ⅛ weaker at 1¾. The new shares are quoted 3d. to 9d. premium, which is not very tempting. Aerated Breads were dull, although unchanged, and other Caterers remained as before. Oil shares went back a little, Iron and Steel descriptions flattened here and there, with Vickers particularly heavy, and Gas stocks declined. Associated Cements were sold a little on the new capital issue announced at the meeting, and Lyceum Theatre shares became practically unsaleable when the reconstruction proposals, involving a 5s. assessment on both classes of shares, became known. London General Omnibus stock yielded 2, and London and India and Surrey Commercial Dock issues were easier. Meat shares are quite out of fashion now and Nelsons and Eastmans were rather off. Non-Flammable Woods came into favour again, and quickly put on 3s. to 7s. 6d., but fell away a little towards the end. United States Steels were severely handled in New York throughout the week, and close 2¼ lower for the common and 6½ down for the preferred stock. Telegraph issues were lower.

It was said that a mere £100,000 stock flung upon the market this morning was the cause of a drop in the price

of Consols to 88. There was a rally of half a crown or so from that figure but the stock left off weak. Our impression is that the demoralisation is nearly at its height, and the market indications point to an early credit explosion, a bursting of the balloon, and horrible though the consequences may be, that would give relief to the strain and presently furnish a ground of hope for the future. All sections of the Stock Exchange were in a depressed state, although Yankee Railroad shares seemed to rally a little from the lowest, and Kaffir shares, on the arrangement of the account, hardened by a shilling or so. It is the public that is losing in these shares much more than the market, and all round the Stock Exchange it is probable that a "bear" account is being formed in the more active classes of securities, which may prove a valuable support when the inevitable smash occurs.

Whitaker Wright's Trial.

On the hearing being resumed on Thursday, September 17, the first called was:—

Mr. David Anderson, who was in the employment of the London and Globe Corporation from June, 1899, t othe date of liquidation, gave evidence that the entries made in the books of the London and Globe, the British America Corporation, and the Standard Exploration Company at the dates of the transactions with which this case was concerned were made under directions of the chief accountant and sometimes from written notes in the accused's handwriting. These notes were destroyed after they had served their purpose. Drafts of the balance-sheet occasionally came back to witness with pencil jottings in either Mr. Malcolm's or Mr. Whitaker Wright's handwriting. The sum of £2,332,632 for shares held in various companies on the credit side of the balance-sheet of December 5, 1900, was made up simply of ledger balances in which the shares stood usually at cost, without reference to the market value of the day. There were entries in the books transferring the liabilities to stockbrokers from the Globe Company to the Standard Exploration and the British America companies. With regard to one entry of £1,306,425, he had instructions from Mr. Malcolm that the sale for this amount had been made to the Sandard Company. The date, originally November 26, had been altered by him to the 30th. He supposed he had put to the entry, which was in Mr. Butchart's handwriting, the original date of November 26 because that was contango day; but he had not the remotest recollection why he had altered the date to the 30th. The corresponding entry in the books of the Standard Exploration Company was in his own handwriting under date in this case of November 30. He could not say whether that entry was or was not made before the Globe balance-sheet of December 5 was issued. The Globe Company's ledger contained an entry on December 5, the date of the balance-sheet. Entries retransferring these liabilities to the Globe were entered in journal No. 4 of the Globe Company under date December 29, which was the day after the default of the London and Globe. Looking for a corresponding entry in the books of the Standard, he found it under date December 13.

Are you able to say whether these entries retransferring liability to the Globe Company were made before or after the Globe had gone into liquidation?—They were all made after the default of the Globe Company on the 28th. Other entries in the books related to Victorian Gold Estate shares, which were represented by their equivalents in Moorlort and Loddon Valley shares of £5 each; and 20,000 shares in each of these companies were entered as sold to the British America. As a result of those entries a sum of £588,850 was transferred from the Victorian Gold Estate's account to the credit of the "securities realised account" in the Globe Company's ledger. This sum was the result of the conversion and the difference between purchase and sale. From the securities realised account this £588,850 was carried to the credit of an account called "mining properties purchased and resold." The balance of £479,399 15s. 4d. appearing in the published profit and loss account was arrived at after taking credit for that item of £588,850.

Mr. Henry J. Butchart, one of the accountant staff of the London and Globe office from July, 1899, till the liquidation, deposed that he had made entries in the books under direction, as stated by preceding witnesses.

Mr. F. Davey, one of the examiners in the department of the Official Receiver in Companies Liquidation, deposed that he had had charge of the liquidation of the British America Corporation and had assisted in the liquidation of the other two companies. He found among the books a directors' attendance book of the British America Corporation. No directors' attendance book of the London and Globe had been found. Among other books he had found the stock books of the three companies, purporting to show the shares held by each of them at various dates. On September 29, 1899, the stock book of the London and Globe recorded the receipt of 2,938 Lake View shares from the defendant and their delivery on that day to the Standard Exploration Company. The return of the same shares to the London and Globe by the Standard Company was entered on October 9, 1899. They were returned also to the defendant on the same day. Speaking generally, these books purported to show the receipt of stock on the one side and its delivery on the other, but not accurately in all cases. The books purported to show the transfer of Victorian

Gold Estate shares from one company to another. The stock book showed the receipt of stock from, say, the British America Corporation, but there would not be always corresponding entries in the books of the other companies.

Mr. Avory: At what time do the shares appear to have been transferred?—Just before the Globe balance-sheet of December 5, 1900.

Shall we call the record on the books a transfer of shares between the three different companies?—A delivery of shares between the three companies.

That record you say is not complete in the different books?—Quite so.

Give us shortly the history of the £250,000 which did duty between the Globe and the British America. You know the sum I am referring to. In the balance-sheet of the London and Globe for 1900 is credit taken for a sum of £250,000 representing shares received from the British America Corporation?—Yes.

And is that included in the item "Shares held in sundry companies £2,352,632," in the balance-sheet?—It is included.

Is it also included in the profit and loss account item "Securities held and realised"?—Yes.

In October, 1897, on the formation of the British America Corporation, did that corporation agree to pay £500,000 to the Globe in shares as the purchase price of certain options?—Yes.

And in the balnce-sheets of the Globe Company for 1898 and 1899 did they take credit for a profit of £350,000 derived from that transaction?—Yes.

On November 16, 1899, is there a minute of the London and Globe Company agreeing to a surrender of one-half of that £500,000 to the British America Corporation?—Yes. The minute is "Resolved that, in consideration of the British America Corporation having given to this company a joint interest in its British Columbian undertakings, the request of the directors of that corporation for a surrender of one-half of the purchase price given by the British America Corporation to this company for the transfer of the option of its Canadian properties, etc., be and is hereby complied with."

Was the £250,00 in fact, according to the books, repaid to the British America Corporation by the Globe?—Yes.

In the shape of shares?—In the shape of shares. That was on November 16, 1899; and at or about the same date the shares were retransferred.

Did that £250,000 enable the British America Corporation to show a profit on its balance-sheet dated November 30, 1899?—Yes.

And to pay a dividend of 10 per cent.?—Yes.

Without that sum would there have been a loss on the balance-sheet?—Yes.

Was that £250,000 repaid by the British America Corporation to the Globe, according to the books, in December, 1900?—Yes.

By the transfer of shares, including 125,000 Victorian Gold Estate shares?—Yes.

What is the earliest record you find in the books of either the Globe or the British America as to the repayment?—December 13, 1900.

Witness read the minute of the Globe Company of that date as follows:—"It was resolved that the minute of the board passed on November 16, 1899, agreeing to hand over securities to the value of £250,000 to the British America Corporation, Limited, in consideration of the latter having agreed to allow the Globe to participate in certain undertakings, is hereby rescinded, and that in consideration of the securities subsequently credited to the British America Corporation on November 16, 1899, of 55,000 Columbia Kootenay shares and 195,000 East Le Roi shares, the Globe Company now accepts from the British America Corporation the giving up of any claim to 125,000 Victorian Gold Estate shares at par and 20,000 Le Roi No. 2 shares at 6¾, aggregating the before-mentioned sum of £250,000."

Summarising that minute, it rescinds the resolution of November 16, 1899, and records the fact that the British America has repaid to the Globe £250,000 in the shape of shares?—Yes.

Witness also, at the request of Mr. Avory, read a minute of the British America Corporation recording the "giving up to the London and Globe Finance Corporation, Limited, of and claim to 125,000 Victorian Gold Estate shares at par and 20,000 Le Roi No. 2 shares at 6¾ in exchange for 55,000 Columbia Kootenay shares and 195,000 East Le Roi shares credited by the Globe Company on November 16, 1899, the Globe Company having now informed this board that they were advised by their solicitors that the arrangement contemplated at the time was without consideration and in their opinion *ultra vires*." Witness added that the minute purported to show that this arrangement had been made on November 30, but the board did not agree to it until December 13, according to the minutes. According to the attendance book of the British America the accused was present at the meeting of December 13.

With regard to the transfer of liabilities to stockholders from the Globe to the Standard and the British America Corporations, do you find that the accounts and the carrying-over notices of the brokers were rendered to the London and Globe for the mid-December account?—Yes.

That is for those shares the liability of which had been purported to be transferred to the Standard and British America?—Yes.

Were these accounts all settled by the London and Globe?—Where it became necessary to pay the Globe paid. Where the account shows a credit balance the Globe received the balance. All the cheques given by the London and Globe in payment were signed by the defendant.

With reference to the item in the balance-sheet "Shares held in sundry companies," do you produce a list which you have prepared showing the total market value of the various shares held by the company, the amount of depreciation actually written off the shares in the Globe books, and the actual depreciation according to the evidence of Mr. Stewart, the deputy official assignee of the Stock Exchange?—Yes; adding up the amounts of the shares stated by Mr. Russell and Mr. Stewart to have no market value, he arrived at the figure £1,630,000.

Mr. H. A. Malcolm, recalled, said he negotiated the loan for £25,000 with Messrs. G. A. Phillips and Co. referred to on the previous day by the witness Mr. Dormer. He did so by Mr. Whitaker Wright's instructions, who also authorised him to agree to the procuration fee of £500. The item was included in the balance-sheet, but shown on both sides, as it was included among loans on the debtor side. A large part of the balance was received from the Victorian Gold Estates as cash under the arrangement for the conversion into Loddon Valley and Moorlort shares. It was a loan on security. It appeared amongst the loans. He could not say whether the £500 paid as procuration fee to Phillips and Co. was included on the debtor side.

Mr. G. S. Barnes, Senior Official Receiver in Companies Liquidation, gave evidence as to the dates of proceedings before Mr. Justice Buckley and the institution of proceedings by his order.

By Mr. Muir: He had asked Mr. Whitaker Wright to come and give him information immediately after the order for the winding-up. He had attended several times since.

On every occasion you asked him?—Certainly, he has always been quite willing.

Mr. Avory: That is the case for the prosecution.

Mr. Alderman Smallman: Are you going to call any witnesses, Mr. Muir?

Mr. Muir said he did not propose to call any witnesses. Before the defendant was called upon he wanted to say what must have been obvious from the conduct of the defence that there had been no attempt made on behalf of the defendant, either by cross-examination or by calling for the production of documents or in any other form, to put forward what was necessary to the defendant, because he had realised that to do that effectually would involve months of the Alderman's time and the expenditure of considerable sums of money. This expenditure of time and money would be much better deferred to a later stage of the proceedings; and he only made any observation now for the purpose of stating publicly, in view of all that had been publicly said against his client, that his side of the case remained to be heard—a fact which was much lost sight of by the persons who published only some of the facts which were proved in evidence before him, and those not the facts most favourable to the defendant. He had only one further request to make. It had been impossible to direct attention with a minimum expenditure of labour and money to the accusations made against Mr. Whitaker Wright until they knew precisely by what evidence, and by production of what books, those charges were to be supported. Now they did know that a vast number of books and documents would have to be examined for the purpose of elucidating the defence. These were all in the possession of the prosecution—the department represented by the Official Receiver. He was sure he only had to say that he desired to have as full access to those books as the prosecution in order to have that access; but, in order that there might be no misunderstanding, he formally requested the Alderman to direct that the defence should have access by themselves and their properly accredited agents—accountants, for example—to the books, which required the most thorough examination. He was sure the Alderman would give that direction, so far as it lay in his power, and that if he did give it it would be thoroughly carried out. He did not propose at present to call any witnesses or open the defence.

Mr. Avory, while doubting whether the Alderman had the power to make the direction suggested, assured the defence that there would be not the slightest obstacle put in the way of their examination of the books.

Mr. Alderman Smallman then committed the defendant for trial at the next sessions of the Central Criminal Court, intimating that the same bail would be accepted for his appearance there.

MINING NOTES AND NEWS.

Prices of Kaffir shares have continued to droop. This is the message we have had to tell in these columns for weeks past, a brief message, but one of deep import. The nineteen day account came to a close yesterday, and speculators again had heavy differences to face. Falls have been heaviest towards the end of the week, a large amount of stock being liquidated by Scotch banks owing to the running out of margins, whilst it is said there has been liquidation of a deceased account. Wednesday was option day, and that helped the decline, for many large options were entered into by continental operators, who looked for a revival ere this. Deep levels and outcrops alike have all relapsed heavily and created a state of gloom in the market deeper than has been experienced for many a long day. Fears of a rise in the Bank rate have also made speculators nervous and dispirited, nevertheless here and there it is possible to meet an optimist who would fain believe a better time is coming sooner or later. "Wait until the report of the Labour Commission is published; that will end our troubles," is the hope on which these men are feeding their minds, merely the husk of a hope of little nourishing quality. The announcement that the railway has reached the Wankie coal field has not helped Rhodesians, which have declined in company with Kaffirs.

A meeting of the people of Modderfontein and neighbourhood was held on the 16th inst., at which the question of Asiatic labour was discussed, and the meeting pledged itself to support the policy of the Labour Importation Association. Another large meeting

was held two days later at Vereeniging, under the auspices of the latter institution, which also passed a resolution advocating the necessity of the importation of Chinese.

Mr. Fox Bourne, the secretary of the Aborigines' Protection Society, states that the following resolution was passed at six different meetings of the Transvaal Miners' Association, held on August 9:—"That we condemn the unfair and unmanly action of the managements of the various mines in attempting to coerce the employees into signing for the importation of Asiatics; that we will strenuously oppose the introduction of Chinese, and consider that the steps which are being taken to introduce them during the sitting of the Commission are contemptible; and that we strongly counsel our fellow-members of the Association not to sign anything until the Association as a body has decided the question." Mr. Bourne adds that this is only a sample of resolutions to the same effect passed at many other meetings, and it sheds a lurid light upon the coercive methods resorted to by the mine bosses to keep honest, *bona-fide* evidence from the Commission. It confirms also what one of the witnesses himself has said, viz., that miners are afraid to give evidence lest they should lose their situations. Mr. Bourne also forwards a copy of the following resolution which, he says, was adopted "by an overwhelming majority as an amendment to a motion proposed at a large meeting convened by the Labour Importation Association on August 12":—"That this meeting is directly opposed to the introduction of Asiatics or any other aliens until representative Government has been instituted and deprecates the action of the Labour Importation Association, seeing that the Native Labour Commission has not completed its inquiry, nor given its verdict." The same gentleman adds that Mr. G. W. Fursey, at whose instigation this amendment was passed, accepted a seat on the Labour Commission, but was so dissatisfied with its proceedings that he resigned. He likewise says that Mr. P. Whiteside, a member of the Commission, has had to make public complaint as to the way in which even such adverse testimony as is admitted is garbled. In fact, this Labour Commission, is, as we have felt all along, a veritable farce, merely a ruse of the magnates to bamboozle the public. But when they get their Chinese their troubles will only commence. It is as likely as not, a year hence, they will be fleeing the country for their lives.

Mr. Ross Skinner, who was commissioned some months ago by the Transvaal Chamber of Mines to make a tour of California, British Columbia, Japan, the Malay States, and other places, in order to inquire into the question of the importation of Asiatic labour, has now returned to Johannesburg, and on Tuesday this week met the Executive of the Chamber of Mines and the Board of the Witwatersrand Native Labour Association. The correspondent of the *Financial Times* cables that the conference lasted two hours, Mr. Skinner speaking for fully an hour. Nothing definite transpired as to his report, but the correspondent understands that the Commissioners think 200,000 suitable Celestials would be available. To this he adds the significant words:—"Their importation, however, would involve considerable time."

A Gazette Extraordinary was published on Tuesday announcing the appointment of a Commission in terms of the resolution passed by the recent Bloemfontein Conference that, in view of the coming federation of the South African colonies, it would be desirable that a commission should be constituted to gather accurate information on affairs relating to natives and native administration, and to offer recommendations to the several Governments concerned, with the object of arriving at a common understanding on questions of native policy. The Commission will consist of two representatives of each colony, and one each for Rhodesia and Basutoland, and it is to report on the status and condition of natives and the lines on which their natural advancement should proceed, native education, industrial training, labour, land tenure, and the obligations entailed upon the State by native law, the administration of the liquor acts, the prohibition of marriages, and the extent and effect of polygamy.

Westralian prices have fallen to lower levels. Last week it was announced that Mr. J. H. Curle had withdrawn his candidature for a seat on the board of the Associated Northern Blocks, and this has been followed by a similar action on the part of Sir Bartle Frere. These withdrawals will greatly complicate matters, seeing that the recent meeting passed a resoution, subject to the results of the poll, approving of their election. It will be interesting to see how this problem will be solved.

Another disappointing monthly report has been issued by the Wassau Company, which has not helped to revive public interest in the Jungle market. The average result of the work done by this company during August was only 17.2 dwts. over a width of 20.6 in. in the north drive, sixth level. For the last 30 ft. of work done in the south drive the reef was broken and scattered.

Amongst Egyptians "Mummies" have been put up on a cable announcing that at 350 ft. the cross-cut in the Um Rus mine has cut the lode which is 19 in. wide and assays 38 dwts. per ton. In the miscelaneous list Etruscans slightly hardened at first in anticipation of a favourable circular from the directors, only to relapse later in the week. Copper shares have been unrelievedly weak and Rio Tintos have again dropped to a lower figure.

Etruscan Copper Estates.—For a week or so shareholders and the market generally have been waiting a circular from the directors of this company. They have just returned from a visit to the property, and have promptly gratified expectations. A favourable circular was generally anticipated, and it has come. It states that the copper smelter, "after considerably more delay than the London Board anticipated," is now working regularly, and dealing with from 350 to 400 tons of 4 to 5 per cent. copper ore weekly. This quantity will be gradually increased to the full capacity of the smelter, that is, to from 550 to 650 tons a week. "Underground developments are being pushed ahead as rapidly as possible, which should shortly be advanced sufficiently for the company to order further smelting plant, for which tenders have been invited." The mine manager has arranged to deliver to the reduction works 1,000 tons of copper ore per week, commencing October 1. Work at the copper mine is declared to be opening up well. At No. 3 level (depth 300 ft.) the Govett and Gran Cava shafts have been connected by a main drive, the distance being 540 ft. "For the greater part of this distance the drive has been in country rock, and the persistence of the lode has been proved by crosscuts for the whole length, while for 300 ft. good copper ore has been cut in each crosscut. Driving is still continuing northwards, and the mine manager estimates that in three or four months some 700 or 800 ft. in length of the lode will have been opened up on this level. At No. 4 level (80 ft. below No. 3 level) driving north has been proceeded with for about 160 ft., and crosscuts into the lode will be commenced shortly. At No. 1 copper lode a vein of good copper ore (which has not yet been driven on) has been cut in the north drive from the Le Marchant shaft, and a crosscut under the Ortaccio outcrop will be proceeded with." Though markets generally are dull, there is no lack of interesting events in the mining market, what with the Associated Northern Blocks comedy and the complicated situations developed by the unravelling of the Etruscan mystery. This circular contributes another chapter to the thrilling story, but it hardly helps one to foresee the finale.

Sheba Gold Mining Company.—A week or two ago we commented at some length upon certain unpleasant rumours respecting the position of this company, and the likelihood of reconstruction or amalgamation. These have been replied to in a circular issued on Wednesday by the directors. It is admitted that the gold values are irregularly distributed throughout the ore chute, that bodies of very rich ore have in the past been struck within the masses of lower grade ore, and that the junction of these two classes of ore have made up the high average. During the greater part of the past year "the output has been low, and the expenditure has in some cases exceeded the results," which is attributed mainly to the shortage of labour. Development, it is added, is being pushed, and "at any moment a favourable find of rich ore may be discovered, for, according to the ordinary expectations of mining, when there is sufficient labour to work in the lower levels, rich ore similar to that found in the upper levels should be opened out," which may be described as very vague and uncertain possibilities. "There is no reason apparent," the circular proceeds, "to lead to the belief that the length and breadth of the reef attained in the upper levels will not continue in depth." We gave an analysis of the company's last accounts—which dealt with the position at the end of the previous September—on December 20, 1902, where the fact was mentioned that the company was carrying a debit of £48,534. It is now opined that as this represents no liability to anyone outside the company, it can be dealt with as circumstances may indicate. "It may, for example, be liquidated over a series of years, in the same manner as it has arisen over a series of years—the exceptional years of the war." The rumours of amalgamation or reconstruction are stated to have "no foundation whatever." The policy agreed on by the board is being actively carried out, viz.:—(a) To complete as quickly as labour permits the full battery of stamps, so that there may be 200 in active operation; (b) to maintain development in the expectation that (as hitherto) richer ore may be struck; and (c) to prospect on the other large portions of the Sheba property." But surely all this work cannot be done without money? It would have been more reassuring had the directors given some figures showing the exact financial position of the company, for twelve months ago it had practically no liquid assets. How has it been financed in the meantime? and where is the company to obtain the pecuniary help with which to carry out the above programme? Such important questions as these have been ignored.

El Oro Mining and Railway Company.—The results reported by this company for the year to the end of June last are practically the same as for the preceding twelve months. There were treated 110,958 dry tons of ore, the average gross value of which, in gold and silver, was $16.58 per ton, of which $13.72 per ton was recovered. Working expenses, including taxes, mining, development, milling, and other operating charges, came to $4.97 per ton. The bullion recovered realised £319,942, in addition to which the railway department receipts totalled £40,873, whilst interest, exchange, and sundry receipts yielded £571. Mining expenditure absorbed an aggregate of £135,562, and the railway took £18,366. A couple of dividends were declared, requiring £162,000, at the rate of 15 per cent., and £41,437 is carried forward. The directors neglect to make any provision for depreciation of plant and machinery, and have not commenced a reserve fund. Otherwise a very good balance-sheet is issued. The ore reserves blocked out and awaiting extraction on June 30 were estimated at 543,890 tons. In addition to this amount there is reported to be a large quantity exposed in various sections of the mine, but not yet sufficiently blocked out to justify its inclusion in the above estimate. It was the existence of this additional tonnage, concerning which the directors say they have no doubt, that enabled them to state in their circular of February 11 last, that above the limit of present development the mine would yield at least 1,000,000 tons of ore which could be profitably treated on a large scale. To handle this large quantity of ore, and to provide means for the treatment of the additional reserves which it is anticipated will be exposed by further developments in depth the directors decided to increase the present milling capacity by the erection of a new 100-stamp mill, making 200 stamps in all. This mill will be in operation before the close of the current fiscal year. The estimated cost is put at £70,000, which it is proposed to meet out of surplus profits, and this is the excuse advanced for not making any provision this past year for depreciation. It is reported that all the work done on the Somera property so far has been directed towards opening up the San Rafael vein, and the development of the other probable

resources of this ground has been delayed on this account. Recently, however, a strike, described as of considerable importance, has been made in the Victoria No. 2 property, adjoining the Somera on the south, in which a vein has been exposed 13 ft. in width, and carrying fair values. It is said that this discovery adds materially to the value of the Somera by proving the continuation westwards of the series of parallel veins opened in the original El Oro ground. During the past year the company has secured, in conjunction with the Exploration Company, an interest in a working option on the Mexico mine, which is a northerly extension of the San Rafael vein. Development work is being actively prosecuted here, the report saying the mine "gives promise of proving a property of substantial value."

No. 2 South Great Eastern Gold Mining Company.—During the six months ending July 6 this Charters Towers gold mine showed a substantial increase in its production on the preceding half-yearly period, both as regards yield and quality. In all, 19,488 tons of ore were raised and crushed for a yield of 25,404 oz., realising £90,771. Out of this the directors distributed £50,400 in dividends, at the rate of seven shillings per share. In addition to this the sum of £18,000 was placed to the credit of battery account. A balance of £17,469 was brought in, and £11,591 is carried forward. The finances are strong.

Yields Per Ton of Rand Mining Companies.—The Johannesburg *Star* has published an interesting and valuable table showing the values (in shillings) per ton of a number of South African mines for the month of July of this year compared with the average for 1899, the best year on the Rand. Examination of the figures will reveal, in the majority of cases, a lower yield. Before the war, however, closer sorting was practised, which principally accounts for the difference.

	July, 1903. Percentage of waste sorted out.	July, 1903. Value of yield per ton milled.	Average for 1899. Percentage of waste sorted out.	Average for 1899. Value of yield per ton milled.

Rhodesia's New Labour Bureau.—Rhodesia is to have a brand new labour bureau in order, we assume, to tackle the native labour problem, which has been a little too much for the mighty intellects controlling the destinies of the mining industry. A deputation, consisting of three members of the Rhodesia Landowners' and Farmers' Association, Lieut.-Colonel Raleigh Grey, C.M.G., M.L.C., representing the Salisbury Chamber of Mines, and three members of the Rhodesia Chamber of Mines, met His Honour the Administrator on August 13 last—the news is contained in the report of the executive committee of the Rhodesia Chamber of Mines—and discussed the principle of a new native bureau "to recruit and distribute native labour for the industries of northern and southern Rhodesia." After some discussion, "His Honour agreed to recommend that the Government should advance the capital sum required to start the bureau, which should be self-supporting, provided the Rhodesia and Salisbury Chambers of Mines and Landowners' and Farmers' Associations were unanimous in their approval of such a scheme, and were prepared to support the organisation." Such is the momentous announcement. Perhaps Rhodesia intends to do without Chinese and settle the problem in her own way? We shall see.

Westralian Mining Results.—Accompanying the July report of the Chamber of Mines of Western Australia is a table of statistics giving an analysis of the working of twelve of the principal mines. These have been compiled by Mr. J. W. Sutherland, the general manager of the Golden Horseshoe, and are worthy of reproduction. The following table shows the grade of ore, costs, profits, etc., of the leading mines for the years 1901-1902:—

	1901.	1902.
Grade of ore	oz. 1.502	oz. 1.402
Per ton treated:—		
Gross value	£ s. d. 5 9 0.82	£ s. d. 4 18 11.47
Costs	3 6 3.11	2 17 6.02
Profit	2 2 9.71	2 1 5.45
Details of cost per ton treated:—

Mining in New South Wales.—A return of the mineral production of New South Wales for the half-year to the end of June has been published by the Government of the Colony. The quantity produced in the State was 245,984 crude ounces, and the yield 208,193 oz., of a value of £884,350. These figures, however, include a large quantity of gold obtained by the smelting companies from auriferous ores brought from other States, and treated in New South Wales. The following statement gives the yield and value of the gold obtained from ores and alluvium mined in the colony in the six months:—

1903.	Quantity: oz. crude.	Quantity: oz. fine.	Value. £
For 1st quarter	38,002	32,748	139,106
April	36,242	31,200	132,530
May	10,852	9,398	39,921
June	34,622	30,572	129,859
For half year	119,718	103,918	441,416

The quantity and value of the silver, copper, tin, and coal exported during the half-year was as follows:—

Product.	Quantity. oz.	Value. £
Silver ingots and matte	507,645	49,179
Silver-lead, concentrates and ore	163,928	649,657
Copper, ingots, matte and ore	4,444	204,339
Tin, ingots and ore	984	123,304
Coal	1,861,665	871,229

This is an increase of £159,419 compared with the corresponding period of last year, the exports of tin and coal being chiefly responsible for this result. The copper and tin exports include metal to the value of £27,318, and 47,481 respectively, refined from imported ores. With these exceptions the figures represent the output from the mines of New South Wales.

Company Reports and Balance Sheets

*** *The Editor will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Atchison, Topeka, and Santa Fe Railway Company.

For the year ended June 30 the gross earnings from operation amounted to $62,350,397, or an increase of $3,215,312, and as the income from other sources came to $177,135 more, at $1,317,994, the total revenue showed a fairly satisfactory increase of $3,392,447 at $63,668,391. Of the improvement in receipts freight traffic yielded by far the largest proportion, passenger traffic, and mail and miscellaneous earnings showing respective advances of $30,601 and $377,879 only. The number of passengers carried one mile showed an increase of 0.90 per cent. and the passenger-train mileage was 1.35 per cent. larger, but the average revenue per passenger train mile fell off from $1.04 to $1.03, or 0.96 per cent., while the aver-

age tons of revenue freight carried per train-mile increased by 12.99 per cent. for an increase in receipts of 4.74 per cent. This small improvement in revenue compared with the larger tonnage handled is ascribed to the freight being of a less profitable class, and it is explained that the cattle movement, which was large last year, yields a very small margin of profit, and although a disappointing wheat crop was compensated for by a large corn crop, the cotton movement was light, and citrus fruits showed little change compared with the previous year. But the question of working expenses was a very serious one for the company, and as these were exceedingly heavy, the benefit of the larger business done was more than swallowed up. Including taxes, rentals, and other charges, the cost of working the line came to $4,363,144 more, at $40,635,576, or 61.65 per cent. of the revenue against 57.34 per cent. a year ago, so that the net income was actually $970,697 smaller, and with fixed charges also heavier at $9,134,485, the available surplus came to $13,898,329, or, the report points out, equivalent to 5 per cent. on the preferred stock, and 8.033 per cent. on the common stock, compared with 9.66 per cent. on the latter last year. This boast, however, of the balance being sufficient to pay a large dividend on the common stock, is without justification, as under the arrangements made a year ago $2,500,000 per annum has to be found for twelve years to pay off an issue of $30,000,000 4 per cent. debentures then made, and provision for this payment and for discount on bonds absorbed $3,000,000, while $285,175 was appropriated to fuel reserve fund, and after paying the same dividend of 4 per cent. on the common stock as for the preceding twelve months, there was a balance of no more than $826,244 to be added to undivided profits, raising them to $16,853,660. How far that total is real time will show. Of the increase in working expenses $3,163,426 fell to maintenance of way, and about $1,000,000 of this at any rate was due to exceptional circumstances caused by the floods in Kansas, which did considerable damage to the line between Topeka and Kansas City. Another large amount was spent on rails, 61,613 tons of 85 lb. rails being provided out of revenue, to replace lighter sections taken for the reconstruction and building of branches. In spite of $3,496,717 spent on rolling stock out of capital, the maintenance of equipment cost $645,592 more, instead of a reduction in these charges being effected as had been expected, and many and various are the excuses given, including increased cost of material and labour, decreased efficiency of shop labour, and the impurity of water supplies for engines which necessitated extraordinary repairs and renewals of engine boilers. Capital expenditure on the construction and acquisition of additional railways and equipment and other properties, etc., reached a total of $15,325,851, but the net addition to the funded debt by the issue of general mortgage and other bonds given in exchange for the securities of other lines, after deducting the $2,500,000 paid off, was only $3,457,000, and the average amount of funded debt per mile owned works out slightly lower at $28,501, against $28,882, while the interest charges per mile of road are $16 lower at $1,152. The company continues its policy of buying up all sorts of little lines and projected lines to an extent which does not seem in any way justified by the results so far obtained. Three of these which are claimed to be valuable adjuncts of the system cost $89,227 to work, and produced an income of $26,956, leaving a deficit of $62,271, and it is difficult to believe that the quantity of traffic provided by such feeders is in any way equal to the direct loss involved. With regard to the other subsidiary or branch lines, the report is confined to vague generalities which give no real information.

Cleveland, Cincinnati, Chicago and St. Louis Railway Company.

For the year ended June 30 the gross earnings of this company, commonly known as the "Big Four," came to $20,390,762, or an advance of $1,673,690, and, as was the case in the preceding twelve months, all departments contributed to this increase, freight traffic yielding $1,314,202 and passenger $290,984 more. Of the improvement in freight revenue, however, only a small proportion was due to increased tonnage hauled, and no less than $1,061,242 came from the heavier charges exacted. The number of tons carried one mile showed an increase of 2.1 per cent., while the revenue was 11.0 per cent. higher; the average receipts per ton per mile rose from 5.92 mills to 6.44, and the average train earnings, with an increase in the load of 1 ton, were $2.15 per mile, against $1.97 a year ago. Passenger earnings also owed a large share of the increase to an advance in rates, as the number of passengers carried one mile was only 1.8 per cent. better, against an improvement in revenue of 5.3 per cent., so that the progress made by the company cannot really be ascribed to expanding business. Operating expenses, including taxes, rose from $13,744,920 to $15,669,430, or 76.85 of the revenue, against 73.43 per cent., and net earnings consequently showed a reduction of $250,820, at $4,721,331. Part of these increased costs is ascribed to higher wages and heavier cost of materials, which have affected both the maintenance of the property and the traffic expenses, the increase in the latter amounting to 14.3 per cent., but this company also follows the plan of replacing and adding to its locomotives and rolling stock out of revenue, and in pursuance of this policy purchased 10 engines, 336 freight and 19 passenger cars, built 59.27 miles of side track, and bought land at various points for additional right of way or terminals. In addition to all this, $311,262 was paid on account of new freight cars, 121.36 miles of eighty-pound steel rails were laid, and 3,966 lineal feet of trestles and wooden structures were replaced by stone and iron, so that the property seems to have been thoroughly looked after. It is admitted that this outlay is heavy for a company of the size of this one, but, at the same time, the president points out that the property is now in such good condition that in the event of a reduction in the volume of traffic the extraordinary outlay can be postponed or reduced without serious injury. After meeting all these charges, and providing for interest and rentals, the net income was $1,877,268, or sufficient to pay the dividend on the preferred stock and 4 per cent. for the year on the common stock, and leave a surplus of $257,731. To this was added sundry receipts of $152,712, making a total of $410,443, out of which $311,262 was spent on freight cars and $99,181 was added to the balance brought in, making $1,537,862 to be carried forward. In order to prepare for the business of the St. Louis Exposition next spring it has been considered advisable to improve the line between Cincinnati and St. Louis. A new line was therefore authorised of about 25 miles in length, a portion to be double, between Cincinnati and Indianapolis, which will relieve that division from many of its heavy grades and curves, and enable the business to be handled with greater economy and despatch, and to pay for this an issue of general mortgage bonds for $1,000,000 has been made. Between Pana and East St. Louis the company has a single track with some bad grades and a large amount of curvature. A contract, however, has been entered into with the St. Louis and San Francisco and the Chicago and Eastern Illinois roads for using that line, and paying their share of the interest upon the same and expenses of operating, under which this company agreed to make a double track and to build fifty miles of new line to avoid the bad section. This work has already been arranged for, and is expected to be finished early in 1904. To pay for the new line a mortgage will be issued guaranteed by this company, but the rental received from the two roads will more than cover the interest on the bonds, so that no additional charges will be made against revenue. Mr. M. E. Ingalls always waxes enthusiastic when dealing with the prospects for the coming year, and his language this time is quite delightful. The company, he says, had the most extraordinary business in July that it has ever had in its history, and even now the freight is pressing upon it beyond it capacity to handle, the increase being in every class of traffic, while expenses of working seem now to have reached their limit.

Norfolk and Western Railway Company.

Another excellent showing is made by this company in its results for the twelve months ended June 30. Total earnings were $21,160,675, or $3,608,470 more, and working expenses rose $2,561,203 to $12,697,430, leaving a net revenue of $8,463,245 against $7,415,977. Receipts from interest and dividends were almost doubled at $148,259, and after meeting interest on funded debt, rental of equipment, etc., there was a surplus of $6,040,189 to be dealt with, compared with $5,123,095 a year ago. From this was deducted $347,078 for discount and commission on securities sold, etc., $159,175 for payment to the Pocahontas Coal and Coke Company, on account of deficiency of interest on Norfolk and Western-Pocahontas joint bonds, and £2,500,000 was transferred to betterment fund, and after meeting the dividend on the preferred shares, and paying 3 per cent. on the common shares, the balance of $185,041 was added to the amount brought in, raising it to $3,000,587. The number of passengers carried rose by 538,959 to 3,169,574, and this branch yielded $462,015 more of revenue, but the average rate per passenger per mile again dropped from 2.350 to 2.308 cents. Freight traffic, however, was better in every way, the tonnage hauled showing an increase of 1,842,081 tons, and the income an advance of $3,082,068, the average rate per ton per mile being 0.023 cents higher at 0.486 cents. About 91.7 per cent. of the total tonnage and 87 per cent. of the earnings from freight were derived from local sources, and were largely due to the carriage of minerals, coal and coke contributing about 56 per cent. and coal and coke, limestone, ores, and other products of mines about 69 per cent. of the total tonnage. During the year $5,768,727 was spent on construction and betterments, including expenditure on second track, of which $1,712,285 was charged to betterment fund. A sum of $1,500,000, which stood in the last accounts to the debit of "Equipment Trust of 1902," was also charged to this account, reducing it to $2,697,996. To meet the capital expenditure an addition of $3,002,000 was made to the funded debt, of which $3,000,000 bonds were sold, and the balance used to acquire $3,300 of undeposited bonds of the old company. The company continues to add to its rolling stock by means of equipment trust certificates, and issued two more series representing an aggregate value of at least $2,375,000, repayable in annual instalments, and bearing interest at 4 per cent. per annum. Beyond this $3,041,414, or an increase of about 30 per cent. over 1901-2, was spent on maintenance, out of revenue, including $540,000 credited to the fund for acquiring new equipment, and $251,928 charged for equipment destroyed or retired from service.

Chicago, Milwaukee, and St. Paul Railway Company.

Gross earnings for the year ended June 30 were $47,662,737, or an increase of $2,049,613, of which $1,280,233 came from freight and $623,235 from passenger traffic. The number of tons of freight carried was 21,304,638, or 1,419,065 tons more than a year ago, the largest improvements being 574,363 tons in bituminous coal, 122,553 tons in iron and other ores, 127,720 tons in stone, sand, etc., and 303,586 tons in forest products other than sash-doors and blinds. Wheat traffic showed a decrease of 115,506 tons, corn of 168,207 tons, and anthracite coal of 191,530 tons. Agricultural products in general yielded 9,073 tons less at 4,922,169 tons, and comprised only 23.10 per cent. of the total tonnage compared with 24.80 per cent. a year ago. Other commodities carried, however, rose by 1,428,138 tons to 16,382,469 tons, or 76.90 per cent., against 75.20 per cent., but the average train load was smaller, and the revenue per mile came to $2,113 only, against $2,136. The passenger traffic showed a substantial increase of 427,244, or 4.66 per cent. in numbers, but the revenue per passenger per mile was also slightly reduced by .008 cent to 2.309 cents. Working expenses, including taxes, notwithstanding a reduction of $1,370,000 in the amount transferred to renewal and

improvement account, were $1,401,279 higher, at $31,598,174, and the proportion to revenue was 0.10 per cent. up at 66.30 per cent. This advance was in very large measure due to increased rates of pay to practically all classes of employees, and to the heavier cost of coal, which was about 22.21 cents per ton dearer, materials and supplies, but was also partly owing to the fact that in addition to the transfer to renewal account already mentioned, further sums were expended on the roads and property, making a total of $2,333,619. The net earnings from operations were $16,064,563, or an increase of $648,333, and with $510,031 received from other sources, gave a total income of $16,574,594, out of which fixed charges were met, and dividends of 7 per cent. for the year have been declared on both the preferred and ordinary stocks. Capital expenditure, including $2,143,801 on new locomotives and cars, $2,842,094 on construction of new lines, and $1,138,690 on second main track, amounted to $8,568,924, but no additions were made to the capital stock beyond $1,042,000 preferred stock issued in exchange for bonds of a similar amount cancelled.

Houlder, Brothers and Co.

A week or two back the market value of this company's debenture stock fell rather heavily, a decline of 7 being witnessed within a few days, and we began to fear that the year to December 31 last had turned out badly. Now that the report and balance-sheet are published, it appears that the twelve months were exceedingly prosperous, and we can only conclude that the security has lost favour because so little is known of the company's affairs, or because the more recent trading has been unfavourable. Net profit, after providing the fixed remuneration of the managing directors was £74,132, from which debenture and preference interest absorb £11,125. Then the balance of preliminary expenses £423 is written off, and £1,050 is appropriated to meet depreciation on the reserve fund investments, leaving £61,534 to be dealt with. Regarding the disposition of such sum we cannot do better than use the words of the report:—"Out of this the further remuneration of the managing directors, as per agreement, will be paid, and from the remainder the directors propose to place £10,000 to the credit of a 'Reserve for future dividends on ordinary shares account,' and to apply the balance to a dividend on the ordinary shares for the year 1902." This ordinary capital, amounting to £100,000, was not issued to the public, and the directors do not see fit to disclose the amount of the dividend paid, but the available balance suggests the comfortable little return of about 50 per cent. A study of the balance-sheet does not leave us appreciably wiser. Reserve remains at £50,000, separately invested, and as already mentioned, £10,000 has been set aside as a dividend equalisation fund. Investments in connection with the business at cost have grown a little to £227,677, and floating liabilities and assets reach very large proportions, debts owing by the company, including bills payable, undrawn dividends, etc., amount to no less than £309,010, against debtors, advances on steamers' working accounts, cash at bankers and in hand, and bills payable, all one item, of £297,170. Can it be that some of the debts due by the concern must soon be liquidated and that another debenture stock issue is in the wind?

Dick, Kerr and Co.

This big engineering business did remarkably well during the twelve months ended June 30. Net profits are returned at £110,449, from which debenture interest, trustees' fees, and interest on loan required £8,172, and debenture stock premium £300. Under the trust deed one-fifth of the net profits must be set aside to a reserve, securing the debenture stock, but for the past year the directors appropriate an additional £23,265 to this fund, or £40,000 in all. Then the preference dividend absorbs £18,300, the ordinary shares receive a 10 per cent. dividend, and a 5 per cent. bonus, and £4,677 is added to the carry forward, making it £35,545. Capital expenditure, including goodwill and patents, is entered at £572,771, but there is no mention either of additions for the year or of the amount allowed for depreciation, though the latter is doubtless on a generous scale. Total reserves come to £151,560, part of which is invested outside the business, sundry investments being down for £84,653. The rather large sum of £336,042 is owing to creditors, against only £63,600 owing by sundry debtors, but there is an item, contracts due for work, stock of materials, etc., reaching £509,294, and cash balances stand at £90,103.

Hong Kong and Shanghai Banking Corporation.

This flourishing Eastern bank earned a net profit of $2,155,210 during the six months ended June 30, the total being arrived at after making provision for bad and doubtful debts, expenses, and interest. To it is added $1,435,473 brought forward, making $3,590,683, and the directors again propose a dividend at the rate of £1 10s. per share, absorbing $533,333 at the exchange of 4s. 6d. But the exchange of the day was no more than 1s. 8d., and the difference between these amounts requires a further sum of $906,667, so that the dividend payment actually absorbs $1,440,000. In view, too, of this big depreciation in the sterling value of the dollar, the directors continue to strengthen the silver reserve, and add $500,000 for the past half-year, bringing the total to $6,000,000. Then $200,000 is written off bank premises and $1,435,683 is carried forward. Besides the silver reserve there is the sterling reserve equalling the paid up capital of $10,000,000, largely invested in Consols and National War Loan, and as both are valued at 90, the depreciation in the former needs no serious immediate provision for. On June 30 last the bank had notes in circulation of $13,118,158, current accounts $99,820,889, fixed deposits $98,193,040, and bills payable $12,273,676. On the credit side cash comes to $33,143,734, in addition to $5,500,000 lodged against excess note issue, and $3,974,551 bullion in hand and in transit. Indian Government rupee paper comes to $2,207,902, and Consols, Colonial, and other securities, apart from the reserve fund investments, to $9,960,869. Bills discounted, loans and credits reach $96,592,382, and bills receivable $90,055,865. Bank premises are very modestly valued at $1,311,142, and altogether the display is excellent.

Bank of Australasia.

This important bank makes an excellent display for the six months ended April 14 last. After deducting rebate on bills current and providing for bad and doubtful debts, the gross profits reached the big sum of £297,588, from which general charges absorbed £119,956, and rates and taxes £19,926, together £139,882. This left the net revenue at £157,705, being an increase of £13,237 compared with the same period of the previous year, and with the addition of £14,648 brought forward, the sum for appropriation is £172,354, against £158,705. First the directors increase the dividend from 11 to 12 per cent. per annum, and then add £30,000 to the reserve fund, and apply a similar sum to write down the reserve fund Consols to 85, leaving £16,354 to be carried forward. A year ago reserve reached £40,000, and £16,000 was placed to bank premises. Circulation has increased £68,879 to £567,903, and deposits are a little higher at £14,758,614, but bills payable and other liabilities, £2,381,115, remain about the same. Specie bullion and cash balance have risen £100,000 to the splendid total of £3,290,633, and another good movement in present circumstances is the decline of £841,000 to £682,000 in the loans at call and short notice. It has led to an advance of £1,000,000 to £14,770,153 in the bills receivable, advances, etc., and investments, including British Government securities of £991,340, have gone up £76,617 to £1,419,106. Bank premises are again lower at £358,093, and in all respects the position seems satisfactory.

Delhi and London Bank.

The decline in the profits of this small institution is becoming rather persistent, and for the fourth successive half-year the directors have to report a falling off. The circumstance would not be so serious but for the fact that the assets include various irregular accounts estimated to require £17,000 for eventual losses, in the provision of which but little headway is now made. In the six months to June 1901 £2,000 was set aside to meet these doubtful accounts, but the half-yearly contribution has fallen to £500, and unless some improvement is effected many years must elapse before the losses are entirely made good. Gross profits were £19,844 against £20,132, and as expenses were actually higher at £12,625, the net balance shows a shrinkage of £599 at £7,219. Then the sum brought forward was £340 less at £4,989, and the amount for disposal is £12,207, compared with £13,148. Dividend, however, is maintained at 4 per cent. per annum, but £500 less at £500 is placed to doubtful debt account and the balance forward reduced to £4,955. Current deposit and other accounts have advanced £121,835 to £1,403,618, bills payable amount to £24,275, and loans have been raised to the amount of £56,000. Cash is rather smaller at £141,126, notwithstanding the sharp increase in liabilities, and we note loans and advances and bills discounted £53,119 up at £1,495,546. Government securities are a little higher at £78,915, and other securities, including bills purchased, stand at £86,356.

NEXT WEEK'S MEETINGS.

Monday, September 28.

Armstrong, Whitworth, and Co.—Newcastle-upon-Tyne, 1 p.m.
Elmore's Trust.—Winchester House, 3 p.m.
Northern Investment.—Edinburgh, noon.
Querette (Parent) Co.—Winchester House, 2 p.m.

Tuesday, September 29.

Australian Mining.—42, New Broad Street, 2 p.m.
Dick Kerr and Co.—Cannon Street Hotel, noon.
D. M. Wilson's Options.—Winchester House, noon.
Ilford Co.—Winchester House, 2 p.m.
Mersey Railway.—Worcester House, noon.
Ottoman Railway.—50, Old Broad Street, noon.
Weardale Lead.—Cannon Street Hotel, noon.
Weardale Steel, Coal, etc.—Newcastle-upon-Tyne, 3 p.m.

Wednesday, September 30.

Alliance and Dublin Consumers Gas.—Dublin, 1 p.m.
Bexhill Water and Gas.—Cannon Street Hotel, noon.
British Gas Light.—11, George Yard,
Crosswell's Cardiff Brewery.—Cardiff, 2.30 p.m.
Electricity Supply for Spain.—College Hill Chambers, 12.30 p.m.
Highland Railway.—Inverness, noon.
Killin Railway.—Killin, 11 a.m.
Lyceum Theatre.—Winchester House, 11.30 a.m.
Tennant Brothers.—Sheffield, 12.30 p.m.

Thursday, October 1.

Bank of Australasia.—4, Threadneedle Street, 1 p.m.
Frederick Hotels.—Hotel Russell, noon.

Broken Hill Water Supply.—During the half-year to the end of June the revenue from water sales, meter rents, and sundry receipts came to £17,805, whilst interest contributed £652. After deducting the outgo a profit of £13,397 is shown, increased to £29,504 by adding the balance of £16,107 brought forward. Of this £10,000 was appropriated in paying two dividends of 6d. per share, £2,000 is transferred to the contingency reserve fund, £503 goes in income-tax, and £17,000 is carried forward. As usual, a strong balance-sheet is issued.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Bombay, Baroda, and Central India.—Dividend on the consolidated stock of £1 3s. 6d. per cent., in addition to guaranteed interest, making in all a distribution of £3 13s. 6d. per cent. for the half-year, as against £3 11s. per cent. for the corresponding period of last year.

Buenos Ayres and Rosario Railway.—Interim dividend on the ordinary stock at the rate of 4 per cent. per annum, with £221,556 carried forward.

Great Indian Peninsula Railway.—Dividend of 17s. per cent. on the 3 per cent. stock, in addition to the guaranteed interest, making a total distribution of £2 7s. per cent. for the half-year to June 30.

Horncastle.—A dividend of 7½ per cent.

Lanarkshire and Ayrshire.—Dividend at the rate of 4 per cent. per annum on the ordinary shares, carrying forward £1,402.

New York Central.—Quarterly dividend of 1¼ per cent.

BANKS.

Bank of Australia.—Dividend of £2 8s. per share, placing £30,000 to reserve, and carrying forward £16,353.

Chartered of India, Australia and China.—Interim dividend for half-year ended June 30 at the rate of 10 per cent. per annum.

Delhi and London.—Dividend at the rate of 4 per cent. per annum, carrying forward £4,955.

London and Brazilian.—Interim dividend of 10s. per share for half-year ended July 31, being at the rate of 10 per cent. per annum.

TRAMWAYS.

Calcutta.—Interim dividend of 2s. 6d. per share (being at the rate of 5 per cent. per annum), for half-year ended June 30.

City of Buenos Ayres.—Interim dividend of 4s. per share for half-year ended June 30, placing £3,000 to reserve, and carrying forward £3,001.

BREWERIES.

Crosswells, Cardiff.—Distribution of 5 per cent. on the ordinary shares.

Wilson's Brewery.—Interim dividend on the ordinary shares at the rate of 12½ per cent. per annum for half-year.

MINES.

Brownhill Extended.—Interim dividend of 5s. per share.

Ivanhoe Gold.—Second quarterly interim dividend in respect of 1903 of 5s. per share, payable Oct. 28.

Libiola Copper.—Interim dividend of 1s. per share.

Linares Lead.—Dividend of 1s. 6d. per share, payable Oct. 10.

No. 2 South Great Eastern Gold.—Dividend (No. 62) of 1s. per share, payable 25th inst.

Queen Cross Reef Gold.—Dividend (No. 33) of 1s. and a bonus of 1s. per share, payable Oct. 7.

MISCELLANEOUS.

African Steam Ship.—Usual interim dividend of 6s. per share.

Anglo-American Telegraph.—Interim dividend for the quarter ending September 30 of 15s. per cent. on the ordinary stock.

Ashton Vale Iron.—Dividend of 1½ per cent., carrying forward £128.

Aux Classes Laborieuses.—Interim dividend of 6 per cent. on ordinary share capital, payable Oct. 1.

Babcock and Wilcox.—Interim dividend on the ordinary shares at the rate of 14 per cent. per annum.

Ben Evans and Co.—Interim dividend on the ordinary shares at the rate of 7 per cent. per annum for half-year ended August 31, payable Oct. 1.

Birmingham Small Arms.—Final dividend for year ended July 31 of 5 per cent. on ordinary shares, together with a bonus of 5s. per share, making total dividend for the year of 10 per cent., in addition to a bonus of 5s. per share.

British American Land.—Interim dividend of 12s. 6d. per share on the "A" shares, payable Oct. 9.

Calcutta Electric Supply.—Interim dividend for half-year ended June 30, at the rate of 6 per cent. per annum.

Chadburn's (Ship) Telegraph.—Usual interim dividends on the preference and ordinary shares at the rate of 6 per cent. per annum.

Chamberlain, King, and Jones.—Interim dividend at the rate of 5 per cent. per annum on the ordinary shares for the six months ended July 31.

Charles Kinloch and Co.—Dividend at the rate of 6 per cent. per annum on the ordinary shares for half-year ended June 30.

Chloride Electrical Storage.—Dividend at the rate of 8 per cent. on the ordinary shares.

Coltness Iron.—Dividend of 8 per cent., and a bonus of 5 per cent. on the ordinary shares for year ended July 31, adding £35,000 to reserve, and carrying forward £8,442.

D. H. Evans and Co.—Interim dividend for half-year ended August 19 of 5 per cent. on the ordinary and £2 per share on the founders' shares.

Dick, Kerr, and Co.—Dividend of 10 per cent. and a bonus of 5 per cent. on the ordinary shares, carrying forward £35,545.

Dimbula Valley (Ceylon) Tea.—Interim dividend of 4 per cent. on the ordinary shares on account of the year ending December 31 next, payable Oct. 1.

Direct Spanish Telegraph.—Interim dividend at the rate of 4 per cent. on the ordinary shares for half-year ended June 30, payable Oct. 1.

Direct West India Cable.—Further dividend of 3 per cent., making 6 per cent. for the year ended June 30.

East London Waterworks.—Dividend at the rate of 8 per cent. per annum.

Eastern Extension, Australasia, and China Telegraph.—Interim dividend for the quarter ended June 30 of 2s. 6d. per share, payable 15th prox.

Eastern Telegraph.—Interim dividend of 1¼ per cent. on the ordinary stock, tax free, for quarter ended June 30, payable Oct. 15.

Evered and Co.—Interim dividend for the half-year ended June 30 at the rate of 7½ per cent. per annum, payable 30th inst.

Folkestone Electricity Supply.—Interim dividend at the rate of 4 per cent. per annum for half-year ended June 30, payable on the ordinary shares on the 1st prox.

Frederick Hotels.—Dividend of 2½ per cent. on the preferred ordinary shares, carrying forward £1,368.

Halifax and Bermudas Cable.—Final dividend of 2½ per cent., carrying forward £745.

Harper's South of England Automatic.—Final dividend for half-year ended August 29 at the rate of 5 per cent. per annum on the ordinary shares, making 5 per cent. for the year.

John Barker and Co.—Interim dividend for the six months ended August 31 of 8d. per share on ordinary shares.

John Mantle and Sons.—Final dividend at the rate of 10 per cent. per annum on the ordinary shares, making 7½ per cent. for the year.

King's Lynn Docks and Railway.—Dividend at the rate of 1¾ per cent.

Mount Vernon (Ceylon) Tea.—Interim dividend at the rate of 8 per cent. per annum for the half-year ended June 30.

New Zealand Shipping.—Dividend of 5 per cent. for the year, of which 2½ per cent. was paid on April 1, 1903.

Nicholson's.—Interim dividend on the ordinary shares for past half-year at the rate of 5 per cent. per annum.

Northern Investments of New Zealand.—Dividend of 5 per cent. for the year, carrying forward £219.

Parker, Winder, and Abchurch.—Interim dividend at the rate of 7½ per cent. per annum on the ordinary shares for half-year ended June 30.

Paterson, Laing, and Bruce (1901).—Dividend at the rate of 6 per cent. per annum, on the cumulative preference shares, for half-year ended Sept. 30.

River Plate Trust Loan and Agency.—Interim dividend at the rate of 13½ per cent. per annum on the "A" and 3 per cent. per annum on the "B" shares for half-year ended June 30, payable 1st prox.

S. Hildesheimer.—Interim dividend at the rate of 6 per cent. per annum for half-year ended June 30 on the ordinary shares.

San Paulo Gas.—Interim dividend at the rate of 6 per cent. per annum for half-year ended June 30, payable 29th inst.

Scottish Ceylon Tea.—Interim dividend at the rate of 6 per cent. per annum on the ordinary shares for half-year ended June 30.

Sheepbridge Coal and Iron.—Dividend of 1s. 3d. each on the ordinary shares, making 10 per cent. for the year, carrying forward £15,692.

Staveley Coal and Iron.—Dividend of 10 per cent.

W. M. Cuthbert and Co.—Dividend of 10 per cent. per annum on the ordinary shares, adding £20,000 to reserve, and carrying forward £4,067.

Weardale Lead.—Dividend of 2½ per cent., carrying forward £3,169.

Witbank Colliery.—Dividend (No. 2), of 7½ per cent. (1s. 6d. per share).

Wright, Bindley and Gell.—Dividend of 6 per cent. on the ordinary shares, carrying forward £1,725.

MINING RETURNS.

Alaska Mexican.—Crushed, 21,133 tons ore; value $28,728; saved 437 tons sulphurets; value $31,420.

Alaska United.—Crushed, 16,800 tons ore; value $17,169; saved 350 tons sulphurets; value of same, $8,690.

Brilliant Block Gold.—Value of the bullion produced at the cyanide works £440.

Brilliant Central Gold.—Crushed, 3,210 tons of quartz for a yield of 3,044 oz. Value of the cyanide bullion £1,496.

British Broken Hill Proprietary.—4,240 tons crude ore produced 724 tons concentrates, which contain 413 tons lead and 20,272 oz. silver.

Caylloma Silver.—28,000 oz. fine silver in export ores; 14,000 oz. fine silver in bullion.

Central Chili Copper.—Production of regulus 338 tons.

El Oro.—Mill crushed, 9,194 tons; producing from the new mill, $120,354; from the old cyanide plant, $3,096. Total $123,450.

Komata Reefs.—Crushed 1,250 tons; bullion recovered, £2,600.

Mount Lyell.—Total quantity of 24,852 tons of ore treated, being 20,820 tons from the Mount Lyell Mine and 4,032 tons from the North Lyell Mine. In addition to the above, there have been treated 2,115 tons of metal, bearing fluxes. The converters produced 472 tons of blister copper, containing—copper, 467 tons; silver, 42,785 oz.; gold, 1,571 oz.

Mysore West and Wynaad.—Crushed 1,900 tons, yield 1,187 oz. of bar gold.

New Ravenswood.—1,100 tons of ore, value, £4,000; 280 tons of concentrates and smelting ore produced value £2,800.

No. 2 South Great Eastern.—Crushed 3,350 tons for 3,822 oz.

Ouro Preto of Brazil.—6,219 tons of ore produced 1,943 oz.

Queen Cross Reef Gold.—Crushed 3,271 tons for 9,828 oz.; residues £4,033. Total value, £37,450.

The Pennsylvania Railroad Company announces that stockholders who have subscribed for the capital stock allotted to them under resolution of the board of March 25 last, and paid thereon the instalment of 50 per cent., may pay the balance in one instalment between October 15 and 26, instead of two payments. A circular in further explanation is being sent out to the stockholders interested.

SOUTH AFRICAN MINE RETURNS.

The August return from the mines now crushing in the Transvaal is the highest since the suspension of operations in 1899, and tops the output of July by over 20,000 oz., whilst the value, as our tables show, exceeds that of the preceding month by £86,122. From the Rand itself the production totalled 265,269 oz., whilst that from the outside districts was 9,349 oz., an aggregate of 271,918 oz., compared with 162,750 oz. for the corresponding month of last year, the value being £1,156,039 against £691,322. This was a substantial improvement in the short period of four weeks, exhibiting a much greater ratio of increase than the preceding months, and is hardly consistent with the tales of labour shortage and the threatened "sickness" of the industry, to quote a mine magnate. As usual some of the individual returns are erratic, several showing biggish decreases, and others making up for these by large increases. The Robinson, for instance, returns 170 oz. less, and the profit shows a drop of £582. The Rose Deep output has fallen by 730 oz., whilst the profit is actually £4,100 lower. These figures are the more astounding and incomprehensible as the company had 15 more stamps operating. This is a member of the Wernher, Beit group, and an explanation of this perplexing phenomenon would be interesting, as well as enlightening. Large all-round decreases are shown by the Langlaagte Deep, Crown Deep, the Bonanza, and others, but these are off-set by the excellent improvements in the returns of the Jumpers Deep, Geldenhuis Deep, Nourse Deep, Ferreira, Glen Deep Jumpers, Geldenhuis Estate, Durban Roodepoort Deep, and a few more. Two new companies have entered the crushing list—the South Randfontein and Knight's Deep. The latter's return is the first in its history, and is a poor one. It is explained, however, by the manager that mostly dump ore was put through the mill, as it is better to do this while the plates are settling than to do it later.

‡ Loss.

RHODESIAN MINING RETURNS.

Another trouble has overtaken poor Rhodesia in the shape of the disappointing return for the month of August. The majority of the mines, as our table records, show a falling off in their outputs, with the result that the aggregate production for the colony exhibits a big decline of 4,384 oz., at a total of 19,187 oz. for the month. This is the lowest figure since February last, and is indicative of a sad state of affairs in this wonderful gold field. Of course it is due to the scarcity of native labour, not to any natural scarcity of gold, say the wise men. A month ago we said, "we are afraid we have seen the last of the records for a time." This prediction has been speedily verified.

Gold in Dutch Guiana.—According to the report of Consul Pigott for the past year there has been a further fall in the gold production of Dutch Guiana, a fact that may not seriously concern forty million inhabitants of this country. However, it is just as well to know it, as it adds to one's knowledge of the gold production and resources of the world. The following are the amounts obtained during the past five years:—1898, 864,990 grammes; 1899, 893,197 grammes; 1900, 842,272 grammes; 1901, 752,842 grammes; and 1902, 587,604 grammes. The hope is expressed that the long-talked of railway to the interior will be commenced during the current year, though so far no definite decision has been taken. The home Government have decided to do the work themselves.

RAILWAY TRAFFIC RETURNS.

Foreign.

Argentine North-Eastern.—Traffic receipts for the week ended August 21, $10,298; decrease, $792. Aggregate from January 1, $404,956; increase, $7,921.

Assam Bengal (Chittagong Section).—Traffic receipts for week ended August 22, Rs. 25,334; increase, Rs. 397. Aggregate from July 1, Rs. 2,18,773; increase, Rs. 4,416.

Assam Bengal (Gauhati Section).—Traffic receipts for week ended August 22, Rs. 8,264; decrease, Rs. 1,159. Aggregate from July 1, Rs. 61,505; increase, Rs. 17,364.

Bengal Central Railway.—Traffic receipts for week ending August 29, Rs. 33,662; increase, Rs. 4,939. Aggregate from July 1, Rs. 224,845; increase, Rs. 39,006.

Canadian Northern Railway.—Traffic receipts for week ended September 14, $57,100; increase, $16,500. Total, from July 1, $620,900; increase, $286,200.

Lucknow Bareilly Railway.—Traffic receipts for week ended August 22, Rs. 18,126; decrease, Rs. 1,910. Aggregate from July 1, Rs. 1,53,603; decrease, Rs. 9,533.

Quebec Central Railway.—Traffic receipts for the 2nd week of September, $12,808; decrease, $445. Aggregate from January 1, $490,262; increase, $19,312.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended August 22, Rs. 7,421; decrease, Rs. 343. Aggregate from July 1, Rs. 65,820; decrease, Rs. 1,960.

Salvador Railway.—Traffic receipts for week ended September 19, $6,250; increase, $500.

White Pass and Yukon Railway.—Traffic receipts for the week ended August 31 amounted to $111,453.

English.

Cleator and Workington.—Gross receipts for the week ending Sept. 20, £1,138; increase, £82. Total receipts from July 1, £12,642; decrease, £186.

Cockermouth and Keswick Railway.—Receipts for week ending Sept. 20, £994; decrease, £19. Aggregate from July 1, £13,166; decrease, £801.

East and West Yorkshire Union Railway.—Traffic receipts for the week ending Sept. 19, £452; increase £74. Aggregate from July 1, £4,392; increase, £372.

Liverpool Overhead Railway.—Traffic receipts for week ending September 20, £1,690; increase, £176. Aggregate from July 1, £20,596; increase, £1,264.

TRAMWAY AND OMNIBUS RECEIPTS.

Home.

Aston Manor Urban.—Traffic receipts for week ending Sept. 19, £543, increase £10; aggregate from July 1, £6,629, increase £189.

Belfast Street.—Traffic receipts for week ending Sept. 19, £2,670, increase £79; aggregate from July 1, £33,966, increase £1,467.

Birmingham and Midland.—Traffic receipts for week ending Sept. 18, £802, decrease £14; aggregate from July 1, £10,119, increase £247.

Birmingham City.—Traffic receipts for week ending Sept. 19, £5,095, increase £144; aggregate from July 1, £62,060, increase £2,424.

Blessington and Poulaphouca.—Traffic receipts for the week ending Sept. 20, £25, increase £1; aggregate from July 1, £387, decrease £27.

Bristol Tramways and Carriage.—Traffic receipts for week ending Sept. 18, £4,894, increase £73; aggregate from July 1, £63,235 increase £1,443.

Burnley Corporation.—Traffic receipts for week ending Sept. 19, £851, increase for week £175; aggregate from July 1, £10,545 increase £1,765.

Dublin and Blessington.—Traffic receipts for week ending Sept. 20, £176, decrease £2; aggregate from July 1, £2,113, decrease £85.

Dublin and Lucan.—Traffic receipts for week ending Sept. 20, £132, decrease £1; aggregate from July 1, £1,761, increase £84.

Dublin United.—Traffic receipts for three days ending Sept. 19, £4,811, increase £105; aggregate from July 1, £66,516, increase £6,256.

Edinburgh and District.—Traffic receipts for week ending August 15, £4,304, increase £323; aggregate from January 1, £142,790, increase £18,701.

Edinburgh Street.—Traffic receipts for week ending Sept. 19, £472.

Harrow Road and Paddington.—Traffic receipts for week ending Sept. 18, £275, decrease £30.

Isle of Thanet.—Traffic receipts for week ending Sept. 19, £1,050; decrease, £215; aggregate from July 1, £17,390, decrease £876.

London General Omnibus.—Traffic receipts for week ending Sept. 19, £23,961, increase £1,138; aggregate from July 1, £298,543, increase £3,763.

London Road Car.—Traffic receipts for week ending Sept. 19, £7,163, decrease £397; aggregate from July 1, £91,503, decrease £3,046.

Rossendale Valley.—Traffic receipts for week ending Sept. 18, £172, decrease £8; aggregate from July 1, £2,214, increase £3.

Foreign.

Anglo-Argentine.—Traffic receipts for week ending August 24, £6,263, increase £2,274; aggregate from January 1, £196,971, increase £45,137.

Barcelona.—Traffic receipts for week ending Sept. 19, £2,392, decrease £98; aggregate from January 1, £87,316, decrease £1,564.

Barcelona, Ensanche y Gracia.—Traffic receipts for week ending Sept. 19, £300, increase £185; aggregate from January 1, £10,924, increase £6,292.

Brazilian Street.—Traffic receipts for the month of July Rs. 35,553; increase Rs. 63. Total receipts from August 1, 1902, Rs. 473,933, decrease Rs. 7,662.

Brisbane.—Traffic receipts for the week ending August 5, £2,212, decrease £59.

British Columbia Electric.—Traffic receipts from July 1 to July 31, $61,845, increase $12,627. Net earnings $23,953, increase $8,395.

Buenos Ayres and Belgrano.—Traffic receipts for the week ending Aug. 23, £3,073, increase £443.

Buenos Ayres Grand National.—Traffic receipts for week ending Aug. 22, $42,460, increase $5,796; aggregate increase from April, 1903, $13,621.

Calais.—Traffic receipts for week ending Sept. 19, £184; decrease £12; aggregate from July 1, £2,633, increase £27.

Calcutta.—Traffic receipts for week ending Sept. 19, Rs. 35,714, increase Rs. 6,751; aggregate from July 1, Rs. 392,896, increase Rs. 86,115.

Carthagena and Herrerias.—Traffic receipts for the month of August, £2,915, decrease £863; aggregate to July 31, £30,169; increase £2,673.

Lombardy Road.—Traffic receipts for the month of July, £1,356, increase £16; aggregate from January 1, £8,795, increase £144.

Twin City Rapid.—Traffic receipts for the month of July $364,471, increase $27,019; aggregate from January 1, $2,283,124; increase $279,233. Net traffic receipts $200,433, increase $5,351; aggregate from January 1, $1,196,715, increase $115,564.

COMPANY MEETING.

DUNDERLAND IRON ORE COMPANY.

The ordinary general meeting was held on Thursday, September 24 at the Cannon Street Hotel, Sir David Dale presiding.

The Chairman, in moving the adoption of the report, stated that only £2,392 was now due on account of the second instalment of £1 5s. per share, which was payable on March 31 last; and, with regard to the final instalment of £1 5s., which was due this month, £35,143 had been already paid. He therefore thought that their shareholders had paid up their instalments with more than the usual regularity and punctuality. Nothing whatever had arisen to modify in any degree the expectations as to the success of the company which were held out in the prospectus. He made this remark more especially with reference to the discouragement which some shareholders appeared to entertain, judging from the fact that the shares were at a discount. He might remind them of what occurred in connection with the Oconera Iron Ore Company, of which he was chairman, and which was probably known to many present as one of the most successful concerns raising large quantities of Spanish ore. That company was formed about 30 years ago, and it took twice—almost three times—as long as had been anticipated to bring their works into operation, although he admitted that the disturbances which prevailed in Spain at the time in connection with the Carlist movement contributed to the delay. The result, however, was that for four or five years after that company was formed no dividend was paid, whereas for many years past they had paid dividends varying from 50 per cent. to 70 per cent. He was not at all holding out the idea that after the same interval from the beginning of operations the Dunderland Company would be able to achieve the same result. All he desired to point out was the success which had attended the operations of the Oconera Company, although no dividends were paid by them for four or five years, and although their shares once stood at a discount of 30 per cent. compared with their present premium of 550 per cent. Nothing had occurred to modify the expectations held out in the prospectus with reference to the ultimate result of the company's operations, excepting in regard to two small points—namely, that more time would be required for completing the works, and therefore for raising and selling the ore, than had been anticipated. It had been thought that a state of mining activity would have been established by June 30, 1904, but he feared that that result would not be attained until a year later. He might, however, point out, with regard to the preference shares more particularly, that, while the guarantee of 6 per cent. only extended to June 30 next, the dividend on these shares was cumulative; and he quite hoped that any temporary suspension in its payment after that date would be recouped by the operations of the company. The causes of the delay were not far to seek. An unexpected difficulty had been met with in the very large cutting with which their railway commenced almost at the port end of it. A hill of considerable dimensions had to be cut through, and their engineers had had to deal with a very difficult slimy material. The result had been to prevent the material from being got up to the other end of the line for the construction of the bridge. The delay of a year in the completion of the works would to some extent add to the cost, but it would be nothing material. The delay and the additional expense would have no influence whatever on the future operations of the company. They had no reason to doubt that the ore deposits were of the magnitude and importance which they believed them to be when the prospectus was issued; they had no reason to doubt the quality of the ore or the cost of raising and treating it, as set out in the prospectus; and they had no reason to doubt the value of the ore as measured by its iron percentage in the resulting briquettes they would send to market. Of course, the market value of the briquettes must vary from time to time, according to the conditions of the steel trade, but there was nothing discouraging in that point. As regarded the processes, he might state that the special processes which were to some extent invented by Mr. Edison would be carried out. They had no reason to doubt that the magnetic separation would be a success. They had had some anxiety, more particularly in regard to the briqetting process—not as to the possibility of accomplishing what was necessary, but as to the best mode of briquetting—including in the word "briquetting" the whole treatment of the concentrate from that stage to the finished article to be sent to the market. Important inquiries and experiments had been made, and the directors had been satisfied that a process of briquetting which dispensed with the use of pitch as a binding material might be successfully applied to the treatment of Dunderland ore, and, as a result, the briquetting process would, they had every reason to believe, be less costly than it would otherwise have been. After referring with satisfaction to the report which had been made by Mr. Moncrieff on his inspection of the railway and harbour works, he remarked that they were fortunate, again, in having through the Standard Construction Company, the services of Mr. Simkin, who had already designed the necessary machinery for the company, subject to Mr. Edison's approval.

Sir J. Lawrence, M.P. (the deputy chairman), in seconding the motion, remarked that Mr. Edison had a great hope that he would be able to give a new lease of life to the Bessemer steel industries and plants of this country by the utilisation of low-grade ores. The company's financial position was very strong. They had about £225,000 at the band, and £175,000 more to come in. They were therefore in no immediate want of money, and he hoped that by the time this £400,000 had been spent they would very nearly have reached the point of commencing operations on a large scale.

In answer to questions, the chairman stated that the directors had always expected that the company would have to pay something for patent rights in connection with a part of the briqetting process. It now seemed probable that the only legal claim might have reference to the type of furnace in which the briquettes had to be burnt. With regard to the statement in the directors' report that a suggested export tax on iron ore had been abandoned by the Norwegian Parliament, he thought it was rather reassurring that they had been able to make this announcement. He thought it would not be easy now for any Chancellor of the Exchequer in Norway to recommend such a tax.

The motion was unanimously adopted.

EUROPEAN PETROLEUM CO., LIMITED.

The ordinary general meeting was held on Thursday, September, 24, at Winchester House. Mr. H. Pike Pease, M.P., who presided, observed that the profits for the year ended May 13 (April 30, O.S.), were £44,300, and, adding the balance from last year, the total was £50,241. From this they had to deduct for interest and debentures £30,616, and for depreciation account—which, according to the trust deed, had been used to purchase and cancel £35,200 of the company's debentures—the sum of £32,115. They had also to deduct provision for income-tax £1,100 making a total of £63,832. This showed a debit balance of £13,590. In addition to the amount of £32,115, the board had considered it advisable to charge a further sum of £20,000 for depreciation and wells renewal, which would make a debit balance of £33,590 to be carried forward. The production of crude oil had been about 12¾ million poods, and the price had been 6.07 copecks per pood. They were unfortunate at the present time in having both low prices for crude petroleum and very low freights ruling for the steamers. Two out of their six steamers were laid up owing to unremunerative freights. The year under review had been one of the most critical through which the Baku oil trade had passed. Although the crisis set in two years ago, the full weight of it made itself felt during the twelve months under review. The manager and directors had had many difficulties with which to contend, especially low prices, a reduced number of sound customers, and a smaller production of wells. There had been many attempts at combination between producers, refiners, and exporters, but they had always led to the same negative result. Although within the first few months of last year's navigation on the Caspian Sea a gradual recovery from the lower prices of 4¼ to 4½ copecks had taken place, yet there was really no sound business either for producers or refiners. As to the near future of the Baku oil trade, he did not feel capable of expressing an opinion. A general feeling was prevalent that as far as price was concerned the worst was passed. The Russian home market should be looked upon as the basis and foundation of the industry, and the situation in Russia at the present time was not a satisfactory one. The export trade kept up the activity which set in some months ago, and which is being sustained to a fair extent up to the present moment. It was not only kerosine, but a number of by-products which found new markets, and if it were true that the production of crude petroleum, which at one time appeared to outstep all reasonable limits, had found its level, a considerable improvement might be looked forward to in the industry. The labour question in Russia in general was a very serious one; but it must not be forgotten that the conditions of the labour market in the Baku district were entirely different to those of any other part of Russia. The bulk of the workmen were not Russians, took no interest in politics, and did not wish to join in a strike unless terrorised by others, and it was greatly through this help that the late strike terminated quietly. But they could not possibly expect that the pipe line from Baku to Batum would be completed before the end of next year. It was difficult for him to anticipate what the result would be. It might be the means of altering the position of the petroleum trade completely, as it would extend so largely the market which they had at the present moment. He did not think any practical help from the Russian Government should be relied upon. A reduction of the enormous excise duty of 60 copecks levied by the Government on each pood of kerosene consumed in Russia would probably in a moment alter the whole state of the industry, but it seemed that this fixed rate of duty had become part of the fiscal system of the Russian Empire. It was difficult to anticipate the price of crude oil for the future, but it was hoped that before long there would be a recurrence of those prices which were prevalent about three years ago, and which would ensure a prosperous future for the company. Having expressed regret that the board were unable to pay any preference dividend, he concluded by moving the adoption of the report.

Mr. William Fowler seconded the resolution, which was carried.

NEW ISSUE.

THE GRAND TRUNK RAILWAY COMPANY OF CANADA.

The Directors of the Grand Trunk Railway Company of Canada invite Subscriptions for £750,000 Four per cent. Guaranteed Stock under the powers of the Grand Trunk Railway Act, 1903 sanctioned by the Proprietors at a Special General Meeting on the 24th August, 1903.

Issue price £97 10s. per £100, payable as follows:—

£10	per £100	on application.
£25	"	on allotment.
£30	"	1st December, 1903.
£32 10s.	"	1st January, 1904.
£97 10s.		

Interest at the rate of Four per cent. per annum will be allowed on the above payments, and will be paid on the 1st January, 1904. The present issue will receive the dividend for the half-year ending 30th June, 1904, and will rank pari passu with the existing Four per cent. Guaranteed Stock after the payment of the dividend thereon for the half-year ending 31st December, 1903.

Payment may be made in full on allotment, and interest will accrue on such prepayments as above stated.

The object of the present issue is to provide for the extension of the double tracking of the system, for further extensive siding and yard accommodation, and for the purchase of necessary additional rolling stock, all of which are urgently required to enable the Company to adequately cope with the enormous increase in the business of the Railway.

During the seven years ended 31st December, 1902, the capital expenditure on the line amounted to £1,500,000, an average of about £215,000 per annum, but owing to the redemption of bonds bearing a high rate of interest by the issue of Four per cent. Debenture Stock, and the reorganisation of the Chicago and Grand Trunk Company, the fixed charges of the whole system, including the undertakings of the Grand Trunk Western and Detroit, Grand Haven, and Milwaukee Companies, increased only by about £20,000 per annum. In this period the gross receipts steadily increased from £4,417,000, in 1895, to £6,286,000, in 1902, and the receipts for 1903 to date show a considerable further increase.

In addition to the above capital expenditure, large contributions have been made from revenue for the renewal of bridges, the improvement of rolling stock, and the general bringing up of the property to a high state of efficiency. The constantly increasing traffic of the Company, however, renders necessary the provision of the further facilities above referred to.

This issue forms part of a total authorised issue of £10,000,000, of which £5,219,793 have been already issued, and is quoted in the official list of the London Stock Exchange. The balance of the stock will only be issued as and when needed for the requirements of the Railway, and in pursuance of the policy of caution which governs the Board in expenditure of Capital.

The Four per cent. Guaranteed Stock ranks for dividend out of the profits of each year immediately after the Debenture Stocks of the Company, and the net earnings of the Company for the year 1902, after providing for the fixed interest charges and the dividend on the existing Four per cent. Guaranteed Stock, showed a surplus of £370,000, notwithstanding the large special contributions from revenue for the improvement of the line.

Interim scrip certificates will be issued in exchange for the bankers receipts for the payments on application and allotment, for which registered stock certificates will be issued after the payment of the dividend on the existing Four per cent. Guaranteed Stock for the half-year ending December 31, 1903. The Stock will be registered free of expense.

Application will be made in due course for this stock to be added to the Four per cent. Guaranteed Stock already quoted in the official list of the London Stock Exchange.

Applications must be made on the accompanying form and forwarded to the Company's bankers, Messrs. Glyn, Mills, Currie and Company, 67, Lombard Street, E.C., with a deposit of £10 per £100 nominal applied for.

Should it not be possible to make an allotment in full in respect of the amounts applied for, any excess in the amount deposited on application will be applied towards the payment on allotment.

The subscription list will be closed at or before 4 p.m., on Wednesday the 30th September for London, and 10 a.m. on Thursday, 1st October, for country applications.

Prospectuses and Forms of Application may be obtained at the offices of the Company, and of Messrs. Glyn, Mills, Currie, and Company, 67, Lombard Street, E.C.

On behalf of the Board,
C. Rivers Wilson,
President.

Dashwood House,
No. 9, New Broad Street, London, E.C.,
25th September, 1903.

NOTICE.

THE PENNSYLVANIA RAILROAD COMPANY.

PHILADELPHIA, PA., September 23rd, 1903.

NOTICE TO STOCKHOLDERS.

At a meeting of the Board of Directors held this date, the following resolution was adopted:—

"RESOLVED, That the privilege be and is hereby given to the stockholders of the Company who have heretofore subscribed for the capital stock allotted them under resolution of the Board of March 25th, 1903, and paid thereon the instalment of fifty per cent., to pay the balance upon said allotment, between October 15th and 26th, 1903, instead of in two payments, as prescribed by the said resolution, upon such terms and under such regulations as may be approved by the Board, and that the proper officers of the Company are hereby authorized to take such measures as may be necessary to carry this resolution into effect."

A Circular in further explanation will be mailed to stockholders who have paid only the first instalment.

Stockholders residing in Great Britain, or on the Continent of Europe, may make payment at the London Joint Stock Bank, Limited, Financial Agent of the Company, Princes Street, London, E.C.

ROBT. W. SMITH,
Treasurer.

The Investors' Review.

Plain Speech About Our Financial Position.

It has been our unhappy fate this week to incur the displeasure of all those interested in upholding stock markets, and in persuading the public that the time has come to buy. Most of the owls and bats who play guides to the nation in matters financial have hooted and screamed in chorus over the alleged recklessness and infamy of this writer, but these may be passed by as unworthy of serious argument or elaborate refutation. Graver people, however, have joined in the outcry, and amongst their arguments are several that deserve respectful attention. Briefly their contention may be summarised thus. "We have had plenty of critical times in the market before now, and have surmounted them without a panic; why should we not do so on this occasion? You yourself admit that the trade of the country, especially the foreign trade, is "magnificent," that is your own word. If it is magnificent it must be profitable, and sooner or later the profits will find their way to the Stock Exchange. You deny, however, that the domestic trade is as good. Granted—although we see no evidence of it yet—and that also is in favour of stock markets, because if trader and manufacturer cannot employ capital to advantage in their own business, they will put it into Stock Exchange securities to wait for better times. And surely prices are tempting in many directions? There has been such a fall in the market prices of all first-class securities, that they have become tempting instead of repellent to investors. Even much despised Consols can now be bought to yield the investor nearly 2¾ per cent. per annum, and not so many years ago he was apparently quite satisfied to buy the stock at a price which yielded him less than 2½ per cent. Moreover, we cannot see any evidence that the Stock Exchange itself is overloaded. In the Consol market, no doubt, there are quite a number of dealers who carry more Home and Colonial securities, state and municipal, than is convenient, but the banks may be trusted to take care of them, and in other directions the very contango rates levied every account day prove that the open speculation is well within the compass of the market's capacity. Why then should we look for a 'solution of continuity,' as you call it, in other words, for a panic and a general smash up all round? The ruin produced by such a catastrophe would be so appalling that we contend you are little better than a traitor to the country, or at least to market and banking interests, to suggest any such conclusion to present difficulties."

All this, and much more to the same effect, is urged in order to deprecate criticism, and to inculcate a policy of silence and smooth speaking, of hope and encouragement to buy. We should be only too pleased to take that line were it possible, just as we should have been delighted to pass the South African war over without criticism had it been possible to do so without betraying every principle of fair dealing and honesty. Statements, however, such as we have summarised contain at best only half truths, and half truths are sometimes more harmful than deliberate lies. It must not be forgotten that, as we have pointed out to weariness, we began our gigantic war with the whole of our capital already always over-engaged; and not only was it over-engaged but the continuous demands upon us for fresh supplies of this indispensable commodity were incessant and enormous. Enterprises at home were in constant want of fresh capital—our railways, our new electrical undertakings, our municipalities, all the colonies, and many foreign countries like Argentina, Brazil, Uruguay, Chili, China, India, and even Scandinavia, let alone Russia, Egypt, Mexico, and the Balkan States, were one or other unweariedly pouring demands in upon the market for more means, which we were already experiencing difficulties in meeting, so that the end would have been a financial crisis in any event. On the top of these commitments came the manipulations of the berserker or highwayman class of financier, the creator of bubble companies of every description with more or less conscienceless aggregates of capital, by the sale of which the innocent and other public had been, or were being, swindled, so that the destined end of the agglomeration of over commitments and fresh demands, of manipulations and chicaneries, was certain to be a catastrophe in time. Without the war, however, the bubbles, with their airy structures atop, might have continued to float for years, and the liquidation, the clearing away of the falsehood might have taken place gradually, so that the country would have slipped instead of falling headlong into temporary poverty and sobriety of mind. The crises, in short, like those that preceded them, might have been partial, have touched only sections of credit, allowing others to escape, and to conserve the means of recuperation, after the fashion of previous breaksdown.

The war made all this impossible, not only by its direct expenditure, but by the losses it caused in every other direction. In the mining markets alone, Kaffir and other, it is not an exaggeration to estimate the loss suffered by the British public at a sum equal to the £250,000,000 to £300,000,000 the African war has already swallowed up, and a noticeable peculiarity of the present long-drawn-out crisis differentiates it in a marked degree from every similar crisis that has preceded it. It is universal. All classes of investment stocks have suffered, and the very best often most, and that alone affords the most convincing proof possible that we were in a state of credit exhaustion before the war demands began to fall upon the market. How, then, can any recovery be expected while the most solid classes of people in the community, the most prudent and hitherto the wealthiest, have been impoverished by declining markets quite as severely as the mere irresponsible gambler in mining and so-called "industrial" shares? The reservoirs of wealth have all

been run low or emptied. It will, therefore, take many years of suffering and thrift before the prudent classes can get back into the position they occupied four years ago. The bulk of these people are thus incapacitated at present from coming to the relief of the markets by purchasing the masses of stock held there, or held by banks on behalf of speculators. They have losses to make good first, and, as all divisions of the Stock Exchange are in the same plight, it follows that there is not a really "free market" in any corner of it.

The mention of banks brings up the point so much insisted upon, that the market is not overloaded with bales of securities carried from account to account by means of borrowed money. Undoubtedly that seems to be the position of the Stock Exchange itself, but why? Because the banks have stepped in and taken away a most profitable part of its business. The speculative accounts that, when this writer was young, were habitually carried on the Stock Exchange, are now in great part distributed amongst the banks of the United Kingdom. These banks have found it a profitable business to intercept market contangos, as it were. By doing so they have enjoyed excellent rates of interest, rates that now usually imply exhaustion of the borrower's means, and have been able to pay handsome dividends, but the product or harvest of their success is the transfer of the main strain of falling markets to them. You often hear the "marvellous stability" of the markets under losses of stupendous magnitude belauded. Formerly the successive slumps would have been accompanied by showers of insolvencies in "the House." It is now the outside speculator who suffers, and when he is cleaned out the banker has to "stand the racket" himself. Bankers have no longer the wealth of the Stock Exchange, as well as of the client, between them and loss, and as their customers become exhausted—which they are doing in augmenting numbers every fortnight—they are compelled either to throw the shares pawned with them upon the market at what they will fetch, as one of the Scotch banks was doing all last week, or they quietly accept the risk and continue to hold on, hiding their losses in the hope that a revival of speculation will enable them to sell out and escape. That is to-day more or less the position of all banks that do a large Stock Exchange business, and some few are involved to a notoriously dangerous extent. No wonder, therefore, that such bankers, who by doing this business have over-stepped legitimate limits that prudence would set upon banking, are furious that any portion of the veil should be lifted, and eager to assure all interviewers, and through them the world at large that the position is "perfectly sound." They cannot do otherwise, but their confident language does not alter the facts.

We have never said that the Stock Exchange was the source of the present agony. To some extent it is the victim thereof. It, moreover, stands to reason, speculative business having been withdrawn from its ken to the extent it now is, that the market should no longer be in a position to estimate the bearing of facts and probabilities as it formerly did. It therefore trades in blindness, and cannot understand why there should be such complete stagnation, such a prolonged time of difficult dealing, or of blocked or unworkable markets, why real quotations should so often be from 2 to 5 per cent. below officially published quotations. To some degree, the fact that the Stock Exchange is not the source of the present financial distress supports the views of those who insist that we shall pass through our crisis without a panic collapse, but these again forget one other important consideration, viz., our excessive taxation. The burden in this direction has been so augmented upon the nation during the last five years, to go no further back, that multitudes of people find themselves no longer able to save, and a not inconsiderable number are being impoverished by the demands of the Government. It is taking £50,000,000 per annum more out of the taxpayers' pocket than it did five years ago, and gives nothing in return for this exhausting drain, unless it be to a few favoured iron and shipbuilding and machinery making companies. Part of the money, doubtless, filters back through these and through the wages paid at the Government dockyards and factories, but it does not reach the bulk of those who pay taxes. Here, therefore, we have a potent and continuously operative impoverishing influence, and on the mere ground of over-taxation alone, not only imperial but local, we insist that there can be no genuine recovery in markets, that the end must be an empire-shivering crisis. Spurts and rallies will doubtless be seen, because there are always numbers of people eager to make money by operating for the fall, and on every slump or relapse in prices those who sold to make a profit on the decline pour into the market to buy back and secure their gains, but their repurchases leave the market essentially weaker than it was before, because "the more bears, the more elasticity" is a wise old saying. All these market changes are mere ripples on the surface of the stream, so long as the great public is absent through poverty. Add to all this the disastrous paralysis of business caused by the dishonest and insolent tariff agitation of the Government, and its chief bully, Mr. Chamberlain, and it can hardly be denied that the cup of the nation's sorrow is about full.

What are we to look for, then? We are to look for a long lane of affliction, for defaults by some of our colonies at no distant date, for the failures of Yankee insurance companies and trusts, of combination and monster companies, fabricated with a view to rob the public and secure dishonest gains to a few, and for embarrassment amongst a proportion of home municipalities that have borrowed beyond their strength; for capital-raising difficulties amongst our railway companies, and, unquestionably, as the crowning misery of all, for trouble amongst some of the weaker of our banks. Most gladly would we seize upon any symptoms calculated to assure us that these catastrophes, any or all of them, might be averted, but however we may search, and often have we searched, we can see none. As was said in these columns more than four years ago, the end of an age is upon us, and what the ultimate consequences will be the boldest mind dare not attempt to forecast. One thing, however, appears sure that some of the nations now bound hard and fast in the bonds of the cosmopolitan usurer are gathering themselves together to burst these bonds, and to enter upon a new and unknown life.

You will see, good reader, that the outlook taken by this *Review* is a much wider one than anything that concerns the ups and downs of stock market prices in one day or one week, and that when the words crisis, catastrophe or cataclysm are used here they are given a significance far deeper than anything relating to passing market spasms or the struggles of Consol jobbers to escape, even at the cost of their fortunes, and leave the banks with their load. From our point of view, the crisis upon which we have entered is only at its secondary stages, and the ingenious, and in some respects praiseworthy, attempts made by credit manufacturers and proppers everywhere to keep things smooth on the surface serves only to prolong the agony, and to further exhaust the springs of wealth, not only in this country but in other countries. We can see, because it is always easier to interpret phenomena outside us than to analyse those under our eyes, something of what is going on in the United States, the crumbling of securities there, the hopeless condition of the market, the lying daily indulged in with the hope that the public may be induced to believe that no matter how prices shrink nobody is a penny the worse, and we come to the conclusion that in the States at least a prolonged agony of reaction has set in. But are not we worse off than the United States? We have no virgin soil to put under crops and impoverish in order to keep up the show of wealth, no untapped stores of minerals to build monster "combines" upon. On the contrary, we have many exhausted colonies to keep from becoming bankrupt, if we can, and a stagnant or dwindling agricultural and mineral output at home. We have demands upon the nation's savings a thousandfold multiplied that we must gratify if the appearance of solvency is to be maintained. The empire, and all that exists therein, has been, to an extent unexampled in the world's history, reared upon credit, and if credit cannot sustain it at the heights to which it has been lifted then the whole fabric must crumble and fall about our ears. It is visibly crumbling, and this is briefly why we cannot take "an optimistic view," as it is called in the gabble of the

financier and journalist, or emit "reassuring statements" calculated to calm the public mind, any more than we can maintain that black is white or a lie the unadulterated truth. Long have our merry, light-souled financiers busily occupied themselves in weaving the web of debt around the limbs of those who work here and in our over-sea settlements, calling their industry empire making, and now the trammelled Titan is aweary and grumbling, the whole machinery of credit has gone out of gear, and the law of compensation is bringing its revenges; and perhaps our ultimate gain will be the defeat of the fraudulent company and loan raising "boss," the return to paths of probity in the treatment of the public, a public so fleeced and bamboozled by these gentry for at least a generation back, that we wonder sometimes how any "buyers" can be left for anything. The days of the arithmetic of finance by which 2 and 2 were made to appear 22, or from that to 202, are, at all events, over for a few years.

Notes from New York.

New York, September 22.

The notable event of the hour is the collapse of the Lake Superior Consolidated, one of those creations of the promoting craze of 1901. It started out with a nominal capital of $117,000,000 in thirty-five millions preferred and eighty-two millions common. The first started at 80 and fell to 2½, and the latter dropped from 36 to ¼ of one per cent. When the higher prices prevailed for the company's securities it was paying 7 per cent. on the preferred. That dividend, in fact, was paid as late as last September, when the two classes of stock were at 75 and 25 respectively. The directors obtained first and last some $30,000,000 from a too confiding public, mostly in Pennsylvania, where the people do not seem yet to have cut their eye-teeth, for it was they that made rich the promoters of the late Asphalt Trust, and qualified its head for his present position of Chief Commissioner of our New York Police.

The prospectus, which was alluring enough, for it dealt with actual possibilities of wealth based on minerals, forests and water powers unlimited, was drawn up by Mr. F. H. Clergue, who, if I am not mistaken, was mixed up with attempts to float loans in some of the Balkan States. The trouble seems to have been that they spent all their cash capital in buildings, plants, wharves, harbour works, railways, and on other things, on a most extravagant scale. Not a little, I imagine, went in boodle to Canadian Dominion and Ontario provincial legislators, and so nothing was left for working capital. Then occurred a suspicious incident. Recourse was had to a foreign banking house here in New York, who after some negotiation advanced $5,050,000 on the security of the company's properties in Canada and the United States, for the original shareholders would not, for some reason or another, probably want of confidence in the management, advance $9,000,000 in a special issue of $15,000,000 4 per cent. bonds. The loan made by the foreign bankers, Speyer and Company, fell due three months ago, and, after some trouble, an extension to date was obtained. It is now a question whether all the valuable properties belonging to the company are to be sold, literally, for a mere song, or are to be rescued for the benefit of the original shareholders. The appearance is that whatever arrangements may be made, the people whose capital was wasted in criminal extravagance, and for the enrichment of a few not too scrupulous promoters and politicians, the latter mostly in Canada, will be sacrificed. Regarding the matter philosophically, I cannot say that they are to be pitied, for only the most veritable gulls would have allowed themselves to be plucked the way the original stockholders of the Lake Superior Consolidated have been.

It is rumoured that it will eventually fall under the control of the Steel Trust, which will keep the Canadian works going, in order to profit by the bonuses which the beneficent and wealth distributing Laurier Government grants for the encouragement of Canadian industry. All kinds of stories as to "malign influences," "outside and antagonistic interests," etc., have been put in circulation, but are probably only intended to divert attention from those really responsible. Meantime, some $200,000 are due to the miners and other employees and officials of the company, who are flocking into the Canadian and American towns on either side of the Sault Ste Marie in a destitute condition and ready to make trouble. The money due Speyer and Company, however, is not the only outstanding debt of the company. There are other creditors to the amount of $11,000,000 that have to be satisfied, and unless the money can be raised in a few days the whole assets of the company will be put up for sale, and the original proprietors will lose everything. The probability is that other creations of the boom period will end in the same way.

The last news from Canada is that the Laurier Government has dropped the Grand Trunk Pacific Bill for the moment, and is hurrying the Redistribution of Constituencies Bill, with a view to a general election. The fact is that the Opposition developed among the people of Canada to the Government's plan of building the new line with public money and then handing it over for half-a-century to private exploiters, has proved so formidable that the Government has had to halt. It may be worth while warning English readers as to the value of Canadian direct news in the future. An agency has been established in Canada for the supply of Canadian news, ready cooked and dished for the consumption of the British public, which, according to the disinterested purveyors of the Canadian article, has been too long misled by the malignant inventions of the Yankee press agencies.

Economic and Financial Notes and Correspondence.

The Quarter and Half-Year's Revenue.

When he looks at the figures, we should think Mr. Ritchie will feel thankful that he has escaped from the Exchequer. The revenue is falling off, and to the net decrease of £611,446 realised in the June quarter there has to be added a net decrease of £495,070 in the September quarter, making the decline for the six months £1,106,516. There is also, naturally, some decline in the amounts handed over as doles to local authorities, landlords, parsons, and others, so that the net shrinkage on the entire amount collected by the Chancellor of the Exchequer in the six months is £1,133,223. When we look at the details we find that the increase of £768,000 shown by the Customs income in the first quarter of the year has given place to a decline of £220,000. There is also a falling off of £70,000 in the Excise to be added to the loss of £270,000 in the June quarter. Estate duties, however, have made up £70,000 of the £600,000 lost in the first quarter of the year, but the stamp revenue continues to shrink, although the loss in the quarter just ended is only £60,000, compared with £140,000 three months ago. House duty is also falling off. It lost £20,000 in the June quarter and £10,000 in the September quarter, and in both quarters the property and income taxes show a decline of £390,000, making the total decrease £760,000, but these diminutions are due in great part, if not wholly, to the reduction of fourpence in the poundage levied. The Post Office and Telegraph services continue to do well, although the latter shows an increase of only £25,000 in the three months just closed, which is £5,000 below the increase of the June quarter. The Post Office, on the other hand, with an increase of £100,000, is £40,000 better than it was in the June quarter. Miscellaneous revenue is also better in the second quarter by £58,899, so that the decrease of £49,467 in the first quarter is more than wiped out. These, however, are accidentals, and it remains true that the revenue drawn from the consumer is sluggish, and, all allowance made for traders' devices about budget time, the probability at present is that the budget estimate will not be realised next March. Realisation could hardly be expected, in view of the disorganisation of business produced by the unprincipled protectionist agitation of the Prime Minister and his Brummagem ally.

For the past quarter the entire income from taxation and public services came to £28,525,616. This is ex-

clusive of £1,929,259 handed over to local taxation account. That added the gross revenue of the three months ended on the 30th ult., was £30,455,175. How much did the revenue retained by the Treasury for national purposes fall short of the wants of the quarter? We are not quite sure, because the abstract balance-sheet furnished is far from adequate. It surely might be within the capacity of Treasury officials to draw up a quarterly debtor and creditor account of a lucid type, and they might even have the industry and business training adequate to enable them to give the nation a continuous cash account statement, so that it could not only be able to see at a glance how the money has come and gone during the quarter, but to comprehend the state of public income and expenditure for the entire period of the fiscal year that may have elapsed. Making, however, the necessary deductions the best way we can, we arrive at the conclusion that in order to meet its liabilities during the past three months the Government had to raise altogether about £9,900,000. It borrowed for public works no less than £1,398,000, or say £1,400,000, and the net floating debt remaining after paying off some of the Exchequer bonds—out of borrowed money by the way, the Transvaal loan—and sundry temporary advances obtained from the Bank of England, seems to be £8,500,000. This floating debt is bound to increase in the current quarter, so that December 31 next may find the Treasury short of the necessary revenue by probably £15,000,000. This is a guess, but the expenditure is so monstrous and so clamant that the unfortunate taxpayer need be in no measure surprised should this estimate prove to be short of the actual fact. A more unhealthy position than the Treasury now occupies could hardly be wished for by the country's greatest enemy. The nation, besides other floating debts, is carrying a floating debt in Treasury bills to the amount of £25,133,000, and that accommodation-bill or "kite" form of floating debt is bound to be increased before the end of the next quarter; in addition to which further Ways and Means and deficiency borrowings must be made at the Bank of England. We are thus living by a system of accommodation bills and credits based on nothing but the capacity of the nation to meet all its obligations. That capacity would temporarily count for little were a credit storm to overtake the market, such as might prevent it from being able to carry the monstrous volume of Treasury bills our administrative extravagance has thrown upon it. The credit storm is due, and will come all the more swiftly because of the criminal waste of the nation's means the figures we have quoted reveals, and as distress increases throughout the country the revenue will continue to shrink, so that the prospect is the reverse of soothing. At the end of the past quarter, it is pointed out in the fragmentary account furnished by the Treasury, the deficiency of means wherewith to pay the accrued debt charges amounts to £3,049,000 net, after allowing for the slender balances of £2,374,000 at the credit of the Exchequer in the Banks of England and Ireland. These balances cannot be reduced much below these figures, so that probably £4,000,000, and perhaps £4,500,000, will have to be raised from the Bank in order that the quarter's interest payments may be met. Such is the flimsy structure upon which our great imperial might is based.

Cabinet Rending and Mending—or Ending?

The droll side of our politics continues outmost. It is infinitely amusing to observe how the nation eats, sleeps, and pays its taxes just as well seemingly without a "Government" as with. And the stories told of Balfour's chicane and Joseph's "cheek" are a perpetual diversion. Profligate cynicism, impotence and futility are written over all. A graver phase though is reached when we come to Milner, the man of blood, the Rhodes' Trustee. Surely there was a time in our national history when the proposal to include such a person in any administration, Tory or Liberal, would have been greeted with a storm of indignation. It was only revealed the other day that this autocratically-minded blossom of Baliol, in his zeal for the sordid, mean and short-sighted interests of Rhodes, Beit and Co., hurried on the war in South Africa,, over-rode his military advisers, behaved like a cad of no breeding to the heads of the threatened Republics, and to all who dared to doubt his divinity in Cape Colony, thus bringing down disaster after disaster upon our heads. And since he became the deputy dictator under De Beers of the annexed territories, he has suppressed freedom of speech and action, loaded the country with an enormous expenditure on "Government," plotted to upset the constitution of Cape Colony, encouraged or connived at the importation of Asiatics, allowed his bosses to capture the Premier diamond mine, stopped the free carriage of supplies to the naked and hungry among the white natives, and generally behaved in the spirit of a Russian bureaucrat ruled by the furies. Is all this forgotten by the country that our press should heroise this narrow-minded tyrant, this man with the bloody hands, and welcome his inclusion in the Ministry as a sort of heaven-sent guide? We think not. Our press is merely doing after its kind, with its customary thoughtlessness.

And why bother? The funny side of things is best. We should laugh to see the man who forced Joseph's "British preference" pill down the throats of the Bloemfontein tariff conference, stepping into the place Joseph has vacated, because the dear, gentle, ever-doubting Arthur could not "cotton" to that preference, though "dead nuts" on "retaliation," as being the manlier, more "God-dam" style of handling the foreigner, hated brute. It would be Alfred sitting in Joseph's chair—only the bosses may not allow it. Where would they be were a real, live man with a human heart in him, sent to South Africa in his place? And who can tell? he might, once in the Cabinet, hustle up against the sleeping Duke and thereby incur censure from the *Spectator*, dear old thing. It dreams of *the* Duke as the wisest, best, and all that, political clothes horse the country possesses, and would be very angry indeed, quite ready to give him a good hard knock, if Lord Milner were to disturb his free trade slumbers with a proposal for imperial "reciprocity"—in escaping from financial engagements, say—or autocratic wind-on-stomach antidote of that kind. Ah, let not the fates or the great Arthur deprive us of a pleasure merely on grounds like these. Let him rather imitate the mighty Sir Clinton Dawkins—Morgan's man, you know, and an authority on shipping combines, London Tubes and Carnegie Steels—the one great genius deputed to welcome the African boss tool home. "Come on Milner," cried Dawkins—so the reporters said, and so say we. The Ministry with him in it might yet breed in the country a party of reformers, intent on something else than golf, capable of grasping the fact that there is a whole nation almost of people alive and gifted with appetites who neither know bank parlours, grouse moors, Kaffir Circuses, golf courses, motors, nor the art of company promoting.

Ah, we fear this is to display a sanguine mind. The "swinish multitude" loves its mush-troughs and the gentle Premier has been unable to restrain himself from playing imp. It may have been a huge diversion for him to trip up Mr. Ritchie and Lord George Hamilton, the two leading honest free traders in his Cabinet, and, on the whole, its two ablest administrators, by keeping back Joseph's resignation, and hiding his own share in the superchery until the men with convictions had departed, but the publication of their letters should put an end to the career of this elegant golf player, oft-fined motorist, and comic opera joker, as a Cabinet patcher or political odd man of any sort. Low as it has sunk the mob has still some respect for decency left, and can understand fair play. "What could have tempted the Prime Minister to stoop to baseness like this?" even the pot-house philosophers will be asking, and no exculpating answer is possible. The deed was mean, unprincipled, contemptible from every point of view, could not even have been decently glozed over if the two conspirators had had mere selfish and family ends in view, sons or nephews to make room for. The "balance of criminality" between Arthur and Joseph in this low-down Aston slum trickery may be hard to determine, but the responsibility is Balfour's alone, and, alas for it, it stamps him as a man unworthy of any position of trust—a false friend and a treacherous foe. He deserves to be hounded from public life. Eh? His manners are so charming, he is such a sweetly persuasive man, and doubts with such elegance and—yes, but there

is still some demand for downrightness here, bastard imperialism and all its hogwash notwithstanding.

Macedonia—A Futile Protest.

So far as indignation against the Sultan and our supine Government went, the Macedonian meeting at St. James's Hall was magnificent. Speaker after speaker, in words more or less eloquent, denounced the brutalities of the Turk and the indifference with which they are regarded by our responsible Ministers. Yet what good will come of it all? So far as we can see none. The nation may register protests innumerable against the Government's policy of drift, and demand that for once it should show some degree of firmness in its conduct of our affairs, but no matter how loud the cry, the result must be the same—impotent inertia. Even though this present tattered Ministry were turned out and a stronger one put in its place, all that the country could do would be to diplomatically protest, as it has done before, against the misdeeds of Abdul Hamid and his minions or masters. Such protests experience has proved to be worse than useless, but we cannot afford to do more. Already the country suffers almost more than it can bear from the strain of the late South African war and its sequels, and another war following so soon after, if it did not begin in bankruptcy would end there. For armed intervention in the Balkan spells war, and a long bloody war at that, with far-reaching consequences. Whoever intervenes must be prepared to utterly crush out the rule of the Turk, not only in Europe, but in Asia, so weary has the world become of his evil-doing. To do this means a religious war between Christian and Moslem, in which the latter would be fighting not only for his creed, but for his place as a ruling nation, his right to exist, and his death throes will be long and fierce. And after? The Turk conquered, a dispute will almost certainly arise as to the division of his territory. Where the carcase is there will the vultures be tearing and rending, each striving to seize the largest portion for its share, until they fight between themselves.

To erect Macedonia into a self-ruling, autonomous protected state would be sheer madness, on account of the racial and religious differences existing among its inhabitants. Greeks, Bulgars, Serbs, Albanians, Roman and Greek Christians, all hate and despise each other as much as they collectively detest the Turk, and to expect them to forget their mutual hatreds when formed into a self-governing community would be merely to open the door to greater anarchy than exists at present. Now they have a mutual enemy, then they would fight among themselves. This in itself would give the powers an opening for partition, and it might well be that the resulting conditions of the Macedonians would be no better off than under the Turk. For Poland was partitioned.

Why then should we be the chestnut-puller of the Balkans. Even if we had not to carry the burden of that ruinous South African war, it is not our policy to interfere in the Balkans merely to benefit the other members of the Concert. Whether any of them are in a better position than we are ourselves to attack the Turk is doubtful. Fear of domestic troubles and the chains of the usurers hinder their freedom of action. Over Austria itself hangs the terror of civil war, of empire dismemberment, while Russia, debt throttled, dreads the awakening of her peasants and artizans, and both, therefore, will be slow to enter on a long struggle with a foreign power. Italy is not far enough away from the precipice of national bankruptcy to take on single-handed the task of intervention, with its inevitable exhaustion, and France is hardly likely to move without her Russian ally or ourselves to help her. Germany alone is left, and for the moment German financial interests in Turkey are too deep, too dependent on the Sultan's friendliness, to let her do anything which might end in their ruin. Around and interwoven with these domestic fears are the coils of the usurers, whose grip on every nation of the world is so strong as often to choke all questions of humanity. War to these horseleeches is equivalent to loss, so war must not be, until they see their way to turn that loss into a hundredfold gain, as they hope they have done in South Africa. If the Sultan were cast out and his dominions divided, where would the security lie for the debts he and his predecessors have piled up? Here perhaps is the most powerful argument against the idea even of intervention.

Is It Rhodes's Money?

The story goes, or is going, that some of the late Cecil Rhodes's ill gotten millions have been turned into the treasury of "Consistent" Birmingham to be devoted to flooding the country with dishonest and dishonourable leaflets, pamphlets, catechisms, etc., about preferential trade, with lying concoctions of figures, and other noodle-deluding trash of a sham patriotic and diseasedly sentimental character. From this source, it is alleged, comes the money wherewith to buy up and suborne newspapers here as the African press was suborned and bought up. We should not be surprised. Uses of this kind are quite in keeping with the origin of these tainted and dirty millions, and with the objects to which the late Cecil Rhodes and his pals devoted their life. He "went into politics," that goldbug hero, and found them expensive, he said. One consideration that would lead us to give credit to the story is the notorious unreadiness of the average politician to dip his hand into his pocket to find money for anything, and we may be quite sure that the Tory Party as a whole is either too much hipped by its Stock Exchange losses, or too distrustful of the Birmingham ex-screw maker and West Indian hemp speculator to hand over any cash to help him to climb on its back. But there are other points of view which strengthen the suspicion that rumour has here stumbled upon the truth. It would obviously be to the advantage of the surviving South African marauders that public attention should be diverted from South African affairs so as to facilitate the introduction of Asiatic slave labour there, and to prevent people from turning their thoughts to the state of the population left alive after the war, from the waste of public money now going on under the imperial rule of the children of Baliol, from the dishonour of the British name involved in the repudiation of monetary obligations of all sorts, including debts due for supplies and compensation for the devastation of loyalist property by Boer and Briton alike. The malversation or bungling connected with the administration of the £3,000,000 grant to the Boers must also be kept out of sight as much as possible. Therefore, agitate, kick up a dust about declining trade, bang the big drum of a canting, lying, imperialism, spout about colonial "loyalty," magnify Canadian "goodwill," belaud Seddon and his serfs in exchange for his vulgar flattery, in all ways keep the public mind occupied so that it may not think or desire to enquire into facts.

Equal urgency impels the political gamblers headed by Chamberlain and his ally—or dupe, or victim—the Prime Minister, to keep people from brooding over domestic affairs. Imperfect or garbled as the revelation is, the state of impotence, the crass ignorance, corruption, waste of public money, political blackguardism and high-handed insolence combined with contemptuous disregard of facts, disclosed by the report and evidence of the War Office Commission might drive the nation to open revolt against the Cecil-Chamberlain regime were it allowed to pause and reflect. Therefore raise false issues, no matter what the consequences may be to the country's trade, to the nation's position amongst other nations, to the empire as a whole. Keep the hubbub up so that not only the war scandals may be hidden, but the demoralising consequences of the reactionary education act, the injustice of the doles distributed to the Government's "friends," and the blight of Chamberlain's inclusion of colonial securities amongst those in which trustees are permitted to invest. Amid the pandemonium all may be forgotten and the venality behind the latest Irish Land Act hidden away like every other crime. Above all must the current extravagance of War Office and Admiralty pass unheeded, uncomprehended, unrestrained? Are these not sufficient reasons, then, to justify suspicion that behind all this agitation and turmoil lies some malevolent power which, having committed in the past, crimes repugnant alike to God and man, now seeks to hide them in the dust of a fearful eruption? Whose necks are in danger if the mob once realises the whole force

and truth of the political events of the past four years, and the parts played therein by our "responsible" Ministers? In whose interest must that same mob be drawn away from the dangerous past by lying dreams of an alluring future?

The Mystery of City and Suburbans.

When one of the oldest and the best of the gold mines of the Transvaal, which has outlived the dangers of childhood, survived the perils of youth, encased itself in a dividend-lined garment of severe middle-aged respectability, and appears to be on the high road to an honoured old age, suddenly startles the world by an exhibition of eccentricity, it is fair to conclude that there is something radically wrong somewhere. It produces much the same sensation as if we had just heard the intelligence that Herr Beit or Sir Thomas Lipton had been borrowing a couple of hundred pounds on a three-months' bill. Time was when "Cities" was also a name to conjure with, but after the performance of a fortnight ago, and the quibbling "explanations" that followed, who shall say that there is any longer safety in a great reputation? A week previously the quotation for City and Suburbans (£4 shares) was round about 6¾ ex. dividend; on the re-opening of the market on Monday, September 21—there had been a little sagging in the interval—the price dropped ½ on the day, that is to say to 5⅞—6⅛. The fall caused all the more comment, because there was no apparent reason for it; at least none was known to the outside world, and the market had been tolerably steady, as, of course, it ought to be, for a share which has already paid 325 per cent. in dividends since the company was formed. It is true that just before the formal conclusion of the late war the price stood at 7½, so that in the short space of about fifteen months there has been a depreciation in the value of this single mine of over half a million sterling! This is no wild-cat company. On the contrary, it has been a fairly good dividend payer, and has always been surrounded by an unmistakable halo of extreme prosperity. Why, then, did the script fall ½ in one day, representing a loss in the capital of £170,000? And why were we immediately thereafter treated to egregious "explanations," which only revealed half the truth? Banks, even in Natal where banks do funny things at times do not call in their loans for the purpose of amusing themselves, and advances producing 8 to 10 per cent., or even 6 per cent., with "security" are a class of business that in these dull days is not usually turned away without a very solid reason. With bated breath and whispering humbleness, we would suggest that the cause of this excess of caution on the part of the banks is the utterly commonplace, vulgar, horrible reason that the reefs in the famous City and Suburban Mine are pinching out!

This concern is almost as dangerous, from an investor's point of view, as its celebrated racing namesake. In 1894, the year before "the boom," its gross profits were £151,919 with 90 stamps running. In 1895, with the number of stamps increased to 130, the profits fell to £121,548. The following year, when 140 stamps had been dropped, the profits further diminished to £121,471. Then for the seven months of 1899, that is down to July 31, with the full battery of 160 stamps at work, crushing at the rate of 4,194 tons per stamp daily, profits rose to £161,630, which for the whole year would have meant, if continued, a profit of £277,000, or over £23,000 per month. Although the comparison is necessarily incomplete, it may be added that at the present time, when 115 stamps are crushing, the monthly profit is about £19,000. On the face of it, therefore, there is an advance in the profits of, proportionately, about £3,000 per month—an odd reason, surely, why the Natal banks should grow anxious regarding the safety of their money! The fact is that, notwithstanding considerable ore reserves, the information has leaked out that the reefs in the lower levels of the mine are proving very unsatisfactory, and the greatest uncertainty prevails as to the future. The South Reef has widened very considerably without any corresponding increase in the yield, and this unpleasant condition of affairs, so far from improving, as was hoped, has latterly become greatly accentuated. In August the rock tonnage dealt with was only 14,328 tons of South Reef and 1,882 tons of Main Reef Leader, a total of 16,210 tons, exclusive of 2,517 tons of waste rock sorted out at the picking tables. Before the War the monthly crushing averaged over 16,800 tons of South Reef and 2,600 tons of the leader, but even at that period it was known by the management that the exposure of the former to the east and west of the main incline shaft was turning out badly, and that the leader had been pushed so far from its position by the intrusion of an immense dyke nearly 40 yards wide that it was doubtful for a time if it would be found again; and although it has been traced and "recovered" since, the results have been much poorer. In 1896 the ore milled was taken in almost equal proportion from the South Reef, and the Main Reef Leader and Main Reef—there were 106,594 tons crushed of the former, and 97,000 tons of the two latter combined. Now, the ratio of the ore crushed from the Main Reef and its Leader to the South Reef is as 1 to 7. It hardly needs to be said that this state of things demands a thorough investigation. If there were any ground for supposing that it would be merely temporary, it would not matter so much, but, unfortunately, such a hope receives little confirmation in circles which know the facts, and consequently it may reasonably be assumed that the banks will grow more cautious, rather than the reverse, in accepting Cities as security. The company, of course, has a large freehold estate, on which building operations are proceeding. It produces a good income annually, and, indeed, it is not unfair to say that but for it as a standby the dividends could not have been kept up in the past—at least the profits of mining proper would have suffered considerably by the discovery of the dyke we have mentioned, and the increase in the amount of rock which has to be mined to procure the same quantity of gold as formerly. What the future has in store for shareholders we do not know, but when the Natal banks—it is a "Natal" concern with its head offices, directors, officials, and principal shareholders in Pietermaritzburg—display nervousness, and can verify the real position of the mine for themselves within twenty-four hours—it may not be presumptuous on our part to remark that "fools" at a distance would do well to imitate the "angels" on the spot, and keep off the grass.

The Rand Labour Commission.

Further important evidence was laid before the Rand Labour Commission at the seventh sitting. Sir Godfrey Lagden was recalled in order to give additional testimony on questions which arose in the course of his previous examination. He has just returned from a month's tour of the native locations in the northern and eastern Transvaal, and a memorandum he handed in contained some impressive statistics respecting native mortality, the average death rate per 1,000 on the mines in Johannesburg, Krugersdorp, Boksburg, Germiston, and Springs being as high as 70.6. A similar return in respect of natives employed other than on mines showed a death rate of only 17.4 per 1,000. In several districts the rate was 47.5. Sir Godfrey also put in a lengthy memorandum by the Executive Committee of the Chamber of Mines on the subject of a report to the Commissioner of Native Affairs on the mortality amongst natives on the mines of the Witwatersrand, compiled by a committee of medical officers. In this the executive stated that the hygienic conditions prevailing amongst natives had occupied the attention, for many months past, of both the Government and the boards of directors of mining companies, and the executive believed that the recommendations contained in the medical report had already been practically adopted, and "observed with great satisfaction that, as stated by the doctors themselves, all the improvements suggested by them are already in use on some or other mine on the Rand." This is vague. For the Committee apparently only "believes" that the recommendations have been adopted on "some or other" mine; there is an absence of conviction, of sure knowledge, and there is certainly an air of utter indifference in its attitude and indefinite language. The other principal witness was Mr. William Grant, formerly Native Commissioner to the Chamber of Mines, and his opinions should be compared with the report of the Chamber on which we comment elsewhere. This witness contended, "that the futile attempt made to reduce native wages below an

equitable level was responsible for the present position of affairs on the Rand, and he believed that it would undoubtedly lead to a demand in the near future for a higher rate of pay than ever previously obtained. The suggestion to supply the deficiency of labour from Central Africa he viewed with misgivings; he saw nothing to warrant a belief in permanent beneficial results from the introduction of a people alien in habits and in language to the South African tribes. Moreover, the principle of engaging men at a distance who were entirely ignorant of local conditions and below the current rate of wages paid locally contained, in his opinion, no element of satisfaction or permanence." Mr. Grant is likewise of opinion that the fact will have to be faced that among natives generally there is a growing dislike to labour in the mines, "they more clearly than ever realise and discuss the arduous nature of the work and the liability to sickness, accident and death," which "points to the necessity for stimulated energy on the part of the controlling houses to see that all the conditions of labour are made as reasonably attractive as possible." He expressed his conviction that had different methods been adopted there would have been abundant labour for the mines. And this is a view which appeals with considerable force to reason and common-sense.

New South Wales Budgeteering.

It would appear that the Treasurer of New South Wales, Mr. Waddell, is among the great ones of the earth as a financial conjuror. Reading the summary of his budget statement furnished by Reuter's agency one would think the position of the colony impregnable. He does admit a small deficit but explains it away and turns it into a figurative surplus by mentioning the fact that no less than £369,000 was employed during the year in repayment of State debts, so that although the "business deficit," as he calls it, was £273,000, against £84,000 twelve months' back, he really was £96,000 to the good. The revenue for the past year was put at £11,296,000 and the expenditure at £11,467,000, and the gross income of the current year to June 30 next is put at £11,507,000, while the expenditure comes only to £11,474,000. Thus nine months' hence the colony will be the proud possessor of a surplus of £33,000, after allowing for another £369,000 applied "towards paying off State debts." What a delightful phrase that is, and we should perhaps be quite happy over it if that nasty fellow, the *Times* Sydney correspondent, had not sent a message in which, quoting the *Sydney Morning Herald*, he points out that Mr. Waddell has accomplished his feat in budget conjuring by adding the accumulated deficit to the public debt, raising it thereby to a total of £80,000,000. He crowns this information by adding the opinion that there is "nothing in the minister's statement to inspire confidence and reassure creditors abroad." Knowing what we do of New South Wales finance, we can thoroughly endorse this opinion. The budget is sure to be full of juggling, and the politicians who have had the ruining of the colony in hand for more than a generation back have, you may be sure, systematically taken into account as revenue amongst other things the capital received for State land disposed of. Also the New South Wales Railway accounts have always been handled in that free and easy manner which rakes in capital by the million in order to hide the deficiency of earning power, and in other directions there will have been cookings and adjustings whereby the gross revenue has been swollen out and deficits concealed, but the end is coming and will now come swiftly enough. Hence probably the determination of the Sydney Government, announced with the usual flourish, to "practise strict economy in current expenditure for several years to come," and to "keep down the loan expenditure to a minimum. Nevertheless, "every reasonable encouragement" is to be given to private enterprise, and although the people are counselled to "exercise more and more the spirit of self-reliance," they may be depended on to disregard the advice, because the loan raising furore has completely demoralised them. New South Wales will have to economise because it can no longer borrow. Our Consol market is carrying lumps of its unplaced stock, and banks are "fed up" with its accommodation paper now and cannot take any more. Its inability to raise the needful may be productive of ultimate good, but the generation of dishonest politicians, budget fakers and falsifiers of public accounts will have to pass away, and be replaced by men of genuine patriotism and common honesty, before the finances of this or any other Australian colony can be brought back to a healthy position.

An Argentine Railway Deal Off.

A mild sensation was caused in the Argentine Railway market at the end of last week by the announcement that the agreement for the purchase of the Bahia Blanca and North-Western Railway by the Buenos Ayres Western Railway would not be consummated, the board of the latter concern having advised the directors of the smaller undertaking that they were not prepared to recommend their shareholders to ratify the provisional agreement arrived at some three months ago. Before the terms of purchase were officially made known at the end of June 30 someone had got wind of the proposed absorption, and Bahia Blanca securities were rushed up to fancy heights—70 for the preference and par for the debenture stocks. This was because the Buenos Ayres Western Company proposed to pay an extraordinarily high price for the doubtful benefit of buying the Bahia Blanca system, and speaking of the purchase at the time, we said:—"With its go-ahead methods the Western Company may be able to turn its purchase to good account, but superficially it gets much the worse of the bargain." No reasons for the breakdown of negotiations have yet transpired, the Western Company's officials adopting a policy of reticence, while the Bahia Blanca directors profess complete ignorance as to the position of affairs. It has been suggested that the deal has been opposed by the Argentine Government, as was the Central Argentine-Rosario deal, but more probably the Western directors have awakened to the fact that the bargain was a little too one-sided. Anyhow, it is significant that Western Stock rose sharply on the announcement, while Bahia Blanca issues became almost unsaleable after falling 17 and 12 for the debenture and preference issues, respectively. Keen traders, though, had sold Western stock and bought Bahias in anticipation of the coming haul, so being caught bears of the former, it naturally rebounded while Bahias fell.

The South African Banks and Commandeered Gold.

The South African banks do well to make public the correspondence that occurred between themselves and the Colonial Office on the question of the gold coin commandeered by the Boers during the late war. It affords a striking illustration of Government methods as now practised in connection with South African affairs, and the whole business can only be described as one of the most discreditable incidents in the long series of misdeeds of which the Colonial Office has been guilty. Relying on the good faith of the Government, not only to interpret International law in its broadest spirit, but also to honestly act up to its implied assurances, the banks were shamefully tricked into action which now involves them in very heavy loss. It will be remembered that the Boers applied to five banks for an aggregate amount of £500,000 minted money, offering as security for the repayment an equal amount of unminted metal, but following the advice of Sir Alfred Milner and Sir Robert Herbert, who was acting as Under-Secretary for the Colonies, the manager of the Standard Bank of South Africa, refused to comply with the request on the ground that the transaction was in the nature of a loan, and that any such loan to a hostile Government was obviously illegal. Subsequently the Boer demand was reduced to £260,000, which sum was forcibly taken on March 24, 1900. In due course the Standard Bank applied to the Home Government for the restitution of its share of the amount taken—£150,000—but in a brief communication Mr. Chamberlain declined to admit the Government's obligation to reimburse. This drew from four of the banks involved a joint communication, in which they detailed the position with much thoroughness, and clearly showed that it was under the direct advice of the High Commissioner that the native gold offered as security was refused. It appears, however, that before receiving the High Commissioner's opinion from their general manager

at Cape Town, the directors of the Standard Bank in London had been advised by counsel in this country to accept the native gold, not as an equivalent for the commandeered coin, but as security, and always under protest as to the whole transaction. The advice which they thus received from counsel appeared to them the more worthy of consideration, because the Colonial Office had addressed a communication to the African Banking Corporation on April 20, 1900, in which it was said that "Her Majesty's Government are of opinion that the action of the banks in receiving native gold against gold coin being taken under compulsion or duress, is not obnoxious to the penalties of trading with the enemy." Under all the circumstances the directors again sought advice from the High Commissioner and received a reply that while disclaiming any desire to instruct, his opinion was unchanged that the bank's claim should not be complicated by the acceptance of what he described as dubious security. The board thereupon sought an interview with Sir Robert Herbert and laid the matter before him, and he recommended that in the absence of fresh instructions from the Colonial Office the High Commissioner's views should be acted upon. The Standard Bank directors consequently authorised their general manager to follow the advice of the High Commissioner and the policy was acquiesced in by the other banks, Sir Robert Herbert being duly informed. Surely, then, the banks have right on their side in the contention that but for the advice given by Sir Alfred Milner, supported as it was by Sir Robert Herbert, the directors of the four banks would have directed their officers to accept the native gold which had been officially and spontaneously promised, and which there is no reason to doubt would have been forthcoming. The Colonial Office, however, had made up its mind to be dishonest, and although several more communications were addressed to the officials, advancing absolutely irrefutable arguments, they were all to no purpose, and the banks must bear the losses with as much equanimity as possible. It is a pretty object lesson of the kind to make patriots of us all, and an apt illustration of Milnerism in action.

Mather and Platt, Limited.

This old established firm of mechanical engineers which has now been in existence for about a century is notable as having been one of the pioneers in the adoption in 1893 of a forty-eight hours week for its workpeople without alteration in the rates of wages paid. The experiment was attended with considerable risk, as at that time prices were being cut into heavily by keen competition, but it is now a matter of history that it proved highly successful from the point of view of both employers and employed. In January, 1899, the business, which had in the meantime been converted into a private limited liability company, amalgamated with the private company of Dowson, Taylor and Co., manufacturers of the "Grinnell" Sprinkler for the automatic extinction of fires, and the capital was fixed at £775,000, divided into 37,500 5 per cent. cumulative preference and 40,000 ordinary shares of £10 each. None of the ordinary shares were issued to the public, and only 21,700 of the preference shares were offered for subscription at that time, 10,800 going to the vendors with 37,500 ordinary shares in part payment of the purchase price, and the remaining 5,000 being held in reserve for future extensions of the business. From the very beginning the new company met with a fair measure of success, and each year has seen steady progress made, progress all the more gratifying because it has been regular, without any of the wide fluctuations arising from "boom" periods seen in the results of so many undertakings of a similar character. The following comparison of the balance-sheets for the four and a half years of the company's existence in its present form shows clearly the excellent results obtained and the soundness of the financial position, but it would perhaps be better if the directors could see their way to render the accounts a little more fully. For instance, the item of land, buildings, etc., might be given in greater detail instead of being included under one heading with plant and machinery, patterns, investments, patents and goodwill, etc. This, however, is really the only blemish in an otherwise highly creditable balance-sheet. The amount due to sundry creditors would naturally swell with the growth of the business, but the directors evidently work as little upon credit as possible, and the increase is small compared with the larger amounts due from sundry debtors and held in stocks. In the twelve months ended June 30, 1902 new works were established at Newton Heath, and in the following year the authorised capital was increased to £1,000,000, and 7,495 additional preference shares were issued, bringing the total subscribed up to £800,000.

Turning to the statement of net profits, which is rendered each year after allowances for depreciation, it will be noted that the same care characterises the method of dealing with the surplus. Notwithstanding that the available balance has steadily risen year by year, the dividend on the ordinary shares has been maintained at a level 7 per cent., while substantial additions have been made to reserve, with the result that within the period covered by our figures a fund equal to nearly 19 per cent. of the capital outlay has been built up out of revenue, in addition to the £20,000, or about 3 per cent. obtained from premiums on shares issued, and in the last twelve months a further £10,000 was set aside for special depreciation. Truly the record is one to be proud of. Only would it not be wise to hold a little of it in securities extraneous to the business?

The United States Steel Trust.

At least one important firm on the London Stock Exchange has been again and again reported to have suffered destructive losses in connection with this Carnegie bubble company, but so far, if the rumour has any truth in it, it has not been "implemented" by an open suspension. But other and humbler people have been losing money here in that unfortunate product of the unscrupulous company fabricator's ingenuity, and the decline in prices has been disastrous for thousands of heedless speculators and eager fortune hunters in the United States. So bad did things become early this week that someone ventured to question the stability of the bonds so liberally shovelled out by the amazing Andrew Carnegie in endowment of Scotch universities and in gratification of other manifestations of pseudo-philanthropic ardour. Carnegie promptly denied that his bonds were in any way touched. "My mortgage," he in effect declared, "is a superior one, not quoted on any Stock Exchange, and consequently the decline in the prices quoted for the second bond issue do not concern

me." The worthy man told the truth. His mortgage of $304,000,000 stands above the proposed 5 per cent. second mortgage of $250,000,000, failure in the attempt to issue which began the topple. It will be remembered that $200,000,000 of this second mortgage was to be utilised to mop up a like amount of the 7 per cent. preferred stock. which otherwise was only redeemable, after years, at 115 per cent. The proceeds of the other $50,000,000 in bonds were to be utilised as additional capital, and the fact that so much more money was wanted so soon by a concern whose world-staggering prosperity had been blazoned for a certain limited number of months in all printed sheets, may be said to have been the first fact that awakened suspicion. The issue could not be made because of this suspicion, and because the preferred stockholders naturally fought against the loss of 2 per cent. per annum in the interest derisively secured to them, and of the 15 per cent. premium upon redemption.

Since the failure of that issue things have rapidly gone from bad to worse, and it begins to become visible even to the least observing eyes, that a great deal of the business done by the corporation was fomented business—pure sham. Orders, we suppose, were received from companies, sometimes created *ad hoc*, or influenced to give them, and the goods were paid for in paper issues, after the usual fashion of the Yankee world subduer, which paper the overshadowing combine had to plug into banks to raise cash on the best terms it could. Much genuine business there doubtless was, but prices for the Corporation's products were lifted to such a height as prevented people who had sense left from entering into any contracts they could possibly avoid. Carnegie was right, though, in saying his bonds stand ahead of this abortive second mortgage, but he omitted to inform his correspondent that there are debts to the amount of over $68,500,000 which really stand ahead of his mortgage. That is to say, a number of separate companies swallowed up in the Corporation, companies themselves for the most part endowed with shockingly inflated capitals before the transfer of control took place, have bond issues of their own, the aggregate of which exceeds $44,503,000. These debts, in the usual American fashion, have a first claim upon the several assets, and rank before the monster bond of Mr. Andrew Carnegie on these assets. Furthermore, the two railways nominally owned by the Corporation possess bonded debts that occupy the same privileged position. The Pittsburg, Bessemer, and Lake Erie road, for example, is responsible for a total of $16,425,000 of bonded debt, and the Duluth, Missabe, and Northern has a debt aggregating $7,593,000. Adding these railway debts to the total of the Federal Steel, National Tube, National Steel, American Bridge, American Steel and Wire, and other swallowed-company obligations, we reach the total figure of over $68,500,000 above mentioned. It is therefore quite within the bounds of possibility that the mortgage of Mr. Carnegie may have to be placed upon the market before very long to find its level. We have from the first regarded this sinister product of American financial legerdemain as no better than a vulgar imposture of the Hooley type.

Russia's Trade in 1902.

In spite of the yield of grain and other crops being exceptionally good, 1902 was by no means a prosperous year for either agriculture or trade in Russia? The peasants had not recovered from the exhausiton produced by the deficient harvest of 1901, and several districts and provinces were again compelled to seek a Government grant in aid to assist them over the winter, and to buy grain for seed purposes. This impoverishment of the peasants and farmers naturally reacted upon the manufacturing industries, still depressed by the crisis which followed the boom of some five years ago, when foreign capital was poured into the country for all manner of enterprises. Prosperity begotten and fostered by such means could never endure, but few anticipated that the effects of its collapse would last so long or spread so far. How wide the circle has been is shown by the report of our Consul-General at St. Petersburg, on the trade and commerce of the country for last year. The quantity of coal, cast and wrought iron, steel machinery and apparatus necessary for native industries all show a marked comparative decrease, though the most depressed branches were the metallurgical and mining. Naphtha, one of Russia's most important products, shared the same fate as all the other industries, owing to the fall in prices not only of the thing itself, but of its bye-products. Sugar alone showed undiminished prosperity, propped up as it is with bounties paid for by the consumer. As valued by the Russian Customs Department the foreign trade, export and import, of both European and Asiatic Russia amounted to £157,736,622, a slight increase on the figures of 1901. This is explained by the fact that owing to the good harvest the grain exports from Russia in Europe were higher in value, although the imports showed a small decrease. But whatever gain there was in Europe was entirely neutralised by the heavy fall in the value of the Asiatic export trade, due almost entirely to the unsettled state of China, its chief market. During the year the value of the exports from European Russia to this country amounted to £20,057,343, compared with £16,608,575 in the previous year, the increase being due principally to larger shipments of grain and agricultural produce to British ports. On the other hand the imports of Russia from this country were £10,551,368, or £415,650 less than in 1901, and only constituted 18.8 per cent. of the total value of the import trade. Taking into consideration the unsatisfactory economic state of the country the fall in the value of the goods we sent to Russia is not excessive, but on the other hand Germany, in spite of the same adverse conditions, managed to increase her exports to Russia, which last year formed 38.4 per cent. of the total trade. The only reason for this expansion appears to be the better business methods adopted by the Germans, who study their markets and the requirements of their customers far more than British traders. As we mentioned above the principal increase in the export of Russia to this country was in grain and other agricultural produce. That this should be so is hard on the Russian peasant and artisan who go short that the interest on the foreign loans and other burdens placed upon the country may be paid. One and the only good feature these hard times have brought is cessation of company promotion, which in 1902 was almost nil. Banking operations in St. Petersburg were inert, most of the banks paying either a reduced dividend or none at all. So far as the future is concerned it does not seem as though the dark days will pass for some time to come. Labour troubles are rife and continue to depress the manufacturing industries, while the Government still wants more money with which to carry out its so-called schemes of reform.

Critical Index to New Investments.

*** *To assist subscribers of* The Investors' Review *in deciding how to act when new issues of capital appear during the early part of the week, and lists close before the critical examination given in this Index can appear, the Editor has decided to reply by telegraph to all enquiries referring to such issues. A letter sent to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, Strand, ana enclosing a shilling for the reply, or a reply-paid wire to "Unveiling, London," will bring a prompt answer whether to subscribe or leave alone.*

Car and General Insurance Corporation, Limited.

Some ingenious persons have been struck with the notion that there is money to be made out of insuring motor cars, motor bicycles, tricycles, and quadricycles, and they have accordingly created this company, with a capital of £100,000 in £1 shares to put their ideas into practice. The whole of the shares are offered for subscription, and 5s. per share is to be paid up. The promoters are hopeful that it will not be necessary to make any further call. In addition to the motor insurance, the company proposes to encourage and obtain all kinds of desirable accident insurances, and will also issue policies in connection with public and employers' liabilities, burglary, and sickness. There may, of course, be room for this venture in the ranks of insurance companies, but we cannot feel too confident. Is it quite fair to set out the position of other

successful companies by way of demonstrating what a full destiny this new company will have?

British Dredging Co., Limited.

This company has been formed to acquire the sole right for working throughout the British Isles and Colonies the "Frühling" system of dredging, which it is claimed has met with unqualified success in Germany. One dredger of this type working in the Emperor William canal at Kiel is certified by the chief engineer of the German Government to have removed in 700 working hours 1,350,000 tons of sand, mud and silt, and to have transported and discharged this material for a distance of 1.5 miles in 1,450 hours, at an average cost of three-fifths of a penny per ton. It is estimated that from the five shipping ports of the Manchester Ship Canal, Hull, London and Liverpool Docks and the Clyde, about 8,000,000 tons are dredged annually by the bucket and grab systems, at an average cost of 3½d. per ton, and the promoters of this company estimate that if it handled only 1,350,000 tons at a profit of no more than 2d. per ton its gain would be £11,250. The capital has been fixed at £200,000, divided into 155,000 ordinary shares and 45,000 6 per cent. preference shares, carrying the right to participate further in profits after the ordinary have received 6 per cent., but only the latter are offered for subscription at par. Of the ordinary shares the vendors take 35,000, together with £15,000 in cash, in payment for the patents handed over, and the remaining 118,500 are reserved to provide funds for the future development of the business. No contracts for work appear to have been made, and the employment of even one dredger is as yet problematical, but the promoters have underwritten 30,000 of the shares for a commission of 2½ per cent. in cash and 5 per cent. in ordinary shares, and as this should provide sufficient funds to go on with the public need not be in any hurry to come to their assistance.

Hodgsons' Kingston Brewery Co., Limited.

This company was formed in 1886 with a capital of £200,000 in £5 shares, to acquire the brewery business at Kingston-on-Thames known as Hodgsons' Brewery, which had been in existence for more than 300 years. At that date it issued £150,000 5 per cent first mortgage debentures, and in 1893 and 1895 another £50,000 4 per cent. second mortgage debentures were issued, both amounts being redeemable in 1906, the former at 110 and the latter at par. A large outlay has since been made in the purchase of new properties, in further loans on licensed properties, in improvements to the brewery, and in the purchase of the "Eagle Brewery," Kingston-on-Thames, and the company now offers an issue of £350,000 4 per cent. permanent mortgage debenture stock at par, out of an authorised total of £400,000, partly to provide funds for this purchase. Of the balance, £199,900 will be used to redeem the outstanding debentures, leaving £40,000 for the purpose of further developing the business. The assets on September 30, 1902, the date of the last balance-sheet, were valued at £459,464, but the properties, including the recently acquired Eagle Brewery, have recently been valued at £643,519, exclusive of any allowance for goodwill. Profits for the year ended September 30, 1877, amounted to £19,497, and in 1902 to £30,744, after writing off wear and tear of plant and machinery and depreciation of leaseholds, and the dividends paid have risen from 6½ to 9½ per cent. There would therefore seem to be fair security for both principal and interest, but the directors have hardly been notable for prudence in the past, and have neglected to consider the question of reserves beyond a paltry £14,000 accumulated to meet the premium on the first mortgage debentures which it is now proposed to redeem.

We are requested to state that Mr. William Archer Thomson, of the firm of Merriman, White, and Thomson, of 3, King's Bench Walk, Temple, London, solicitors, is not, as erroneously stated, in the Directory of Directors for 1903, a Director of the Cambridge Theatre of Varieties, Limited, or the Tivoli, Manchester, Limited, or of any other limited company. The Mr. William A. Thomson who is a director of those companies has no connection, and never has had any connection with the above firm. The publishers of the Directory much regret the error which arose from the similarity of name.

Passing Events.

It amused us much to see in Wednesday's *Financial News* a proposal gravely put forward and said to embody "influential representations" made to the Government to the effect that Consols and other British Government securities should be reconverted into a permanent 3 per cent. stock to be for ever free of income tax. Had we been in search of a symptom calculated to prove our contention that the market distress is acute, a better could not have been found. The clumsy impudence of the thing constitutes its comicality as a market trick. No thought of the taxpayer ever enters into the minds of these distressed people who play at cheating the investor. They only wish to find a way of escape, to create a market for a discredited security. How is this fake to be reconciled with the assertion mentioned elsewhere that the public will be eager buyers of 2½ per cent. Consols at 87? The Government is said to have received the suggestions "in a sympathetic spirit," and we can quite believe it, for a more anti-democratic and anti-national Government this country has never had since the days of Charles I. It is a Government of gamblers for gamblers.

When the suggestion was first made in these columns that banks would be obliged in prudence, or compelled by events, to write their Consols down to 85, rhetorical half-bricks were plentifully heaved at our head. Yet the 85 limit of safety has already been passed, and bankers who desire to be well sheltered from untoward eventualities will make haste to provide for writing their stock down to 80. That is perhaps safety point for this generation, but any figure above 80 seems likely enough to give cause for flurries and anxiety. Which bank will be the first to take the plunge, and how are those whose Consols are held between 92 and 95 to cope with the situation? Far seeing men should seize the opportunity to permanently lower their dividends, and by systematic withdrawal of large sums from profits every half-year to be used in writing down their Government securities of all kinds, establish a reserve against every contingency. Part of this reserve they would also be wise to hold in gold, for they would be quite unable nowadays to sell any large amount of stock in order to provide themselves with cash should cash be demanded. The difficulty of selling any kind of stock except at ruinous loss is not going to be temporary by any means.

It may be just as well to record the dates pertinent to the Balfour-Chamberlain Cabinet shattering plot. September 9, Joseph writes to Arthur to announce his resignation. "Arthur says nuffin' to nobody," and the Cabinet meets twice on September 14 and 15. At the meetings the members of the Government were all led to suppose that Joseph's preferential food taxation was to be accepted by the Premier. That is clear both from Lord George Hamilton's and Mr. Ritchie's letters. Therefore these two Ministers resigned, and on the evening of the day of the second Cabinet meeting, Balfour issued his pamphlet. Next day, the 16th, he answered Chamberlain's letter of the 9th, and the day after gazetted the resignations of all three Ministers. Finally, on the 18th, Chamberlain's letter of the 9th was made public, and the world wondered, until Mr. Ritchie and Lord George Hamilton published their letters of resignation, both dated the 15th. Blasphemy, derision and contempt followed, all addressed to the Premier.

Another series of dates may have to be compiled illustrative of the new political rake's progress. In his pamphlet of the 15th ult. Mr. Balfour says, "I am a 'free trader,' but not, it must be acknowledged, precisely after this pattern," i.e., the Cobden pattern. At Sheffield, on October 1, he pronounced free trade to be "a farce," and announced his determination to go in henceforth for protectionist tragedy. But is it merely Arthur and Joseph outbidding each other in caustic "friendly" rivalry, with a God-forsaken and besotted nation looking on. "A great speech," quotha! Truly most stupendous, surpassing, a sublime wind effort, and it proclaimed a great betrayal of the country. But do you deserve anything better, oh mob? One good the speech may do, it may force the pace in

fighting and compel "Consistent Birmingham" to methodise its lying. And success will surely mean as much for Kastner-Kellner Alkali as for West Indian sugar and Vickers, etc.

The colony of Victoria, having provided no sinking fund or device of any kind for redeeming its loan of £5,000,000 in 4½ per cent. bonds, due here on January 1, 1904, has through its Government been struggling to get another loan arranged to take the expiring one's place. But nobody wants a colonial loan just now on any terms, and the intrigues and fussings around have so far brought no result. What will the colony's Government do? It must just try to arrange for a continuance of the expiring loan, at the same rate of interest if possible, if not at a higher rate, and bellow imperial sentiments to hide its impecuniosity. "Victoria has immense undeveloped resources," oh, yes, to be sure.

Seddon the spouter has had another fall. The New Zealand Government has introduced a draft bill to penalise Germany and the United States by shutting out their shipping trade from the coast of islands, because these two powers, Seddon alleges, have closed the Samoan ports to New Zealand ships. It turns out he has either made another howling blunder or wilfully ignores the truth since the New Zealand Union Steamship Company's vessels still call at Apia at regular intervals of four weeks as they did when Samoa was under the triple control. Really Richard you ought sometimes to get acquainted with a fact before letting loose that imagination.

A friendly hand should be held out by all true lovers of their country to Lord Hugh Cecil and Mr. Winston Churchill. They faced the mob clamour like men, at the conference of the National Union of Conservative and Constitutional Associations on Thursday, and had the usual reward. Sir John Gorst also had to pay for intelligent convictions and honest opposition. But Lord Hugh was best: "If conservatives go in for protection I will have nothing to do with such an apostate party."

Canada, too, must be in the "milingtary" fashion. Among the supplementary estimates—$68,000,000, or $8,000,000 more than last year, presented to the Dominion House of Commons is $1,250,000 for militia purposes, shooting tools, explosives, stores etc. What for? Does the Laurier Ministry contemplate an Alaskan raid or what?

Russia in order to punish us for excluding her bounty fed sugar intends to increase the import duty on India and Ceylon tea. This is hardly the kind of fruit the nation was led to expect from the ill-conceived Sugar Convention. Though the burden of the duty will fall in the first instance on the Russian consumer, it will also severely affect the Indian and Ceylon tea companies, and through them the British shareholders, so much of whose money is sunk in these concerns. But never mind, the law officers of the Crown declare that Russia's action is a direct violation of the Commercial Treaty of 1899, which, however, she declares we broke first by refusing her sugar. Anyhow, Treaty or no Treaty, Russia means to put on the additional duty, and so restrict an important market for India and Ceylon. Perhaps when shareholders find their dividends declining they may remember the evil effects of this Government's tinkering with sugar. India, to be sure, does not count nor yet the millions of British capital sunk in tea estates. West Indian sugar is the one thing needful.

Honest men of all shades of political opinion will receive with regret the news that Mr. C. P. Scott, the editor of the *Manchester Guardian*, will not again stand for Parliament. And those by whose side he so manfully stood in resisting the blood and gold lust which produced that disastrous crime, the South African war, will never forget the noble service rendered to the cause of liberty and progress, to humanity and true patriotism, by the *Manchester Guardian* during the horrors of that brutal and brutalising imperialism, by which the nation's policy was degraded and its conscience obscessed. In the teeth of popular hatred, of misrepresentation and abuse, the *Guardian* stood up manfully for truth, freedom and righteousness, its editor and proprietors never flinching for a moment because of threatened loss and popular clamour. Men of the stamp of Mr. Scott are more than ever needed now in the House of Commons; all the greater will be the sorrow that he is to be absent henceforth. And the sorrow will be the deeper because the prolonged illness of Mrs. Scott is said to be the cause of his withdrawal. All through the crisis she bravely stood by her husband's side, working with him and for him, for the cause of peace and goodwill, with magnificent ability and true womanly courage. Her countrywomen can no more spare her than the conscientious politician can spare her husband, and we trust health may yet come back to her, health and many years of beneficient life.

A new service between this country and the Argentine has been inaugurated by the Pacific Steam Navigation Company. The ships will sail from Liverpool to Bahia Blanca, calling La Pallice, Corunna, Vigo, Cadiz, and Santa Cruz (Teneriffe). Bahia is undoubtedly the future port of the Argentine, as it is about the only deep water one the country possesses, and the journey between it and Buenos Ayres can be done in thirteen hours.

The African drapery business of Stuttaford and Co. has had a remarkably successful year, paying a 15 per cent. dividend on the ordinary shares, with £10,000 to reserve, so the directors think the moment opportune for the issue of more capital. A year ago powers were taken for the creation of 60,000 new ordinary shares and 40,000 of them are now offered to proprietors in the proportion of five new for every seven at present held. They can be had at £1 17s. 6d. per share, that is 17s. 6d. per share premium, and payment of the whole amount must be made on or before November 1 next. The four original vendors of the company will apply for all the shares, to which they are entitled at the issue price, and they guarantee the balance of the issue in consideration of obtaining all shares unapplied for at the rate of £1 15s. per share.

One of the first things a new Chancellor of the Exchequer will have to attend to and get into shape is that £30,000,000 contribution to our embarrassed finances from the magnates of the Rand. When Joseph was touring in Africa as star politician of the Empire last winter, these magnates promised the money, or at least Joseph says that they said they might, could or would promise it. Unless the lying was unusual, the first £10,000,000 of the loan was to be handed over to us early in the new year, 1904. We have not heard of any steps being taken to make good this promise, but there can be no question that we shall want the money badly.

The latest news about the Consolidated Lake Superior Company is that Messrs. Speyer have intervened in the interests of the workmen. On condition that $250,000 is found to pay the men's wages they have undertaken to postpone foreclosure upon their mortgage for ninety days. That is a liberality eminently creditable to this firm's humanity.

The Morgan shipping ocean-subduer, otherwise the International Mercantile Marine Company of New Jersey, is of a shy and retiring disposition that belies its mouth-stretching title. It, says the New York correspondent of the *Morning Leader*, has declined to disclose the results of its first six months' working, because the facts would have no effect on the price of the stocks—3 cents to the dollar for the common and 14 for the preferred. It is added that the real motive for reticence is fear lest revelation of the heavy losses should cause the German allies to withdraw. Well, well, now, and has nobody lost anything?

A circular has been issued by the directors of Chas. Cammell and Co., of the Cyclops Works, Sheffield, notifying to their shareholders the fact that they have provisionally arranged to amalgamate with Laird Brothers, Limited, shipbuilders, Birkenhead, and calling a meeting for the 12th inst., at which particulars will be communicated. Amalgamation is to date from June 1 last, and the price to be paid for the Laird business is to be partly in cash and partly in preference and ordinary shares. Therefore an increase in the capital of Chas. Cammell and Co. is

in prospect, and the new shares will be offered to existing shareholders in the proportion of two new ordinary for every complete set of five existing ordinary shares, and the price will be £3 per share premium on the £5 share. The name Laird will be included in that of the enlarged company, and two of the Laird board will join the board of the Sheffield Company. The step thus announced has long been in contemplation, and was doubtless forced upon Cammells by the absorption of the Barrow shipyard in Vickers, Sons and Maxim, and of the Clydebank yard in John Brown and Co.

How very tenderhearted the members of the United States Steel Corporation Finance Committee are! Moved by the anxiety of the officers and employees of that wonderful Trust, caused by the slump in the price of the preferred stock to 60⅜, they hasten to reiterate their belief in the intrinsic value of the Corporation's issue, and offer to guarantee to redeem the preferred stock at the price of 82½ originally paid. It is all very touching, this faith, no doubt, but—who is going to guarantee the guarantors?

We hasten to welcome the first number of "*The Book Monthly*, an illustrated record, guide and magazine for booksellers, librarians, and publishers, for book-buyers, readers and writers." It is a promising, but not perfect, number, only no first issue ever is perfect. The reading, however, is good and purposeful, and will interest a wide circle of readers, and the longer essays are preceded by a number of interesting notes on writers and recent publications. The most important essay is entitled "Mr. Morley's 'Gladstone.' A Great Political Biography and the Great Task of Writing It." This is followed by an interview with Mr. William Faux, the retired librarian to Messrs. William H. Smith and Sons. It is quite fascinating reading. Then comes an article on the "Perils of the Reviewer, "and one on the "Geography of Bookselling," both suggestive. Quotations from reviews of books follow, and would not be missed, and then comes a London letter which promises well, and will bear a good deal of expansion. Particulars are afterwards given of books nearly ready for issue, and these would be increased in value were the prices at which they are to be published to be appended. A classified catalogue of the books issued during the past month winds up the number, and altogether the magazine promises well, and it should have a long and prosperous life. Its price is 6d. net and its publishers Simpkins.

A witty Continental banker, remarking on Chamberlain's politics, says they are modelled on that of Falsacapa in Offenbach's "Brigands." "Give them money? Nay, never, it is only necessary to promise them something. To promise costs nothing to any politician who respects himself, and Mr. Chamberlain is a past master in that kind of argument."

Answers to Correspondents.

[*A Fee of Five Shillings per query is charged for replies under his heading. Letters, Five Shillings extra per letter.*]

V. S. C.—The price is tempting to sell at, and if you have a profit take it. I am sorry about the other stock, but it is safe enough. What to buy for a rise I cannot indicate here, and do not know if I could find anyhow, but will look around and see.

H. B.—No, I do not think you should sell the stock. Looking at the big financial operations ahead in your part of the country an improvement in quotations seems to me more probable than a decline. Certainly the security is less liable to serious relapse than almost anything else I could point to.

B. W. F.—A fair engineering business, but its shares are not very marketable. If you buy more, therefore, you must be prepared to keep them, and not to look for a rise in price. There is very little chance of a profit on the purchase at the figure named for a long time.

TRADE AND PRODUCE.

Wheat.—English wheat is now on the market in fair quantities, and so much of it is poor in quality that the average price is declining. Last week farmers' deliveries were 51,368 qrs., against 48,165 the week before, and the average price obtained was 27s. against 27s. 5d. Old wheat keeps firm, and foreign is pretty steady, but the tendency generally is in favour of the buyers, and business has been dull and listless, American cables mostly disappointing, and the markets depressed by reports of heavy shipments, though they are very much below the average of last year. Dornbusch estimates the quantities of wheat and flour on passage as 1,865,000 qrs., when, as last year, at this period, the average was about 2,250,000 qrs. American markets show no very interesting feature, prices have fluctuated within narrow limits, but are practically the same as at the end of last week. Bradstreet estimates the quantities in sight east of the Rockies at 29,015,000 bushels, against 26,046,000 in the previous week, and 40,454,000 bushels in the same week last year.

Wool.—During the series of London sales just closed 151,000 bales out of an available 158,000 have been sold, and it is estimated that 80,000 have been taken on home account, 70,000 on Continental, and 1,000 on American. Under the keen competition of Continental buyers merinos improved 5 per cent. on the opening quotations for better grades, faulty and inferior sorts, on the other hand, dropped 5 per cent. lower. Cross-bred supplies have been most abundant, and eagerly sought after, home buyers have preferred the coarser makes, and the final rates quoted for them are 15 per cent. over opening prices, medium getting from 7½ to 10 per cent. more, and finer sorts 5 per cent. The sale generally has been satisfactory, but no consequent improvement shows itself in the trade. Prices are too stiff for these hard times, and spinners complain that there is no cause for them, no increasing demands coming from either manufacturer or retailer. Home grown wools continue to increase in favour and in price, and though these last are still some way behind the Colonial produce they also are becoming too high for the consumer. South American wools appear to be attracting more attention, and some Bradford buyers have gone out to Buenos Ayres and Monte Video to purchase wools during the coming season there. The statistics issued by the American Consul at Huddersfield and Bradford show that the total exports to the United States during September from the first town were less than in September last year to the extent of £810, and woollen and worsted teogether how a decrease of £3,301. Bradford, on the other hand, shows an increase in the value of goods exported to the extent of £43,290 more than in September last year, the total amounting to £192,303.

Linen.—Little change takes place in this market in any shape or form. The tone is strong, prices stiff, and manufacturers independent in their attitude. Steadily, if slowly, business is expanding, dress linens, housekeeping goods, handkerchiefs, and almost all branches coming in for increasing attention. Exports also tend to improve, India, New Zealand, Argentine, Cuba, and the Continent are all sending larger orders, and the United States also improves, but is still disappointing. Less has been doing in yarns, but there is no sign of cheapening prices nor any increase in the supplies of lines and tow. The Irish flax crop, from the specimens shown on the market, does not promise very well, the quality with one or two exceptions, being poor. Reports from abroad are more favourable, at least from Russia, Holland, and Belgium are not so good.

Cotton.—During the past week there was quite a flood of selling orders on Liverpool, the sales being made against actual purchases of cotton in the States. Buyers, however, were timid, and for this reason futures declined until unfavourable news from America restored quotations for the winter months to the old level of 6.06d. per lb. The news that effected this change was contained in the special monthly report of the "Journal of Commerce and Commercial Bulletin," which gave the average of the new crop at 67.8 against 79.6 in August, most of the deterioration having taken place in Texas. Sir Jacob Behrens and Sons, in their circular, state that although the crop is still late, the port receipts are rapidly increasing, and have now overtaken those of the 1901-2. On Wednesday the amount received for the first time this season exceeded that of the corresponding day last year, but if the trade resumes full work at the end of the present month, it will be some time before stocks can accumulate. Spinners are still paying dear for actual cotton in Liverpool, as the basis has inc eased with the change of the month, while Egyptian spot has been brought more into line with futures. The prices of American yarns display much irregularity, even in those for prompt delivery, while for the more distant months this feature is even more noticeable. One reason is that some spinners are afraid to run any risk and are chary in making quotations on the basis of futures, while others deduct ¼d. or ⅛d. per lb. off present rates for delivery in December or January. Sales on the home account are still a matter of considerable difficulty, owing to the increase in the number of looms standing, but for export there is rather more enquiry, and some business with India and the Continent has been arranged for late delivery. No favourable change has taken place in the cloth market, and manufacturers still find it hard to arrange business at anything like covering rates. Neither India nor China are buying anything, except outside articles, and staples are practically neglected.

The New York market, in the early days of the week, showed a tendency to put prices down in spite of occasional rallies under pressure of demands to cover contracts. Weather reports were however against any decided rise in quotations, and it was not until the end of the month squeeze began to be felt that prices moved. Then September went up 150 points in one day, only to lose 40 of them on the next owing to the feeble demand, but Thursday's close saw the market fairly steady, with prices inclined to rise.

On Friday the demand for American spot at Liverpool was small and prices accordingly fell two points to 6.04d. for middling, though the tone of the market was steady. Egyptian fair was quoted at 6 13-16d., American futures were also steady, the quotation for October being 5.34d. to 5.35d., Oct.-Nov. 5.17d. to 5.18d., and for later positions between Jan.-June the price varied from 5.10d. Jan.-Feb. to 5.11d. May-June.

Coal.—Though not quite so gloomy, trade remains very dull. House coal demands have been checked by the warm weather, railway deliveries have fallen off considerably, and in most varieties less is doing for the moment. Steam and gas keep up a good average, but Welsh steams have not been so active lately. However, the contract season is beginning, and coalowners are hopeful for an improvement towards the end of the month. The rise to the public of household fuel, about which the London Exchange has been exercising its mind, is now decided at from 6d. to 1s. per ton.

Copper.—This market was dull for the greater part of the week, and prices nearly every day slipped back a little. When the Stock Exchange succeeded in improving its quotations, the dealers managed to put up those of the metal but the improvement was only temporary. However, though closing dull, the market managed to keep fairly firm, and quoted £55 2s. 6d. for cash and £56 5s. for three months.

Tin.—Better advices from the East induced the market here to put quotations up to the extent of 2s. 6d. at the close of last week. Immediately this was done things turned round, and prices fell until on Tuesday cash and October were down to £113 10s., or more than £4 below the worst on the previous Friday. Matters then took a better turn, and the close last night saw cash up again to £115 10s., and three months to £116, with the market firm.

Iron and Steel.—The Glasgow pig-iron market was closed on Monday for the autumn holiday, and when it opened on Tuesday, it was very much the reverse of cheerful. For the depression the crisis in the money market and the rotten state of affairs on the Stock Exchange were mainly responsible. A smart drop consequently took place in the prices of warrants, which, though attributed to a speculative account having gone wrong, was really due to the miserable condition of the markets here and in America. Cleveland warrants were dealt in at 43s. 7½d. to 43s. 4d. cash, but Scotch and Cumberland, though quoted at 50s. and 55s. respectively, were practically untouched. A steady business in Scotch hematite pigs, however, still goes on, but the official price of 59s. 9d. is reported to have been broken on several occasions. In the manufactured iron trade there has been a fair amount of business done, and therefore prices have managed to keep steady. Moreover, no change for at least two months will take place in the scale of wages, since the average price obtained during July and August was not sufficient to allow of an increase. The steel trade is still hunting for orders, though there is a moderate amount of current business doing. In the north of England matters have gone from bad to worse, and the past week is, perhaps, the most unsatisfactory the pig-iron trade has seen for quite two years. Ever since the beginning of September the prices of Cleveland warrants have been falling fairly rapidly. But this week they went down with a bang, and on Tuesday touched 43s. 3½d. cash buyers, and though they managed to pull round a little on the following day, they still stand somewhere near 43s. 9d. Part of the drop was no doubt due to market manipulation, but, as in Glasgow, most of it was due to the unsettled condition of the American market and the unsatisfactory state of general business in this country. The figures of the exports of pig for September were decidedly good, but though more than those in August, were not up to September, 1902. For one thing not a single pig was sent to the States during the month, whereas a year ago no less than 29,196 were exported. Every branch of the manufactured iron and steel trades has been slack this week, even the demand for rails having fallen to such an extent that heavy steel can now be got for £5 per ton net at works. Yet this was the branch in which makers were so hopeful a few weeks ago. At Barrow a better feeling has prevailed in the pig-iron market, not on account of any increase in the demand, but because the prospects appear brighter. It is confidently expected that in the near future a demand will spring up which will not only clear out all the accumulation of stocks, but also necessitate putting into blast a number of furnaces at present standing idle. Where this wave of prosperity is coming from is not, however, stated. Another Admiralty order, this time for a new first-class cruiser, has gone to Barrow, and this, with the work already in hand, is expected to liven things up a bit.

Tea.—Last month's deliveries of Indian and Ceylon were a million less than in September last year, a decrease not due to any decline in the home consumption, but to smaller exports. Foreign markets as yet have been buying simply to cover present requirements, and will probably increase their purchases shortly. Imports into this country from June 1 to end of September were over a million more than in 1902, being 79,600,000 against 78,500,000, deliveries were 82,500,000 against 80,000,000, and stocks now stand at 60,700,000 against 64,900,000 last year. This week's auctions were heavy, 45,484 packages being offered, including a large quantity of inferior tea, and consequently quotations dropped still further, and lowered the average price for the week to 7.36d. against 7.87d. last. Medium and better qualities were fairly steady, Ceylon offerings were light, only 13,400 were placed on the market, and as the quality showed distinct improvement, quotations were better, and the average obtained 7.58d. against 7.33d. last week. Javas also were small, and showed a poorness of quality, and a fall therefore in quotations.

Sugar.—Though the week has not seen any great changes in values there was little business doing, Continental speculators buying May and August deliveries at previous quotations, while the few sales of October were carried through at a fractional decline. Mr. Czarnikow, in his circular, states that holders are looking for some American demand, but as yet none is reported. In any case, the new sugars cannot arrive in the States until late next month, and if Cuba continues shipping and selling as she has done in the past few weeks, there will be even less anxiety to operate on this side for arrivals to take place during the harvesting of the Louisana and home-grown beet crops. While waiting for this problematical American demand to spring up European buyers and producers show little anxiety to come to terms. Consumers have still fair supplies of old sugar on hand, and, in this country, at any rate, will require very little new sugar this month. The disparity, however, between old and new is such that old stored sugar will be kept back, some parcels in barge having even been ordered into store. Crop reports continue very contradictory, as Eastern Europe, on the whole, has had a dry season, while Western has been very wet, and this makes it almost impossible to generalise. Austria, however, continues to hold out the best hopes, and her crop, it is estimated, will work out at about 1,200,000 tons, compared with 1,057,000 tons. A fair increase is also expected in Germany, but French and Belgian producers are inclined to be pessimistic. The American market has been quiet though steady at 3⅞ cents, equal to about 7s. 9d. for old sugars. Consular Beet Certificates must state the season, the Treasury orders, and this raises the presumption that new Convention sugars will not be countervailed. Imports fell short of meltings by 4,000 tons, and stocks are still further reduced to 173,000 tons.

WEST AUSTRALIAN CRUSHINGS.

The West Australian gold export and mint returns for the month of August give a total of 206,617 oz., the lowest figure since March. Compared with the preceding month it shows a falling off of 5,884 oz., but compared with the month of August, 1902, it is an improvement of 18,645 oz. The quantity of ore treated was 183,775 tons, for a yield of 183,797 oz., showing an average yield of only 1 oz. per ton. Compared with July this is a decrease of 7,884 oz., whilst the quality is poorer than it has probably ever been.

The Investors' Review.

The Week's Money Market.

Bank Rate 4 per cent. (Advanced from 3 per cent. on September 3.)

Norfolk House, Friday Evening.

The dominant fact in the Money Market this week is its borrowings at the Bank. These amount to £7,830,000, and bring the total of other securities up to £30,484,000. Some of the money has been lent until dividend day, and a good deal of it represents bills discounted by the Bank of various usances up to three months. The market will therefore be comparatively well supplied with short credits for another ten days, and it might be so till the latter half of the month. No great fall in rates, however, should occur, because cheap money would immediately revive the gold export demand, and whether market money is cheap or not we have a variety of autumn requirements for the metal that must be provided for whatever happens. Real ease, in short, cannot come to the market, and as long as it pays no more than 3¼ to 3½ for day or seven day advances, it has nothing to complain of. Just now call money is only 3 to 3¼ per cent., and towards the close this afternoon balances till to-morrow or Monday, could be had for 2½ to 3 per cent., with credit still unlent. A considerable sum was also paid off at the Bank. The India Council, though, lent a fair sum into November at 4 per cent.

Discount rates will probably hang around 4 per cent. for full three months' remitted bills, and 4 to 4⅛ per cent. for four and six months' bills, as they have done all this week. Bank paper due within the year has been taken to-day 3-16 to ¼ below 4 per cent., and even finer rates might be reached next week on December bills, as bankers and bill brokers are naturally anxious to work so as to place themselves in funds at the end of the year. Full three months' bills of the same class were not bought below 3⅞ per cent. The market, however, cannot hope for any durable decline in discount quotations, any more than in short credit rates, and there is no disguising the nervousness which prevails under the surface, not only about gold exports, but about the possible outbreak of trouble either in our own credit market or in that of New York.

The chief anxiety is about gold. If only those Transvaal gold mines would turn us in a £1,000,000 of the metal every fortnight, we should be as happy as sparrows in a harvest field, but this is a vain hope. Years must elapse before any imposing volume of the metal can come to us, and even were the output double what it is now our maturing commitments are so enormous that immediate relief to our market could not be counted upon. Only about £300,000 in bar gold is due in next week, and it is by no means certain that the Bank will secure it, although the German demand has slackened. The French exchange has moved against us, but only to a trifling extent. on the other hand, the New York rate has been going down rapidly, and that is in our favour, but were gold shipments from that quarter to Europe threatened, acute agony must at once arise again in Wall Street. Whatever happens we are bound to lose gold between now and the end of the year, and we have none to spare. The stock actually in the Bank, till money included, is £2,000,000 below that of the same date a year back. Perhaps some of the difference may be in the safes of the joint-stock banks; let us hope it is. To-day the Bank reported the receipt of £173,000 in bar gold, the remainder of its Monday's purchase, and the withdrawal of 10,000 sovereigns for South Africa.

SILVER.

There has been a fair amount of steady support to the market from the Indian requirements, but in the end of last week and the beginning of this the supplies came forward rather more readily than usual, and as values weakened a little in Bombay, quotations here flinched to 27 3/8d. per oz. for immediate delivery, and 27d. per oz. for future metal. The United States Government, however, bought another 250,000 oz. for the Philippine coinage on Monday, and since then the quantity offered from day to day has once more been limited to small amounts, and prices rose gradually to 27 5/8d. per oz. for cash and 27 5-16d. per oz. for delivery two months' forward. The announcement is made that from to-morrow the Government of the Straits Settlements will prohibit the importation of Mexican dollars, but this action is not likely to affect the price appreciably. For the Rs.50,00,000 of India Council drafts the tenders last Wednesday amounted to Rs.2,40,25,000 in bills and Rs.25,00,000 in telegraphic transfers, and of these Rs.44,16,000 were allotted in bills and Rs.5,84,000 in transfers. Applications at 1s. 4 1-32d. and 1s. 4 1-16d. per rupee respectively received about 23 per cent. Next week a further Rs.50,00,000 will be offered.

Stock Market Notes and Comments.

So much is said about the general financial position elsewhere in this number that we have nothing further to add in this column. The markets have surmounted their settlements, met their difference somehow, submitted to whatever charges bankers imposed, and are now eager to be happy for another fortnight or month. The players are even able to amuse themselves a little, and some of them have been gravely declaring that the Germans bought Consols heavily on the *Financial News* 3 per cent. reconversion tip. Doubtless, and the bought stock will be paid for with German silver. But what is the poor investor to do all this time? He gets his quarter's dividends in the beginning of the week, and has already pocketed the proceeds of many a coupon cut off for the 1st inst. Is he to let the money lie idle for ever, so that bankers may risk it on the Stock Exchange instead of himself? There is no necessity, as that shrewd foreign banker reminds us, and as we have often told correspondents privately. Several Government stocks still exist where money can be lodged with reasonable safety to capital throughout the prolonged time of crisis, far from being at an end. There are the 2½ per cent. annuities redeemable in January, 1905, the Exchequer bond issue to be paid off on December 5, 1905, and the National War Loan stock repayable at par in 1910. These are all British Government securities, whose capital value is bound to be maintained in the darkest times by the early date of their redemption. It is much better to put away savings in securities like these, and rest satisfied with moderate rates of interest until the issue of the prolonged reaction is known. Apart from Government stocks, moreover, there are such issues as the Metropolitan and London County 3 per cent. stocks, and the debenture issues of some of our best Home Railways. The time is also drawing near when it might be prudent for people who can face a little risk, not much, to look at the better classes of American Railroad bonds. They may go lower, many of them are almost certain to go lower before the liquidation on Wall Street reaches its conclusion, but their safety as interest payers seems quite as great as that of any British Railway stock. Most people, however, will be well advised to lay their money, for the present, aside in what may be called short-dated securities of the Home Government, to wait there until the market misery has worked itself out, ready for transfer to other securities when the proper time comes. Do not buy Consols even at current figures, because they may fall far yet. On the other hand, it would be folly on the part of investors to sell out their holdings in the stock just now. The nation is not going to default. Sit still and wait.

Do not in any event be misled into speculating for the rise by the present superficial rally in the price of Home stocks, and above all in the Kaffir Circus. Should that rise continue in African shares sell out those you now hold. Those that possess such treacherous stuff in any part of the market should sell out on every rally, and buying of anything speculative ought at present to be carefully avoided, speaking in a general way. It seems unnecessary to say more. Calmness will probably remain with us for a few days, till towards next making-up day, or even later, if there are no disquieting gold movements, and if short credits in the open market remain tolerably cheap, but do not be deceived by these hectic transitory glows. They indicate consumptiveness rather than a return to robust health in markets.

The Week's Stock Markets.

A week of keen, if suppressed, excitement has been spent upon the Stock Exchange, and not since the days of the Baring crisis have markets seemed so near a complete breakdown as they did on Monday and Tuesday last. Throughout those two days securities of all kinds were thrown out in chunks, regardless of price or consequence, and the gravest fears were entertained as to the outcome of the Consol and general settlements then in process of adjustment. Markets in fact followed the course destiny has marked out for them, and, despite the whipping up before the close, when it was found that the efforts made to smooth over the weak places had been successful, the position is not a whit sounder than it was before the latest slump occurred. How can it be, when we consider the events that have brought about the present condition of affairs, and that in no single direction is the source of the weakness being removed? Such incidents as were witnessed last week only accentuate the trouble, they do not eradicate it. Consols have been persistently realised for months past, causing quotations to decline many pounds, and yet the burdensome account open for the rise has not been materially, if at all reduced. The load overhanging the market remains big as ever, otherwise we should not have 5 per cent. contango money. One large firm in this section was reported to be in trouble, and at least four meetings of creditors were held on Tuesday. In all instances the exhausted positions were once more bolstered up, no failures having been announced. Selling commenced in the Yankee and Kaffir sections, the latter on a rumour that a Johannesburg house had failed, and acute depression was quickly in evidence throughout the Stock Exchange. Realisation in Consols was urgent, owing to operators' inability to pay 4¾ or 5 per cent. contango money, and find a difference of over £3 as well. At one time on Tuesday the quotation was driven below 86⅞, Yankee selling to relieve the embarrassment on that side playing a not unimportant part. The statement was also put about that some of the joint-stock banks were realising, in order to avoid writing down, but the story was not generally credited, for the very sufficient reason that extensive selling would be impossible. Consols did not long remain below 87, and on Wednesday rather brisk bidding, said to be on behalf of commission houses, sent quotations forward with some rapidity. Investors, too, were attracted by the low figures, and before the day ended prices were once more over 88. Further assistance came from the absence of an advance in the Bank rate, and closing figures are actually ½ higher for money, at 88 9-16 to 88 11-16, and 88 13-16 to 88 15-16 for the account. Khaki stock never lost much ground, and closed ¾ up, but Transvaal scrip at one time fell to 3 discount on heavy selling, prompted by the refusal of bankers to continue loan accounts for weak "bulls" who had had allotted to them ten times as much stock as they could take up. It, however, recovered with Consols, and closes only 1¼ discount, or 1-16 down. Childers 2½ per cent. went up ½, and India loans recovered towards the close, leaving them ½ better. Bank of England stock fell 4, and amongst Home, County and Corporation stocks

Amidst all the depression elsewhere, the Foreign bond market kept wonderfully firm, and although changes never reached important dimensions, all the week's movements are favourable. Berlin seemed rather keen on Argentine issues, and the belief is prevalent that another unification scheme is in the air, because it may prove a useful weapon at the forthcoming Presidential election. Brazilians likewise scored moderate improvement, but Chilians were neglected and finish as before. Colombians were advanced to 24½ on the news that the latest President favours the building of the Panama Canal. Paris was always a small buyer of the principal Continental favourites, paying particular attention to Portuguese 3 per cent., which left off 1¾ better. It seems that the new bonds are now ready for circulation, and this stimulated a few purchasers. Turkish also came in for support, and Bulgarians finished 1 higher. In the Far Eastern group Japanese sterling were heavy, but Chinese loans wiped out early losses. Rates for continuation were slightly higher owing to the enhanced value of money, and Argentines, Brazilians, and Chilians all cost from 4 to 6 per cent. Spanish, Portuguese, Turks and Greeks were carried over at 3 to 5 per cent., but Italians and Russians were done at 2 per cent. and "even" respectively. Uruguay 3½ per cent. cost 1 to 3 per cent., and the 5 per cent. 3 to 5 per cent. The principal movements in the fortnight were in Turkish issues which showed gains ranging up to 3. Spanish and Russians each rose ¾, while Hungarians fell 2. Brazilian loans made up ½ to 1½ better, Argentines lost fractions and Colombians dropped 2¼. Japanese scrip was 2 down.

Contangos on Home Railway ordinary stocks were still high, rarely falling below 5½ per cent., somteimes rising to 7 per cent., and in the case of Brighton "A," touching 8 per cent. The market was quiet and lifeless throughout the whole of the nineteen day account, and prices gradually sagged, with the result that the making up figures showed substantial declines in the majority of instances. Brighton ordinary was 2 lower and the preferred and deferred both fell 3, North-Eastern, Central London ordinary, South-Eastern ordinary and deferred and Caledonian were also 3 down, South-Eastern preferred receded 6, Great Northern issues 2½ each, and the losses of 1 and 2 were too numerous to be mentioned in detail. The greater part of these falls, however, took place in the earlier days of the account, and although the traffic returns for the past week afforded little encouragement, the market took its cue from Consols, and with the rebound recorded there on Wednesday quotations rallied from the lowest points touched. Public interest, however, is still absent, and the recovery could not be altogether maintained. Midland preference rose 1½, but the deferred, after being ½ up finished without change, Great Northern deferred and Great Eastern gained ½, Great Central deferred ¼, Chatham ordinary ⅜, and South-Eastern ordinary and deferred 1 and ¼. On the other hand South-Western ordinary receded 2, and the deferred 1, and Brighton deferred dropped 1. Amongst Undergound issues City and South London fell 2, Central London ordinary 1, and District ½.

Bear operators generally had a pretty good innings in all sections of the markets during the past account, and this was particularly the case in the Yankee division, where falls of $4 or more were far from uncommon. Baltimore ordinary headed the list with a decline of 9½, but Denver preference, Louisville, New York Central, Union Pacific common, and Wabash income debentures all showed losses of 7. Milwaukee, Illinois Central, Norfolk common, Southern Pacific, and Wabash preferred were from 6 to 6½ down, and Atchison issues, Chesapeake, Denver common, Reading ordinary, and Southern ordinary dropped 5 to 6. Money for the settlement was comparatively easy at from 4½ to 6 per cent., but the account open on this side of the Atlantic is, and has been for a considerable time, of very insignificant proportions. The daily tale of market movements has for the most part been of the usual character. Wall Street is still dominated by fears

of serious financial troubles, with the result that no heed was paid to news which would in ordinary circumstances be considered encouraging. United States Steel Trust issues have again set the pace, and heavy liquidation of these shares caused demoralisation everywhere, which the more favourable Associated Banks' statement, good crop reports, and even the Treasury's money market relief measures failed to check in the slightest degree. Monday was equally black with Saturday, but by Tuesday the big operators had come to the conclusion that something must be done, and commenced to screw up quotations with a quick turn. It was openly admitted that the upward movement was entirely a manipulated one, due to the banks helping the speculative leaders for their own interests, and although care was taken at the same time to put about soothing reports that no great financial disaster was impending, and that there were signs of the public at last taking an interest, the "bears" were only scared temporarily, and soon resumed operations. Persistent selling had again begun in the market by Tuesday night, and although fresh attempts were made to bring about a rally the support seemed unable to gather real strength. Stocks were sold by Wall Street on Wednesday under the impression that our Bank rate would be further raised this week, and the knowledge of this induced a certain amount of "bear" covering both here and on the Continent, which brought about a fair recovery. Wall Street took back the shares thrown over earlier, and this, with the news that Mr. E. H. Harriman was joining the board of the Erie Company, proved sufficient to steady the market for the time being. Erie ordinary finished 3 better and the first preference rose 2¼, Union Pacific common gained 2¼, Milwaukee 3, Southern Pacific 1½, Atchison ordinary 1½, Chesapeake ½, but against these must be placed losses of 3 in Denver preferred, 2 in Louisville, and 1½ in Reading second preferred issues. Norfolk common were 2 down, and a few others lost ¼ or ½.

Among Canadian Railway securities the downward movement went steadily on throughout the whole of the account, and when the making up prices came to be fixed Canadian Pacific shares showed a loss of 4¾, Grand Trunk ordinary stock was 2¼, the guaranteed 3, the first and second preference 2½, and the third preference 3½ lower. The account open for the rise in the issues of the latter company is comparatively small, and carrying over rates ranged from 3 to 5 per cent. as a general thing. A slight rally on Saturday, after the slump of the previous day, proved of a very temporary nature, and by Monday weakness had again developed. Forced sales of Grand Trunk stocks sent quotations down rapidly, and the fall was further helped by the monthly traffic statement, which showed an increase of less than £14,000, instead of the £18,000 to £19,000 which had been hoped for. A fresh recovery was brought about on Wednesday, which, however, was soon lost, and, in spite of further rallies on Thursday, closing figures reveal falls of ½ to 1. Canadian Pacific shares also fluctuated widely, but never quite lost the early improvement, and ended with a gain of 1½. A number of Indian Railway stocks were marked down during the week from 1 to 2, including Assam guaranteed stock, Eastern Bengal debenture stock, Bengal Dooars preference, Madras 4¾ per cent., Southern Punjab ordinary and several East Indian issues, while Bombay and Baroda stock relapsed as much as 3, and Great Indian Peninsula debenture stock declined 2½.

The Foreign Railway market was quite disturbed by the news that the directors of the Buenos Ayres Western Company felt themselves unable to recommend their shareholders to ratify the *ad referendum* agreement made for the absorption of the Bahia Blanca and North-Western line, and rumour had it that the Argentine Government had intervened to prevent the amalgamation. Bahia Blanca and North-Western preferred stock suffered a sharp fall of 12, and the debenture stock relapsed 10 on the news, and the former went down another 5 later, making a total decline for the week of 17. Buenos Ayres Western, on the contrary, advanced 3, but sagged again later, and closed unaltered. Other Argentine issues were weak in sympathy, but recovered in part at least before the end of the week. The fluctuations, however, still left Buenos Ayres and Pacific ordinary 2 down, and Argentine Great Western ordinary 1 lower. Of other South Americans Antofagasta debenture stock declined 1, Arauco general mortgage bonds receded 2, Brazil Great Southern 6 per cent. debentures 1, and San Paulo ordinary 3. Mexican Southern first debenture stock dropped 2, and Manila redeemable debentures 1½, but Nitrate issues, which have recently been introduced on the Brussels Bourse, met with Continental support, and finished with advances of ¾ in the preferred, ¼ in the ordinary, and ⅛ in the deferred shares.

Miscellaneous markets shared the universal gloom, and prices gave way in all directions. James Nelson shares were quite flat, and although they recovered a little before

the close, are 1-16 down at the last. The market does not anticipate an interim dividend. Other Meat shares also went back, particularly River Plates. Aerated Breads were weak, and so were Sweetmeats on another heavy traffic decrease. Oil shares continue very dull, and Cotton and Textile things dropped a few pence here and there. South Metropolitan Gas, after a recovery, fell back, and amongst Waterworks, Southwark and Vauxhall declined 7½, and West Middlesex 4½ per cent. debenture stock fell 3. At the half-yearly meeting of the East London Company, held on Thursday, the chairman advised proprietors to stick to their holdings and not realise in a panic. Brewery stocks were flat most of the week, but Allsopps regained some lost ground towards the last. Kent Coal were bid up a little on the reported striking of "several" seams. Rates were light at the carry over on Monday, and everything went smoothly enough.

Nothing happened in the Stock Exchange to-day. The thin stream of investment in Consols and other securities was again in evidence, and markets continued to present a cheerful aspect in all directions. Foreigners steadily buy Consols in small lots and France also bought a few Kaffir shares, but there was really nothing remarkable going on. The rate on Consols quite ran off to-day, "so much so that some 'floaters' had to be taken to the Bank for exchange into registered stock." Wonderful, is it not?

Transvaal Chamber of Mines and the Labour Supply.

For some weeks past that philanthropic institution yclept the Transvaal Chamber of Mines, an institution established to watch over, with zealous disinterestedness and untiring energy, the interests of that class of men incapable in this naughty, unrighteous world, of looking after themselves—the mine bosses—has been assiduously collecting data and other things to lay before that senate of pure and infallible wisdom, the Rand Labour Commission. We can easily imagine with what love, alacrity and diligence these unselfish altruists have worked, for have they not been prompted so to do by one of the noblest of aspirations—the desire to enlighten mankind? To-day we gaze upon an idle mining industry, upon ever falling prices, upon a deluge in the market of Kaffir paper, a sight that we feel has saddened the hearts of the mine bosses, that has robbed life and wealth of all their pleasures, that has oft laid them prostrate with poignant grief. They have gazed upon misfortunes and ruin they have been powerless to avert, let alone powerless to alleviate. This misery, wretchedness and poverty are the effects of causes they are impotent to control—the effect of a scarcity of black labour, although of white labour there is abundance. As, therefore, there is no black, and they will not have white at any price, there is nothing for it but to get yellow. It has to be proved, however, that there is an insufficiency of black, and to furnish a proof the Chamber of Mines has worked with a devotion and a perseverance that evoke unstinting admiration. Statistics have been piled upon statistics, lessons and morals have been written upon them, and the whole has been dumped down in the place where sit the oracles who are to decide upon this momentous, world-shaking problem. It is evidently a vast pile, a monumental, majestic testimony to laudable human exertion. For the Johannesburg correspondent of the *Financial Times* has been fortunate enough to obtain in advance some of the most important portions of the report, including the summing up of the whole position." The portions make a goodly heap, and these he has forwarded to his paper, and we take the liberty of extracting a portion of these portions for the edification of the readers of this Review.

The inquiry, it appears, has been divided into the following heads:—(1) Sources of supply in Africa from which labour can be obtained, financial aspect of the question as

far as the working of the mines is concerned, the loss resulting from the non-working of certain mines owing to the shortage in the supply of the necessary unskilled labour; (2) Requirements of public works, municipalities, semi-public companies, such as railways, water-works, etc.; (4) Mining labour requirements for South Africa now and five years' hence. Quoting from the correspondent, "only certain African territories are open to recruiting. Every effort has been made by the Chamber or on its behalf, to procure the throwing open of certain further African territories, but, after long negotiations, the result has been either direct failure or dissatisfaction. Recruiting is prohibited in Portuguese East Africa, entirely in Madagascar and Natal. In German South-West Africa and the Eastern portion of British Central Africa recruiting is limited to 1,000 each. The balance of territory, comprising Cape Colony, Bechuanaland, the Orange River Colony, the Transvaal, and a portion of Portuguese East Africa, is open to recruiting, but from Northern Bechuanaland and the Western Province of Cape Colony no labour is forthcoming, while in Rhodesia recruiting has been stopped by agreement." All this may be true, but it leaves unanswered the question, has every effort been made? What kind of an effort was that that reduced wages? If readers will refer to our articles in preceding issues on this subject they will remind themselves that many witnesses before the Commission averred in dogmatic language that every effort has not been made, either to offer the natives decent wages, to provide them with habitable quarters, or to treat them in any way whatsoever as human beings. And as for Rhodesia, why has recruiting been stopped there? Why has this agreement been made with the Chartered Company? Is it to facilitate the procuration of labour, or to place additional difficulties in the way? The Chamber estimates that in the territories open for recruiting there is a total population of 4,672,000. "This number includes able-bodied males between the ages of fifteen and forty, suitable for work, who would leave their districts at any given time to a total of 233,611. Adding the available supply from German South-West Africa and British Central Africa (1,000 each), 2,000, it gives an available total of 235,611. It is assumed that 10 per cent. of the total population would leave their districts, equal to 467,223. But only half would be working at one time, equal to 233,611 available for the requirements of all outside districts." The question is then asked, how is this number employed and the answer is:—(1) Transvaal mining in labour areas, less those employed on farms, 130,035; (2) Cape Colony mining, 14,835; (3) O. R. C. mining, 4,245; (4) in public works, 49,786; total, 198,901. This leaves a balance of 36,710 to be accounted for, "against which has to be counted numbers employed by the Public Works Department of Pretoria and Cape Colony and in domestic service. Taking these two demands into consideration it appears to the Committee that even now the available supply of floating labour in South Africa is fully or almost fully utilised, if that supply is calculated on the basis set forth by Sir Godfrey Lagden."

A tabular statement is given to show the number employed in mines, public works, etc., the number at present required, and the number that will be wanted five years' hence, these being respectively, 197,598, 350,714, and 650,574. Thus there is declared to be a shortage at this moment of 115,103. The Chamber then calculates the losses resulting from this shortage, in order, it is to be presumed, to harrow the feelings of the public and compel the latter to yell for Chinese to come and save them from ruin. The vast number who have already been ruined may not be so deeply affected by the figures. The correspondent points out that the sub-committee "makes its contrasts upon the maximum erected stamp basis rather than on the actual working results of 1899," that is, upon a total of 7,145 stamps, whereas in July, 1899, there were only 6,000. "This rather goes to show," he significantly adds, "that the sub-committee has been indulging somewhat in special pleading. In this direction and, perhaps, in others, it is open to criticism, which no doubt it will receive when officially published in Johannesburg. But to proceed with the evidence, they put forward:—Stamps working, July, 1899, 3,725, erected, but idle, 3,420, total, 7,145. The stamps standing idle would crush 16,587 tons per diem, 464,436 tons per month, or 5,573,232 tons per annum. The gold output of that quantity may be set down at £11,000,000, as against £12,339,000, the present estimated product for 1903 upon the basis of July. Assuming the profit at 15s. per ton of ore treated, the profit would be £4,179,924. Of this about 70 per cent., or £2,924,947, would be distributed in dividends, and this is the annual loss which the Committee estimates the industry is suffering on the basis of the present stamping power, and without allowing for losses being incurred through delay in erecting further stamps. Were all the stamps working it would also mean the distribution of some £3,727,100 in salaries and wages, of which 1,985,463 would be in respect of white labour. It is estimated that the 3,420 stamps standing idle would, if started, give employment to 5,612 more skilled workers, and about £182,828 per month would be spent among local merchants and coal companies, or £2,191,536 per annum."

Such, on the showing of this Chamber, is the loss suffered by shareholders because the mine bosses refuse to give to the black labourer the hire of which he is worthy. As for white labour, the employment of that would, of course, spell black ruin and desolation. Out of 79 mines it is declared that no less than 48 would work at a loss and the rest would have their profits materially reduced. "Even on the basis of a very considerable reduction in the wages paid to white unskilled labourers it is economically impossible to profitably work the gold mines of the Witwatersrand, and, therefore, the more economically impossible to think of profitably working the huge bodies of low grade bold-bearing rock at present lying entirely untouched." The correspondent says this opinion is open to argument. Not only is it open to argument, however, but, as we stated last week, it has been refuted. It is most interesting, as well as instructive, to recall what we published in our last issue, in face of the following words from the *Financial Times* correspondent:—"Mr. F. H. P. Creswell, the manager of the Village Main Reef, at least thinks that there is a case for the economic employment of white labour. It would be a most instructive experiment to put this gentleman on his mettle, and say, 'work your mine by white labour.' We have it on the authority of the *Daily Mail* that he has been put on his metal, with the result that he has put to nought all these elaborate estimates of the Chamber of Mines. Are the latter not utterly useless, in face of the fact that this manager saved no les than £5,700 during July and August by employing such labour? In spite of his gentle cynicism, the correspondent seems to think it is quite possible that white labour could be employed on the mines successfully. For he says he has had an opportunity of comparing and discussing Westralian costs with a leading Rand engineer, who has had much experience in Western Australia. "He was disposed to think that if mines here were laid out with a view to being worked by white labour, if it could be ensured that the individual workers would work as hard as they did in England, and if a maximum of labour-saving appliances was adopted, then it was a conceivably economic proposition. Without elaborating this theme, though great difficulties stand in the way, the dictum of the sub-committee is not to be considered the last word in this important question." No, the last word has been said by the Village Main Reef manager, whose dictum is backed up, not by hypothetical figures, but by irrefutable facts. So all the labour spent in erecting this colossal statistical compilation has been thrown away. Instead of wasting so much mental effort in arraying these figures, the time would have been more profitably and satisfactorily employed had all the mines carried out experiments similar to those of the Village Main Reef. It is not facts, however, the mine bosses want. They want slaves, not men who can take their own parts. Slaves, however, can take their own parts in very summary fashion. They seek revenge in killing and slaying, and gore may be flowing copiously in the land before the mine bosses are two years older, if they get their way now. And they are to partly get it, for has not the Government of Lord Milner decided to release 25,000 blacks from the railway works and replace them by Indian coolies, just as a beginning?

MINING NOTES AND NEWS.

There is little news we have to record of the mining market this past week, except the customary story of gloom and depression. As we stated in our last issue, operators had heavy differences to face, owing to the steady fall in quotations during the past account, consequently the market has been in a state of suspense as to the probable outcome of the settlement. One or two failures, at least, were confidently expected, and whilst the uncertainty lasted punters and others were too nervous to try to lift prices. As no support has come from the professionals, and as the public continue absolutely indifferent, prices have naturally fallen lower, thereby bringing still greater suffering upon holders. Pay-day passed off without any hammering in the mining market, and relief at the news was vented in an outburst of cheering at three o'clock on Wednesday afternoon. Many thanked heaven that their worst fears had not been realised, notwithstanding one or two failures in Glasgow and Edinburgh, and the well-known fact that "lame ducks" have had to be assisted to waddle along out of temporary danger. That there is considerable potential danger in the present situation is tacitly admitted, but it would not do to tell the world so. The eyes of the public must be turned away from the chasms yawning around them, and should there be a crash they must be told it is merely a little tumble, with no necks broken; that they themselves are perfectly safe. Dealers gave some expression to their relieved feelings by putting prices up a fraction or so here and there, and lo, the cry is re-echoed in the market place that a more cheerful feeling prevails. This greater cheerfulness has been exhibited on scores of momentary occasions during the past three or four years, and at least three or four times a fortnight since the termination of the war. And as the cheerfulness has invariably speedily changed to gloom, readers of this Review will judge how much importance is to be attached to this reiterated cry.

Little has been heard of the labour problem, probably because the minds of the speculators have been too pre-occupied with matters of more immediate and serious concern. As regards the forthcoming report of the Commission, opinion appears to be changing. It is still felt that the report will pronounce in favour of recourse to Chinese, but the hopes are less assured that it will have any effect upon the mining market, at any rate, not a favourable effect, only an influence similar to that effected by the declaration of peace. Elsewhere we give a synopsis of the report drawn up by the Transvaal Chamber of Mines for presentation to the Commission, and also a summary of the evidence tendered at the seventh sitting of the latter body.

As regards the campaigns on the Rand, a meeting under the auspices of the Labour Importation Association was held a week ago, at Maraisburg, attended by miners from the Consolidated Main Reef Mines, the Aurora West United, and the New Unified Main Reef. The meeting, with one dissentient, adopted a resolution in favour of the importation of Chinese labour. Another meeting held at Standerton also passed a resolution, by 78 votes to 23, favouring Asiatic coolies. It is stated that the decision of the High Commissioner to suspend the work entailed by the construction of the new railways, has created a profound impression upon all classes of the Johannesburg community. The decision is regarded as a recognition by the High Commissioner not only of the great need for labour, but also of the acute stage which the shortage has reached, at least that is what the cable informs us. It is added that the view is held locally that London people have evidently failed to grasp the immense significance of the matter to the mines. It is admitted there is abundance of white labour, and one mine manager has demonstrated that he can earn large profits with such labour. In face of such an impressive fact, is not all this shouting for yellow labour overdone?

A cablegram from the manager of the West Rand Central announces the startling news that he has found it impossible to keep the mills running full time owing to the continued scarcity of native labour. Acting upon this the directors have decided to suspend crushing temporarily, and with the available labour to confine operations to development work. This is not an important mine, it has never paid a dividend, but no doubt it is felt it will help to create a scare, and assist the mine bosses to their own way in getting slaves from China. An interim dividend of ten per cent. has been declared by the New Jagersfontein Company.

As regards the other sections of the mining market they can again be dismissed in a few words. There is nothing to say respecting them except that all alike have been unrelievedly weak. No support of any kind has come from any quarter, accordingly prices have drooped. In Westralians Great Fingalls have attracted some attention as a consequence of the higher interim dividend declared, but other shares have not been affected. Rio Tintos and other copper shares have been stronger towards the close of the week than they were at the beginning.

Companhia de Mocambique.—During 1902 the receipts in Africa totalled £153,138, which exceeds the estimated receipts by the sum of £23,116. With this the directors appear to be highly pleased, for they consider it "very satisfactory, in view of the crisis which still continues to affect the company's territory." The Customs receipts and port dues have also exceeded the estimates, and the same may be said of the hut and poll taxes. "It is apparent, therefore," the directors gossip, "that in spite of the crisis weighing upon the local commerce, the actual development of the territory has not fallen off; the order and general security of the country continue to progress, and the natives, whose labour constitutes one of its most valuable sources of wealth, are, little by little, familiarising themselves with work, and in developing an attachment to the country have increasing necessities to satisfy," all which we are glad to hear. The actual expenses of administration exceed the budget allowance by £8,610, but it is pointed out that in this excess £2,313 figures as applicable to the past year, and refers to expenses in connection with the judicial and ecclesiastical services. In Europe the receipts amounted to £9,856, and the expenses to £23,570, showing an excess of £13,714. The balance-sheet is not an impressive looking document. Shares and debentures in various companies are valued at £59,272, there are participations in sub-concessionary companies totalling £180,044, cash in hand amounts to £434, and that in the hands of Paris and London Committees to £14,544, whilst sundry debtors owe £11,475, and bills receivable stand at £17,109. Other fat and magnificent assets consist of "preliminary expenses, £47,545, general expenses, £287, administration in Africa, after deducting loss of £28,713 in 1902, and the sum of £19,108 in transit, £429,623, and a debit balance of £42,427, which is to be met from the special reserve fund. The latter totals £59,117, there is another reserve fund of £10,202, securities on deposit amount to £20,086, and bills payable to £11,009. In addition to these, there is a suspense account of £125,044, and "certificates representing share interest in the Beira Railway Company," £55,000. The shares and debentures show a reduction of £22,399, representing the value at which £20,000, of Consols stood in the 1901 balance-sheet, which were parted with during the year in order to meet the company's expenses. There are also considerable reductions aggregating £60,110, in the sums of cash held, attributable to a like cause. Sundry debtors have increased £6,517, but bills receivable have been diminished to the extent of £25,393. In 1901 the deficit was £89,567, consequently it has been reduced by over 50 per cent. On the other hand, the special reserve fund shows a reduction of £89,567, the 1901 deficit having been charged to this account, as the present debit is to be similarly written off. Having resolved to issue a new series of shares for the reinforcement of the company's funds, the Council of Administration increased the capital by 55,555 shares, of which 5,555 were issued as fully-paid to the Portuguese Government. The remaining 50,000 shares were taken firm by the New African Company at 30s. per share. During the past year experimental trials were made in Neves Ferreira in the cultivation of cotton and Ceara rubber, "with good results." The five palm groves of Chiloane were increased by 3,000 trees, and those of Danga and Inlamunaze, in Sofala, contain 8,800 cocoa nut trees, "which are coming to maturity and look well." At present the company has 14,382 developed rubber trees in Zambesia, and 19,985 roots recently planted. Cultivation of cereals has been started in Sena, Chimoio, Neves Ferreira, and Mossurize.

West Roodepoort Deep.—This is a company that is a long way off the producing stage. Operations were resumed last February, "but, owing to the difficulty experienced," to quote the report for the twleve months to the end of June, "in obtaining sufficient native labour, the bulk of the work has of necessity been confined to unwatering the shafts, repairing the timbers, and strengthening the headgears to allow of larger skips being used. A certain amount of development has been done, the footage being 273 ft., the total ore exposed being thereby increased to 25,188 tons, with a value of 22.3 dwts. per ton over 8.09 in. in the east shaft, and 68.5 dwts. per ton over 3.09 in. in the west shaft. No profit and loss account is yet issued. Expenditure during the year amounted to £3,722, against which rents and interest were received totalling £7,224. On capital account the sum of £12,794 was spent. The company, however, has plenty of cash at present, to the extent of £93,704, thanks to an increase in the capital to £350,000 by the creation of 120,000 new shares, of which 113,600 have been issued at par. A vast amount of development work has yet to be carried out before the winning of gold is possible, by which time it may be necessary to make a further increase of capital, an eventuality of the future for which shareholders should be prepared.

Victoria and Queen Gold Mining Company.—During the half year ending July 20, 3,903 tons of stone were crushed for a yield of 11,818 oz., the total value, inclusive of residues returns, being £44,834. Thus the yield per ton was uncommonly high at 3 oz. 13 grs., and the value at £11 9s. 8d. Tributers raised 41 tons of stone, giving 35 oz. of gold, valued at £143, from which the company obtained a small sum in royalty. The half year commenced with a credit of £2,935, which has now been increased to £6,828, whilst £5,400 is on fixed deposit. A dividend of 1s. per share was declared, requiring £4,800.

Mining in Mexico.—We have recently drawn attention to a mining rush in Mexico consequent upon the finding of gold at a place called Ejutla. There have now been published the figures of the output of gold, silver, and copper, for the first nine months of 1902-1903, and these show a material increase. The gold production amounted to $9,796,816, compared with $7,284,832, an increase of $2,511,984, the silver production was $50,791,860, or $6,502,369 in excess of the output of the corresponding period, whilst the exports of copper were 44,955 tons, of a value of $14,703,431, compared with 30,718 tons, valued at $9,358 686.

Weardale Lead Company.—An improvement is noticeable in this company's accounts for the year ending June 30 last. There were raised 2,600 tons of ore, and 2,597 tons were dressed in the twelve months; 2,650 tons were smelted, the yield from the mill being 2,080 tons of pig lead. Sales of lead brought in an income of £22,955, and sales of flour spar, £1,521, and after crediting the profit and loss account with stocks of ore, £2,725, and smaller items, a gross credit of £29,286 is shown. After deducting expenditure, which does not include anything written off for depreciation, a profit of £3,185 is displayed, against £600 a year ago. Adding a balance of £1,820 brought in, there is a credit of £5,005, out of which the directors recommend a 2½ per cent. dividend, and carry £3,169 forward. In cash the company has £6,021, with

debtors owing £2,156, against creditors for £3,786. There is a debenture debt of £10,000, which falls due next year. A sum of £1,850 was spent on buildings, machinery, and shaft-sinking, and charged to capital, though it could very well have been debited to revenue. The price of lead was still low, though at £11 5s. 11d. per ton, it averaged a few pence higher than in the preceding year. It has been decided to erect a crushing mill and dressing floor at Boltsburn mine in order, says the report, to deal more economically with the Bouse, and to save the heavy cost which is at present incurred in transporting it to Groverake mill.

Anglo-French Land of the Transvaal.—During the year ending May 31 last the directors of this company considered it opportune, so they say in their report, to realise the erven held in various towns of the Transvaal, as they do not consider it advisable to utilise the company's funds in erecting the necessary building structures which would be required to bring the erven to a remunerative condition. All the Pretoria and Potchefstroom erven and three in Ermelo have been disposed of, the erven remaining consisting of two at Standerton, six in Lichtenburg, and one in Ermelo, which are to be disposed of as opportunity offers. The company's land holding of 43 freehold farms remains unchanged. A moderate expedition has been fitted out and the managing director has been engaged in the work of inspecting the different farms, but progress has been slow, "owing," it is stated, "to the still devastated condition of the country in the outlying districts, and the extended distances to be traversed between the various farms belonging to the company." The only income received during the year was £483 from transfer fees, consequently the debit balance is increased from £7,875 to £9,541. Liabilities are now, with cash and other liquid assets fairly plentiful.

Brilliant Block Gold Mining Company.—In the six months to the end of July 22 this company crushed 315 tons for 86 oz. of gold, realising £309, and 92tons were crushed for tributors, for 81 oz. of gold, realising £310, being a total of 407 tons, yielding 167 oz., and selling for £619. In addition 11,057½ tons were milled for the public. At the cyanide works 6,250 tons were treated for the company, and 2,610 tons for the public. The total bullion recovered for the company was 1,827 oz. 11 dwts., realising £3,623. These are the poorest results for many a long year past, and of course no dividend is possible. A debit of £77 is shown, reducing the credit balance at the bank to £718.

Eastern Rand Exploration.—This company was formed in July, 1899, with a capital of £165,000 in £1 shares, of which 75,000 were issued to the vendors and 50,000 sold at par, to provide working capital, the rest being held in reserve. The property consists of one-half of the freehold farm Putfontein, No. 24, in extent 1,580 morgen, and options to purchase several other farms are held. Boring was commenced on a farm called Rietkol in the month the company was incorporated, but owing to the outbreak of the war operations were suspended soon afterwards. Drilling was resumed in September of last year, and on the expiry of the option period a depth of 1,397 ft. had been reached. But the results obtained from this hole did not encourage the directors to exercise their rights under the contract. Efforts were made to obtain a renewal of the contract for a further period of one year. "The price asked by the owners of the farm was, however, so exorbitant, that the directors, taking into consideration the unsatisfactory intersection in the borehole, decided that it was in the best interests of the shareholders to abandon the option." At present the company is engaged in putting down a series of boreholes on the farms held under option to the north-east of the farm Klipfontein, as well as on farms held in the Heidelberg district, the report stating that the work done to the end of June last was not sufficient to prove the value of the options. No profit and loss account is issued. The company appears to be without cash or available resources of any kind, and owes £2,985 to sundry creditors. But there are the 40,000 reserve shares. Perhaps the directors will take these up?

Victoria Gold Mining Association.—During the half-year ending May 31 last the operations on this company's properties were practically confined to exploration work, only a small amount of stone being broken. The principal operations were in connection with the No. 3 shaft, where indications of a favourable character are reported to have been met with. Since the close of the half-year gold bearing quartz was cut, but this proved to be only a patch. "Although," says the report of the directors, "so far a payable body of stone has not been found, the indications are of an encouraging nature, and work in this shaft is being continued in the expectation that payable stone may be met with as work proceeds." During the half-year the tributors obtained 242½ tons of stone, yielding 150 oz. 7 dwts. of gold, from which the company received £54 by way of royalty. The operations at the mine being now almost entirely of the nature of exploration work, and the company receiving very little financial assistance from gold won, owing to the reef so profitably worked in the past being almost worked out, the expenses are gradually reducing funds. In view of this and to provide the necessary means to carry on operations should no payable stone be met with before the funds in hand are exhausted, the directors have decided to recommend that the present capital be increased, for which purpose an extraordinary general meeting has been called for October 9 next.

Western Australian Gold Export and Mint Returns.—The Agent-General for Western Australia has received telegraphic advice from his Government stating that during the month of September last 1,581 oz. of gold were entered for export, while 129,824 oz. were received at the Perth Branch of the Royal Mint for coinage, giving a total of 301,405 oz. The total for September, 1902, was 188,168 oz.

Company Reports and Balance Sheets

*** *The Editor will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Grand Trunk Railway Company of Canada.

There can be no doubt that the working of the Grand Trunk Railway of Canada during the half-year ended June 30 last again sorely disappointed the professional "bulls." Practically every week splendid traffic increases were published, and more than once the jubilant operator for the rise saw visions of a dividend on "thirds" for the opening half of the year, but when the monthly net revenue statements were published it was usually found that all the fine improvement in earnings had been swallowed up in working expenses. What could be the cause? No one was quite sure and the directors wickedly refused to explain the mournful business by adding a footnote to the monthly return. So the blame was laid on the coal bill, and, as is already well known, all the mischief could be traced to this very important item. The increase in gross receipts compared with the corresponding period of last year was £400,879, to a total of £2,778,080, but almost the whole of this splendid gain was absorbed in working expenses which rose £391,420 to £1,995,032. This left the net revenue £9,459 better at £783,049, an advance partly eliminated by a decline in the revenue received from other sources. With this added the actual net receipts were £877,915, against £875,175, from which fixed charges took £609,022, or £3,979 less, and Detroit Grand Haven and Milwaukee deficit £14,365, compared with £14,747. The amount available for dividend, therefore, was only £7,101 better, at £254,528, and it does little more than provide the guaranteed and first and second preference stock dividends, the amount carried forward being only £5,542, against £4,041 brought in. Number of passengers carried went up 434,639, and the receipts £79,638, and an additional 1,000,000 tons of freight and live stock were carried to earn the extra £306,735, which appears under this head. Mails and express and miscellaneous gave smaller improvements. As to working expenses, which were 71.23 per cent. of the gross receipts, against 66.88 per cent., the greatest rise was in the item known as American railways as "conducting transportation," the equivalent on English lines being locomotive power, and traffic expenses. Here the advance was £330,601, largely attributable to the increased cost of fuel, resulting from the prolonged coal strike in the United States. The actual difference under this head was £199,129, of which about £145,000 was caused by increased price, and the remainder by the bigger amount of work performed. Maintenance of way and structures went up £35,548, maintenance of equipment £11,440, and general expenses £11,248. Increase in passenger train mileage was 255,112 and in freight 1,156,072, but there was a drop of 104.949 in mixed trains, leaving a net increase of 1,306,235 miles. Capital expenditure for the half-year was £123,482, the principal items being £65,581 for double tracking and £52,017 for additional land at Montreal, Toronto, Stratford, etc., for the improvement of terminal and traffic facilities. There has been credited to this account £19,084 in respect of premium on debenture stock, issued, reducing the actual charge to £104,398. No additions to rolling stock at the expense of capital were made within the six months, but revenue provided 20 freight engines, 20 passenger cars, 179 box cars, 729 platform cars, and 51 brake vans, all built in the company's shops. On June 30 there remained an amount of £92,090 at the credit of engine and car renewal funds, applicable to future renewals. On the Grand Trunk Western the receipts rose £89,366 to £554,020, the working expenses £77,211 to £475,586, and the net profit £12,155 to £78,434. Net revenue charges were £75,439, leaving a surplus of £2,995, which, added to the free balance of £618, for the half-year to December 31, 1902, and the balance of £465 carried forward on June 30 of the same year, gives a total of £4,078. It admits of the payment of 1 per cent. on the second mortgage income bonds. Gross receipts of the Detroit Grand Haven and Milwaukee were £115,038, or £7,033 more, against an advance in expenses of £6,830, to £92,408, thus leaving the net balance better by £203, at £22,630. Charges for the half-year were £36,995, leaving a deficiency of £14,365 to be provided by the Grand Trunk Company, as already mentioned. During the current half-year the last-named has made a much better net revenue display, but in estimating future results, the recent issue of £750,000 new guaranteed stock, with the probability of more to follow, must not be overlooked.

Buenos Ayres and Rosario Railway.

The half-year to June 30 last was a period of extraordinary prosperity for this undertaking, even taking into consideration an increase of 140 in the number of miles worked, and the fact that the wheat harvest in 1902 was, to a large extent, a failure. Gross receipts rose no less than £499,148 to £1,668,195, against an advance in working expenses of £192,177, to £795,158, so that the net receipts show the great improvement of £306,971, to £873,037. Ratio of expenditure to total income was 3.92 per cent. lower at 47.66 per cent. Passengers carried went up 274,003, bringing an additional revenue of £66,643, and the improvement is described by the general manager as the natural result of the exceptionally prosperous year through which the districts served by the line are passing. It is, however, to the goods traffic that we must look for the chief contributor to the splendid revenue increase. Weight of goods handled advanced no less than 800,350 tons, to a total of 2,759,035 tons, and the gain in income was £390,033 at £1,148,347. Principal gains were wheat and barley, 552,101 tons, maize 63,013 tons, linseed 48,258 tons, wine and beer 23,650 tons, flour and bran 10,881 tons, fruit 10,695 tons, and foreign timber 7,276 tons.

On the other hand hay shows a decrease of 21,390 tons, due to the falling off in the export trade to South Africa and Brazil, and native timber of 14,766 tons, the latter industry being somewhat neglected as the labourers found they could get better pay by going south for the grain harvest. Live stock receipts went up £10,664, a slight spurt being witnessed when the British ports were opened, but the fact of their being closed does not, in the opinion of the general manager, prejudicially affect either the farmers or the railways, as if the animals are not exported alive they are carried to the freezing establishments, whence they are exported as either frozen or chilled meat. To the net revenue is added £4,086 for interest, registration fees, etc., making a total of £877,123, from which debenture interest absorbs £147,489, western section annuity £45,394, and general interest, etc., £6,189, leaving £678,051. Preference dividends having been provided the directors propose a distribution at the rate of 4 per cent. per annum on the ordinary stock, against 2 per cent. a year ago, with an increase of almost £100,000 at £221,556 in the amount carried forward. It is an excellent display, and as the improvement in receipts is well maintained, the immediate outlook seems very encouraging.

Denver and Rio Grande Railroad Company.

This company's annual report made up to June 30 last will not do much to stay the Yankee Railroad slump. Gross earnings from operation were $17,304,560, or an increase of $267,731, compared with the preceding year, but all this and more was swept away in additional charges, the working expenses being $298,308 higher, at $10,629,851, so that the net earnings show a decline of $30,576, at $6,674,704. The advance in gross earnings represented 1.57 per cent., the increase in outlay 2.89 per cent., and the drop in net revenue 0.46 per cent. Including $209,717 interest and dividends on securities the entire revenue was $17,514,277, or an improvement of $311,686. The rise in income was equally divided between freight and passengers, and on the expenditure side we find important increases in maintenance of equipment and traffic expenses, against a sharp decline in maintenance of structures. After providing for interest on funded debt, taxes, insurance, and rental of leased lines, the preferred stock dividend is paid, and $120,000 transferred to the renewal fund, leaving a surplus of $622,562. Of this $417,547 was charged for betterments and $19,250 for worn-out narrow gauge equipment, leaving an actual net profit of $185,765. Twelve months ago the directors referred to the construction of a branch from Delta station along the north fork of the Gunnison, known as the north fork branch, and stated that the work was being done for convenience under the charter of the Rio Grande Railroad Company. This branch, 43 miles along, was completed and placed under traffic about the close of 1902. It has been taken over by the Rio Grande Company, and nearly the entire cost has been paid for by the proceeds of $850,000 first consolidated mortgage 4 per cent. bonds, being a part of the $6,900,000 reserved under the terms of the mortgage for certain purposes set forth fully in former reports. Other important extensions and improvements were also completed, and the directors desire to call attention to the large increase in the equipment of the system in the last two fiscal years, consisting of 60 standard gauge and 12 narrow gauge locomotives, 20 standard gauge passenger coaches, 2 baggage, mail, and express cars, one dining car, and 4,500 freight cars of various classes. These additions have been rendered necessary by the growing business, both passenger and freight with the territory traversed by the system, and more especially the increase in the coal output of the Colorado Fuel and Iron Company, and the growth in business of the Utah Fuel Company, which is controlled by this undertaking. The figures given to illustrate this increase in business are quite striking. In three years the output of coal in the State of Colorado has advanced no less than 3,250,839 tons, or about 58 per cent., and during the last three fiscal years ended June 30 the Colorado Fuel and Iron Company increased its output 2,865,816 tons, or nearly 69 per cent. Utah did better still, relatively, in the same period, the rise being 763,314 tons, or about 87 per cent., while the Utah Fuel Company did better to the amount of 755,428 tons, or no less than 98 per cent. During the past two years the expenditure for equipment on the Denver road proper was $3,874,099, of which $500,000 was charged to income, $103,800 to renewal fund, and the balance, a very large proportion, to the equipment or capital account. On the Rio Grande Western Railway the outlay was $703,903, and to provide all this money some pretty big bond issues were necessary. Within the two years $4,800,000 first consolidated mortgage 4 per cent. bonds were sold, of which $3,400,000 went for equipment, $850,000 for the purchase of the north fork branch and the proceeds of $550,000 were set aside for improvements on the Denver and Rio Grande Railroad, aids to revenue, probably, in great part. A good deal of useful work was accomplished on lines open for traffic, the main lines being strengthened by the use of 9,304 tons of 85 lb. steel rails on the Rio Grande road, relieving 52 and 65 lb. rail, which will be used on other parts of the system, and by the use of 5,179 tons of 75, and 85 lb. rail on the Rio Grande Western Railway. Bridges were also replaced and strengthened, grades improved, and various buildings, covering stations, ice houses, additions to shops, and fuel and water conveniences were erected at various points. Surplus at June 30, 1902, was $3,377,643, to which was added net balance for the past twelve months $185,765, and various small credits, making a total of $3,571,975. On the other hand, discounts on bond issues absorbed $415,000, so that the balance at the credit of profit and loss on June 30 last was $3,156,975.

Chicago Great Western Railway Company.

Gross receipts from all sources for the twelve months ended June 30 were $7,823,191, an increase of $273,502, or 3.62 per cent., and operating expenses came to $149,030, or 2.84 per cent. more, at $5,434,630, leaving a balance of $2,388,561, compared with $2,264,998, and after providing for taxes, which showed a trifling reduction, the net revenue was $2,184,664, or an advance of $124,433. By far the larger proportion of the improvement in gross earnings came from the passenger traffic, which were $116,172, or 6.18 per cent. better, compared with an increase of $83,629, or 1.51 per cent. from freights. The average distance each passenger was carried was 42.12 miles, or a decrease of 2.03 miles, and the rate earned per mile was 0.02 cents less, but the average number per passenger train mile was higher at 32, and the receipts per mile 1.50 cents better, so that this branch shows fairly satisfactory progress on the whole. The freight traffic results were less satisfactory, as the increase in the tonnage hauled was no more than 14,632 tons, and with a decrease of 1.364 tons in the train load, the average rate per train per mile only rose from $2.00 to $2.05. During the year the debenture stock was increased from $24,327,089, to $26,117,089, so that the larger net earnings were just about sufficient to meet the heavier interest charge involved, and after paying the full 5 per cent. on the preferred stock "A" there was only a balance of $7,621. A further addition of $6,537,650 was also made to the common stock issued, and loans have risen by $1,205,576. On the other hand $2,668,159 was spent on additional terminals and improvements, and $935,884 on additional rolling stock.

Mersey Railway.

This company's system was converted to electric traction on May 4 last, thus giving two months working under the new conditions during the half-year to June 30, and the results to date are extremely disappointing. True the receipts began to improve as soon as the old order of things was done away with, but the chairman of the company at the meeting held on Tuesday last, was bound to admit that the growth had not yet reached anything like what the board had expected or what it must attain if ordinary shareholders are to benefit. More serious, however, than the trifling rise in revenue was the great advance in working expenses, and this the chairman sought to explain by saying that the experience of every similar undertaking was that the results arrived at in the early months were no indication at all of what might be afterwards expected. As regarded both receipts and expenditure, the board was convinced that electrical power was best for the railway. There was a large and important traffic to be served, and if the company continued to meet the demands made upon it in the best possible way, there was reason to believe that they would be rewarded by the results. These are optimistic statements, and we can only hope that the future will justify them. Total receipts for the six months were £32,278, or £496 more than in the corresponding period of last year, but working expenses, exclusive of charges for pumping, ventilation, and lifts were up no less than £4,309 to £27,375, the proportion to revenue being 8.41 per cent. against 72.58 per cent. Outlay for pumping, etc., was £1,703 lower, at £4,686, but despite this assistance the net revenue was only £216, a drop of over £2,000. The British Westinghouse Electric and Manufacturing Company, which carried out the conversion, advances £12,000 towards interest payments, making, with £3 received for interest, a total credit of £12,219. Total interest and rent charges, however, come to £15,947, so that the company starts its electrical career with a debit of £3,728. Capital expenditure for the half-year was £106,983, of which £100,000 was on the electrical installation, and the outlay for the current six months is estimated at £16,800. Since the report was issued the ordinary stock of the company has dropped 5½ to the nominal price of 5-8.

Sheffield District Railway Company.

The proportion of gross receipts payable by the Lancashire, Derbyshire, and East Coast Company for the six months ended June 30 amounted to £1,893, or an increase of £470, and £2,500, or £500 more, was received from the Midland Railway for the use of the line, but the revenue from rents, transfer fees, etc., fell off by £196, to £181, so that the gross income was £774 up at £4,574. Of this £568 was absorbed by expenses, leaving a balance of £4,006, to which was added £423 brought in, and £292 from general interest account, making a total of £4,721, and after meeting debenture interest and rent of Midland passenger station, the surplus was sufficient to pay a dividend at the rate of 2 per cent. per annum on the preference shares, and leave £652 to be carried forward. Capital expenditure, after deducting a credit of £1,442 for land purchase and compensation account, amounted to £6,019, chiefly on the branch line to the Tinsley Park Colliery, which it is expected will be completed and open for traffic by the end of the year.

Ottoman Railway from Smyrna to Ardin.

In the half-year ended June 30 the gross receipts of this railway amounted to £100,649, or £9,266 less than in the corresponding period of 1902. The decline was entirely due to the shortness of agricultural produce, as the passenger receipts were better by £3,651. Working expenses fell £3,203 to £45,001, leaving the net profit £6,063 lower at £55,648. Balance brought forward, however, was £4,502 better at £36,561, and the sum for appropriation is down only £1,455 at £92,983. After meeting debenture interest and sundry small charges, the sum still remaining is £23,702, so the directors again propose a dividend of 8s. per share, with £5,863 carried forward. The directors are able to tell the shareholders that the plans submitted to the Ottoman Government for the extension of the existing pier at the terminus of the line in the Port of Smyrna have received the Imperial sanction, and that instructions have been given to the general manager to commence the work. Receipts for the current half-year to date show a small decrease, the usual autumn traffic having been delayed by the lateness of the harvest, and by the heavy rains in July and August. Immediate prospects, though, are good, and the directors think it reasonable

to expect that the earnings for the complete six months will compare favourably with those of the same period of 1902.

Standard Bank of South Africa.

Banking business in South Africa continues to be highly profitable, and this institution makes an excellent display for the six months ended June 30. Gross profits, after deducting interest on deposits and new shares, and a special appropriation to bank premises, furniture, and fittings were £521,961, including £54,492 brought forward. Current expenses absorbed £230,793, and rebate on bills not due £71,637, leaving the net balance at £219,531. For the corresponding period of 1902 the profit was £184,044, with £48,933 brought in, so that the past six months' revenue is nearly £30,000 better. It enables the directors to increase the return for the half-year by 1 per cent. to 9 per cent., with an extra £10,000, at £35,000, to reserve, £12,000 against £10,000 to officers' pension fund, and £60,031 carried forward. The balance-sheet reveals some important movements. Deposit and current accounts have declined no less than £3,350,694, to £20,793,597, compared with the same date last year, but it should be remembered that an advance of £6,383,039 was then shown. Notes in circulation are a little lower at £1,374,304, and drafts outstanding bills re-discounted etc., amount to £1,732,870. Notwithstanding the big reduction in liabilities, cash in hand, with bankers, and at branches, has advanced over £600,000, to £5,377,331, while remittances in transit come to £630,628. Investments in Consols, Colonial Government and other securities, are well over £1,000,000 less, at £4,111,282, and it would be interesting to know at what price the Consols are held. Bills of exchange are about £3,000,000 down, at £5,238,117, but bills discounted and advances have risen over £4,000,000, to £10,590,550. Loans on securities at short notice are now only £726,700, against £4,381,851 similarly used or deposited with bankers on June 30, 1902. Elsewhere will be found a reference to the correspondence between the various South African banks and the Colonial Office on the question of commandeered gold.

Colonial Bank.

According to the half-yearly report of this institution, the past season has been disappointing generally to West Indian sugar planters, crops being below estimates, while prices have not compensated for the deficiency in the yield. But the Brussels convention is in force now, and "there is a more hopeful feeling throughout the West Indies." Some attention is being given to the production of cotton, in the cultivation of which, at the price now ruling, there should be a good margin of profit. Cyclones visited Jamaica and Dominica, and that which swept over the former island on August 11 caused serious damage to buildings, and almost complete destruction of the growing banana crop. The cane cultivation did not suffer materially, and so far as can be at present ascertained, no direct loss will accrue to the bank, though some time must elapse before the trade of the island can assume its normal proportions. These troubles will prove useful explanatory aids should the fantastic sugar convention not cause the West Indian islands to flourish. Gross profits for the six months to June 30 rose almost £2,000 to £54,391, and the considerably increased sum of £12,709 was brought forward, so that after deducting expenses of £33,698, the sum for disposal is £4,331 up, at £33,402. Dividend, however, will again be 3 per cent., or at the rate of 6 per cent. per annum, with a large increase in the balance forward to £15,402. Notes in circulation, £485,253, and current and deposit accounts, £2,186,985, each show increases, but bills payable and other liabilities £628,870, are almost £40,000 lower. There is a decline from £452,684, to £419,598, in the specie held, but cash at London bankers and at call and short notice is £85,561 up, at £342,062. Investments have risen £173,450, to £1,227,828, bills receivable etc., are £165,661 lower, at £896,028, and bills discounted and advances have fallen a little to £853,656.

Egyptian Salt and Soda Co., Limited.

Shareholders in this undertaking have had to wait a considerable time for the details of the working in 1902, as the directors withheld the accounts lest they should convey a misleading impression of its prospects. This at least is the excuse put forward, and although it is somewhat thin, it will no doubt be forgiven in the light of the report for the first half of the current year. During the twelve months ended December 31 the sales of salt showed an increase of over 2,000 tons, compared with 1901, and were more than 5,000 tons above those of 1900, while the soap sales, which did not commence until well on in the year, rose from little more than £300 in September to nearly £3,000 in December. The profits from these, however, were sadly eaten into by the cost of the experiments at the soda works of Wadi Natron, and the net result was a small loss. Gross profits on trading, after deducting expenses at Kafr Zayat and Mex, were £E20,652, of which general administration expenses took £E17,177, directors' and auditors' fees absorbed £E768, and interest on bank loan £E617, leaving a balance of £E2 090. Converted into sterling, at the exchange of 97-5, this gave £2,143, to which was added £922 interest on investments, transfer fees, etc., giving a total of £3,065, but London expenses, directors' fees, and debenture interest required £4,176, then £1,333 was written off for loss on sale of Port Said Salt Association shares, and £274 on account of expenses of the debenture issue, leaving a debit balance of £2,718 to be deducted from the amount of £3,614 brought forward. With the new year, however, matters took a turn for the better. The experiments at the Wadi Natron were admitted to be a failure, and the expenditure was, therefore, cut down to the lowest possible limit, consistent with proper maintenance, and the fulfilment of the obligations of the concession under which it is held. Relieved of this burden, the salt and soap works were enabled to make a better showing, and by June last there was a net profit, including £896 brought in, of £10,559. This in the ordinary course would admit of the payment of a dividend at the rate of 6 per cent. per annum, but with a view to strengthening the financial position of the company, it has been decided to carry forward the whole amount. In adopting this course the directors have acted very wisely, as the auditors point out that no provision has been made for the redemption of the cost of the terminable concessions which stand in the balance-sheet at £152,508, nor for depreciation on any of the plant and machinery, valued with the soap patent at Kafr Zayat at £75,553. In addition a sum of £10,211 for discount and expenses of debenture issue still appears as an asset, and these items will have to receive a good deal of attention before the directors can safely make any distribution of profits.

Birmingham Small Arms Co., Limited.

The change in the service rifle recently adopted by the War Office hit this Birmingham company very severely, and trading profits for the year ended July 31 consequently showed a decrease of no less than £30,327, at £62,722. A slight reduction in the balance brought forward was practically offset by a moderate increase in the revenue from investments, so that the net balance available fell short of that a year ago by £30,300, at £69,186, but by cutting down the allocation to reserve to a modest £10,000 against £25,000, the directors manage to pay dividends and a bonus on the ordinary shares aggregating 15 per cent., compared with 20 per cent. last year, and to carry forward £3,899. Not only did the change of model interfere greatly with business during the second half of the year, but it has been the cause of the outlay of a good deal of money on new plant and machinery, and to this must no doubt be ascribed the heavy increase in the various items of capital expenditure. Notwithstanding an allowance for depreciation, which may or may not have been adequate—a point we cannot venture an opinion upon as no details are given—buildings and fittings stand in the balance-sheet at £160,472, or £5,589 more, plant and machinery show an advance of £23,875, to £218,606. Sundry stores and tools are £2,267 up, and work finished and in progress is valued at £14,928 more, at £53,673. Trading balances are still decidedly adverse, and although investments are again taken into the accounts at £55,150, cash is £45,712 lower, at £33,996, so that the position of the company is not nearly so good as it was. "Satisfactory contracts," however, have been secured from the Government for the new weapon, while the cycle components department is steadily and profitably employed, so that the cloud may prove only a passing one, which will soon blow over.

Denver United Breweries.

The year to June 30 was rather unfavourable for this company, the sales showing a decrease of 20,908 barrels compared with the previous twelve months. This decline is attributed to labour and other troubles in the mining and smelting districts, to the depression caused by the low price of silver, and to the exceptionally cold and wet weather. Then brewing materials have again been dearer, and the comparative cost of labour has somewhat increased owing to the smaller output, quite a formidable array of excuses. Gross profits at Denver were £58,984, or £2,702 less than in 1901-2, to which interest, rent, and transfer fees are added, making £59,693. Denver expenses rose sharply owing to the provision of the large sum of £7,444 for bad debts, and reserve on book debts, and after setting aside these, together with London expenses, and £8,333 for depreciation, the net balance is £31,767, a drop of over £7,000. Then the sum brought fofward was more than £9,000 less, at the minute amount of £144, so that the sum for appropriation shows a reduction of £16,233 to £31,911. From this the directors again provide a year's preference dividend, and write off the balance of expenses of debenture issue £716, so only £663, against £20,000, can be placed to reserve, and the balance forward is increased to £2,532. It will be remembered that last year the preference dividend then declared was held in suspense, pending the redemption of the loan raised in connection with the new issue of debentures, and as this has now been accomplished the dividend should soon be forthcoming. Little need be said about the balance-sheet, which is a fair production as American breweries go, but obviously the properties are largely overvalued, judged by their earning capacity, and the question of capital reconstruction should be seriously considered.

Crosswell's Cardiff Brewery.

There is practically no change to report in this company's affairs for the year to July 4. Profits earned still fail to justify the capitalisation of the business and the financial position shows very little improvement. The report just issued is the sixth annual statement, and up to date nothing in the shape of reserve has been accumulated, and we cannot trace even an allowance for leasehold redemption or depreciation with the exception of a small sum written off rolling stock, loose plant, and sundries. Twelve months back £5,000 was placed to a contingency fund, but it has vanished since then, and does not appear in the latest balance-sheet. Will the directors tell us where it is? Loans and mortgages have been reduced about £3,600 to £35,175, and some of the money has been used in repaying loans to bankers, these being down almost £2,000 to £7,767. Other loans, however, of £5,704 and sundry creditors and bills payable, £23,492, are both slightly higher, and there is still a big preponderance of floating liabilities over assets, leaving out of account the loans and mortgages which are probably not immediately realisable. Sundry debtors come to £20,371, and cash in hand and bills receivable reach the startling total of £610, and it seems certain that before the final dividends can be paid the bankers' loans must be again substantially increased. Share-

holders are not favoured with a profit and loss account, but the report states that the net profits for the year were £23,269, or about £200 more than in the preceding twelve months, which is a poor offset to the drop then announced of over £2,000. Balance brought forward was £3,569 down at £3,216, and the sum for disposal shows a big decline to £26,485. Nevertheless, the dividend on the ordinary shares is again to be 5 per cent., so nothing is placed to contingency account and £5,585 is carried forward.

Brett's Stamping Company.

This is a cycle business whose directors are easily pleased. In the twelve months ended July 31 a profit of £2,975 was gathered together, from which debenture interest takes £415, depreciation £1,274, and directors' fees £225, leaving £1,061 as net revenue, a result which the board does not consider unsatisfactory in view of the circumstances of last year's trading. We hope preference shareholders, who receive 4 per cent. of the 6 per cent. to which they are entitled, and ordinary shareholders who have never received anything, and never seem likely to, are equally satisfied. The mentioned dividend absorbs £734, balance of preliminary expenses, £240, is written off, and £287 is carried forward against £201 brought in. The balance-sheet is one of those cheerful productions to which companies of this sort have accustomed us. Goodwill, £19,332, represents more than 50 per cent. of the share capital, and the reserve fund reaches the imposing sum of £251. Allowance for depreciation on fixed plant and machinery is fair, but that on loose plant and tools seems quite inadequate, and as additions have been important, the item is considerably higher than a year ago. Sundry debtors are £1,811 in excess of floating liabilities, and cash and bills come to £1,964, but not much of the latter will remain after debenture interest and dividends are met.

Raglan Cycle and Anti-Friction Ball Company.

Shareholders in this company will read lots of nice things in the report for the year to August 22 last just issued, and they must accept the pleasant story in lieu of dividends. The directors observe that notwithstanding the wettest season on record, a largely increased turnover has been made, and in order to increase the capacity of the works, it was found necessary to rearrange and renew a large portion of the plant. The company has also very greatly improved its position in the markets of the world, and to-day commands a larger sale for its productions than at any previous period. Unfortunately all this has been attained at the expense of the year's profits, but the board felt that the sacrifice was absolutely necessary in order to place the position of the company on a more secure basis for succeeding years. In these days, however, there is danger of such heroism going unappreciated, and we should not be at all surprised if some of the shareholders are dissatisfied with this explanation of the shrinkage of £1,348 in the year's profits. They came to £4,587, exclusive of £6 received for transfer fees, and after allowing £1,389 for depreciation, and providing debenture interest, income-tax, and directors' fees, the net balance is £342. It is carried forward, together with £244 brought in. For the preceding year the net balance was £1,554, and with the aid of £1,500 drawn from reserve, a dividend of 2½ per cent. was paid. It is something to the good that the fund is not further trenched upon in order to provide dividends, as its total is only £20,000, against goodwill, patents, and trade marks, of £81,633. Freehold land and buildings are down for £19,158, fixed plant and machinery for £18,982, and loose plant and tools for £4,529, and the allowance for wastage appears small, but in other respects the company's position is distinctly good. Only £3,082 is owing to sundry creditors, and the liquid assets come to no less than £50,185, provided the investments of £8,006 are worth entered figures.

City of Buenos Ayres Tramways Company.

During the half-year ended June 30 last this company recovered a little of the ground lost in the corresponding six months of 1902, the gross receipts being £2,237 up, at £134,636. At the same time the working expenses rose £738, to £95,713, so that the improvement in net revenue is reduced to £1,499, at £38,924. Debenture interest absorbs £3,480 as usual, but the balance brought forward, £1,558, was less, so that the sum for disposal is only £1,183 better, at £37,002. The directors, therefore, again propose a dividend of 4s. per share, but in order to increase the carry forward, from £818 to £3,002, they reduce the amount placed to reserve by £1,000 to £3,000. Commenting on the half-year's operations, the local committee observe that the commercial depression referred to in the reports for the last two years has tended to disappear during the period under review. A great improvement has taken place, and business activity has been resumed to a considerable extent. The company has shared in this movement, and it has contributed largely to keep up the passenger traffic in face of the increasing competition of electric lines, which has also been met by increasing the speed of the cars. The petition for the necessary modification of the concession with a view to the adoption of electric traction, is still before the municipality of Buenos Ayres, and negotiations are proceeding in reference thereto, but the directors are not yet in a position to make a definite announcement. The chairman left England on July 31 last to confer with the local committee and management on the subject, and is now in Buenos Ayres. As soon as satisfactory terms have been agreed upon, the matter will be submitted for the consideration of shareholders.

Cape Town Consolidated Tramways and Land Company.

The directors of the above have issued their first report and accounts from the date of incorporation, December 14, 1901, to December 31, 1902, and we see no reason why the documents could not have been published much earlier. Revenue consisted of £14,237 in the shape of a dividend from the Oranjezicht Estate, Limited (one of the subsidiaries), and of £90 from transfer fees, a total of £14,327. Outgoings, however, exceeded this sum by £874, which is the debit resulting from the first year's operations. Other subsidiaries are The Camps Bay Tramways Co., Limited, and the Cape Marine Suburbs, Limited. The revenue from the Oranjezicht Estate came from land sales, but there have been no land sales affecting the Cape Marine Suburbs Estate. "Various important undertakings, however, have been put in hand in order," says the report, "to develop this beautiful portion of the Cape Peninsula into an attractive suburb." Amongst these are the erection of a concert hall and restaurant, and the construction of large sea water swimming baths. The parent concern owes £37,751 to the Oranjezicht and Cape Marine Companies, £9,375 to debenture holders for accrued interest, and £2,310 to sundry creditors, against which there is owing to it £57,050 by the Camps Bay Tramway Company, £4,952 is on deposit with Wernher, Beit, and Company, and £10,058 is at the bank.

Santa Fe and Cordova Great Southern Land Co., Limited.

Further progress in the right direction was made during the twelve months ended June 30, and as the major portion of the revenue came from profits on the estancias worked by the company, the improvement is all the more satisfactory. The balance of income from this source was £7,092, compared with £2,754 a year ago, but profits on land sales were £873 less, at £3,234, and interest on mortgage loans yielded only £1,345, against £2,627. In addition a profit of £1,200 was earned on investments, and with sundry interest receipts the general revenue came to £13,197, of which £8,151 was saved as net income, compared with £5,072 last year. To this was added £7,572 brought in, making a total of £15,724, and the directors have decided to utilise £7,000 of this for the payment of a dividend of 10s. per share, or 5 per cent., being the first since 1890, and the second in the history of the company. The report on the condition and prospects of the property is satisfactory, and given reasonable good fortune in the matter of weather, the company ought to continue to prosper now that it has made a start. About 10,000 acres on "Los Alfalfares" have now been sown with alfalfa, than which there is no better food for cattle, and contracts are in force for sowing practically all the rest of the estate, where the water supply from the wells is excellent and abundant. Part of another estancia, "La Cordobesa," has been sold, and the rest let to good tenants, with the result that it is expected to return about 7 per cent. interest on the capital value in the books instead of being a source of loss as hitherto.

American Smelting and Refining Company.

This company owns smelting and refining plants in various parts of the United States and Mexico, with a smelting capacity of 4,370,000 tons per annum, and a refining capacity of 465,000 tons of lead bullion, and 36,000 tons of copper bullion, of which there were in operation during the year ended April 30, smelters of 3,720,000 tons, and refiners of 340,000 tons of lead bullion and 36,000 tons of copper bullion. It has managed to build up a substantial business, and last year purchased ores containing 1,025,132 oz. gold, 62,389,438 oz. silver, 492,960,350 lb. lead, and 47,919,666 lb. copper, from the sale of which a gross revenue of $82,985,442 was realised. The earnings, after meeting all working costs, came to $9,403,711, or $2,365,029 more than a year ago, and as the outgo for ordinary repairs and betterments was $20,452 smaller, and interest, taxes, and general expenses took $329,686 less, the net income showed a substantial increase of $2,715,166 at $7,576,785. From this sum $655,682 was appropriated for extraordinary improvements' expenditure, and $1,500,000 was carried to metal stock account, which is, in other words, a reserve created to absorb all fluctuations in the market value of metals in process of treatment, so as to leave the regular profits arising from treatment charges on ores and bullion unimpaired. After making these provisions, there was a balance of $5,421,103 available, of which the 7 per cent. dividend on the preferred stock took $3,500,000, and the balance was added to the undivided surplus brought forward, making a total of $4,873,071. The company has no bonded debt of its own, but in acquiring some of its properties had to take over the liabilities under certain outstanding issues which are being gradually liquidated, and now stand in the books at $965,000 only. In addition the floating indebtedness, which amounted at the end of the previous year to $3,799,000, has all been paid off and a balance of $2,339,154 in cash has been accumulated, and as the net current liabilities, according to the balance-sheet consist of $1,177,760 on accounts not due for ores and supplies in transit, accrued taxes, and bond interest, etc., the position is decidedly strong.

Otago Harbour Board.

By including in its ordinary revenue for 1902 the receipts from sales of locomotives and old rails, amounting to £623, and another £509 from premium on sales of debentures, a total is shown of £69,993, or a decrease of £4,229, of which £1,786 is ascribed to reductions made during the second six months in dues on certain goods, and in the shipping charges. Working expenses came to £75,243, or £4,786 more, owing to additional work done by the dredges, extensive reclamation works, and the completion of the widening and extension of the Victoria Wharf, etc. A balance of £25,115, however, was brought forward, and with some adjustment of the sinking fund, the year closed with a credit balance of £19,931, but of this £18,018 was in the hands of the bank to meet the coupon interest due on January 1. A considerable falling off in the quantities of goods passing through the harbour is shown by the analysis of dues which accompanies the report, the receipts from this source being only £38,425, compared with £41,380. Amongst imports the principal reductions were 2,300 tons in grain,

6,100 tons in coal, and 2,725,100 ft. in timber, while of the exports grain was 4,900 tons, cheese and butter 2,100 tons, frozen meat 30,200 carcases, and imported and manufactured goods 12,400 tons less. On the other hand, 6,094 more bales of wool and skins were exported, and 5,780 sheep were sent out against none a year ago.

Alliance and Dublin Consumers' Gas Company.

During the six months ended June 30 this company sold 691,318,117 cubic feet of gas at prices ranging from 3s. 4d. to 4s. 5d. per 1,000 cubic feet, from which it realised £100,837. Public lighting and other contracts yielded £7,131, and rental of meters another £17,666, while the sale of residual products brought in £24,478, and rents and transfer fees £374, making total earnings of £150,486. All expenses having been met, the net revenue, including £9,871 brought forward, was £55,867, of which £5,879 was required for interest on loan capital, etc., £2,000 was carried to contingent and suspense account, and £3,000 to reserve fund, raising them to £12,371 and £58,138 respectively, and out of the balance of £44,988, the usual dividends are paid at the rate of 10½ and 7½ per cent. on the different classes of shares.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Argentine Great Western.—Balance dividend of 3½ per cent. on the preferred and ordinary stocks, making, with interim dividend, 6 per cent. for the year ended June 30, 1903, payable after 28th inst.

Buenos Ayres and Rosario.—Interim dividend for half-year ended June 30 on consolidated ordinary stock at the rate of 4 per cent. per annum, carrying forward £221,556.

Buenos Ayres Great Southern.—Balance dividend of 4 per cent. on ordinary stock, making with interim dividend paid in April last 7 per cent. for year ended June 30, carrying forward £96,425.

Entre Rios.—Dividend of 2 per cent. on the preference stock, carrying forward £4,119.

Great Indian Peninsula.—Dividend of 17s. per cent. for year ended June 30, to be paid in addition to the guaranteed interest, making a total distribution of £2 7s. per cent. for half-year.

Tournay to Jurbise and Landen to Hasselt Railway.—Dividend for first half of 1903 of 10s. 6½d. on the dividend shares, and 6s. on the preference shares.

BANKS.

Bank of British West Africa.—Interim dividend at the rate of 6 per cent. per annum.

Mercantile of India.—Interim dividend on the "A" or preferred shares for half-year ended June 30 at the rate of 5 per cent. per annum.

MISCELLANEOUS.

Glynn's Lydenburg.—Dividend of 10 per cent. (2s. per share), payable to registered European shareholders from the London office about November 23.

Great Fingall Consolidated.—Further interim dividend (No. 8) of 6s. per share, payable October 15.

Komata Reefs Gold.—Interim dividend of 2d. per share, payable October 12.

Mount Morgan Gold.—Dividend of 3d. a share for month of September, payable October 1.

New Jagersfontein Mining and Exploration.—Interim dividend of 10 per cent., equal to 10s. per share.

Queensland Menzies Gold.—Dividend (No. 28) of 6d. per share, payable October 14.

MINES.

Alliance Tea of Ceylon.—Interim dividend of 3 per cent.

Anglo-American Telegraph.—Interim dividend for the quarter ending September 30 of 15s. per cent. on the ordinary, and £1 10s. per cent. on the preferred stock, payable November 2.

Army and Navy Co-operative.—Interim dividend of 3s. per share, payable 14th inst.

Bandarapola Ceylon.—Interim dividend at the rate of 5 per cent. per annum, for half-year ended June 30.

Baron Cigarette Machine.—Interim dividend at the rate of 5 per cent. per annum for half-year ended June 30.

Birmingham Small Arms.—Dividend of 5 per cent. on the ordinary shares, making 10 per cent. for twelve months, in addition to a bonus of 5s. per share, placing £10,000 to reserve and carrying forward £3,898.

British and Australasian Trust and Loan.—Interim dividend of 1s. 3d. per share (being at the rate of 5 per cent. per annum), for half-year ended June 30, payable November 2.

Buenos Ayres (New) Gas.—Interim dividend at the rate of 6 per cent. per annum (6s. per share), payable on the 20th inst., for half-year ended June 30.

Charles Cammell and Co.—Interim dividend in respect of the current year of 2½ per cent. on ordinary and preference shares.

Coventry Canal Navigation.—Dividend of £3 per share for half-year ended August 31 last.

Dickins and Jones.—Interim dividend of 9 per cent. per annum for half-year ended July 20 on ordinary shares.

Ederapolla Tea of Ceylon.—Interim dividend at the rate of 6 per cent. per annum, for half-year ended June 30.

Goldsmiths and Silversmiths.—Interim dividend at the rate of 7½ per cent. per annum on ordinary shares for six months to July 31.

Greenwich Inlaid Linoleum.—Interim dividend at the rate of 10 per cent. per annum for six months ended September 30.

Henry Ford.—Second interim dividend for the current year of 7½d. per share.

Henry Hodder and Co.—Dividend of 5 per cent. and bonus of 2 per cent., making 12 per cent. for year, carrying forward £1,129.

Hoods.—Dividend of 8 per cent. for year ended July 31, £1,000 to reserve, carrying forward £730.

Highland Tea of Ceylon.—Interim dividend at the rate of 4 per cent. per annum for half-year ended June 30.

Imperial Continental Gas.—Dividend of 5 per cent. for half-year ended June 30.

Ingersoll-Sergeant Drill.—Usual quarterly dividend of 6d. each on the ordinary shares.

J. Mandleberg.—Usual interim dividend on ordinary shares at the rate of 8 per cent. per annum for half-year ended June 19 last.

James W. Cook and Co.—Interim dividend at the rate of 5 per cent. per annum for half-year ended June 30.

John Cordeux and Sons.—Interim dividend on the ordinary shares at the rate of 6 per cent. per annum in respect of half-year ended August 31.

Maynards.—Dividend of 6 per cent. on the ordinary shares, carrying forward £2,387.

Nelson Share Syndicate (Nelson's Teas).—Interim dividend at the rate of 20 per cent. per annum on ordinary shares for three months ended September 30.

Neuchatel Asphalte.—Interim dividend on ordinary shares of 4s. per share, payable 15th inst.

Poongalla Valley Ceylon Tea.—Interim dividend at the rate of 5 per cent. per annum, for half-year ended June 30.

River Plate Gas.—Interim dividend at tehe rate of 6 per cent. per annum for half-year ended June 30, payable 20th prox.

South African Lighting.—Interim dividend of 4 per cent. (8 per cent. per annum) for half-year ended June 30.

Stuttaford and Co.—Dividend of 8 per cent. on the ordinary shares, making 15 per cent., placing £10,000 to reserve, and carrying forward £16,217.

Van Den Berghs.—Interim dividend on the ordinary shares for half-year ended June 30 last at the rate of 8 per cent. per annum. The interim dividend for same period last year was 6 per cent. per annum.

MINING RETURNS.

British Broken Hill Proprietary.—3,958 tons crude ore produced 735 tons concentrates, which contain 426 tons lead and 20,580 oz. silver.

Chinese Engineering.—Output of coal 14,500 tons; sales 16,500 tons; consumption 1,200 tons.

Collie Proprietary Coalfields of W.A.—Output and sales 7,883 tons.

Day Dawn Block and Wyndham.—2,450 tons crushed for a yield of 942 oz.; from company's works at Burdekin River and Old Wyndham Mills, 3,806 tons of tailings for bullion valued at £2,800; total value £6,100.

Day Dawn P. C. Gold.—Cyanide works, 1,320 tons of tailings treated, produced bullion value £1,150.

Eaglehawk Consolidated.—420 tons crushed, 312 oz. realised, 102 oz. from cyanide.

Great Eastern Collieries.—Output 360 tons.

Hyderabad (Deccan).—Output of coal from the Singaremi Collieries, 22,144 tons.

Malacca Diamond.—126 loads washed, producing 182 carats diamonds, 3,625 lb. tin.

Queensland Menzies.—Crushed, 567 tons, 906 oz.; cyanide, 440 tons, 112 oz.; total, 1,018 oz.

St. John Del Rey.—Gold produce £7,100. Yield per ton, .53 of an oz. troy.

Sulphide Corporation.—14,427 tons of ore milled at Central mine, producing 2,917 tons of leady concentrates, and 2,995 tons of middlings treated, producing 1,482 tons of zinc concentrates. At Cockle Creek 1,502 tons of leady concentrates, 420 tons of residues, and 3,802 tons of purchased ores smelted, yielding 997 tons of lead, containing 81,754 oz. silver and 14,157 oz. gold.

NEXT WEEK'S MEETINGS.

Monday, October 5.

Lyons and Co.—Trocadero Restaurant, noon.
Simplex Copper Extraction.—20, Copthall Avenue, 3.30 p.m.

Tuesday, October 6.

Bank of Scotland.—Edinburgh, 12.30 p.m.
Paine and Co.—St. Neots, 7 p.m.

Wednesday, October 7.

Delhi and London Bank.—123, Bishopsgate Street, noon.
Golden Mint Mines.—15, Copthall Avenue, 3 p.m.
Odam's Manure and Chemical Company.—109, Fenchurch Street, 11.30 a.m.

Thursday, October 8.

Colonial Bank.—13, Bishopsgate Street, 2 p.m.

Friday, October 9.

Brett's Stamping Company.—Coventry, 3 p.m.
Grand Trunk of Canada Railway.—Cannon Street Hotel, noon.
Maynards.—G. E. R. Hotel, 3 p.m.

THE REVENUE RETURNS.

I.—AN ACCOUNT OF THE TOTAL REVENUE OF THE UNITED KINGDOM, in the undermentioned periods of the Year ending March 31, 1904, as compared with the corresponding periods of the preceding Year.

Treasury, September 30, 1903

RAILWAY TRAFFIC RETURNS.

Foreign.

Argentine North-Eastern.—Traffic receipts for the week ended August 28, $10,930; increase, $841. Aggregate from January 1, $415,886; increase, $8,762.

Assam Bengal (Chittagong Section).—Traffic receipts for week ended August 29, Rs. 34,128; increase, Rs. 7,371. Aggregate from July 1, Rs. 2,51,395; increase, Rs. 10,282.

Assam Bengal (Gauhati Section).—Traffic receipts for week ended August 29, Rs. 7,019; increase, Rs. 335. Aggregate from July 1, Rs. 68,796; increase, Rs. 17,970.

Bengal Central Railway.—Traffic receipts for week ending September 5, Rs. 43,505; increase, Rs. 9,931. Aggregate from July 1, Rs. 267,673; increase, Rs. 48,260.

Canadian Northern Railway.—Traffic receipts for week ended September 14, $57,100; increase, $16,500. Total, from July 1, $620,900; increase, $286,200.

Lucknow Bareilly Railway.—Traffic receipts for week ended August 29, Rs. 27,672; increase, Rs. 3,145. Aggregate from July 1, Rs. 1,81,275; decrease, Rs. 6,388.

Quebec Central Railway.—Traffic receipts for the 3rd week of September, $15,186; decrease, $792. Aggregate from January 1, $505,448; increase, $18,520.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended August 29, Rs. 10,433; increase, Rs. 180. Aggregate from July 1, Rs. 76,273; decrease, Rs. 1,780.

Salvador Railway.—Traffic receipts for week ended September 26, $10,000; increase, $3,500.

White Pass and Yukon Railway.—Traffic receipts for the week ended September 14 amounted to $99,000.

English.

Cleator and Workington.—Gross receipts for the week ending Sept. 27, £1,197; increase, £8. Total receipts from July 1, £13,839; decrease, £178.

Cockermouth and Keswick Railway.—Receipts for week ending Sept. 27, £1,107; decrease, £18. Aggregate from July 1, £14,272; decrease, £819.

East and West Yorkshire Union Railway.—Traffic receipts for the week ending Sept. 26, £440; increase £46. Aggregate from July 1, £4,832; increase, £418.

Liverpool Overhead Railway.—Traffic receipts for week ending September 20, £1,690; increase, £176. Aggregate from July 1, £20,596; increase, £1,264.

TRAMWAY AND OMNIBUS RECEIPTS.

Home.

Aston Manor Urban.—Traffic receipts for week ending Sept. 26, £652, increase £33; aggregate from July 1, £7,282, increase £223.

Belfast Street.—Traffic receipts for week ending Sept. 26, £2,683, increase £12; aggregate from July 1, £36,649, increase £1,479.

Birmingham and Midland.—Traffic receipts for week ending Sept. 25, £867, decrease £12; aggregate from July 1, £10,986, increase £235.

Birmingham City.—Traffic receipts for week ending Sept. 26, £5,630, increase £227; aggregate from July 1, £67,690, increase £2,651.

Blessington and Poulaphouca.—Traffic receipts for the week ending Sept. 27, £17, decrease £8; aggregate from July 1, £404, decrease £35.

Bristol Tramways and Carriage.—Traffic receipts for week ending Sept. 25, £5,151, increase £217; aggregate from July 1, £68,386, increase £1,660.

The Investors' Review.

Mr. Chamberlain on the Empire's Bankruptcy.

Mr. William Crooks, it seems, has become pertinaciously anxious to learn what legislation the late Colonial Secretary has "initiated" during his long political career. He says he has got no satisfactory answer to his query, and that was to be expected, for the only law that Mr. Chamberlain has passed "all on his own," so far as we recollect, is the Bankruptcy Act of 1883. What it has done for British trade let merchants testify. One thing is obvious, bankruptcies were never so perfectly driven under the surface and hid away from the eyes of the public as they have been since that Act came into force. It has given facilities to dishonest traders in swindling their creditors unexampled in our history. Anyway, Mr. Chamberlain may be accepted as an authority on bankruptcy subjects, as he seems to stick to his old love, for this electioneering and tariffing tour of his, begun on Tuesday night in Glasgow at an assemblage graced with the presence of a large deputation from the peerage, is nothing other than a proclamation of the empire's moral bankruptcy. Ties of blood kindred are of no account now, unless they are cemented with bribes, and the perilous sentimental condition of the outlying portions of the empire is a matter so urgent that we are summoned to impose shackles upon our trade and hunger upon millions of our crowded population in order to save it from dismemberment. It was a harrowing picture, presented with all the vulgar tawdry arts of the practised rhetorician; yet the argument was horribly stale and the sentimentality with which it was supported miserably lean and mean. No high aspiration for the good of the peoples afflicted with this kind of propaganda escaped the speaker's lips. He could only appeal once more to the imperialistic pride and vanity he so successfully stirred up in order to get his ruin-scattering African war, and he rested his case on force throughout, force, the most worthless and transitory means of binding peoples together it would be possible to summon. But he appeared to please his audience and, we suspect, pleased also the majority of the electorate throughout the country. We have not yet risen clear of the evil passions nourished to such heights during the last eight years. We still regard the foreigner as an enemy and take kindly to suggested methods of coercion, the flourish of the big revolver delights our hearts, commends itself to us as the one attitude becoming in so mighty a race, don't y' know, towards trade rivals.

In his vigorous speech at Sheffield Lord Hugh Cecil put a point that we may be quite sure the Birmingham caucus and its master will take care to ignore. Lord Hugh wanted to know what success foreign nations, which had adopted tariffs of retaliation and assumed an attitude of more or less violent hostility towards their rivals, had attained in breaking down opposition tariffs. To put a question of that sort is to indicate as with a flash of electric light the dishonest pretence beneath the present agitation. Nothing is more notorious in the history of modern nations than the absolute failure of their ever rising tariffs to open up new markets to them. They join the race for these new markets with arms and feet bound in fetters, whereas our competitive strength has all along consisted in our perfect freedom of movement. Thanks to this freedom, we stand in the position of the one country in the world which enjoys the most favoured treatment under all tariffs. So much is this the case that, should tariff hostilities break out anywhere, as they did some years ago between France and Italy, to the disaster of both countries, England is always the least injured by the strife. France created differential duties against Italy, and we came in under the lowest scale, the most favoured nation clause. No concession could be given by one country to another that England does not now share. What are we going to gain by surrendering this position of unexampled privilege, by taking the big revolver in our hands and dashing around threatening our neighbours, all the world, with our vengeance unless they open the doors of their markets to us more widely than they now do? We can gain nothing, but we are certain to lose much, in commerce, in banking, in carrying trade, in entrepôt business, everywhere.

Our loss does not concern the ex-Colonial Secretary, whose sinister and malignant career has done more to hasten the destruction of the empire than that of any other politician in modern days. The wellbeing of the masses, whether at home or in the colonies, is the last thing this man thinks of. What he is concerned with is to bolster up shams, and if possible to make the democracy forget the ghastly thoroughness of his failure. No boon he predicts ever comes to hand. If he promises, you can invariably trust to the promise being broken. He completely failed to get either Canada or Australia to endorse his demands for large contributions towards the monstrous naval and military expenditure of the mother country. He did not succeed in getting any of these young countries to break down their tariffs by one per cent. in our favour. At all points where he banged the empire drum and made demands for sacrifices on the part of the outlying settlements of British folk his efforts failed. But still he goes on in the same reckless path, and—apart from the desire to hide that horror-inspiring mess in South Africa—probably one of his present motives for agitation is to be found in the over-capitalised position of so many of our home industries. It is not foreign tariffs that weaken our competitive power, if it is being weakened, but the dishonest capitalisations of thousands of manufacturing and distributing businesses accomplished under limited liability during the last quarter of a century. Not only have these businesses been loaded up with capital

for the dishonest profit of the vendors and promoters, but in the straining after a high market price for shares, profits have been manipulated and dividends distributed, often totally without regard to the future, so that in addition to the original fraud of excessive capital the conductors of these businesses are now confronted by a wasting of the original values of the properties transferred, a waste for which little or no provision has been made. Their one hope lies in some artificial elevation of prices, some unscrupulous fomentation of markets whereby the ravages may be concealed. Thus is it true that Mr. Chamberlain is on a tour to proclaim our bankruptcy and arrange preliminaries for a private composition with the creditors.

What is his remedy for all the ills he conjures up? It would be contemptible in its childishness could we regard it as anything else but the beginning, the thin end of the wedge. He would put a 2s. duty per quarter upon foreign corn, to the injury of British corn growers in Argentina in the Western States of North America. But 2s. is a derisory remedy if it is meant to stimulate wheat production in such territories as Manitoba, New South Wales and South Australia. Some of these settlements, notably the Australian ones, would want a duty of from 15s. to £1 per quarter as against home and European competitors, because the yield of their soil is so poor. Even in Manitoba the average yield fluctuates according to frosts between 9 and 25 bushels to the acre, in New South Wales it runs from nothing, or next to nothing, to 12 bushels to the acre as a maximum, and in South Australia the range may be said to be from 3 to 6 bushels to the acre. But at home here our wheat harvests show an average return of from 26 to 35 bushels to the acre. Clearly if these colonies are to take a leading position in our market against the foreigner and the British farmer the new duty on wheat must be made very much heavier, and high duties no doubt will be the goal aimed at by the land-owning protectionists and their plausible leader. Never mind who goes hungry here, so long as the colonists are bribed sufficiently to adhere to the empire. But why is not maize to be taxed? Is it because Canada is incapable of competing with that grain in any effective manner, thanks to the way in which it is squeezed up into the frozen north, or is cheap maize wanted for rearing pheasants? But there is Rhodesia, "a splendid maize country," its advertisers assure us. Ought not a duty to be put upon Indian corn so as to stimulate the development of that "great empire," population, 10,000 or so?

We may pass by the unspecified tax on flour and the 5 per cent. duty on foreign meat and dairy produce—excluding bacon, which exclusion will not please Canada—for all these duties are open to the same objection, they are insufficient. Does Mr. Chamberlain really think that wine drinkers in this country will forsake the delicate vintages of France in order to consume the harsh fluids of Australia or of Cape Colony, just because an unspecified preferential duty would be clapped by him upon French, German, and we presume Spanish and Portuguese red and white wines? Perhaps Indian tea planters will thank its author for the proposal that the duty on tea should be reduced by three-fourths, but will that remission compensate them for the loss of Russian custom, or for the higher duties which we may be certain France and other non-British consumers of Indian tea will make haste to impose for the benefit of their own over-sea possessions? We are delighted to see that the conjuror thinks a reduction or complete remission of the sugar duty may be possible, and hope the mob he beguiles may one day force some Government to give effect to his hint. But what is he going to gain by the proposed 10 per cent. upon foreign manufactured goods? The average is "not to exceed" that amount. What are "manufactured" goods? The ex-Secretary's own brother, Mr. Arthur Chamberlain, answered this question in a singularly instructive conversation that a *Manchester Guardian* interviewer had with him early last month. The manufactured articles of one business are often the raw material of another. How is the great Joseph going to distinguish? Will he please particularise in his future harangues, and instruct not only the luminous dukes, marquises, earls, barons and mere baronets and knights who escort him around and smile sweetly upon him as he does a bravo's service in their cause, but the multitudes of those who have to work for their daily bread, who toil and spin? We have doubts. It is not in this man's mental composition to condescend too much on particulars. He deals in the vague and is no more than an excellent practitioner upon the big drum or on the trumpet with one note, "imperial grandeur," "the mighty power of England's empire," our right to dominate all the world as traders, the infamy of the foreigner in daring to oppose us and to steal into our markets or keep us out of his own. It is poor mental furniture this for a nation's leader, but it is all Joseph Chamberlain has got. How he does whine though when he turns to the colonies. Please, good kind gentlemen, erect no more factories of your own. Give us all your orders henceforth in exchange for this 10 per cent. It is the third rate, wheedling bagman we have here.

"I rest may case," says Joseph, "on a little table contrasting the figures of 1872 with those of the past year," and he proclaims loudly that our exports to the United States and other countries have fallen off in a disastrous manner between the two dates. Why does he not complete this table so as to include quantities and prices? He might at least have as much honesty as that and face the music out, but he has not; and why did he not take 1873? Because the aggregate value for 1872 was the biggest of the post Franco-German war and British coal and iron boom period. And why did he ignore prices? Because they have fallen so far since 1872 and 1873. In the latter year the average price of our pig and puddled iron exported rose to 124.65s. per ton as against only 100.85s. in 1872. But in 1902 the average price of the same class of commodities exported was only 64.75s. per ton. Everything else has fallen in price on a more or less striking scale, even "British bleach," about whose imaginary exclusion from Russia Mr. Arthur Balfour is naturally so deeply distressed. Cement has declined from 2.45s. per cwt. in 1872 to 1.72s. in 1902. Cotton yarn has fallen from 18.87d per lb. to 10.49d., and the decline in cotton tissues is even more severe. In 1872 our wool exported fetched 19.86d. per lb., and in the two following years rose to 21.18d. and 21.92d. per lb. Last year the price was only 6d. per lb. Will Mr. Chamberlain be good enough to have the statistics completed for the two dates he "rests his case" upon, giving quantities and prices for all leading commodities exported, as well as aggregate values? If not, what are we to think of him as an honest man intent upon telling the truth to his countrymen?

What is the use of combatting charlatanism of this description? The mind of the nation has been well prepared for the reception of falsehood. It swallows sophistry with a greed that seems insatiable. By appealing to the basest passions a population can nourish, by dangling false hopes before its eyes, by prophesying benefits which at the best can only accrue to a limited class, and mean augmented poverty for the immense majority, and by wrapping up all this sort of thing in the gaudy phrases of the sham imperial patriot it is but too probable that the ex-Colonial Secretary may triumph. We are not at all sanguine of a free trade victory at the polls when the General Election does come. There is not enough capacity in the minds of the people, as a mass, to comprehend the simplest economic proposition. We have become so steeped in false sentiment, so possessed by debasing ideals, that truth cannot penetrate the panoply of lies and false imaginings with which we have surrounded what intellect is left to us. This man from Birmingham has probably only to go on tootling his one note, "unite the empire by bribery," and banging his big drum, in order to seduce the minds of a generation not yet brought to its senses by hunger. None the less must those who have the good of the people at heart, who desire to see this country living in amity and friendly emulation in progress with its neighbours the world over, who wish to see hunger banished from our city slums and our village stys, fight on and fight determinedly against a disastrous revolution in the policy guiding our commerce, a revolution which constituted as this country is, must bring upon it inconceivable miseries. Instead of uniting it the empire will be burst asunder like an over-driven fly wheel, if Joseph has his way. Jealousies

innumerable will spring up between the different sections of this ill-knit empire, over the distribution of tariff favours. Their trade will be thrown into greater or less confusion, and the impending bankruptcy of some of them hastened. Instead of loving us more the minds of the people in each colony will be filled with disgust and hatred, and not against us only but against each other. Our investments, many of them amongst the most safe and profitable we have left, in countries not under the British flag, will be disturbed, rendered precarious, and in some instances, perhaps, deprived of all value. Our banking business, now world-wide, will be put in jeopardy, our mercantile marine crippled, and all for a will-o'-the-wisp. Well, what does it matter so long as Joseph and his brethren sit on top and survey the ruin they have caused from the serene height of the privileged? Is it not the duty of wise Governments to provide criminals for justice, to promote roguery in trade for the benefit of bureaucrats and to keep the people lean lest they should become presumptuous and talk of elementary human rights?

Nine Months' Foreign Trade.

The monthly figures compiled by the Customs officials and published by the Board of Trade come as a useful reminder that our foreign trade, in spite of maligning, is still very profitable, quite something for the poor "little Englander" to be proud of. In the month of September we imported goods to the value of £45,451,184, an increase of £3,686,693, or 8.8 per cent. upon the figures for September, 1902. In the same time, however, we exported, at £23,315,751, British and Irish produce to a less value by £269,622, or about 2 per cent. compared to the same month last year. But this loss was nearly wiped out by an increase of £184,898 in the value of foreign and colonial produce re-shipped to foreign customers. This was an increase of nearly 4 per cent., the total being £4,796,675. It would thus appear that our trade is rather increasing in profit than the reverse, for a smaller shipment of our goods abroad, values alone taken in measurement, brought back a larger supply of produce originating abroad. Necessarily, however, the returns of one month are of comparatively limited significance, and the nearer the year comes to its close the more interesting do the figures for the whole period expired become. Before, however, noting one or two points in the returns for the nine months it may be useful to point out that to some extent the increase in our imports for September arise from a temporary increase in our necessities. We have, for example, imported upwards of £1,000,000 worth more grain and flour than in September, 1902, and the total increase in the value of articles of food and drink imported last month exceeds by £2,000,000 the total for the preceding September. With a poor home harvest and rising prices, this swelling out is likely to last for months.

Some of our industries appear to be doing well in spite of the horrible ruin which the false prophet of Birmingham says overhangs this part of the nation's business, for we imported last month £114,000 worth more of metallic ores, other than iron, and the decrease in iron ores, scrap iron and steel was under £51,000, in spite of stagnation in the shipbuilding trade, while of wood and timber the increased importation was about £526,000, and in textile raw materials, other than cotton and wool, the increase was £239,000. Some imports of manufactures also show considerable gains, but not all, and nothing in the figures in the least bears out the contention of Mr. Chamberlain and his allies. Certain of the changes are due to prices. We have been paying rather more for our wheat, and wheat flour, and for our oats, although less for Indian corn and barley, but the most notable increase in price is shown by raw cotton, and it is unquestionably due to the mischievious consequences of the unprincipled attempt, or series of attempts, in the United States, to corner the supply of raw cotton, that our exports of cotton textiles have recently shown a decline. Export prices have not risen to compensate this branch of trade for the higher cost of the raw material, and it may be said that our exports as a whole are now being adversely affected by the fall in prices which has touched most things in the list except iron and steel, linen and jute piece goods, wool and the tissues of wool, except worsted tissues, which have brought less money for the same quantity of goods as in September last year.

For the nine months the "hang the foreigner and our foreign trade" class of imperial politician will doubtless be pleased to find that the excess of imports over exports has declined by nearly £9,000,000 compared with the previous year, and by about £7,000,000 compared with the first nine months in 1901. We should interpret this as indicating either a wholesome check in the tendency to over import, which has undoubtedly existed since we began to waste our substance in a gigantic war, or as a mere passing variation produced by price movements or credit operations. Whatever the cause of the narrowing in the margin between export and import values it remains true that our foreign trade is remarkably good and obviously profitable beyond that of any similar trade carried on by other countries in any part of the world. Most people will probably look at the figures—though the multitude hates the sight of figures—in their relation to the latest economic heresy according to Joseph, and from this point of view the detailed tables are full of interest. We are going to have foreign wheat taxed for the benefit of the colonies, Joseph says, and it is consequently of interest to note that 50 per cent. of our entire supply of wheat has come this year from the United States and the Argentine Republic, that about 16 per cent. of it has come from

†Not included under the following heads.

Russia, little more than 17 per cent. from India, and less than 13 per cent. from Canada. There is a long lee-way, therefore, to make up before we can dispense with the grain now poured in from countries deprived of the blessing of the British flag. That is a striking example relating to food grains, and much the same story is told by the figures relating to meat. Of the entire supply of fresh beef, for instance, upwards of 60 per cent. came this year from the United States, and most of the remainder from the Argentine Republic, New Zealand having sent little more than 139,000 cwt., out of a total of 3,125,000 cwt. imported. New Zealand naturally shows better in mutton, having sent us 1,782,000 cwt., compared with 1,115,000 cwt. received from the Argentine Republic, but the latter figure is quite respectable enough to raise a doubt whether it would be wise to penalise that source of supply in the interest of New Zealand, where excessive zeal in exporting has already reduced the flocks of sheep. One might go through the whole list and fail to find encouragement for the crude barbarism of the ex-Colonial Secretary, but let us turn to the exports and look at one or two figures there.

Mr. Chamberlain wishes to tax foreign "manufactures," and especially foreign machinery completed things, and is in deadly alarm, so he alleges, at the coming competition of the gigantic and gigantically insolvent United States Steel combine. Well, there does not seem to be much necessity either for the tax or the terror, if we may judge by the position of our own exports of machinery. Thanks to the free application of borrowed money to pay for goods

* The value of the Exports represent the cost and the charges of delivering the goods on board the ship and are known as the "free on board" values.
† Not included under following heads.

ordered, the great bulk of the locomotives exported have this year gone to British South Africa, India, and Australasia, but foreign countries took nearly 80 per cent. of our steam agricultural machinery and are, oddly enough, our best customers for sewing machines, a specialty which used to be thought an exclusive appanage of the foreign trade of the United States. Our sales of sewing machines alone in the first nine months of this year reached a total of £1,415,530 in value, and of that total countries in Europe alone took £1,233,000, the total export to foreign countries being, as we have said, upwards of 90 per cent. of the whole. We are thus beating the Yankee on his own ground. It is the same with our textile machinery. It more than holds its own, but it would soon be ruined if we put taxes upon the finished or half finished manufactures of foreign countries, utilised in it, on the tools imported, the various novelties always coming out in order to stop them from reaching this country. And less than 15 per cent. of a total value, £3,367,431, of textile machinery exported this year went to countries under the British flag, the great proportion being sent to India, whose demands are to a large extent the outcome of British capital invested there. Russia alone, that special object of Mr. Balfour's dislike, took £239,000 worth, and Mr. Chamberlain's hated Germany £42,000 worth. Is it to be for a moment supposed that we should continue to enjoy custom of this description if we commenced the policy of retaliation and sought to penalise the articles offered to us by these customers in return? Could we sell so many ships, built in our yards, to foreign navies and mercantile marines if we blocked the way to the import of foreign iron and steel? After

all, what does the import of such material amount to? It principally consists in raw material for some branch or other of our manufactures. We have bought this year, for instance, about £1,500,000 worth of iron bars, angles, rods, girders, beams, joists, and pillars, besides some £1,300,000 worth of steel bars, angles and shapes, ship, bridge, boiler and other plates, sheets and plates and hoops and strips. One has only to mention the names of these various forms of foreign iron and steel to see that they are only bought because we can utilise them to advantage in our own manufactures. Probably the entire value of the iron and steel brought to this country from abroad, which in the current year has reached £6,250,000, is one of the best proofs imaginable that we are holding a commanding position amongst nations as producers of the highest, most expensive, and most perfect class of finished iron and steel goods. It is also proof that the domestic trade of the country must be exceptionally prosperous and profitable, but why go on trying to instruct the public as to the bearing of facts when that public is drunk with vanity and incapable of understanding what is best for its own interests?

Economic and Financial Notes and Correspondence.

A "Dry Rotter" Cabinet.

We are getting on. The incompetent of the War Office has been transferred to the India Office, where he will be equally the strenuous "fushionless" tool of the military hydra, the strident muddler and fatuous retailer of official flapdoodle. Joseph's son, Austen, of Hoskins and Co., Admiralty contractors, has been sent to the Exchequer, as successor to men like Sir William Harcourt, Sir Michael Hicks Beach and Mr. Ritchie. That amiable echo of other men's catch words, Alfred Lyttelton, first-class cricketer, is popped into Joseph's seat, and will be as incapable of undoing the mischief that restless anarchist wrought there as of handling a fleet in action. Never, in the mass, an able ministry, the cabinet of Lord Salisbury, to whose position his nephew succeeded, is now a battered swarm of nonentities, an object of derision to all men—Tory, Whig or Radical—who believe in "constitutional government." It will be borne to the ground by a nation's contempt, in spite of the strength of its Parliamentary majority, the interested betrayal of the Irish, and Mr. Balfour's pretty contempt for public opinion, the democracy in any guise. And that poor man has at last lost the Duke of Devonshire. All through the intriguing which Arthur and Joseph brought to a successful termination by jockeying the honest free traders out of the cabinet—his grace slumbered on, soothed by sophists and deluded by Joe and Arthur, but the Sheffield protectionist harangue, redolent of moral degeneracy and national betrayal, woke him up, and, as often happens when sleepy-headed people are unduly disturbed in their repose, he flung himself out of the Balfour troupe of understudy motleys with a precipitancy which hurt that gentle creature's feelings. To lose the support of a duke at any time is a misfortune for a political party, for we all worship dukes, but to lose *the* duke now, when the team is a scratch one, is for Balfour a preliminary warning of the crack of doom.

It is the one consolation open to true patriots. The nonentities, the cacklers, and posturers, the bounders and "boodlers'" instruments, the stock market punters and hangers on of Park Lane helots, now chucked into offices of high responsibility, for which they have disclosed no capacity, are soon to disgrace themselves, and to be so smudged with the discredit of incompetence that once ousted, the nation should be rid of them for good. But that is poor consolation meantime, and a Brodrick presiding over the destinies of hunger wasted India, an Arnold Forster overhauling the work at Woolwich—he was, to be sure, such a phenomenal success at Cassell and Co.'s that the shop will never know him any more—or an Alfred Lyttelton wicketkeeping for the African bosses, whose slavish admirer he is, bidding the ill-begotten Australian Federation economise and live cleanly, soaring like a bountiful Father Christmas over the acquisitive and presumptuous dollar-lust of Canada, keeping the West Indian sugar industry on its legs, and bringing our new empire in Nigeria into order and profitableness, crying the while, "Any orders, gents., Brum. way"—Ye Gods!—finding traffic for the Uganda Railway, teaching Dr. Jameson how to suspend the constitution and cheat the Dutch at the Cape, and instructing the De Beers minions at Pretoria and Johannesburg on the swiftest method of starving the Boers to death, will indeed be a spectacle calculated to amaze mankind. It cannot last long, sanguine observers think, and we hope they are wrong. It would delight us to behold the bold Austen caught in

the throes of an empire credit whirlwind, or the sportsmanlike Lyttelton giving his opinion that a colonial default "isn't cricket, don't ye know, hang me if it is," for then we should feel sure that the nation had got just the sort of "Government" it deserves. A nation that finds the worthiest expressions of its ideal in the rantings of a Joseph Chamberlain—unprincipled derision of all that is honest and true—or in the versifyings of a Kipling, deserves all it is now getting, and more. But the hunger will follow.

Mr. Harold Cox on Mr. Balfour.*

Why did Mr. Cox, or his publisher, Mr. Fisher Unwin, put the price of this pamphlet at 1s.? We hope a penny edition will be issued before very long, else it will never reach the hands of thousands of people who ought to read it. It is a trenchent and effective answer to the visions, suppositions, imaginings, and assumptions of the Prime Minister, and reveals not merely the ignorance of that dialectitian, his indifference to facts about business, but his incapacity to argue straight. We never read a weaker production than that of Mr. Balfour, an effusion supposed to be animated by a serious economic purpose, and it is a pity in some respects that a man of Mr. Cox's vigorous intellect and wide knowledge of business should have been compelled to waste any of his time in handling a production so fanciful. With nearly all that Mr. Cox says we are in agreement, but at one point a difference arises. "Till recently," he says, "the protectionists would have replied by suggesting that we were living on our capital, and that British owners of American Railroad stock were generously parting with their scrip in order to buy foreign flour for our starving British poor. That ridiculous myth appears no longer to be current in protectionist circles." We never noticed that the so called myth was put quite in that way, but Mr. Cox is wrong if he supposed that no such sales took place. In the City nothing is more notorious than the fact that for some years the United States financiers and people bought back not merely many millions sterling worth of their Railroad bonds formerly held here and on the Continent, but also many millions worth of Railroad shares. The money thus brought home, to a considerable extent in augmented imports, was not devoted by the vendors to "feeding the indigent poor" here, but a good deal of it went into the Boer slaughtering business, and the waste of that money—wholesale murder being ever the costliest of industries—has so impoverished us that we have never been able to buy back the American Railroad shares at the advanced prices they reached after leaving our hands It is this failure to repurchase which to a large extent accounts for the distressed condition of the Yankee finance market to-day. All this is to a certain extent beside the point at issue, but it is well to interpret facts accurately wherever they are touched, and there can be no question at all that we have taken back capital from the United States to enormous amounts which has been wasted in other directions. The return of this capital, followed as it was, or partly accompanied by, the criminal waste upon our African war accounts for most of the unusual expansion in our imports but, as we have more than once shown, this expansion has nothing whatever to do with foreign tariffs, and is wholly without relevancy to the tariff question at home. Never mind this little slip, the pamphlet is excellent, ably written, and quite unanswerable.

Willans and Robinson.

As recently as the year 1900 the ordinary dividend paid by the fine engineering business of Willans and Robinson was as much as 12 per cent., and the shares, nominally of £5 each, were quoted in the market at £12 apiece. By 1901 the dividend had dropped to 10 per cent., at which it was maintained until June, 1902, while for the opening half of the current year it is no more than 3 per cent., or 6 per cent. per annum. During the same time the value of the shares has tumbled 50 per cent.—from £12 to £6—and it is rather interesting to trace the causes of this decline, and to try to ascertain if it is likely to be of a permanent character. Below will be found two statements, the one showing the result of operations for the five half-years to June 30 last, and the other the position of the capital account and principal assets during the same period. From the first it will be observed that the gross profits, which in the December half of 1901 reached the satisfactory figure of £52,679, fell nearly £10,000 in the following six months, and by the end of 1902 had given way yet another £3,000. The latest report shows a recovery of nearly £6,000, but although the total revenue is more than £4,000 above that earned in the six months to June 30, 1902—the last half-year when the dividend was at the rate of 10 per cent. per annum—the dividend proposed is only at the rate of 6 per cent. per annum. Why is this? To begin with the dividend should not have been maintained at 10 per cent. per annum, in face of the heavy fall in profits which commenced in 1902, because it had to be paid on a largely increased capital, and the directors knew that the fixed charges must presently largely increase. The effect of paying a larger dividend than was earned is seen in the fact that nothing was placed to debenture redemption, the contribution to reserve was nearly £3,000 down, and the carry forward was likewise largely reduced. From this mistake the company has not been able to recover, and in the following six months we find the dividend down to 3½ per cent., with, it is true, an advance to £2,500 in the sum placed to reserve, but a very severe drop in the amount left over, to £1,375. It is to the latter circumstance that the further fall to 3 per cent. in the return for the past half-year is due, because after meeting higher fixed charges, and providing a larger amount for depreciation, the actual net balance was £2,309 better than in the preceding period. When, however, the respective amounts brought forward were added on the available sum is £1,705 lower, so the dividend and allocation to reserve are reduced, and the sum carried forward substantially increased.

Half-year to Dec. 31, 1901, 5 per cent.
Half-year to June 20, 1902, 5 per cent.
Half-year to Dec. 31, 1902, 3½ per cent.
Half-year to June 30, 1903, 3 per cent.

Now as to the reasons for this position of affairs. The second statement shows that since 1901 the share capital has been increased by £143,830, and the debenture stock by £146,448, or over £290,000 additional capital which had to be provided with dividend or interest. Necessarily, the properties have increased in like ratio, and we find that the outlay during the same period on properties, plant, machinery and boiler works has been £232,416, and the question naturally arises—why in face of these big increases have profits not increased instead of fallen away? The solution is found in the boiler works at Queen's Ferry. Up to June 30 last the sum of almost £24,000 had been laid out on these works, the erection having been in progress some years, but even now, for a variety of reasons, they are not complete, and up to date have not contributed a penny to the company's revenue. In the meantime, as mentioned above, the money raised for their construction

* *Mr. Balfour's Pamphlet: A Reply.* By Harold Cox, Secretary of the Cobden Club. (London: T. Fisher Unwin. Price 1s. net.)

must be found with interest, and here is the explanation of the poor results:—

—	Half-Year ended June 29, 1901.	Half-Year ended Dec. 31, 1901.	Half-Year ended June 30, 1902.	Half-Year ended Dec. 31, 1902.	Half-Year ended June 30, 1903.
	£	£	£	£	£
Issued share Capital ...	522,830	650,304	666,660	666,660	666,660
Debenture capital	100,000	100,000	159,977	245,961	246,448

Materials, stores and engines in stock, &c. ...	97,025	95,645	88,231	83,305	84,052

We are told that satisfactory progress has been made in overcoming the difficulties met with at Queen's Ferry, and it is reasonable to suppose that these works will soon be in a profit earning position. Should they be, we ought to witness an early recovery in both profits and dividends, particularly when we remember that the financial position is exceedingly sound. Goodwill has long since disappeared from the balance-sheet, the company possesses reserves of £145,626, all separately invested, and can show a splendid volume of liquid assets. The only point which gives us pause is the statement that certain important orders have lately been taken on the basis of part payment in shares, and we hope the chairman will have more to say on this subject at the half-yearly meeting on Wednesday next.

Transvaal Misgovernment and Misery.

We shall doubtless be asked to rejoice over the magnificence of the Transvaal revenue for the year ended June 30 last. It amounted, we are told, to £4,683,205, and the telegram goes on to say that there were other receipts, including the repayments of advances made by the late Government to Boer farmers amounting to £744,303, repayments made out of loans. The Imperial and Orange River Governments also contributed £1,251,947 to the cost of constabulary, etc., bringing the entire receipts up to £6,679,456, less £686,956 chargeable to the grant in aid and the Transvaal loan. Yet the accounts show a final revenue balance of £816,394, such is the statement, and we may add that out of the resources of the Transvaal this balance would have been quite a full revenue to provide. For what are the facts about this Transvaal? The mining industry is not providing this vaunted revenue, nor one-tenth of it, and the country around the mining centres is in a state of abject poverty. That is the condition not merely in the Transvaal, but all over South Africa north of the Orange River. So horrible is the state of affairs that the people will die of hunger in hundreds and thousands unless help is given to them at once. It is the fashion to sneer at Miss Emily Hobhouse, yet no one dares to impugn her facts. They show that the population remaining upon the farms throughout the ravaged country is being systematically left to die of starvation. The farmers have been charged monstrous prices for the animals and implements sold to them in order that they might resume work, and the supplies of food doled out for a time with a grudging hand have now been stopped. So ghastly is the state of affairs that the Englishmen out there with consciences of something of human feeling are beginning to exhibit intense resentment and disgust at the way the country is being misgoverned, and we find in the *South African News* of September 16, a letter from Mr. R. Grenville Nicholson, of Mateba's Kraal, Zoutpansberg, dated August 29, in which ample confirmation of Miss Hobhouse's statements is given. The writer has only taken cases "within rifle shot" of where he lives, and amongst his instances are these. A lady with four children, whose husband has refused to take the oath of allegiance—an oath that the treaty of peace stipulated should not be exacted—is living in a small bell tent that had seen two years' service, and the Repatriation Board has ceased to permit this destitute family to draw rations, so the lady is endeavouring to eke out a living for herself and children by making dresses for the Kaffir women on the mission station. Another lady whose husband had procured temporary employment away from his farm, went to Pietersburg about a year ago, and applied to the Repatriation Board for rations, for which she offered to pay cash, as at the time local stores were charging exorbitant prices for food. This request was refused in writing, because "it would be a gross injustice to local storekeepers." An immediate neighbour of Mr. Nicholson's endeavoured to make a little money by enclosing a weak fountain of water on his farm and selling it to travellers for a small fee. The Repatriation Board cattle had to pay as well as the rest, but the chairman of that Board sent the man a demand for £168 for rations supplied. With the demand was enclosed two promissory notes, one for £48 and one for £120, payable some two years hence. The object of this device is plain enough, to get the land into the hands of the capitalists, and turn the industrious Boer farmers into pariahs. Mr. Nicholson says that he built a small hut out of sheets of iron zinc strewn about the farm for another wretched starveling, his wife and four young children, the husband having been wounded in a fight in 1899 so that his leg had to be amputated. He has been an invalid ever since. The Repatriation Board sent him to Mr. Nicholson's farm in September, 1902. He has no land, no means of any kind, and was left with his wife and four children in a small tent. The Board gave him, besides rations, a small plough, which was useless to him since he had no ground to put it in. The last rations were issued to this starving family in June, 1903, when the man was told that it would be useless to make any further application for food, as such would not be granted. But for £50 given by the Botha-De la Rey Committee out of funds in its hands, this man and his family would have been dead of starvation unless the good hearted Mr. Nicholson had himself kept them alive. None of these instances are taken from Miss Hobhouse's harrowing catalogue, they are furnished by an English farmer, and our De Beers administration of the Transvaal boasts of its revenue, and allows white people to die to make room for Chinese. The Transvaal has no genuine revenue to the extent of even £1,000,000, let alone £6,000,000 or £7,000,000. It is a country in ruins, whose white population, one of the sturdiest in the world, is in danger of dying off before another harvest can be reaped. Fine security for "guaranteed" and other loans, surely.

Swansea Improvements and Tramways Company.

Before dealing with the amazing methods of finance indulged in by this company, it may be well to point out that it springs from the British Electric Traction Company, and that that worthy parent, according to its latest report, owns no less than £243,050 out of an issued share capital of £267,420. These facts are probably sufficient to account for the peculiar fashion of treating the various undertakings at Swansea as separate concerns, and seizing upon the profits of one branch for dividend purposes while the losses shown by the others are carried forward. Taking the tramways first, as being most remunerative, the directors show an increase of £719, to £12,982, in the gross receipts for the six months ended June 30, and of £529, to £9,565, in working expenses, the advance in the latter being set down to increased local taxation. The profit on working was therefore £3,417, and with £204 brought in gave a total of £3,621, of which £1,000 was handed over to the B. E. T., in reduction of the amount due to it, and dividends on the preference issues took £1,299, leaving £1,322 to be carried forward. It will be noticed that no reference is made to any allowance for depreciation, nor does any appear to have been thought of, although the capital outlay on the old tramways which have been reconstructed stands at the heavy figure of £102,973, and with the sum spent on electrical equipment, etc., brings the cost per mile out at £43,700. Even if the reserve and depreciation fund of £10,612, presumably taken over from the old company is allowed for the cost is £41,770, a figure which certainly calls for rapid reduction. In addition, there are Parliamentary costs of £3,698 to be wiped out, and £708 for expenses of new debenture issue, which it is proposed to write off in ten years time, instead of the earliest opportunity being

taken of clearing the balance-sheet. Nor is this the only fault to be found with the balance-sheet, as trading balances are decidedly adverse even after crediting the sums due from the other branches, and the company owes £23,000 to the B. E. T. Company for money spent on reconstruction over and above the capital raised. The second of the undertakings, the Mumbles Railway and Pier is in a still more unsatisfactory position, although the directors attempt to minimise the importance of the figures by blaming the period of the year. Gross receipts come to £8,248, or £649 more, and expenses to £10,791, or £789 more, leaving a deficiency of £2,543, which is carried forward. To make good this shortage, and to cover extensions, improvements, etc., made during the six months, as well as to meet the excess of floating liabilities over assets on December 31, £1,085 has been borrowed from the tramways branch, and £5,790 from the B. E. T. Company. The total expenditure to date on reconstruction, rolling stock, etc., amounts to £32,229, and the B. E. T. Company has advanced £36,271, so that the latter's investment does not seem altogether well secured. The improvements undertaking, which shares with the tramways the honour of having capital especially apportioned to it, has proved a disastrous failure, and all that the directors have to say regarding it is that some progress is being made in the direction of realising the assets. Rent and sundry receipts yielded only £98, whilst interest on loans, rents, rates, taxes, and general charges, etc., took £142, and the "Palace" Theatre of Varieties produced a deficiency of £315, resulting in a loss for the six months of £821, and bringing the total debit balance up to £2,943. Expenditure on lands and buildings, including preliminary expenses, stands in the balance-sheet at £85,223, and another £17,059 has been spent on the Palace Treatre, to meet which there is £87,420 in shares, £4,575 from loan on mortgage, £8,500 from mortgage on the music-hall, £2,887 has been borrowed from that main support, the tramways, and £1,358 from the bankers. Had the whole business of the company therefore been treated as belonging to one undertaking, as it ought to have been, the net result would have proved to be a profit of £53 only, without taking into account at all the question of depreciation, which ought to be provided on a lavish scale in a concern of this kind, holding concessions for limited periods. But £65,060 is due to the B. E. T. for advances, besides the money it has sunk in shares, and the smallest return on its outlay must be very acceptable and necessary to that waterlogged and unwieldy Trust, so the unprofitable sections are allowed to flounder along as best they can, and the one which can even be made to appear to pay is squeezed to the uttermost farthing possible.

Victorian Finance.

Whatever else he may lack, Mr. Irvine, the Treasurer of the State of Victoria, is not deficient in a certain kind of courage. He boldly announces in his budget statement, covering the past year and the coming year, that the twelve months ended June 30 last wound up with a surplus of £194,000, revenue being £6,968,000 and expenditure £6,774,000. For the current year the surplus is going to be still bigger, no less than £230,000, on a revenue of £7,232,000, and an expenditure of £7,002,000. So twopence is to be taken off the poundage on incomes derived from property, and a penny of that on incomes derived from personal exertion. It is most wonderful, because it is perfectly false. As our Melbourne correspondent, writing the other week, says, "The real fact is that Victoria is getting deeper and deeper into the mire, and going faster than ever to the dogs. You cannot call a jumble of figures a surplus when such jumble is made up of purposely unspent votes of Parliament within one financial year, borrowings from trust funds, numerous withdrawals of old age pensions, and the skimming of the civil service and railway hands by percentage reductions of salary and short time." We shall know later in greater detail how the budget surpluses have been conjured up, but it is significant that in spite of Mr. Irvine's boast that an anticipated deficit of £1,000,000 has been turned by retrenchment and taxation into a surplus of £194,000, and of his platitudes about keeping a careful and keen watch on expenditure whereby a permanent reduction of £400,000 has been made in the annual cost of administering the business of the state, the expenditure for the current year should be estimated at £228,000 more than in the year just closed. That surely is an ominous fact worth reams of mere rhetorical professions. Old age pensions are to be brought down from £210,000 to £150,000 per annum by a closer scrutiny of the deserts of applicants. Just so, and is the flight of population from the colony helping to reduce the number of those who have to be fed out of the proceeds of London loans?

James Nelson and Sons.

The history of this undertaking supplies an object lesson from which the investing public would do well to profit. As was inevitable with the kind of business conducted by it—meat importing and purveying—the company's career has been most erratic, and leaving out of account the abnormal year 1902, which formed the excuse for such a violent gamble in the company's securities, we find that since 1892 the annual profits have been as low as £8,167 and as high as £95,630. Only five years ago the concern was unable to pay even its first preference dividend, but from that point there was a gradual recovery, and for 1901 the ordinary shares received a distribution of 10 per cent. As is quite well known, the following year was a period of remarkable prosperity for the meat trade, thanks to the high prices ruling, in which Nelson's shared to the full, and advantage was taken of this passing good fortune to manipulate the ordinary shares to over £4 apiece, a price for which there was not the slightest justification. True, immense profits had been earned, and the ordinary dividend was raised to 50 per cent., but the publication of the year's results brought about something like a slump in the shares, and rumours became current that notwithstanding the statement in the report that the position of the business gave every satisfaction, profits had fallen alarmingly, if they had not commenced to disappear altogether. At the annual meeting held on the last day of April the chairman asserted that there had never been a week or day even on which the business had not earned profits, but there was no staying the fall, and it quickly became evident that the sellers were not acting blindly or without their book. For some weeks past it has been persistently asserted that no interim dividend would be payable on the ordinary shares, and the truth was out on Thursday when an official announcement was made that neither the ordinary nor first and second preference shares could have a preliminary distribution. It is rather a sensational collapse from the imposing display made for 1902, but history is merely repeating itself, and those who were foolish enough in the face of repeated warning to pay the inflated prices to which the shares were hoisted, have only themselves to blame.

Seven Years Australian Drought.

It is reasonably safe to say that the effects of the prolonged drought in our Australian colonies which wrought such havoc and desolation to the pastoral industry there have never been fully realised by the people of this country other, perhaps, than those whose personal interests and investments were the means of bringing the facts forcibly before the mind. Maybe the picture was too harrowing for peaceful contemplation, and men preferred to blot it from their sight, or at least look at it through shaded glasses. But now that the relief, doubly-welcome because so long delayed, has come, removing anxiety as to the remaining flocks and herds, it may not be out of place to give a few figures illustrating the terrible consequences of those seven waterless years. We are indebted for them to the *Australasian Insurance and Banking Record*, which, lest we become too optimistic, and quietly lull ourselves into the belief that all is now well, points out that there are many districts in which the drought still prevails. But the numbers of sheep and cattle in Australia are now so enormously reduced that there is ample room in those districts where grass is abundant for all the stock which has to be shifted from less fortunate localities. So far as can be ascertained, therefore, sheep and cattle have now ceased to die from starvation, and provided there is a return to

normal seasons the flocks and herds should in the course of time, gradually increase. Let us sincerely trust that future seasons will be not only normal but abnormal from the point of view of abundant rains, because it must be remembered that this mere natural increase of numbers makes it inevitable that the area of available pastures should be increased if we are to witness any durable recovery. Official figures for all the States are not yet available, but so far as can be ascertained they will be approximately as follows:—

Australian Sheep Returns at December 31.

	1902.	1901.	1900.
Victoria	10,841,790	10,841,790	10,841,790
New South Wales ...	25,912,472	41,857,099	40,020,506
Queensland	7,213,985	10,030,971	10,339,185
South Australia ...	4,880,540	5,012,216	5,235,220
Northern Territory ...	48,324	48,324	48,027
West Australia ...	2,542,844	2,542,844	2,434,311
Tasmania	1,679,518	1,792,481	1,683,956
Total Australia ...	53,119,473	72,125,725	70,602,995
New Zealand ...	19,002,049	20,342,727	20,233,099
Total	72,121,522	92,468,452	90,836,094

The above figures are up to December 31 each year except those for New Zealand, which are up to April 30 of the following year. The 1902 figures for Victoria, Northern Territory, and West Australia not being available, the 1901 figures have been repeated. The 1900 figures for Victoria are those of the census of 1901.

Distressing as these official statistics are, they by no means reveal the true position as prevailing on December 31 last. This is especially so as regards New South Wales and Queensland. The official figures are based upon returns furnished by the owners and managers of the various stations and farms, but musters are never made for the purpose of supplying the information. The rule seems to be to send in the numbers of sheep actually shorn a few months earlier, subject to any subsequent increases or decreases actually ascertained. In 1902 the bulk of the sheep were shorn from August to November, and it is generally supposed that most of the returns sent in on December 31 were based upon the shearing figures. But we know that enormous losses occurred after shearing in 1902, and it is important to ascertain as nearly as possible the number of grown sheep actually in existence when relief came and put an end to the agonising deaths from starvation and thirst. During the last few months the bulk of the sheep in Australia have probably been mustered, and their numbers ascertained. Official figures on the subject will probably never be available, but it is pretty safe to assume that of the sheep returned on December 31 for New South Wales and Queensland, no less than 20 per cent. are now dead. This would bring the number in the former State to about 21,000,000, and in Queensland to 5,750,000, reducing the total in Australia and Tasmania to 46,500,000, and in Australasia to 65,500,000. But so far we have dealt with the decline in two years only, the great bulk of which occurred within the last twelve months. What of the losses that have taken place since 1891, the year when Australia had her maximum number of sheep? The figures would move the hardest heart, and we reproduce them without comment. They show that in eleven years the sheep in Australia have diminished from 106 millions to 46 millions, the decrease being about 60 millions or 46 per cent. And the States all go on borrowing as if nothing had happened:—

Sheep Decrease in Eleven Years.

State.	1902.	1891.	Decrease
Victoria	10,841,790	12,928,148	2,086,358
New South Wales ...	20,729,978	61,831,416	41,101,438
Queensland	5,771,188	20 289,633	14,518,445
South Australia ...	4,880,540	7,646,239	2,765,699
	42,223,496	102,695,436	*60,471,940 Increase.
West Australia ...	2,542,844	1,962,212	580,632
Tasmania	1,679,518	1,624,118	55,400
	46,445.858	106,281,766	†59,835,908

* Decrease, 59 per cent. † Net decrease, 56 per cent.

From this subject it is natural to pass to the question of the wool clip, inevitably smaller, owing to the enormous losses of sheep. The net Australian decrease for 1902 was 308,000 bales, or 24 per cent., nearly the whole being merino wool. On the other hand there was an increase of 20,000 bales from New Zealand, but this was practically all crossbred. With this shortage prices have naturally moved up, although not nearly to the extent that might reasonably have been anticipated. For the absence of a greater rise two reasons are advanced, one is that the higher prices have checked consumption, while the other, by far the more important, is that fashion is now running less strongly on merino, and more on crossbred. In many English mills merino wools are being supplanted by crossbreds, and the same conditions obtain on the Continent, where the latter are being consumed freely in quarters which formerly took hardly anything but merinos. Fashion, however, is expected to change again before long, and then the short supply of merino will, it is held, undoubtedly assert itself. Regarding the future, we must not overlook the great diminution in the earning power of almost all pastoral properties, nor the fact that heavy losses must be made good before the tide can be said to have really turned. Then, as mentioned above, there are several districts where the drought is as bad as ever, and admitting that in others the season is exceedingly good, it is clear that many years must elapse before the pastoral industry can recover from the paralysing effects of the almost unprecedented period of drought. We are reminded that at the present moment pastoralists suffer from two great burdens, rent and interest. The latter must still be found on great amounts of capital, swept away and irretrievably lost, and while, as regards rent, certain financial institutions adopt a lenient policy, the Governments of New South Wales and Queensland, with a short-sighted rapacity, reared on reckless extravagance, continue to fix rents on a scale that would only be justified had the pastoral industry recently passed through a period of unexampled prosperity, instead of one of ruin and disaster. Their dire necessities render these Governments incapable of realising that it is better for the community to have tenants prospering and paying moderate rents, than to have them drifting towards insolvency in the efforts to pay exorbitant ones. To those who are responsible for providing the money to carry on station accounts it is becoming increasingly evident that unless considerable reductions are soon made in the rents of Crown lands in both New South Wales and Queensland, large areas will be abandoned. And are not these same lands mortgaged to the colonies' English creditors as part of the assets upon which the extravagant borrowings are based?

The Rand Labour Commission.

The evidence laid before the Rand Labour Commission at its eighth sitting was not of absorbing importance. It consisted principally of the report of the Transvaal Chamber of Mines with which we dealt last week, together with the examination of the witnesses for that body. What these various gentlemen said was merely a paraphrase of the report. All concurred in asserting there is a scarcity of black labour, that the employment of white labour is impossible, and that there is no alternative but Chinese. This they repeated one after the other in parrot fashion. One witness, the first, was asked what the cost of imported labour would be. "Oh, anything between 30s. and £5," he answered, in an off-hand manner, as though a trifle of a few pounds would not be felt by the industry, an industry that would speedily be ruined if it had to pay an extra shilling or two for white labour. "We do not know what the cost will be," this self-same individual added. Of course they don't, and they care less, so long as they can get Chinese and make themselves independent of whites. "At the present time they are making inquiries as to sources from which they could get labour, and certain figures had been given as to cost which had not been applied to Africa. They were theoretical figures. Even these figures would be subject to discussion and adjustment before anything definite was arrived at, and it would be entirely misleading at the present time to give any figures at all." No, the Chamber, as we pointed out a week ago, might publish any amount of hypothetical estimates as to losses and cost of white labour, but it would not be wise to enlighten the public on the probable

cost of importing Asiatics. Not only would these figures be of the utmost importance, but they would probably be startling, and we believe that is the real reason, not their "misleading" character, why the Chamber refrains from publishing them. The mine bosses know what they are about. They're not going to give anything away except under the direst compulsion, but facts will out in spite of them. We hasten, however, to give credit where it is due, and this witness merits one hearty word of praise. He admitted that the reduction in native wages at the end of the war was "inopportune." Questioned on the statement made by a previous witness that the present situation has been created either by ignorance or design on the part of the mine magnates, "Design!" he cried, "Design, gentlemen!" or words to that effect. "Do you think for one moment that the mine bosses would—O, how can you ask me such an outrageous question! Do you really expect me to answer it? Those who have said so have offered gratuitous insults to the noblest, most generous of men. Allow me to say, gentlemen, let me tell the world once and for all, there has been no design on the part of the mine bosses. Fate and destiny have implacably ruled against them, as they have frustrated, not for the first time, the unselfish, self-sacrificing aspirations of other saintly, righteous men." The indignation of the man was evidently a sight to be seen, probably never to be forgotten, so consistent was it with the confession of the "inopportunity" of the wages reduction. Another witness, Mr. Sidney Jennings, a well known engineer, and evidently also a moral philosopher, has "found that a white man working side by side with a black speedily becomes demoralised, because the position he occupies is not fitted to one of a master race." A far more elevating "chum" for a member of a dominant race will be a Celestial, a student of Confucius. What a picture of idyllic happiness shall the world not gaze upon when the Chinaman takes his proper station as the white man's companion, teacher, and mentor! Another witness, Mr. J. Harry Johns, consulting engineer to the Coronation Syndicate, advocated giving the native more liquor as a temptation to the brute to stay longer on the mines, but we would humbly suggest that it would be wiser and far more effective to give him the money, not the spirits. What a deep regard these men have for the native's spiritual welfare! Let him become a beast, there will be no need to give him other than beastly dens in which to exist. It is a sublime suggestion, worthy of men who care neither for God nor devil so long as they can grow rich and ever richer, no matter at whose expense.

United States Steel Corporation and Its Dividend.

Rumour has been busy for months past with the position of this trust, and more recently with the possibilities for and against its ability to pay a dividend on the common stock for the quarter ended September 30. It has been matter of common knowledge that the trade in iron and steel in America has been steadily shrinking, and in various quarters it has been unhesitatingly asserted that the Corporation's earnings were insufficient to justify any distribution, but Morgan and his followers, who were responsible for the creation of the unwieldly monster, have insisted that there would be no difficulty whatever in declaring the usual quarterly payment of 1 per cent. Apparently the Morgan interests, although unable to get their own way entirely, were so far successful in their efforts as to bring about a compromise with the other directors, and a dividend of ½ per cent. was declared on Tuesday night. For the nine months of the current year the net earnings, after meeting fixed charges on the parent and subsidiary companies amounted to $65,978,217, compared with $76,688,053, for the corresponding period of 1902, and of this $36,629,475 has been paid away in dividends, leaving a surplus of $29,438,742, against $34,647,982. But it is during the last quarter that the falling off has become most pronounced, and in spite of all the juggling between subsidiaries by which the trust has contrived to keep up the appearance of solvency, the directors have been forced to confess to a substantial shrinkage. In July the increase in business done was merely reduced to $343,000, but by August there was an actual decline of $2,055,000, and this was followed in September by a drop of $2,930,000. A further falling off is inevitable, as the latest information to hand is that the Corporation is shutting down all but the best located and best equipped mills, owing to the lessened activity and the decline of the paper created prosperity to which it owes most of its even seeming success.

Although the directors have so far recognised their duty in reducing the dividend their action still falls very far short of what is required in the interests of commercial honesty. We have frequently pointed out that in calculating the net profits the board has entirely ignored the subject of depreciation of its mines, to say nothing of its mills and machinery. Yet the question is one of paramount importance, and particularly so at the present time. All the mills which are now being closed down are admittedly worthless for producing purposes under existing conditions, and should therefore stand in the accounts at rubbish prices, or disappear altogether from the balance-sheet, whereas they are valued at little less than their original cost. Had this matter of depreciation been properly attended to, and even 10 per cent. written off each year, the ordinary stock would at no time in the history of the concern have received a penny of dividend, nor would the preferred have been in much better plight, but the business would have been a little better prepared to meet the coming period of depression which must inevitably follow a boom engineered by artificial methods. Care for the future, however, is the very last thing to be expected from the gang of blind gamblers posing as financiers who control the destinies of the company, and utter and speedy collapse of the airy fabric they have created must therefore be looked for.

Passing Events.

Without ostentation, but very effectively, the Free Trade Union is putting into circulation a series of pamphlets upon such subjects as the Food Tax, the way the tax affects the farm labourer, and the "failure of a theory." Among other answers to Birmingham Leaflets Nos. 2, 5 and 12 are before us, and nothing could be better in regard to No. 2 than the way in which the falsehood of "Consistent," Birmingham, is exposed. The original leaflet—a really dishonourable production—is reprinted verbatim, and its juggling with the truth completely exposed. "Imports are the gains we make by trading with foreign countries and our colonies." Just so. Let the people grasp that fact, comprehend that we buy goods, not gold, with the produce we send out of the country, and the lying of the dark ages reactionary will be less easy. Get the leaflets from Mr. L. T. Hobhouse, the Union secretary, 8, Victoria Street, Westminster, and distribute them.

We fear Japan and Russia are drawing towards a fight, and our sympathy is with Japan. It is not to be supposed that the scratch government now in power for the purpose of blotting England out cares a farthing. Some of its members may not even be aware that we have undertaken liabilities of the most serious description in connection with Japan, that it may be necessary for us to put pressure on France to prevent her from joining Russia in attacking the Japanese, because were she to do so we should be obliged to take sides with Japan, and find money for perhaps another great war. But that the Japanese do not mean to allow Russia to squat unmolested in Manchuria, and to extend her paw over Corea, is certain. That is the pitifulness of the position. The Japanese must ultimately fight, because their own existence as an independent people is threatened by Russian aggression. They were deprived by European action of the fruits of their victory over China, and will have to fight the fight over again. Can they count on us to stand by them? Not if Joseph knows it.

Mr. L. G. Chiozza-Money is a first-class fighter in the interests of free trade, and in several newspapers, notably the *Morning Leader* and *Daily News*, he has subjected the haphazard calculations of Mr. Chamberlain emitted during his Glasgow word spate to a rigorous examination. We tender him sincere sympathy, as also Mr. Harold Cox, who is on the same task, for it is a sorrowful work.

The kind of man that admires Mr. Chamberlain is totally incapable of understanding the simplest sum in arithmetic, as that intriguer knows very well. However, it may be well to record the fact that Mr. Money, correcting Mr. Chamberlain's slip-slop arithmetic, shows the consumers' loss on food tax to be about £9,200,000, and that were the 10 per cent. tax on manufactures to be really imposed it would inflict even a greater injury than the food tax. Each family, he says, would lose fully 2s. per week, because a sovereign would buy only 18s. whereas it now buys 20s., and we quite believe his figure inadequate. Can the working man understand that? Does he care? "What odds on the favourite?"

Mr. Chamberlain's speech at Greenock was in such bad taste and temper that we begin to fear his Glasgow reception was not to his mind. The *Glasgow Herald* seems to have ruffled him up badly by questioning his reasoning, and showing the fallaciousness of his alleged facts; so he fell foul of everybody, yelled "little Englander," repeated his slander against the Cobden Club, of which he used to be a member, cursed the foreigner in the fine style approved by the Stock Exchange, denied the plain meaning of his own theories, and generally danced around like the proverbial bully at Donnybrook Fair. The exhibition was both funny and painful, but yet encouraging to those who have the real interests of their country at heart. We hope the self-chosen apostle of the dark ages will go on in his Greenock style.

A valuable pamphlet suitable for use by opponents of reaction, no matter what their shade of politics, could be compiled out of the African blue-books and the evidence laid before the War Commission, combined with the speeches of Mr. Chamberlain, etc., General Butler's remonstrances, the Colonial and Foreign Secretary's replies, and Lord Milner's utterances, despatches, and interviews all pieced together, so as to exhibit the crass ignorance, blind obstinacy, and reckless folly with which our Ministry plunged the country into the Boer war. Scarcely any comment would be required, all that is necessary is to give the exact words of the various gentlemen engaged in the business of hurrying on the war, and in crushing those opposed to them, together with a summary of the consequences. Such a work might even shame the *Times* into a little show of decency, and *Truth* makes a good beginning this week.

We see it stated in the papers that the Warwick and Leamington Liberal Association has decided to oppose the re-election of Mr. Lyttelton, and that the candidate to be presented to the electors against him is Mr. T. H. D. Berridge. Is this gentleman a member of the firm of Burn and Berridge, solicitors to the London and Globe Finance Corporation, and other brilliant emanations of the genius of Mr. Whitaker Wright?

This week's *New Age* contains an able article from the competent pen of Mr. Alfred Marks dealing with the ghastly position of the Post Office Savings Bank. For years we have been drawing attention to the growing deficit in the accounts of that institution, but the figure of £12,000,000 worked out by Mr. Marks exceeds our highest estimate by £2,000,000. The probability is that the deficit will increase before it grows smaller, and even at £12,000,000 the difference between the highest figure of the surplus and Mr. Mark's estimate of the deficit represents a shrinkage of £25,000,000 in the book value of the assets. Of course, there never should have been any fancy surplus of the kind formerly paraded. It was mischievous book-keeping, and doubtless served as an excuse for not creating a reserve fund. Mr. Marks thinks that the P.O. Savings Bank ought to accumulate a gold reserve of at least £15,000,000 to put it on a par with other banks. That is a dream of perfection unattainable, but were the interest allowed reduced to 1½ per cent., or at the utmost 1¾ per cent., there might be some chance of gradually accumulating a cash reserve of £1,000,000. Even that will not wipe out the deficit, and the probability is that the nation will be called upon to create stock to the amount of at least £10,000,000, and lay that additional load upon its back as one of the direct results of our ex-Colonial Secretary's most brilliant and unparalleled statesmanship and political acumen.

Danish finance flourishes, which it really ought not to do, because Denmark is a free trade country; it is, indeed, Mr. Balfour, though you don't know it. The accounts for the year 1902-3 just published show that an estimated deficit of 18,000,000 crowns has been reduced to one of only 1,800,000 crowns, so that there is an improvement of 16,200,000 crowns in the actual position compared with the budget forecast. The revenue was 75,700,000 crowns, as against 68,700,000 estimated, and the expenditure at 77,600,000 crowns was 9,200,000 below the estimate. During the year the national debt has been reduced by 1,700,000 crowns, to 244,700,000 crowns. For the year from April 1, 1904, to March 31, 1905, the revenue is estimated at 76,500,000 crowns, and the expenditure at 77,800,000 crowns, but perhaps this anticipated deficit will likewise disappear, because Denmark prospers at present. Our Joseph, though, has his eye on it, and may succeed in making Denmark default on her bonds held here.

The leader of the Opposition does well to point out that the war taxes on tea, sugar and coal, amounting to between eight and nine millions, are due for remission now that peace has returned, without any question of bargaining in the interests of the protectionist. But it is just like Joseph's audacity to talk of taking such taxes off by way of smoothing the way for his "average" 10 per cent. import duties on foreign manufactures. And remission of taxes is, we may be certain, the last thing our present scratch team will think of. Their pre-occupation is how to get more money out of the taxpayer.

Of course, the Treasurer of Western Australia, whose name we do not at present remember, announces a surplus for the past year of £231,659. For the current year, though, if the figures are right, there will be a deficit of £213,547, the income being estimated at £3,630,200, and the expenditure at £3,843,347. This cannot go on, the Treasurer will have to make a new estimate and imitate Mr. Irvine in producing a surplus much before the end of the year, because there are more loans to be floated. At the date of the budget the debt of this country of gold mines and little else was £15,105,784, and of that amount £8,607,368 had been spent on railways, £1,973,633 on harbour improvements, and £2,742,798 on water supply. This leaves £1,782,000 unaccounted for, but doubtless public buildings and that sort of thing have run away with a good deal. It is a great country. When is the next loan coming?

New South Wales is jubilant over its wheat crop expected to amount to 16,200,000 bushels, averaging 12 bushels to the acre, and actually 26,229 bushels above the highest previous harvest. Potatoes and Indian corn are promising well, but Mr. Chamberlain is not going to tax the latter. It has been a splendid butter season, lambing is good, and only the fruit industry unpromising, which is a pity, when we are so short.

That charming philanthropic concern, the British Investors' Underwriting Corporation, had better be careful or it will find itself in trouble. As recently as the 22nd of last month it was pestering the public with circulars inviting subscriptions for shares in the Dominion Oil Company, describing them as combining "absolute safety for the capital invested, together with handsome dividend returns." Now within less than a fortnight, we learn from Toronto that the shareholders in the concern have decided to wind it up, and that the Attorney-General has been asked to investigate the subject of the promotion of the company.

In last week's *Reynold's* we read that "for a quarter of a century Mr. H. M. Hyndman has absorbed himself in the uplifting of the dismal life of the people, that he has injured his fortune, position, health, in this endeavour," with more to the same effect. Is this the same H. M. Hyndman who figures as director of the Ashanti Gold Mines' Selection Syndicate, and of the Ashanti Gold Reefs Syndicate, both companies of undisclosed capital "limited by guarantee?"

The directors of the Anglo-Russian Petroleum Company have issued a circular to their shareholders, in which they lament the disturbed condition of the oil industry, although

not regarding it as permanent. In the meantime this company benefits by a plentiful supply of cheap labour, and the low prices of material. Naturally the depression in trade is reflected in the low price of oil shares, and the directors fear that in the case of this concern the fact that the shares are not fully paid up further tends to keep down the quotation. Therefore they will consider the question of calling up the remaining 1s. per share at the earliest date compatible with the terms of issue. Unhappily for proprietors the market has other reasons for the low price of this undertaking's securities, and celebrated the probability of the 1s. call by dropping the shares fifteenpence.

Mr. Dresser, a former president of the Trust Company of the Republic, is stated to have given evidence before the referee in the suit brought by the first mortgage holders of the United States Shipbuilding Trust of a highly interesting description. Messrs. Morgan and Schwab, he declares, were so anxious to "get from under" the flimsy structure that when a pool of 200,000 preferred and 250,000 common shares, part of its capital, was placed in the hands of Messrs. Harris and Gates, said Morgan and Schwab stipulated that none of the pool shares should be sold until 25,000 common and 25,000 preferred shares owned by Morgan and 75,000 of each class of shares owned by Schwab has been first sold. Well, what of it? Are pools of any other use than to allow the insiders to unload first?

Anyhow, only a few rags out of the sackfulls of financial dirty linen have yet been sent to the wash. And naturally the firm of J. P. Morgan and Co. denies that they ever did any dirty business with the Shipbuilding Trust. That may be true, and yet the attorney for the prosecution may be quite justified in declaring that "the documents speak for themselves as to the connection of Mr. Morgan with the company." And the market evidently believes the lawyer for the slump was renewed on Wall Street on Thursday.

Months ago Messrs. Holden, the self-styled bankers hailing from the States, and strenuous pushers of Sand Fork Petroleum and other wild-cat shares, found that they had practically exhausted the credulous capacity of the British public, and transferred their energies to Paris. Now, according to the *Financial Times'* correspondent, they have made France unhealthy for themselves, but have shrewdly disappeared before the complaints lodged against them resulted in the authorities taking action. There are no means of discovering to what extent they have robbed their dupes either here or in France, but some idea of their plunder may be gathered from the fact that they have planted about £120,000 of St. Mary's Petroleum Company shares in the latter country. They have retired to America with their plunder, and that is apparently the end of it so far as they are concerned, but it is surely high time that steps were taken to amend the law so as to prevent the constant recurrence of this Yankee invasion. Protection against these exploiters is of a kind with which the most ardent free traders would find no fault.

An old Ceylon planter writes to us as follows: —

Permit a retired planter to thank you for your recent comments on "Sport in Ceylon." I can endorse every word in Suffering Shareholder's letter. At the same time, I quite understand Mr. Capper's position. The *Times of Ceylon* owes its very existence to fostering sport. But we do not consult *Bell's Life* for trust investments, nor dream of referring to the *Times of Ceylon* for tropical agriculture.

The Aerated Bread Company has succeeded in maintaining its dividend at 42½ per cent. for the past year, but as was to be expected the number of bonus shares to be distributed suffers a further reduction. This time shareholders have the privilege of subscribing for one new share for every sixty at present held, meaning at prevailing prices a bonus of about 3s. 6d. per share. As the growing competition diminishes the outlet for new capital, this proportion must be still further reduced in the future, and since the same competition renders it increasingly difficult to earn the old rate of dividend on fresh money a further fall in the shares seems inevitable.

From what he told his constituents at Leeds it looks as though Mr. Gerald Balfour was thinking about chucking his brother and joining the Brummagem statesman. "I am a free trader, but not a financial free trader." "No member of the Government is favourable to protection pure and simple, but many members were in sympathy with the aims, objects and aspirations of Mr. Chamberlain. The Government did not think the taxing of food within the range of practical politics." "Possibly when Mr. Chamberlain had concluded his mission the case might be altered." Fancy the President of the Board of Trade making such fatuous remarks as these in public. Does he do so because he suffers from the same complaint—fluid convictions—as his golfing brother, or because Joseph and Arthur have arranged that each shall have a member of the other's family in his camp? But if Gerald is held to be the equivalent of Austen, then the ex-Colonial Secretary has done his late chief once more.

Critical Index to New Investments.

*** *To assist subscribers of* The Investors' Review *in deciding how to act when new issues of capital appear during the early part of the week, and lists close before the critical examination given in this Index can appear, the Editor has decided to reply by telegraph to all enquiries referring to such issues. A letter sent to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, Strand, and enclosing a shilling for the reply, or a reply-paid wire to "Unveiling, London," will bring a prompt answer whether to subscribe or leave alone.*

Imperial Paper Mills of Canada, Limited.

It is not made clear in the prospectus why this concern, which, although Canadian, has its chairman and secretary in London, should find itself under the necessity of trying to raise a loan in this country. The nominal capital is $3,000,000, in $1,000,000 7 per cent. preference stock and $2,000,000 ordinary stock, and there is in addition a debenture debt of £150,000, while the only reference to any outlay is confined to a statement that upwards of £200,000 has been spent on the erection of the mills and machinery, and on the development of the water-power. The company was formed under Canadian law in the early part of this year, to acquire the assets and goodwill of the Sturgeon Falls Pulp Company, but no hint is given of the value placed upon the property, although it is pledged as security for the issue of £100,000 6 per cent. prior lien bonds which are now offered for subscription. Although the mills have just been started, and have not yet produced any material, it is estimated that a profit of $10 per ton will be earned on a daily output of 50 tons of paper, or £30,000 per annum, and the company undertakes to set aside for the redemption of the prior lien bonds one-half of the net profits, after payment of the interest on these and the debentures. With so few really essential details regarding the undertaking to guide investors, it is perhaps just as well that the directors have secured a guarantee of the minimum of £80,000 upon which they have decided to go to allotment.

Abbeville Gold Mines, Limited.

There is not the least doubt that the promoters of this company intend if possible to find it a gold mine for themselves, but the methods adopted to this end will, it is to be hoped, defeat their object. A company calling itself the Golconda Mines, Limited, has acquired from a Mr. H. T. Marks fifteen mining claims of about twenty-two acres at Barberton in the Transvaal Colony for £2,600 in cash and £19,000 in shares of the present company, together with an agreement to appoint him consulting engineer at a salary of £450 per annum. This property is generously handed over for £100,000, of which £20,000 is payable in shares and £80,000 in cash or shares, and in addition the vendors are to be reimbursed for the amount spent on plant and equipment, development, and all other outgoings up to the date of registration. The capital is fixed at £120,000 in £1 shares, and 100,000 are offered for subscription, of which 20,000 have been underwritten by the vendors for a cash commission of 50 per cent., a confession which indicates their real value clearly enough to serve as a warning.

Answers to Correspondents.

[*A Fee of Five Shillings per query is charged for replies under his heading. Letters, Five Shillings extra per letter.*]

W. F.—(1) I do not think there is any necessity for you to sell out your holding at once, as it is possible that the price may improve a little. You should not, however, forget the liability, which, although not likely to become effective, is an important factor in judging of the character of the investment.

(2) I should see no objection to a small purchase of this stock. The company is well managed, and although there is a heavy depreciation in its holdings this has not been overlooked by the directors.

(3) The fact you mention is not necessarily a recommendation, but, of its class, this debenture seems moderately well secured. The company is suffering a great deal from competition, but, in spite of this, it ought to earn considerably more than the debenture interest.

S. N. R.—I am doubtful whether this stock is worth purchasing at present. The issue is secured on the railway, which was not a very great success as an independent undertaking. It is true the debt is not heavy compared with the other countries you mention, but it amounts to a fair total. Recollect the long-pending dispute with our neighbour next door is by no means settled yet. The colony, too, is very backward and poor.

INDIAN GOLD MINES.

We have to record another Indian gold mining top figure for the month of September, the output from the great Colar mines aggregating 51,452 oz., being an increase of 1,166 oz. over August—which was a longer month—and 2,032 oz. over the corresponding period of last year. The principal improvements are exhibited by the Mysore and Champion Reef mines, of 556 oz., and 536 oz. respectively, but all the others have assisted, though in a minor degree, to the general betterment. The returns are detailed below and make an excellent exhibit.

Indian Mining Returns.

Total ...	415,147	440,249	493,342	504,348	514,291	440,863

The Newnes Magazines for October touch, on the whole, a somewhat higher level than usual, notably the *Wide World Magazine*, which teems with attractive and thrilling articles. Lovers of Kipling's Jungle Books will read with interest the story of "Sanichar, the Wolf Boy" (by Miss Cornelia Sorabji), supposed to be the original of "Mowgli." "A Tramp in Spain" is a favourite of long-standing, and something may be learnt from Mr. Herbert Vivian's illustrated article on "A National Pawnshop." In the *Strand* we meet again with Sherlock Holmes, who, like any other resuscitated corpse, lacks vitality. Perhaps time may restore his wonted vigour. Hélène Vacaresco's sketch of "Carmen Sylva" is among the best she has written under the heading "Sovereigns I have met," and Mr. Frank T. Bullen contributes a good article on "Whales at Home." The short stories in the *Strand* and *Sunday Strand* are above the average, particularly in the latter magazine, where, also, we find a dainty children's story by the Queen of Roumania. The contents of the *Captain* are also interesting, and an astonishing variety of instructive and humorous reading matter is provided.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1903, and September 30, 1903:—

Revenue and Other Receipts.

—	Estimate for the year 1903-1904.	Total Receipts into the Exchequer from April 1, 1903, to Sept. 30, 1903.	Total Receipts into the Exchequer from April 1, 1902, to Sept. 30, 1902.

LIFE ASSURANCE SOCIETY.

Assets nearly 4 MILLIONS Sterling.

The Results of the 1902 Valuation showed—

1.—INCREASED RESERVES.

2.—INCREASED PROFITS.

THE SURPLUS DIVIDED WAS £597,415.

Chief Office:

15, ST. JAMES'S SQUARE, LONDON, S.W.

W. J. H WHITTALL, Actuary and Secretary.

The Investors' Review.

The Week's Money Market.

Bank Rate 4 per cent. (Advanced from 3 per cent. on September 3.)

Norfolk House, Friday Evening.

Money, that is to say short banking credit, has been rottenly cheap this week, so that expert borrowers could get it for twenty-four hours in more or less big slices at 1½ per cent., and never paid more than 2½ per cent. for it when lent for seven days. The Bank return shows us that this cheapness is of the usual type, the produce of pure credit. A week ago the return showed that the market was about £8,000,000 in the Bank's debt, and yesterday's return indicated that £3,220,000 of this had been paid back, so that about £4,500,000 is still due by the market, and will be wiped off gradually, if at all, this year, as the bills discounted which the amount represents fall due. Helped by this mass of credit and by the dividends distributed, part of which was also furnished by a pure credit operation between the Treasury and the Bank, the market is naturally flush of what it calls money, and will remain flush at least until the Transvaal loan instalment of £4,500,000 comes to be paid next week. After that credits will get dearer, both because this money will not come back to the market in any amount or for any length of time, and because the bills held by the Bank are continually coming due.

The Bank, however, is going to be strengthened by £2,500,000 in gold coming from India, and that amount will certainly bring its stock up to about the total of a year ago. It wants much more than £2,500,000, though, and more than India can supply on any terms, because there is a limit to the power of the Simla Government to force the ninepenny rupee into the hands of the holders of gold in India at the fancy price of sixteenpence, and meantime foreign demands for gold are beginning to threaten again, are sure to come upon us, especially if any ugly failure occurs. We still dread that enormous mass of foreign banking capital which would be swept off the market were anything approaching a panic to arise, and we have to send nearly all the remaining proceeds of the Transvaal loan, or £13,500,000, abroad between now and the end of the year. We are also threatened with American and Dutch demands for the metal, and cannot get over our autumn trade demands without sending gold to Egypt and other parts of the world. The supply is certain to prove inadequate, even if no domestic efforts to hoard confront the credit market.

Because of the outlook we regret that discount rates have been forced down until full three months' bills were saleable at barely 3½ per cent. Leading houses quoted 3⅝ per cent., and did not get much trade at the figure. Some business was done at 3 7-16 per cent. Bills due within the year were taken at 3⅜ and even 3 5-16 per cent., yet it is still within probability that before three months have elapsed the Bank rate may be at 6 per cent. Credit jobbers, however, really cannot help the weakness, the price of short credits regulates the discount rate on bills in spite of all that the rulers of the market can do. A hint was given this afternoon that a new issue of Ways and Means Treasury bills is forthcoming, and this, coupled with the intimation that a large sum in gold will probably be withdrawn for Egypt to-morrow caused bill brokers to stiffen their quotations so that leading houses gave 3⅜ ½ per cent. as their rates for bills due within the year, and 3½ ⅝ per cent. for full three months' paper. Money, however, remained as easy as before at 1½ to ¾ per cent. on call and 2½ per cent. for a week. Loans for longer dates cost 2¾ per cent.

Some people expected the Victorian conversion loan to-night, but the underwriting is not completed, and it is doubtful whether it can be offered to the public in the beginning of the week. If there is much further delay the colony may miss its market altogether. The terms offered we believe, the thing is very complicated, are £108 nominal in a new 3½ per cent. inscribed stock for every £100 of expiring 4½ per cents. surrendered, plus a cash bonus of 25s. Those who exchange will also get their full dividend on January 1 at the old rate of 4½ per cent. on the expired bonds, while the interest on the new 3½ per cent. inscribed stock runs from the 1st inst. This is as good as another £1 bonus. An alternative scheme is two year Treasury bills at 4 per cent., convertible at the end of that term into 3½ per cent. stock at the rate of £104 for every £100 of expired bills. There are other details which we have not ascertained, but these show that the way of the improvident borrower is not smooth.

Apart from the instalment on the Transvaal loan nominally £4,500,000, due on Tuesday, calls falling due in the coming week, are not important. On Thursday £300,000 must be found on India 3 per cent., and £175,000 on Southern Punjab preference shares, but other items do not aggregate £100,000.

SILVER.

The Indian demand for bars has been somewhat irregular this week, and as the principal support of late came from that quarter, prices fluctuated mainly with the cessation or renewal of the inquiry. Some strength, however, was derived from "bear" covering, and from the continued smallness of supplies, which were sufficient to hold the market fairly steady in the intervals of Eastern abstention from buying. Daily changes consequently consisted chiefly of small fraction, and at the close the quotation for prompt delivery was unaltered at 27⅝d. per oz., while forward metal, which was offered a little more freely, finished ⅛d. lower at 27 3-16d. per oz. Applications for the Rs.50,00,000 of India Council drafts offered on Wednesday amounted to Rs.2,77,30,000, of which Rs.2,67,25,000 were for bills and the balance for telegraphic transfers. The whole sum was allotted in bills and tenders at 1s. 4d. per rupee received about 17 per cent. Another Rs.50,00,000 will be offered on Wednesday next.

BANK OF ENGLAND.

Stock Market Notes and Comments.

Markets move just as we have said they would, and we are thoroughly sick of continually reiterating the same story. Market "bulls" say we are not putting the case properly before the public, but events speak with greater effect than any speculator. Every day this week we have been told that a fine investment business is going on in Consols, in Home Railway ordinary stocks, and in Railway debenture stocks, some of which are fresh creations put out by companies in need of money. It is true that a small but steady and good investment business has been going on because the public has its October dividends to put away, but this kind of demand does not last long, and touches only the fringe of the great mass of pawned securities held by financial institutions all over the country in lumps of millions each. These masses could not be sold except at ruinous loss, and therefore they lie a dead weight upon the market. Yet Consols went up about £2 from the lowest only, however, to begin to dwindle again, and as we write the entire market is in a state of speechless misery, with Kaffir shares falling as if they never could rise again, and fear haunting men's minds that something dreadful must happen.

Something dreadful will happen, of that there can be no question. Aerial structures are coming down to mother earth, and will pull more than one imposing looking credit distilling apparatus down with them. The wealth popularly supposed to be represented by the securities now falling about the market's ears either never really existed, was merely a thing of imagination, or it has been dissipated or has passed out of the hands of the multitudinous speculating public into the pockets of the bosses and market ensnarers, who will take precious good care to let go again as little of it as they possibly can. The speculators as a whole have been consuming their wealth when they made a profit, and now that they have losses to face are helpless. Look at that story of the Dowager Countess of Rosslyn and her Stock Exchange gambling losses. It is typical of an indefinite number of similar unfortunate players. Why not face the music instead of hugging the lie and believing "reassuring statements," prophecies of speedy recovery and all that sort of financiers' bait for the simple?

It is time to warn the public to keep its head and not to rush headlong to sell good stocks merely because they are falling in price. Remember that there are plenty of good securities the current quotations for which must continue to be adversely affected by the collapse of the dishonest and thaumaturgists' portions of the market, but remember also that the interest or dividends upon these good stocks will in all probability remain unaffected whatever happens. Keep calm, therefore, and do not throw away anything of real value, merely because it is falling in price. It would be much more prudent to buy within one's means when the market seems about to go to pieces. Buy good securities on falling markets, never sell them. We think that some world stunning smashes are inevitable and near; and it is because we dread the panic effect produced always by such smashes when they come as a complete surprise that we keep putting the danger prominently before readers. What has caused panics in the past? Nothing so much as the dead silence or smooth lying of the Press about the actual position. It used to be the habit for all newspapers that wrote about finance to print nothing but sweet words, to talk pleasantly in the interests of the ever-vending financier and over-committed banker when rottenness might be obvious to every attentive observer. The consequence was that any bankruptcy of stunning magnitude caused the public mind to be seized with terror approaching insanity. We do not want to see any such outburst now, and therefore we keep saying "huge failures which must take place," so that the public mind may be prepared and not taken by surprise. Hold firmly to good securities, even when the worst befalls and the ruin will be much less universal than if the whole nation tries to liquidate in one raging, tumultuous, demented mob. Sell, though, when selling is possible, on every recovery, whatever is carried on borrowed money, whatever returns no interest and is likely to return none. Such is the advice we must continue to give while the throes of the prolonged crisis hold markets in their grasp, until hitherto triumphant rascality comes to its invariable end. One fact about the position is worth reams of advice to buy interested recommendations from financiers, well loaded up and such like. We have been quite credibly informed that in order to help to relieve the strain of last Consol settlement a big finance house took over £2,500,000 of Consols from a firm of jobbers at 85.

The Week's Stock Markets.

Once or twice during the past week the Stock Exchange tried hard to shake off the demoralising depression recently so much in evidence, and, aided by a steady stream of small investment business, occasionally succeeded in its efforts to infuse a little brightness into the gloomy atmosphere. The cheerfulness, however, was always very short-lived, disturbing influences putting in an appearance before the upward sweep could get well started, and in most sections final prices are not greatly different from those current when the week's business commenced. At the start things seemed fairly steady, but many disquieting rumours regarding provincial and other accounts began to be disseminated, and once more heavy forced liquidation—by those Scotch banks they say—caused serious turmoil in the Kaffir Circus. Then came the resignation of the Duke of Devonshire and the details of the newly-appointed Ministry, and even the Stock Exchange could not conceal its disgust at the men chosen to carry on affairs of State. So steadiness soon gave place to pronounced weakness, but, nothing daunted, dealers found excuse for almost a boomlet in Chamberlain's initial rhetorical display, and celebrated his first stump oration by hoisting Consols to 89. They could not quite live the pace, however, and as New York thought much less of the Steel dividend than dealers here seemed to do, and stories of an important Amsterdam failure were afloat, the Chamberlain boomlet rapidly fizzled out. This meant that prices were soon on the tumble again, with the Kaffir liquidation strongly in evidence. The account which commences in the mining department on Monday promises to be an extremely uncomfortable one, but we may be sure that great efforts will again be made to cover up the weak spots, in the hope that some miracle will bring relief.

The first incident to have an important influence on Consols was the publication of the new Cabinet appointments, which promptly knocked them back to 88⅛, a drop of almost ¾ compared with the previous night's closing. There was, however, a quick recovery from this, and under the influence of Chamberlain's tariff proposals, which met with considerable Stock Exchange favour, prices made rapid headway. At one time as much as 89 1-16 was reached for cash, but the Kaffir slump told in the end, and final figures are unchanged for cash, at 88 9-16 to 88 11-16, and ⅛ easier for the account, at 88 11-16 to 88 13-16. Transvaal scrip closely followed the premier security, and after falling to 1¾ discount finished at 1½ discount, or a loss of ¼. Khaki stock was always a pretty good market, and showed a gain of ¾, and Exchequer bonds and Local Loans stock leave off ¼ better. Of other British funds, India 3½ and 3 per cent. advanced ½, while the 2½ per cent. were the same amount easier. During the week Bank of England stock has risen as much as 9, but Bank of Ireland stock is 2 lower. In anticipation perhaps of a public demand dealers have been busy marking up prices for Home County and Corporation stocks, the issues of the L.C.C., Metropolitan Board of Works, Liverpool, Corporation of London, Huddersfield, and Newcastle being amongst those to finish higher. Colonial Inscribed stocks shared the rally, and we find Queensland 4 per cent, 1913-15, and 3 per cent., New South Wales 4, 3½, and 3 per cent., Cape 4, 3½, and 3 per cent., Natal 3 per cent., Victoria 3 per cent., and West Australia 3½ per cent. all 1 better.

Foreign Government bonds followed the mood prevalent elsewhere, but trading was never very brisk, and movements were for the most part confined to fractions. Argentine loans kept quietly firm, with particular strength in the Northern Central Railway issue owing to the operations of a Berlin syndicate, which has absorbed about £800,000 nominal of this security. Prices, however, eased off towards the end, and final figures reveal very small change. Brazilian bonds never moved two days alike, but also finished dull, while Chilians developed pronounced weakness on the Ministerial crisis in that country. Uruguays held well throughout. Paris was not in very cheerful mood at the outset, and allowed most of its specialities to slip back a little, but pulled Turks up again before the end, and they leave off unaltererd. Spanish "sealed," however show a loss of ¼, and Portuguese are likewise ¼ lower, but Egyptian Unified and Italian 4 per cent. close 1½ and ½ harder. Russian loans were rather flat, while Servians recovered 2. Japanese issues continue to suffer from the unrest in the Far East, but Chinese securities were rarely looked at, and finish as before.

One of the results of the loud assurances that everything is sound in financial circles was to send operators into the Home Railway market to buy for the rise. The public, too, came for small parcels of stock in a fairly steady stream, and although the depressed conditions prevailng elsewhere prevented any sensational improvement,

prices in a number of instances show modest gains. Securities of the "heavy" lines naturally attract the chief attention of the investor, and of these Great-Western rose ½, Midland preferred ⅝ and the deferred 1, and North-Eastern 1. South-Western ordinary and deferred gained 3 and 1, and Barnsley and Lancashire and Yorkshire 1 each. Advances, however, were not altogether universal, and North-Western closed 1 lower, Brighton ordinary and deferred also lost 1, Caledonian deferred ¾, and North British deferred 1¼. Underground stocks continued weak, Metropolitan and District each falling 1. Large amounts of debenture stocks of various companies can be bought just now free of stamp duty—a fact indicating that these companies, which have unexhausted borrowing powers, are quietly utilising them in order to raise funds urgently needed.

Once more the Yankee market experienced a disappointment with regard to the return of the New York Associated Banks, which showed a further contraction in cash reserves, notwithstanding the much trumpeted help from the Treasury. This and the uncertainty regarding the United States Steel dividend proved quite sufficient to depress prices on Monday morning, and although Wall Street dealers made one or two attempts to bring about a rally the effort was too great, and they soon desisted. The political news on the following day affected this section of our market equally with the rest, and prices were again heavy during the morning, but New York paid no heed to this influence, and began to work up a semblance of activity which was not without effect, although it was insufficient to wipe out the earlier declines. Part of the optimism was doubtless due to the carefully engendered belief that the Steel Corporation would pay 1 per cent. on the common stock as usual, yet so skilfully is the market manipulated by the "giants of finance" that it was made to appear as if the distribution of only half that amount was regarded as a "bull point." Orders were sent here over night by what was believed to be the Morgan interests, which had clamoured for the full dividend, and the example so cunningly set was followed to a moderate extent by the market generally. The device, however, was thin, and as an attack was made on Steel shares in New York, while the public persists in leaving the play entirely to the professionals, quotations were not long maintained at anything like the levels reached by these means. A spasmodic effort was made on Thursday morning to lift them again by a sensational bid or two, but sellers responded to these so readily that the attempt was promptly abandoned, and for the rest of the day the market sagged. Wall Street increased the drooping tendency by selling freely, and a report of an attack on copper companies' securities helped to drive values down still further. Baltimore ordinary fell 2¾, Norfolk common 1¾, Southern Pacific 2¾, Missouri and Kansas 1½, Southern common 1¾ and the preferred 3, Union Pacific common 2, and Louisville and Denver ordinary 1½. The rest showed losses of ½ to 1.

Except for a steady improvement in Grand Trunk guaranteed stock, resulting in a gain for the week of 2, movements among this company's securities were not of much importance. An increase in the traffic return of £17,898 for the last nine days of September was up to expectations, but sellers came out in sufficient volume to neutralise any effect it might have had. At the close the first and the second preferences were ½ up, while the third fell ¾, and the ordinary lost ½. Canadian Pacific shares were also weak, and 2 lower. Amongst Indian Railways, Bombay and Baroda stock at first fell 1, but gradually recovered, and finally finished with a rise of 1, and East Indian "C" annuities also put on that amount.

Dealing in the Foreign Railway section is still very largely confined to a few of the principal Argentine stocks, where interest has been stimulated by the publication of the half-yearly reports. The Buenos Ayres Great Southern figures were considered satisfactory, but the ordinary stock only rose 1—which it subsequently lost—carrying the extension shares and the 4 per cent. debentures up ¼ and 1 with it. Buenos Ayres Western was lifted 2, also on a favourable annual statement, and Buenos Ayres and Pacific second preference advanced 1, but against these Buenos Ayres and Rosario ordinary fell ½ and the deferred 1, and Cordoba and Rosario preference and Buenos Ayres and Pacific 5 per cent. debenture also receded 1. Antofagasta ordinary and deferred declined 1 each, and the debenture stock gained 1, Central Uruguay Northern Extension debenture stock and Midland Uruguay debenture rose 1 each, North-Eastern of Uruguay ordinary shares put on ¼, North-Western of Uruguay debenture and Southern Brazilian debenture relapsed 1, and Great Western of Brazil ordinary shares were ½ down. Mexican

Railway issues were inclined to droop, and finished with losses of ¾ in the ordinary and 1½ in the first preference.

Miscellaneous markets were not entirely devoid of incident, but unfortunately the outstanding events were not of a cheerful character. Chief interest has centred in the shares of James Nelson and Sons, and the question of the interim dividend, it being generally feared that no distribution would be forthcoming. The shares consequently were always freely offered, and prices fell rapidly, the ordinary standing at about 20s. when the official announcement became known. This was to the effect that far from there being any interim dividend on the ordinary, neither the first nor second preference shares could have a preliminary distribution, and a further slump in quotations ensued. We refer more fully to the matter in another column, and only need further mention here that the ordinary shares show a fall of 5-16 on the week. The market was further disturbed by rumours that the Lipton interim dividend would likewise be passed, and clearly the sun of the yachtical knight is setting fast. This story, however, proved to be only partially true, as 3 per cent. is paid against 4 per cent. a year ago. The shares close ⅛ worse. Aerated Breads maintain their dividend, but again the number of bonus shares declines. Nevertheless, the shares leave off ½ better. Other Supply and Catering issues held up pretty well, but Sweetmeats had to face the very heavy traffic decrease of £1,476 for the first week of the company's financial year, and went back 1 9-16, only to recover again before the close. Gas stocks were moderately supported, particularly Gas Lights and South Metropolitans, but Welsbachs continue neglected. London Docks deferred had a late recovery which left it 2 better, while Shipping securities were as before. Nothing of importance happened in the Textile division, and home Iron and Steel shares improved here and there. United States Steels were rushed up on this side when it was known that the common stock would receive $1½ dividend for the past quarter, but New York banged them down again, and they finish 2½ down for the common and ⅞ for the preferred stocks. Oil shares were a little better. Breweries moved irregularly with some inquiries for American issues, and also for Allsopp preference and Watney Combe deferred.

Hudsons Bays were dull and ½ easier, while Southwark and Vauxhall ordinary stock recovered 2½.

Markets closed steadier this afternoon. The French supported Kaffirs this morning by heavy buying against the stream of liquidation here, and as to-morrow is the preliminary day of the midmonthly settlement, operators for the fall, a numerous party inside the Exchange, bought back in the afternoon, so that all prices leave off decidedly above the lowest. Elsewhere, too, the plague was stayed for a little, but nothing is really changed for the better.

MINING NOTES AND NEWS.

The Kaffir market this week has been more demoralised than ever, and spectators have gazed upon a fall of prices wonderfully like the deluge of rain that swamped the country on Tuesday. Were we not promised a recovery, as the result of the elimination of weak speculators, the wholesale vending of pawned stock, and, above all, as the inevitable effect of the heavenward flight of Consols at the close of last week? The prophets have once again, for something like the 150th time, based their predictions on misleading calculations, and thus led themselves and their dupes astray. They did not bargain for more enforced liquidation? How wonderfully clear-sighted these men are, so keen-visioned that they cannot see even an hour ahead. Rumours, probably not without a substantial foundation of truth, have been plentiful, that the Scotch banks have again been throwing out stock, on which margins have run off, in prodigal fashion, and that this unpleasant development has amazed and disturbed even the mine magnates. Accordingly, it has been declared, these gentlemen have supported the market in order to prevent any alarming subsidence by buying some of these shares, and have held an informal meeting to discuss the situation and to devise ways and means of arresting the slump, lest it might go too far even to suit their selfish ends. Forced selling by a Mincing Lane firm is also reported to have helped the all round decline, whilst there has been free talk of acute distress in Johannesburg.

After falling to the lowest prices reached during the year many shares picked up a fraction or so later in the week, as the result, many declared, of some "satisfactory" talk on Mr. Chamberlain's speech. The market, it is true, expressed itself rather pleased than otherwise with Joe's ingenious oration, but the daily papers have contained cables from the Rand to the effect that Mr. Skinner's report on the importation of Chinese labour had been published, that it is of a favourable tenour—we give the gist of it below, and accordingly the market braced itself up a little and once more inclined to the opinion that the labour question will shortly be settled. This encouraged dealers to mark up prices here and there, and certainly it had a more inspiriting effect than the famous Glasgow speech. The Johannesburg correspondent of the *Standard* goes so far as to say, "the introduction of Asiatic labour into this colony is now assured," and adds that the first batch will probably land next January, and thereafter continue at the rate of three thousand a month. Bear covering was noticeable, and has assisted the improvement in the more speculative shares. French buying has likewise been reported, though many declare this to be roundabout buying on the part of the mine bosses. Anyway, all the glow had vanished again by Thursday afternoon, and the groaning and dwindling was as bad as ever.

At a conference of the Transvaal Miners' Association, at which three representatives of each mine on the Witwatersrand were present, the following resolution was unanimously adopted:—"We, as a congress, pledge ourselves, with the other affiliated bodies, in opposing the introduction of Asiatics in this colony until a referendum is taken and the population agrees. We desire to draw the attention of the Government to the fact that it is absolutely desirable that the superintendence of native recruiting should be undertaken by the Government." This is a sensible decision, and sound advice, but we doubt it will be heeded by the clamourers for Chinese.

A special meeting of members of various scientific and technical societies in Johannesburg have passed a resolution declaring that, being thoroughly conversant with the prevailing conditions, they were of opinion that the permanent employment of large numbers of unskilled white labourers is too expensive and that there is no present indication that the demand for unskilled labour can be materially reduced by the further adoption of labour-saving devices. They considered, therefore, that immediate steps should be taken for the introduction of Chinese or other coloured labourers under proper safeguards.

The report of Mr. Skinner—the gentleman who was commissioned by the Transvaal Chamber of Mines to tour the world to inquire into the possibilities of getting Chinese coolies—has been published this week in Johannesburg, and cables inform us that it advocates the importation of Celestials under strict sanitary supervision, whilst recommending that every effort should be made to increase the supply of Kaffir labour. If those efforts are as energetic as they have hitherto been on the part of the mine bosses, we can imagine what degree of success will attend them. The Labour Commission concluded its inquiry on Tuesday last, and its report is expected in about a fortnight. It is added that the Executive Committee of the Chamber of Mines is passing a resolution expressing its satisfaction with the report. Is that wonderful?

Meanwhile news comes of another mine suspending operations, whilst still another declares a decreased dividend. The former is the Nigel Deep, the cable saying: "arrangements have been made to temporarily suspend operations on the mine owing to the excessive working costs caused by the present short supply of labour." Is this part of the game of spoof now being played on the Rand? A dividend of 5s. per share, or 6¼ per cent., is declared by the Treasury, which was one of the first mines to resume crushing a few weeks before the war stopped. Its full battery has been running for some months, and the news is astonishing, and seemingly inexplicable. This distribution compares with 7½ per cent. for each of the three preceding half-years.

The Jungle market has been in a very bad way now for some years, and it is not likely to get into a better as long as depressing reports are received from the principal mines. During recent weeks we have drawn attention to the fluctuating quality of the ore encountered in the Wassau mine, and on the top of this comes the disappointing returns from the Ashanti Sansu. For some months the yield has been steadily deteriorating, and it culminates in the exceedingly poor figures for September, which have created a feeling akin to consternation amongst punters. Only 1,100 tons were crushed, for a paltry yield of 694 oz., thus averaging as low as 12.62 dwts. per ton. The directors evidently thought an explanation of some kind was needed, in order that the news might fall on the market without completely shattering its foundations. Thus they say:—"The consulting engineer considers that the low tonnage and low average per ton are due to causes which are only of a temporary character." Very enlightening this, is it not? Why not give the real causes? Would they be of such a nature as to destroy the Jungle market, and leave it nothing but a heap of debris?

The West Australian market has once more been in the dumps and prices have weakened daily. Professor Liveing's report on the Associated Northern Blocks mine has been published—we deal with it in a separate note—but it is not surprising to observe the market is not over-joyed with it, for it confirms all the depreciatory rumours that have been circulated for months past respecting this notorious property.

The miscellaneous market has, for once, displayed a fairly steady tendency. No conspicuous measure of support has been given to any shares, but prices have not weakened to any marked degree. In fact, there are very few changes, certainly none of importance, in the entire list. Rio Tintos have received considerable support from Paris, and have advanced. The dividend of 32s. 6d. per share is 10s. more than a year ago, and 2s. 6d. more than the market expected, consequently it gave satisfaction.

Horatio again on the Stump.—The patient shareholders in the Associated Financial Corporation have received a further circular from that dear Horatio, in which he indignantly denies reports that his company is again to be reconstructed. "It is a perversion of the truth," he impressively shouts, being based "upon hasty conclusions deduced from imperfect information." But why, oh thou bold Horatio, do you not publish "perfect" information and thus silence once and for all wicked, unscrupulous rumour-mongers? "I have," says the tender-hearted man, with watery eyes and voice choking with emotion, "for a long time past been very much troubled in my mind at the fact of our shares being quoted at so low a price, and I see now that a mistake was made upon the formation of the present company in allotting to old shareholders, whether they came into the company or not, one million fully-paid shares, ranking in all respects on an equality with the cash shares. The effect of this has been that such million shares have always been hanging over the market, those old shareholders who did not join the company having realised them for what they would fetch, whilst others sold their fully-paid shares in order to provide the assessment." What base ingratitude! What sordid motives must have actuated these men to prefer filthy lucre to Horatio's golden promises, and samples of engraving! However, Horatio has been roused all along as if he had been a "free trade" Dook and he is going to stop that little game now that it has been played out. "I have been considering," says he, "whether by some method of capital consolidation, combined, perhaps, with a conside able strengthening of the directorate, it might not be possible (especially in view of the fact that several of our properties are now entering upon the producing stage), to restore the prestige of our group in the eyes both of the London Stock Exchange and of the general public." That's right, never say die! Dress the old stuff up for the new dupes, and show 'em how to lose their money. Surely here is a benefactor indeed. He will lift prices once more, having a spirit above horse-racing and company promoting! "Accordingly," he rolls on, "I have given very sympathetic consideration to a proposal recently placed before me by some influential city friends (friends is a good word), who control a large portion of both our share and debenture stock, and who, subject to their views as to our future policy being adopted, are prepared to actively identify themselves with the conduct of the Corporation's business, and without directly or indirectly making any demand upon the shareholders, to provide a very substantial addition to our present liquid funds in order that the Corporation may, beyond any possibility of doubt, be placed upon a sound and permanent basis." In order to expound the scheme—which means a re-pawning of the assets we suppose—and at the same time charm shareholders with his suthey eloquence, Horatio convened a meeting for Thursday last. So Horatio expounded his scheme at the meeting. A few months ago his Corporation was reconstructed for the second time, when the capital was reduced from £3,000,000 to £1,000,000 in 4,000,000 5s. shares, of which 1,000,000 were allotted as fully paid, and the others carried an assessment of 1s. What is the profound conception of this financial genius by which to "consolidate" the capital? "What does it matter, gentlemen?"

trumpeted his silvery tongue, "what the nominal capital is? Put an end to rubbish quotations, by writing down your capital to the last assessment—£200,000. Such a capital would forbid anyone saying the company is over-capitalised. Then, my friends have promised to subscribe £50,000, so that we may add to our present liquid funds, or available funds, this additional large amount, and thus put the company in a strong financial position in the eyes of its bankers and of the commercial world at large." Such is the scheme. Is it possible for any business man, is it possible for anyone but a raving lunatic to regard this latest "move" with other than a feeling of unutterable contempt? The most speedy and straightforward way to rehabilitate the company and to create any shadow of respect for it is to pay dividends. Does even Horatio confess the assets to be worth no more than £200,000? If that is the value his optimistic temperament places on them what on earth can their intrinsic value be? Is this public confession likely to strengthen the company's position in the world? likely to raise the shares to £1? Who buys at £1? Who will buy at 1s? Yet we hear the meeting unanimously, or "almost" unanimously, approved of Horatio's scheme. What can we say other than what we have said to weariness of the fathomless depths of human gullibility? Not even a cheer was raised by these word-enthralled men when Horatio intimated he is about to "leave the helm to others" after this grand and final conception shall have matured, when he can take his place as "a contented and hopeful shareholder." How many times has this man been about to retire? So many times that probably this was the reason his words passed unheeded. The gaiety of the world would certainly lose by the retirement of this financial comedian. It is reported that, amid some interruption, a shareholder pressed for a statement as to the cash balance of the company. "In answer to that question," said the dignified, exalted orator, "I may say boldly that I will not tell you anything about the cash balance in London or elsewhere; but I may tell you we are not hard up, we are in no difficulties, and are able to go on, and I think that is quite sufficient." Have we not said Horatio is alone, unmatchable?

Mr. Waddington's Repentance.—Mr. Waddington's conscience has either smitten him, or he has been greatly impressed by recent events—as, for instance, the withdrawals of the nominations of Mr. J. H. Curle and Sir Bartle Frere to seats on the board—or he has been a deep student of the comments in this Review. For he has written letters to Mr. Landau and to his co-directors of the Associated Northern Blocks saying he feels "that the various allegations made against that gentleman (Mr. Landau) have signally failed, and I think that it was a great mistake that they ever were made." Had he understood the position he says he would never have joined the other directors in requesting Mr. Landau to retire, and he has decided no longer to oppose the latter. "I feel," he adds, "that having made a mistake the only course for me, as an honourable man, is to acknowledge it, and endeavour to repair it." Mr. Landau, of course, will rejoice, but this further development only adds fresh confusion to the affairs of this company. How they will be ultimately unravelled only the forthcoming meeting, which is to take the polling on the resolutions passed at the recent meeting, will reveal. It would require the ingenuity of a Philadelphian lawyer to bring order out of the present chaos, for those resolutions have already been nullified by the developments of the past week or two. Will not the proxies of the shareholders now be utterly useless? The fun is waxing more fast and furious each day.

Associated Northern Blocks.—The directors of this company have at last issued the full text of Professor Liveing's report, but it is likely to create disappointment rather than satisfaction. A considerable portion of it is taken up with a technical description of the mine, which the general body of shareholders will not be able to comprehend, whilst the vitally important parts of it are very brief. Readers will recall that a joint report by the Professor and Mr. Griffiths was published three weeks ago, and dealt with at some length in these columns on September 19. The present report says hardly anything that is new, and for the most part repeats what was said in the earlier document. The great difference of opinion respecting the value of this mine has been on the ore reserves, the estimates of which have varied most perplexingly. It has been impossible, therefore, for the shareholders to form any reliable opinion of the prospects of the mine, for some experts have estimated the reserves to be worth millions and others only two or three hundred thousand pounds. Shareholders, however, may now rest assured that former high estimates have been exaggerated and misleading, that the mine has been greatly over-valued, and that its future is speculative and uncertain. Professor Liveing says:—"The mine is an exceptionally difficult one to measure up with anything like accuracy; the peculiar and irregular form of the ore body, the almost entire absence of any definite footwall, the high, but erratic value of the ore itself, owing to the presence of rich strings and patches of tellurides running through the mass, the sudden passage from very rich ore to almost barren rock, without any definite line of demarkation, all render this one of the most difficult mines in the world to sample." He estimates the ore in sight at only 37,342 tons, of an average value of 1 oz. 12 dwts., thus giving a gold contents of 59,957 oz. It is quite probable, he thinks, that "further parallel chutes and laminations of ore will be discovered and add largely to the present ore reserves." The above figures compare most unfavourably with the late Captain Rodda's estimate, on September 30, 1902, of 99,795 tons, containing 291,051 oz. of gold. "Captain Rodda," says the Professor, "seems to have assumed that the whole ore body was good grade ore, but as stopings continued it has been found that large masses (horses) of low-grade rock were included within it. These did not differ greatly in appearance from the rest, but assays show them to contain only a few pennyweights in place of several ounces. Besides this, the width of the ore body seems at several points to have fallen below what he expected. Whilst I do not seek to justify him in his estimate I cannot but remark that at the time it was made the mine must have been very deceptive, the wonderfully rich ore showed on all sides, and there seemed every reason to expect, around the rich core of the chute, a wide margin and large tonnage of fair grade milling ore (2 oz.) before passing into the country rock." The new mill is likely to be ready to start by the end of November, and a profit of £7,000 to £8,000 per month "should be realised," As the present ore in sight will last only some eighteen months what is there to look forward to after it has been exhausted? "No doubt further supplies will have been developed," is all the hope the professor can at present hold out, "with the possibilities of discoveries of other ore bodies in the lower levels." What is the intrinsic value of a Northern Blocks share, based upon these vague prospects? The report is accompanied by a circular from the directors and naturally we looked for the date when the promised meeting is to be held to receive and discuss this report. Judge of our surprise, therefore, when we saw no reference to a meeting. Have the directors gone back upon their promise? Do they intend to convene no meeting? If so, why? Are they afraid of anything in particular or in general?

Lake View Consols.—Shareholders will probably be disappointed with the report of the Lake View Consols Company for the year ending June 30, inasmuch as no dividend is declared. The directors, however, have wisely decided to husband their resources, and to strengthen the company's finances, so the shareholders will have some indirect compensation for their disappointment. Gross revenue totalled £272,816, of which £268,415 came from the sale of bullion, and the rest from transfer fees, interest, etc. Working costs amounted to £143,976, in addition to which the profit and loss account is debited with £51,734 for mine development, and £14,417 expenditure on buildings, plant, and machinery, a credit of £59,478 being carried to the appropriation account. From this is deducted £5,300 as reserve for income-tax, leaving a balance of £54,178 to be carried forward. The directors say they propose to write off out of this £243, the cost of certain shares held in the Kalgoorlie Electric Power and Lighting Company, whilst part of the credit left "is required for the re-organisation of the power plant and certain proposed improvements in the equipment." In the accounts to June 30, 1902, a sum of £5,000 was set aside as depreciation on the large stock of stores which at that time had accumulated. The auditors now report that this was in excess of the amount required by £3,850. Accordingly this sum has been written back, and applied to the reduction of buildings, plant, and mine development accounts. In their report the auditors also point out that since the incorporation of the company the sum of £575,203 has been spent on buildings, plant, and mine development, of which sum £559,090 represents the amount provided out of revenue. After writing off the above £3,850 these accounts stand in the company's books at the low figure of £16,113. It is pleasing to note that during the year there has been a further appreciable reduction in working costs. In 1901 they averaged £2 16s. 8d. per ton, in 1902 £2 9s. 5d., and last year they were brought down to as low as £1 13s. 11d. Readers will doubtless recollect that for a long time past there has been considerable doubt as to the value of this mine in depth, necessitating a great deal of exploratory work. These doubts are not yet cleared up, consequently much uncertainty exists as to how long the mine will probably last. Some anxiety may be removed by the statement in the report of the general managers, Messrs. Bewick, Moreing, and Co., that "the developments in the new bottom levels and the continual increase in the proved quantity of low grade ore in many parts of the mine insures the life of the mine for an indefinite period. It is, therefore, advisable to improve the power and reduction plant in order to treat at a profit the very lowest possible grade of ore." Accordingly the directors have decided to spend money on such improvements. A capital balance-sheet is issued, disclosing a strong financial position.

North-Western Associated Gold Mines.—This little-known West Australian company was formed in the year 1896, with the large capital of £375,000. It acquired a number of leases, of which the principal were named the Boomerang and Womera, on which mining operations were confined for some time. No payable ore, however, was met with, and the leases were let to tributors. Being in need of additional capital the directors propose reconstruction, and all the sound reason they offer the shareholders for this seemingly mad policy is:—"A shaft has been sunk upon the Boomerang lease to the depth of 356 ft. Water difficulties were then met with, and want of capital prevented further progress, but at the lowest points reached it is satisfactory to mention that the best results were obtained, the ore yielding from 2 dwts. 14 grs. to 13 oz. 8 dwts. to the ton. The directors have followed the workings of adjoining mines, and the development in the Iron Monarch, on the east (where the Boomerang Reef has been sought), and in the Brownhill Consols lease, north of the Womera, lead them to believe that the reefs found in them run through the company's property, and they strongly recommend their further exploration." A new company is proposed to be formed with a capital of £100,000, divided into 400,000 5s. shares, with a liability of 1s. 6d. per share. Other alluring temptations are dangled before the eyes of the shareholders. "Not only have we these magnificent prospects," say the directors, though not exactly in this lofty diction, "but we have certain town plots of the area of about four acres, situate in the central part of the town of Kalgoorlie, which should prove valuable. And what is more, dear shareholders, we have the right, yes, the right, to a West African mine shortly to be investigated by a competent engineer proceeding to the Gold Coast, to say nothing of options over two

other West Australian properties which will be dealt with in due course." What lunatics could resist such offers?

Chinese Engineering and Mining Co., Limited.—It is very little the directors of this concern tell their shareholders in their annual reports, they leave far too much to conjecture and imagination. The report issued this week covers the year to the end of February. According to the brief entry in the profit and loss account, the gross profit amounted to £113,376, to this is added £4,240, representing "balance of interest," and with £152 from transfer fees, etc. London expenses took £2,302, and Brussels expenses, £3,550, exclusive of the fees of the directors, which total £3,250. Interest on the six per cent. debentures required £29,162, £4,682 is a proportion of the preliminary expenses written off, £20,000 has been set aside as a reserve for depreciation, and a net profit of £53,050 is shown. Out of this the directors propose a dividend at the rate of 5 per cent., which will absorb £50,000, and leave, with the credit brought in, a balance of £6,672 to be carried forward. It cannot be said that this dividend is justified, looking to the financial position of the company. In addition to a share capital of £1,000,000, there is a debenture debt of £500,000. Against these, property, rights, and undertaking acquired from the original company are valued at the colossal figure of £1,114,785, and the only reserve the company possesses is the £20,000 just mentioned. It is true cash totals £210,070, and debtors owe £57,945, against creditors for £99,885, but what is to be said of such an asset as capital expenditure of £181,878, chiefly on the harbour works at Ching Wan Tao, in face of the following announcement in the report:—"The board regret to have to report in reference to the works at Ching Wan Tao that, in the month of February last, it was ascertained that the jarrah piles used in the construction of the breakwater had been attacked by the *teredo navalis*, or sea worm, and that the piles would have only a very short life. Operations on the breakwater were therefore immediately suspended and arrangements were subsequently made with the contractors for the termination of their contract. Under the advice of the consulting engineers a rubble slope is being constructed which will serve to protect the pier during the coming winter, and form a basis for the further works which will be necessary." Does not this mean that a great portion of this capitalised expenditure has been irretrievably lost, and ought, therefore, to be written off? Other assets are "purchase suspense account, £2,390," and "preliminary expenses, £4,682," which, of course, will have to be gradually erased. There are stores on hand, £48,632, live stock, £2,620, and coal and coke, £58,374, which, the auditors point out, "are entered in the balance-sheet at the value placed upon them by the management in China, the stock of coal being stated to be taken on the basis of cost price." The company certainly has an appearance of being over-capitalised and the position is not improved by dividing up to the hilt. Such finance as is here disclosed is likely to bring trouble, if not disaster in the future.

Nigel Gold Mining Company.—After a stoppage of about two years this South African gold mining company was able to resume milling operations in September of last year, with ten stamps, which number was subsequently gradually increased until 25 stamps were at work in June of the present year. The total milling capacity of this company is 50 stamps, accordingly half are now running, but the whole would be crushing, it is said, were it not for the scarcity of native labour. To the end of June 19,907 tons were crushed, yielding 9,980 oz. of gold, valued at £41,714. In addition 12,582 tons of sand were treated and 3,505 tons of slimes, producing 7,336 oz. of fine gold, valued at £30,256. Hence the total gold recovery was 17,316 oz. of fine gold, of a value of £71,970. Although buildings, plant, and machinery were kept in repair out of working expenses the directors have written off £27,157 for depreciation, whilst a further sum of £10,674 debited to profit and loss represents an "amount owing to the company by the Government of the late South African Republic for the share of claim licenses on Varkensfontein, collected by that Government and not accounted for to the company." Allowing for £79,690 brought in, a credit of £61,250 is carried forward, and a very good balance-sheet is issued.

Consolidated Main Reef Mines and Estate.—"The past year has been one of difficulties, chief among which was that of insufficient Kaffir labour, and this trouble, unfortunately, still exists. In spite of this, however, a very considerable amount of work has been accomplished upon the property, both underground and on the surface," is the opening paragraph of the report of the consulting engineer for the year ending June 30. Some development work has been done, however, and ore reserves to the total of 256,810 tons, averaging 11 dwts. per ton, have been opened up. Of low grade ore, with only 4.3 dwts. per ton, there are 118,730 tons, which, the report says, will, "naturally, not be mined." Most of the surface plant is stated to be completed, the extractor house, cyanide plant, tailings wheel, and the mechanical haulages being the chief items yet to be finished. "As soon as this is done," to quote the consulting engineer, "or in a very few months from now, if labour be available, you could at once drop 80 stamps, and steadily increase until the entire 120 stamps are in operation. That you will realise adequate profits is assured by the amount and value of the ore reserves in the mine." Owing to the great excess of expenditure over receipts the debit balance is increased from £15,195 to £46,811. Cash amounts to the meagre sum of £1,201, and debtors owe a trifle of £553, against an overdraft of £8,113, creditors for £9,563, and loans at call of £49,000.

The *World's Work* for October is very uneven in the quality of its contents. Mr. Birrell's article on the task Mr. Morley has undertaken in writing the life of Gladstone and Mr. W. H. Dawson's, on German Agriculture under Protection, are worth reading.

TRADE AND PRODUCE.

Wheat.—On the whole the London cargo market was steady during week, with occasional slight fits of depression when unfavourable news came from the States. But the firmness was more apparent than real, since the actual business done was small. Buyers are still chary of coming into the market, and will remain so until more definite news is received of the results of foreign harvests. Also Mr. Chamberlain's campaign is not conducive to settled business, and the markets throughout the country are waiting to see what the nation thinks of his latest trick. The same reasons restrict dealings in the future market, which presents a similar appearance of steadiness to that in the cargo. In America the markets began this week with a decidedly bullish tone, but, however, they were unable to keep prices steady in the face of Western selling orders and bear raids made on the prospects of large receipts. Bradstreet's estimate of the visible supply east of the Rockies was 33,043,000 bushels, against 29,015,000 bushels last week, and 43,217,000 a year ago, and this also helped to upset the markets as such a large increase was not expected. A demand for export however, set in which sent prices up, the movement being assisted by firmer European cables, and with the bears covering the markets again became firm.

Wool.—Now that the stimulus of the recent London sales has worn off a little business in many of the markets has relapsed into the old lethargic state. Prices for cross-bred wools are, however, firmer, and though some consumers are inclined to think that the top price for the medium and low grades of this class has been reached, others consider that values will still further increase since but little cross-bred wool will come on the market during the next few months. Merinos are steady, but slow, possibly because they are to some extent out of fashion in this country, though still in good demand on the Continent. The yarn trade, especially in Yorkshire, is more active, and spinners have yet a fair amount of orders to run off. Any new business is therefore refused, unless buyers pay the increase and prices asked, which, in many cases, has been done.

Linen.—The autumn demand is slowly opening up, but with the season only in its infancy, it is impossible to say yet whether it will be good or bad. Manufacturers, however, are inclined to think it will on the whole turn out satisfactorily, though trade may not be brisk. Prices are very much against free dealing at present, and buyers naturally hesitate to order until they see how the markets move. In addition the outlook for flax and yarns in the immediate future shows every sign of stiffer prices, and besides, manufacturers have not yet obtained the full benefit of the present advance to which they are entitled. For brown power-loom bleaching cloths the consumer's demand is quiet, and sales are about equal to production, while for hand-loom goods enquiries are small, though the price keeps firm. Unions and dress goods still continue two of the most prominent features of the market. In the former, considering everything, there is a large business doing for all descriptions, though had the demand shown a falling off instead of keeping at its recent level, no surprise would have been occasioned. The season for dress goods in all varieties promises to be good, but cloth for dyeing purposes is quieter, and low hollands, elastics, and paddings are all dull. Neither is there much improvement in damasks, housekeeping goods, or handkerchiefs, though a change for the better in all of them is looked for every week. One feature of the market unusual at this time of the year is the extensive demand for wide linen sheetings bought in all probability for the purpose of being cut up into fancy articles. Both the home and foreign trade in bleached and finished linens remain quiet and uninteresting, the two weak spots being the markets here and in the States. Re-orders are, however, expected to make up the deficiency, but this is only a hope which may or may not be realised. Although buying on the home and American accounts are poor, the Continental markets are brisker, and in spite of the transactions being only moderate, the total volume of business is rather better than at this time last year. The Colonies also are doing a fair business, with the exception of Canada, which, however, is expected to recover shortly.

Cotton.—The sales of spot cotton in Liverpool continue on a very small scale, as the selection is poor and prices still irregular. However, the tendency is decidedly in spinners' favour, and with all the months from November onwards at about the same price the position is gradually becoming more healthy. As prices become more reasonable, so the enquiry for yarns improves, yet the volume of business actually brought to book keeps small. Some sales to India have been made for future delivery, but buyers do not care to commit themselves to large quantities until they see the market is in a more settled condition. The number of looms standing idle continues to increase, and this also lessens the demand for yarn. However, spinners manage to keep free from stocks, though any increase in production will quickly make a difference to supplies and ultimately affect prices in the present state of trade. For cloth the enquiry is only limited, and until the ideas of buyers and sellers on the question of prices come more into accord there is not much likelihood of business being done. In their weekly circular, Sir Jacob Behrens and Sons' state that the Bureau report of the 3rd inst. had but little effect on the market, as it had been already to a great extent discounted. The average condition, given as 65, though smaller by some 16 points compared with a month ago, is still 6 to 8 points better than at the same time last year. As to the estimates of the American crop, it is too early to arrive at any definite conclusion, but if 10 millions bales, which is the smallest guess, turns out correct, it means that 10 million bales have yet to be received before the end of the season. The worst feature of the situation is the small visible supply available for Great Britain. Stocks in Liverpool and afloat

are unprecedently small, and unless increased somehow point to a serious pinch, not only this month but next.

For a time the New York market was depressed by the Bureau report, and before it could recover unfavourable cables were received from this side. Prices then fell slowly until weather reports of a decidedly bullish character were received from the cotton belt, which assisted operators in turning the downward movement into an upward one. After this an occasional depression would come over the market, but on the whole prices were steady and inclined to rise.

The American market at Liverpool was quiet yesterday, spot middling being reduced 4 points, to 5.80d. Futures also were easy, the quotation for October being 5.21d., and for October-November 5d. For later positions the difference in the prices was small, 4.96d. being that for November-December, while January-February was 4.93d., and May-June 4.94d. Egyptians were likewise quieter, though no change took place in values.

Coal.—Prices on the whole show a falling off this week for all classes of coal, both household and steam. In Lancashire this is attributed mainly to the number of mills either closed or working short time, which has resulted in the output of nearly every colliery exceeding the demand. In the north of England also the trade in steam coal has slackened off, though that in gas is still brisk at steady prices. For Welsh coal the demand is improving, but the recent stormy weather has seriously affected business, which otherwise would have been firmer. The weather is also blamed for the dull state of trade in households, for which there is little demand except in Scotland.

Copper.—Free selling for cash dates produced an easier effect on the market at the beginning of the week, and resulted in the loss of the slight advance gained on last Friday's prices. As soon, however, as the pressure was removed, a fair number of buying orders came in, which steadied the market, though values did not improve. The bears then set to work again, and offered freely for forward dates, with the result that prices fell off slightly, and at the close on Friday were £54 10s. for cash and £54 7s. 6d. for three months.

Tin.—The nervous and unsteady condition of this market is attributed mainly to the action of large individual operators, who are able to discount any better feeling produced by favourable advices from the East. This week prices at first showed a tendency to rise, partly in sympathy with the stock markets and partly because better cables were received from Singapore. The rally was only a temporary one, and quotations steadily drooped, though occasionally an attempt was made to check their fall. But the market was idle, and at the close on Friday cash was £114 10s., and three months £115.

Iron and Steel.—There was a steadier tone generally on the Glasgow pig-iron market this week, and more business done in Cleveland warrants, though very few of the transactions were for cash. With the enquiry for Scotch warrants still nearly non-existtent, the market thinks that the merchants must have got hold of all the warrants, and are supplying their customers direct from the stores. However, if the present rate of consumption continues, stores must quickly be reduced, and the market will again have a chance to deal. For certain classes of manufactured goods there has been a fair enquiry, but the orders placed are, comparatively speaking, small. The works, therefore, although fairly busy just now have not a very brilliant time before them. During September the ship-building yards launched 22 vessels, with an aggregate tonnage of 27,230 tons, compared with 25 aggregating 69,000 tons in August, and 27 of 53,000 tons in September, 1902. New orders to the extent of 45,500 tons are reported to have been booked during the month, and include almost every description of vessel from a cruiser and a liner to a barge. In the North of England the sharp fall in prices, which was the feature of last week, was not continued during this. The market managed to rally quotations a little, and to keep them steady, though at a much lower figure than they were before the slump. This naturally suited the bears down to the ground, and they bought freely. Some merchants also purchased, as they were carrying on their books contracts made when prices were high though not yet executed, and they accordingly seized their opportunity to buy at about 43s. 3d. cash. All the manufactured iron and steel trades are dull, and at most of them work is very irregular, except in the case of the rail mills. On the other hand shipbuilders are more cheerful since they have managed to secure a few orders, though the prices are hardly sufficient to show more than a small margin of profit. At Barrow the trade in hematite pigs is steady, yet makers are by no means well off for orders. Some of them, in fact, are holding large stocks which they can only get rid of slowly, and for this reason have had to reduce their output. In the steel trade there are signs of a revival. These are especially noticeable in ship plates and shipbuilding material generally, and are due partly to the generosity of the Admiralty and partly to the hope that the yards may be fortunate enough to secure some large contracts for which they have tendered.

Tea.—There was a decidedly steadier tone in the Indian market this week, and last week's prices were readily obtained. Good teas continued to sell well, and with an improvement in the demand for common kinds, the average price went up to 7.89d., compared with 7.36d. last week. In Ceylon also there was a better feeling, as the week's auction was moderate, and the tea offered of better quality. These two factors produced a welcome increase in prices, the week's average being 7.69d., or .36d. more than that of last week. Good and fine teas especially were dearer, while the quotations for common descriptions were fully maintained. Of Java nearly everything in the auction was sold, and as competition was keen, prices showed a tendency to advance on those recently quoted. Since June 1 our imports of all kinds of tea are three million pounds ahead of last year, but with deliveries showing an increase of four million pounds, the stock at the end of September was, Messrs. Gow, Wilson, and Stanton state, reduced to 75,620,539 lb., compared with 83,899,830 in 1902. Mr. Chamberlain's forecast of a reduction in the duty on tea has gladdened the hearts of some of the trade who imagine it will bring a large increase in consumption. This may take place in England, and yet be more than discounted by a falling off in the foreign markets through retaliating tariffs.

Sugar.—Mr. Czarnikow, in his weekly circular, states that holders seem less confident of American orders at present. This, together, with the favourable weather, and the sales of 1903-4 crop which took place last week, have rendered Continental refiners more anxious to sell at next summer's prices in the hope of covering with raw later on. This anxiety in turn reacted on the value of old sugar, of which large quantities are still held. But the chief factor in determining the price of sugars both old and new is whether the prices now ruling will enable the factories to contract sufficient roots next spring. This in its turn depends upon the production and consumption in the present season, since the acreage sown will, to a certain extent, depend upon the quantity carried over from the present supplies. The prices of beet for the week were as follows:—Oct. 8s. 10¼d. to 8s. 7¼d. to 8s. 9d.; Oct.-Dec. 8s. 9½d. to 8s. 7¾d. to 8s. 9d., and Jan.-March from 8s. 1¼d. to 8s. 8¾d. to 8s. 10d. In cane sugar business continues on a most limited scale, and the few sales that have taken place have gone through at practically unchanged rates. From the cane-producing countries the crop reports are almost featureless, except that the British West Indies are hoping the next crop will be fair. The American market is quiet, with rates at about the same figure as last week. Cuba is still selling slowly, and unless it is that refiners expect the Cuban law to be settled before new beets could arrive, beet imports ought to show a good margin.

Company Reports and Balance Sheets

*** *The Editor will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Southern Railway Company (U.S.).

So far as gross earnings were concerned the showing made by this company for the twelve months ended June 30 must be considered satisfactory, as these amounted to $42,345,060, or an increase of $4,641,812. Working expenses, however, came to $4,142,303 more at $30,989,140, so that the net income from operation was only $499,509 higher at $11,364,920, and with an increase of $386,752 in income from other sources, gave an available total of $12,576,181, compared with $11,689,920 a year ago. Interest and rentals absorbed $8,446,041 of this, or $612,427 more, other deductions from income including dividends accrued on Southern Railway, Mobile and Ohio Stock Trust Certificates took $32,255 more at $287,663, and $135,000 was charged for improvements and betterments not capitalised. Out of the balance $1,500,000 was required for the payment of a dividend of 2½ per cent., on the preferred stock, and a similar sum was reserved for a further distribution on October 19, leaving $707,477 to be carried to profit and loss. The balance brought forward to the credit of this account was $6,510,895, and, after adding in the surplus for the year, with $292,208 for premiums on sales of $1,500,000 first consolidated bonds, and $100,000 Memphis Division first mortgage bonds, $84,450 for profits on sales of other securities sold, $53,528 for interest and dividends on securities accrued prior to July 1, 1902, and $25,500 proportion of cost of Franklin and Pennsylvania Railroad bonds previously written off the total came to $7,674,059, but of this a dividend of 2½ per cent. was paid on the preferred stock paid in October 1902, $135,113 was charged for proportion cost of acquisition Chicago, Indianapolis and Louisville stock, and issue of Louisville and Nashville—Southern Monon collateral joint bonds, and after making sundry adjustments by writing down or off miscellaneous securities held, $5,961,561 was carried forward.

The largest proportion of the increase in gross receipts again came from freight traffic, which produced $3,138,574 more at $28,081,034, with an increase in the tonnage hauled from 16,900,539 tons to 19,197,484 tons. Mine products as usual provided nearly 50 per cent. of the freight, the exact figures being 8,251,240 tons or 42.98 per cent., against 7,061,074 tons or 41.78 per cent., manufactures and miscellaneous traffic yielded the smaller percentage of 26.73 per cent., compared with 29.04 per cent. a year ago, although 393,635 tons more were carried, and products of agriculture were likewise higher in bulk and 0.20 per cent. lower at 12.83 per cent., grain showing a slight advance, and cotton and its products a further shrinkage. Taking revenue freight only, the average receipts per mile were $1.84 against $1.82, or an increase of 0.90 per cent., but the average train-load was reduced from 194.44 to 193.29 tons, so that the increase of 10.02 per cent. in the number of tons carried one mile was obtained at the cost of an increase of 10.67 per cent. in mileage. Passenger traffic produced $1,203,181 more at $10,804,541, the number carried one mile being 8.41 per cent higher, while the earnings per train mile were 0.47 per cent. less at $1.031. Mail carriage yielded $41,593 more at $1,688,118, express traffic $214,248 more at $990,575, and miscellaneaus earnings were $44,215 up at $789,791. Practically the whole of the increase in operating expenses came from maintenance of equipment and cost of and conducting transportation. In the first case-

this item is debited with the full cost of replacing with modern equipment at current market prices all equipment retired during the year, and the increase of $1,247,401 is therefore readily explained. Repairs and renewals of locomotives cost $970,428 more, of system freight train cars $167,487, and of passenger cars $79,699. Thanks, however, to the above mentioned policy, the average hauling capacity of the locomotives was raised from 3,397 tons to 3,591 tons per engine, and the capacity of the freight cars from 54,604 to 56,900 lb. per car. Conducting transportation cost $2,621,914 more, and of this increase about 29 per cent. was due to fuel, and the remainder was partially due to the higher wages paid and to increased cost of materials. The price of coal was abnormally high throughout the entire year, and as in addition the company was working under at a disadvantage through insufficiency of motive power and inadequacy of track, yard, and terminal facilities at many important points, charges were naturally heavy. Notwithstanding the damage done by the floods of March, April, and June, the cost of maintenance of way and structures was $33,673, or 0.58 per cent. less, and the company also saved $38,531, or 3.14 per cent. in taxes.

Coming back to the revenue figures, it is stated that the larger income from sources other than operations came chiefly from dividends on the Mobile and Ohio Railroad, capital stock owned and pledged for Southern Railway Mobile and Ohio Trust certificates, and on other securities held. Against these, however, must be placed the increase in interest and rentals paid, amounting, after allowance is made for reductions due to the retirement of car trust certificates and other bonds to $612,427. The dividends on the preferred stock paid and provided for appear in the summary to be just double those of the previous year, but this is merely because a different method was adopted, and the second dividend was allowed for before carrying the balance to profit and loss instead of being paid from that account as was the case a year ago. Had the plan followed been the same in each year the surplus would have shown an increase of $106,580 instead of the apparent decrease of $1,393,420 given. No addition was made to the capital stock, but the funded debt was increased by $9,638,421, of which $272,000 bonds were issued upon retirement of equal amounts of outstanding bonds of other companies absorbed by the system, $4,000,000 were issued for account of improvements and betterments and for the acquisition of new property, and $6,641,321 for permanent improvements and to acquire securities of other undertakings. From these were deducted $1,000,000 Spartanburg, Union and Columbia first mortgage 4 per cent. bonds transferred to leasehold estates, and $274,900 various bonds retired, leaving the net increase at $9,638,421 as above mentioned. The equipment obligations were increased from $5,097,098 to $7,021,810 by the issue of $2,977,000 Equipment Trust, Series "C," the difference being due to repayment of portion of the older series, and outstanding securities of leasehold estates rose by $6,009,500, of which $5,000,000 was represented by Carolina division general mortgage bonds, issued to reimburse the company for its cash outlay in the acquisition and consolidation of the properties constituting that division. Further, £8,500,000 was added to the certificates of indebtedness for the unpaid balances of issues made solely for the acquisition of several important railway properties and extensions, for which permanent funding plans have not yet been matured, but $1,940,000 of the old balance was paid off, leaving a total under this head of $8,800,000. Other charges to capital account in the twelve months amounted to $2,308,781 for new construction and real estate, and $1,326,103 for new and additional equipment, and the total cost of road and equipment now stands in the balance-sheet at $320,162,538, or with securities pledged or held for control to $374,501,878, against $349,374,610 a year ago.

Buenos Ayres Great Southern Railway.

The directors of this undertaking furnish their shareholders with an excellent record of the past year's operations, and there is little reason to doubt that the Argentine Republic is just now enjoying marked prosperity. In the twelve months ended June 30 last, the gross receipts amounted to £2,536,127, or £162,558 more than in the preceding period, against a rise in expenditure of £86,378, to £1,184,129, the net revenue being £76,180 up, at £1,351,998. Ratio of outlay to total income was 46.69 per cent., against 46.25 per cent. Excluding company's service, Western railway material, and freights on Government account, all of which are charged at more or less cost price, we find that the increase in the goods traffic was 72,362 tons, bringing an additional revenue of £58,744. Best displays were made by maize, wheat, second, third, and fourth class general goods, hides and skins, posts, baled wool and hay, while on the other hand there was a heavy falling off in local loose wool and smaller declines in stone and potatoes. Thus it will be seen that the growth in revenue was due to steady development of the company's business, and not to any abnormal increase in one particular direction. Working expenses were rather out of proportion to the additional receipts, but it must be remembered that the improved sterling value of the paper dollar accounted for £22,452, and as £38,557 more was spent upon the maintenance and upkeep of the property, the cost of handling additional traffic of £162,558 was only £25,369. As usual, Mr. White, chairman of the local committee, in reviewing the past year, has much that is interesting to say. We are told, and the news is most gratifying, that the cereal crop of Argentina has been more than double that of last year, although, naturally enough, with this abundance, prices did not rule so high. Prospects for next year are described as excellent. Ploughing for the new wheat crop began in the south in the middle of April, favoured by the rainy weather, and when Mr. White was writing at the end of August, sowing was still in active progress in some districts. The subjoined statement illustrates the remarkable rise in the exports since the beginning of the year, compared with the same periods of 1902 and 1901:—

	Wheat. tons.	Linseed. tons.	Maize. tons.
Shipments to date since Jan. 1 ...	1,400,000	450,000	800,000
Same period, 1902	550,000	330,000	580,000
Same period, 1901	800,000	350,000	650,000

Not less interesting are the Government Department estimates for the next crop as follows:—

	Wheat. tons.	Linseed. tons.	Maize. tons.
Province of Buenos Ayres ...	1,460,000	317,000	1,791,000
,, Santa Fé ...	843,000	328,000	1,153,000
,, Cordoba ...	708,000	90,000	131,600
,, Entre ios ...	91,000	29,000	181,800
Other Provinces and Territories	—	—	399,300
Totals	3,102,000	764,000	3,656,700

It is encouraging to note that new cereals are now being sown, such as oats, barley, rye, and rape seed, and naturally these ventures will be contemplated with much interest. Since the closing of the English ports to the importation of live stock, attention has turned towards the traffic in frozen meat, and the success of the old established businesses has induced the starting of new ones. This, however, is a very uncertain industry, and it would be well not to expect too much from it. Full of instruction and deeply significant is the statement that a feature of the trade that has taken place in Bahia Blanca during the past few months is the shipment of several cargoes of wheat by sailing ships for Australia, the result of the shortage in the wheat crop of that colony through drought. Here is a point for the protectionists and preferential faddists to ponder over. How delightfully secure we shall be by depending for our wheat supplies on colonies that cannot feed themselves, and how we shall enrich ourselves by paying an increased price for the immense amount of foreign wheat we must always require. Summing up the position, Mr. White observes that everything leads the local committee to expect that the current year will finish as fortunately as it has begun, as the weather has been always more or less normal, the areas under cultivation are steadily increasing, and all the products of the cattle raising and sheep farming industries are not only finding favourable markets, but prices even show a tendency to improve. As regards the political situation, the country is at present in the midst of the preliminaries for deciding upon a candidate for the Presidential election to be held on October 12, 1904, and although it is premature to make any prognostications as it is quite impossible to tell with any certainty which candidate is likely to obtain the support which the Constitution demands, it may be safely affirmed that the election is being arranged in such a way that it will take place in an independent manner, and will permit of the full play of the influence exercised by all the political elements and politicians of all shades of opinions who are acting in concert to promote an election that shall be definite and generally acceptable. Thus Mr. White expresses himself, and the statement is cleverly guarded. Extensions and new works are proceeding in a satisfactory manner, and further important lines are either decided upon or under consideration. Depreciation of currency balances reduces the net revenue to £1,350,612, to which is added balance brought forward, £93,390, and other income, £41,464, making £1,485,696 available. Interim ordinary dividend, debenture and preference interest, rents, and income-tax absorb £879,271, leaving £606,425, from which a final payment of 4 per cent. is proposed on the ordinary stock, making 7 per cent. in all, or the same as in the preceding year, with £25,000 to general reserve, £5,000 to pension fund, and £96,425 carried forward. The company's holding of Consols has been written down to 90, and the reserves reduced accordingly, but it is rather a pity the position was not fully faced, and 85 adopted as the safety figure, especially as the savings still largely exceed a million sterling.

Buenos Ayres Western Railway.

The publication of the annual report of this undertaking has been rather eagerly awaited, because it was expected to contain some explanation for the breakdown of the negotiations for the purchase of the Bahia Blanca and North-Western Company's system, referred to in our issue of last week. The reasons are duly set forth, and prove to be of a very commonplace order. It seems that the board of this company caused a thorough investigation to be made of the Bahia Blanca system, and the result showed that the line would not be the advantageous adjunct to this company's undertaking which was anticipated when the ad-referendum agreement was entered into, and that in order to make it suitable a very much larger capital expenditure would have to be incurred than was at first contemplated. Under these circumstances the board decided that they had no alternative but to advise the board of the Bahia Blanca that they could not recommend Western shareholders to ratify the scheme. The course taken was no doubt very right and proper, but most people will think that the investigations should have been carried out before any agreement was entered into. We wonder if the Buenos Ayres Great Southern Company had anything to do with the matter. In the strong hands of the Western Company, the Bahia Blanca Extension would have proved a formidable competitor to Great Southern interests, and might have disturbed the hitherto harmonious relations. During the twelve months ended June 30 the Buenos Ayres Western gross receipts were £1,180,748, being an increase of £243,119 compared with the preceding year, while expenses rose £107,389, to £562,344, leaving the net revenue £135,730 up, at £618,404. The company has also a big income from other

sources, the total available including £13,934 brought forward, being £785,287, from which interim ordinary dividend of 3 per cent., debenture and other interest, etc., altogether take £430,347, leaving £358,941. So the board places £100,000 to general reserve, £20,000 to fire insurance account, and £10,000 to the staff pension fund, and pay a balance dividend of 4 per cent., making 7 per cent. for the year, with £28,940 carried forward. This is a great advance on the previous year, when the dividend was 6 per cent., and the reserve received only £30,000, and the excellent results can be attributed to the splendid harvest and the general development in almost all important sources of traffic. Wheat alone gave an additional revenue of £89,622, maize advanced £42,039, and general goods over £43,000. Decreases were insignificant, and need not be mentioned. The expansion in the goods traffic was naturally reflected in the passenger department, which gave £45,106 more, while the live stock receipts went up £29,538. It is pleasant to see that a large part of the increased outlay went on the upkeep of the line, and only £31,189 more was spent on handling the largely increased volume of traffic. The general manager says that the prospects for the future continue bright, there are signs of cultivation on all hands, and the area sown down under wheat is greater than ever. Extensions and works in hand are well advanced, and certain new important works are to be undertaken at the cost of revenue.

Entre Rios Railways.

With the average length of line worked, 51 miles higher at 468 miles, this undertaking increased its gross receipts by £17,720 to £110,244 during the twelve months ended June 30, compared with the preceding year. At the same time expenditure advanced £12,168 to £81,260, so that the ratio of outlay to revenue was nearly 1 per cent. lower at 73.71 per cent., but still a very large proportion. Passenger traffic increased about £2,000, although through a falling off in Government journeys and the extreme depression during the first half of the year the numbers carried showed a reduction. Live stock receipts rose from £2,583 to £5,996, or 132 per cent., chiefly owing to the opening of the branch to Concordia on October 4, 1902, an additional 72 miles, thus coming into operation. Heavy rains during harvest time spoilt what promised to be a very good wheat crop, but it was nevertheless an improvement on the previous year, and the company carried 12,725 more tons, giving an increased income of £1,206. Maize improved £1,767, and linseed no less than £5,268 to £11,051. Improvements were also shown in flour and bran, wool and hair, hides, skins, etc.; but charcoal, firewood and timber and hay all showed declines. With the increased length of line in operation expenditure advanced in all directions, permanent way and works leading with an increase of £4,264. Then locomotive power rose £2,350, carriage and wagon outlay £1,178, traffic expenses £2,877, and general charges £809. There were miscellaneous expenses of £689, compared with nothing. To the net revenue of £28,984, which is £5,551 better, must be added balance brought forward £5,725, and interest, exchange, etc., making a total of £37,100, against £38,710 a year ago, when the sum from previous account and interest on Government bonds were both considerably higher. The directors again propose a dividend of 2 per cent. on the preference stock, reducing the balance carried forward to £4,119.

Rio Tinto.

The interim report upon the company's operations during the current year states that the deliveries of pyrites in the United Kingdom, the continent of Europe, and the United States of America bid fair to be considerably in excess of those of last year. The consumption of non-cupreous sulphur ore is on the increase, the larger quantities sold under the new contracts being now in course of delivery. The quantity of refined copper produced at Cwmavon may be greater than last year. There have been great fluctuations in the price of G.M.B. copper during the present year, but the average for the nine months ended September 30 last may be considered satisfactory, being £6 4s. 3d. per ton better than the average of the year 1902. The directors, out of the estimated profits of the year, declare an interim dividend of 32s. 6d. per share on the ordinary shares.

Electrolytic Alkali Company.

This undertaking makes a very bad display for the twelve months ended August 31, and blames the conflict between foreign and English manufacturers of bleaching powder, resulting, so it is said, in great depression of prices, conditions over which the directors have no control. Maybe so, but why are these contingencies not taken into account when the companies are being formed and highly capitalised? This one has an issued share capital of £301,543, and paid £100,000 for its patents. Then £108,370 has been laid out on plant, and further important sums on buildings, land, etc., none of which is justified if the concern cannot withstand a little competition. It is a protectionist capitalised affair, and therefore cannot live on free trade principles. Gross profits for the year are returned at £38,588, and sundry receipts gave £33 or £38,622 in all, but working charges and unnamed amounts for depreciation and renewals absorbed the big sum of £38,138, so that only £484 was left as net profit. This, together with £369 brought in, is carried forward, so that even the preference shareholders receive no return and it must be very poor solace to read that "those who are familiar with the situation will be somewhat gratified to find, notwithstanding the low price which the company have been obliged to accept for the product named (bleaching powder) during eight out of the twelve months under review, that no loss of capital whatever has been incurred." During the year the parent company has acquired certain patents for improvements in the process, and in accordance with their agreement as vendors they have placed these additional patents at the service of this company. We note that preliminary expenses still stand for £6,889, and that the reserve fund, being premiums on shares, is just £129. Trading accounts are moderately favourable, and cash comes to £14,057. In the absence of details there is no means of judging the adequacy of the depreciation allowance.

Direct West India Cable Co., Limited.

The recent decision in favour of the Cuba Submarine Telegraph Company in their suit against the West India and Panama Company had a disastrous effect on this undertaking's business through the interference with traffic beyond Jamaica which resulted. Gross receipts from messages, subsidies, etc., during the twelve months ended June 30 came to £17,732, and with interest on investments and deposits, and transfer fees, the total income was £19,861, of which working expenses absorbed £5,978, debenture interest took £4,255, and £8,198 was transferred to trustees' account with the debenture holders, leaving a net balance of £1,430, compared with £4,790 for the previous year. Adding in £31,882 brought forward, the amount available was £33,312, and after paying two dividends of 3 per cent. each, or 6 per cent. for the year, £30,612 was carried forward. Out of the balance at credit of the trustees' account, £8,497 was paid for the redemption of £8,500 debentures, and this amount was written off the cost of cable and equipment, making the total reduction of this item to date £32,200. The balance-sheet reveals a very sound condition, and one which says much for the management. No less than £60,492 is invested outside the business, £6,993 is represented by spare cable and other stores, and the cash reaches the substantial figure of £9,071, while the amounts due on bills receivable and from sundry debtors stand at £1,008, and the company owes no more than £376 to sundry creditors.

Halifax and Bermudas Cable Co., Limited.

Including £1,046 from interest on investments and deposits and £2 from transfer fees, the gross income for the year ended June 30 amounted to £18,647, and after meeting working expenses, providing interest on debentures, and transferring £7,453 to the trustees' account with the debenture holders, the net profits came to £3,245, against £3,362 for the previous twelve months. Out of this two dividends aggregating 5 per cent., have been paid, and the balance of £745 is added to the amount brought in, raising it to £16,845. During the year £7,500 debentures were redeemed at a cost of £7,492, leaving the total now outstanding at £62,500, against which capital expenditure has been written down to £95,638. The company's financial position is highly satisfactory, cash in hand and on deposit standing at £6,581, and sundry debtors, etc., at £1,023, while investments are valued at £12,406, exclusive of a sum of £15,000 in New Zealand 4 per cent. inscribed stock deposited with the Government, and against this there is only £921 owing to sundry creditors.

Lewis and Allenby.

The result of this company's operations for the twelve months ended July 31 is very disappointing, and the heavy fall in profits is the more unaccountable because a year ago the directors took additional borrowing powers to the amount of £15,000 in consequence, as they put it, of the "continued expansion of the company's business." No word of explanation is forthcoming in the report, and we trust that the chairman at the meeting on Monday will be able to advance good reasons for the apparent discrepancy. Including the rather larger balance of £1,037 brought forward, and after payment of debenture interest, the net profit is returned at £6,391, a drop of £4,000 compared with the previous twelve months. This provides the preference dividend, with £500 to reserve, and an increase of £1,000 to £2,041 in the sum carried out. A year ago the savings received £1,500 and the ordinary shares got a 6 per cent. dividend. The latter are held by the vendors and the chairman, who must bear the brunt of the collapse in revenue. Reserve fund now stands at £6,000, not a very imposing sum, and we fear that of the fixtures, fittings, furniture, etc., and goodwill, standing at £73,327, the last named must be a very important proportion. Some reduction has occurred in the amounts owing to creditors, these being now £38,644, but debtors are also lower at £53,555, and cash continues poor at £4,402. Business premises and workshops are valued at £123,415, stock comes to £58,142, and although the concern was formed in 1899, preliminary expenses still figure for £415.

NEXT WEEK'S MEETINGS.

Monday, October 12.

Anglicia Petroleum.—Winchester House, noon.
Lewis and Allenby.—195, Regent Street, noon.

Tuesday, October 13.

Isle of Man Mining.—Liverpool, 2.30 p.m.
Saunderson and Co.—Bedford, noon.
Standard Bank of South Africa.—Cannon Street Hotel, 1 p.m.

Wednesday, October 14.

Entre Rios Railway.—River Plate House, noon.
Egyptian Salt and Soda.—Winchester House, noon.
General Hydraulic Power.—Winchester House, noon.

Thursday, October 15.

Akriporisu (Ashanti) Syndicate.—Winchester House, noon.
Chinese Engineering and Mining.—Winchester House, noon.
Palace Theatre.—Shaftesbury Avenue, 2 p.m.
Swansea Improvements and Tramways.—Donington House, 11.30 a.m.

Friday, October 16.

Swift Cycle.—Coventry, noon.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Buenos Ayres Great Southern.—A dividend of 4 per cent. on the ordinary stock, making 7 per cent. for the year, placing £25,000 to reserve and carrying forward £96,425.

Buenos Ayres Western.—Balance dividend of 4 per cent., making with interim dividend in April last 7 per cent. for year on ordinary stock, carrying forward £28,940.

Central Uruguay of Monte Video.—Balance dividend of 2 per cent. on the ordinary stock, making 3 per cent. for the year, with £15,000 transferred to reserve and £9,934 carried forward.

Central Uruguay Northern Extension Railway.—Balance dividend of 3s. 6d. per share, making, with the interim dividend, 6s. 6d. per share for the year ended June 30, equal to 3¼ per cent., carrying forward £4,877.

Central Uruguay Eastern Extension.—Balance dividend of 2s. 6d. per share, making, with the interim dividend, 5s. 6d. per share, for the year, equal to 2¾ per cent., carrying forward £1,214.

Espirito Santo and Caravellas.—Dividend of five shillings per share for the year ended April 30, leaving £2,174 to be carried forward.

Great Western of Brazil.—Interim dividend in respect of 1903 of 10s. per share, being at the rate of 5 per cent. per annum.

Rio Claro Sao Paulo.—Interim dividend at the rate of 14 per cent. per annum for six months ended 30th ult., payable 17th inst.

South Indian.—Dividend of 40s. per cent., which with the guaranteed interest will make a distribution of £3 10s. for half-year, or at the rate of 7 per cent. per annum, as compared with 6½ per cent. for the corresponding half of 1902.

Southern Brazilian Rio Grande do Sul.—Interim dividend for six months ended June 30 at the rate of 6 per cent. per annum, or 12s. per share, payable 23rd inst.

MINES.

Brilliant and St. George United Gold.—Dividend of 6d. per share, payable 22nd inst.

Brookfield.—Dividend for quarter ended September 30 of 3 per cent.

Chinese Engineering and Mining.—Dividend of 5 per cent., carrying forward £6,671.

De Lamar.—Interim dividend (No. 5) of 2s. per share, payable 30th inst.

Rio Tinto.—Dividend of 32s. 6d. per share on ordinary shares for half-year ended June 30.

Treasury Gold.—Dividend (No. 8) of 6¼ per cent. (5s. per share) for period ended September 30.

Witwatersrand Township Estate.—Dividend of 20 per cent.

MISCELLANEOUS.

A. and F. Pears.—Dividend for half-year ended June 30 on ordinary shares at the rate of 12 per cent. per annum, making with interim dividend 10 per cent. for year, and on the deferred shares at the rate of 2½ per cent. for year, carrying forward £946.

Aerated Bread.—Balance dividend for year ended September 30 of 5s. 6d. per share, in addition to interim dividend of 3s. paid April last.

Archibald Arrol and Sons.—Dividend of 2 per cent. (actual), making 6 per cent. for the year, carrying forward £1,813.

Benger's Food.—Interim dividend on ordinary shares at the rate of 9d. per share for half-year ended September 30 last.

Blackpool Tower.—Dividend of 6 per cent. on ordinary shares, adding £1,812 to reserve, and carrying forward £785.

City of Santos Improvements.—Interim dividend on preferred ordinary shares at the rate of 5 per cent. per annum for six months ended June 30.

Cuba Submarine Telegraph.—Dividend at the rate of 5 per cent. per annum, and bonus of 2s. per share on ordinary shares for half-year ended June 30.

Direct United States Cable.—Interim dividend of 3s. per share, being at the rate of 3 per cent. per annum for quarter ended September 30.

Fleming and Ferguson.—Dividend on ordinary shares of 5 per cent., which, with interim dividend paid on April 1, makes 10 per cent. for past year.

Hodgsons' Kingston Brewery.—Dividend of 12 per cent. for six months ended September 30, making, with interim dividend, a total distribution of 10 per cent. for year.

Ibbotson Brothers.—Dividend of 7½ per cent.

Lipton.—Interim dividend on ordinary shares for past half-year at the rate of 6 per cent. per annum.

Novello and Co.—Dividend of 12½ per cent. on the ordinary shares, carrying forward £5,047.

Palace Theatre.—Final dividend of 8 per cent. making, with the interim dividend, 15 per cent. for year ended July 26, carrying forward £16,759.

Ritz Hotel.—Dividend of 6⅔ per cent. making, with interim dividend, 10 per cent. for year ended May 31, 1903, together with a bonus of 2 per cent.

Reuter's Telegram.—Interim dividend at the rate of 5 per cent. per annum, for half-year ended June 30, payable 10th inst.

San Jorge Nitrate.—Interim dividend of 2½ per cent. (2s. per share), for half-year ended June 30, payable October 26.

Shaw, Savill, and Albion.—Interim dividend for half-year ended June 30 on preferred and ordinary shares at the rate of 5 per cent. per annum, payable November 2.

Smith and Maclean.—Dividends of 5s. per share on the ordinary shares, setting aside £3,000 to special reserve fund, carrying forward £3,990.

Stock Exchange.—Interim dividend of £4 per share, payable November 3.

Transvaal and Delagoa Bay Investment.—Dividend of 25 per cent.

United States Steel.—Quarterly dividend of 1¾ per cent. on the preferred stock, payable November 16; also quarterly dividend of ⅝ per cent. on common stock, payable December 30.

Val de Travers Asphalte Paving.—Interim dividend at the rate of 5 per cent. per annum (6d. per share), for six months ended June 30.

W. H. Chaplin.—Interim dividend for half-year ended September 30, on ordinary shares, at the rate of 5 per cent. per annum.

West End Clothiers.—Dividend of 7 per cent. per annum on ordinary shares, payable 21st inst.

Willans and Robinson.—Dividend at the rate of 6 per cent. per annum on ordinary shares.

Wright Bros.—Interim dividend of 6 per cent. per annum upon ordinary shares for half-year ended August 31.

MINING RETURNS.

Alaska Mexican.—Crushed 21,383 tons ore; value $23,780; saved 415 tons sulphurets; value $26,223.

Alaska Treadwell.—Crushed 66,222 tons ore; value $85,595; saved 1,420 tons sulphurets; value $78,075.

Angelo.—Tons crushed 8,720; ounces recovered, 2,886; tons treated by cyanide 6,931; ounces recovered, 2,487; total ounces, 5,373.

Ashanti Goldfields.—Obuassi mine, 1,740 tons crushed for 4,420 oz.; development 1,060 tons crushed for 330 oz.

Ashanti Sansu Mine.—1,100 tons crushed for 694 oz.

Avino Mines of Mexico.—Leaching plant treated, 1,600 tons, produce $21,000; ore shipped, 420 tons, value $10,000.

Balaghat.—2,900 tons produced 2,092 oz.; 2,160 tons of tailings (cyanide process), produced 179 oz.; total 2,271 oz.

Barrett Gold—412 oz. gold.

Bonanza.—Crushed 8,200 tons; obtained 3,616 oz. From cyanide and slimes, treated, 8,200 tons, yielding 2,481 oz. Total, 6,097 oz.

Brilliant and St. George.—Crushed 2,440 tons for 1,654 oz. Cyanide return, £4,124.

Brilliant Extended.—825 tons for 280 oz. Sands and concentrates, 175 oz. after deducting costs of extraction; total, 455 oz.

Brilliant Gold.—550 tons of quartz crushed, produced 477 oz.

British Broken Hill Proprietary.—3,958 tons crude ore produced 735 tons concentrates, which contain 406 tons lead and 20,580 oz. silver.

Broken Hill Proprietary.—Refinery products, fine silver, 366,116 oz.; soft lead, 5,090 tons.

Burma Ruby Mines.—128,000 loads washed producing rubies valued at Rs.1,60,000.

Cassel Coal.—Output 13,961 tons.

Champion Proprietary.—1,170 tons crushed, 646 oz.; 700 tons tailings, 61 oz.

Champion Reef.—14,730 tons of stone produced 14,732 oz.; 20,779 tons of tailings (cyanide process), produced 3,308 oz.; total, 18,040 oz.

Chinese Engineering and Mining.—Output of coal 15,000 tons, sales 18,000; consumption 1,300.

Clitters United.—2,401 tons.

Consolidated African Copper Trust.—Edmundian Mine—A shipment of 277 tons of ore has realised £1,896.

Copiapo.—980 tons copper ores.

Craiggiemore Proprietary.—Crushed 1,100 tons, cyanided 790 tons, for yield of 564 oz.

Crown Deep.—Tons crushed 22,011; yield 4,530 oz.; tons of sands and concentrates treated by cyanide 15,600; yield 3,473 oz.; tons of slimes treated 6,466; yield 532 oz.; total yield, 8,536 oz.

Cumberland Niagara.—1,285 tons crushed, producing 303 oz.; tailings recovered 180 oz. from 1,625 tons.

Day Dawn P.C. Gold.—Crushed 987 tons, 1,130 oz., and stullings, 26 oz.

Dolcoath.—Tons crushed, 8,484; black tin sold, 128 tons; slimes, 4 tons.

Driefontein Consolidated.—Crushing for September: tons crushed, 14,062; ounces recovered, 3,911; tons treated by cyanide, 11,594; ounces recovered, 3,260; total, 7,171.

Dundee (Natal) Coal.—Output 8,965 tons.

Durban Roodepoort Deep.—Tons crushed 7,700; yield 2,427 oz.; tons of sands and concentrates treated by cyanide 5,320; yield 1,155 oz.; tons of slimes treated 2,415; yield 255 oz.; total yield, 3,838 oz.

Durban Roodepoort.—7,005 tons for 3,375 oz.; tailings treated 4,760 tons for 1,206 oz.

Elandslaagte Collieries.—Output 9,761 tons.

Ferreira Deep.—Tons crushed 9,150 yield 4,047 oz.; tons of sands and concentrates treated by cyanide 6,150; yield 1,621 oz.; tons of slimes treated 2,768; yield 250 oz.; total yield 5,918 oz.

Fraser South Extended.—Clean up, 1,800 tons, 490 oz.; value £1,700. Cyanide process, 600 tons, 98 oz.

Geldenhuis Deep.—Tons crushed, 24,060; yield, 5,977 oz.; tons of sands and concentrates treated by cyanide 17,220; yield, 3,166 oz.; tons of slimes treated 6,671; yield 508 oz.; total yield, 9,652 oz.

Geldenhuis Estate.—Crushed 11,285 tons; obtained 3,202 oz.; from tailings by cyanide 1,733 oz.; from slimes 586 oz.; total 5,521 oz.

Geldenhuis Main Reef.—Gold from mill 666 oz.; gold, cyanide works, 523 oz.; ore milled 2,800 tons; tailings treated, 2,230 tons.

Glen Deep.—Tons crushed 13,000; yield 2,945 oz.; tons of sands

and concentrates treated by cyanide, 9,630; yield, 1,784 oz.; tons of slimes treated, 3,842; yield, 297 oz.; total yield, 5,027 oz.

Globe and Phœnix.—Crushed 6,200 tons of ore; yield, 3,103 oz.; cyanide, tons treated, 3,275; yield, 385 oz.; total 3,492 oz.

Glynn's Lydenburg.—Crushed 1,740 tons, yielding 555 oz.; cyanide treated, 1,204 tons, yielding 487 oz.; slimes treated 536 tons, yielding 197 oz.; total, 1,239 oz.

Golden Horseshoe.—Crushed 11,878 tons, yielding 3,751 oz.; 2,072 tons treated by cyanide, yielding 1,022 oz.; 8,082 tons of slimes treated yielding 3,973 oz.; 1,201 tons of sulphide ore yielding 6,997 oz.; 497 tons of concentrates containing 1,860 oz.; total tons, 13,079; output 17,603 oz.

Golden Links—2,280 oz. from 2,550 tons; cyanide 279 oz.; total, 2,559 oz.

Great Boulder Main Reef.—1,750 tons of ore crushed yielded 1,290 oz.

Great Boulder Perseverance.—18,206 oz.

Great Fingall.—Tons of ore, 8,337; ounces recovered, 9,262; tons of tailings treated by cyanide, 7,736; ounces recovered, 1,261; tons of concentrates shipped, 81; ounces recovered, 710; total ounces, 11,233.

Half-Mile Reef.—408 oz. from 800 tons.

Hutti (Nizam's).—442 oz. from 600 tons crushed.

Ida H. Gold.—1,050 tons crushed yielding 1,098 oz.; total value, £4,300.

Imani Gold.—Crushed 1,652 tons, for 652 oz.

Ivanhoe Gold.—12,240 tons of ore crushed, 3,392 oz.; 6,360 tons of sands treated, yielded 2,261 oz.; 5,200 tons of slimes treated, yielded 2,796 oz.; 680 tons of concentrates treated, yielded 2,339 oz.; 120 tons of telluride ore treated, yielded 288 oz.; total, 11,076 oz.

Johannesburg Consolidated.—New Primrose, 6,772 oz.; Rietfontein "A," 2,840 oz.; Glencairn Main Reef, 3,712 oz.; £15,769. Ginsberg Gold, 3,676 oz.; New Unified Main Reef, 3,099 oz.

Jumpers, Limited.—Crushed 2,903 tons; obtained 828 oz.; concentrates by cyanide 87 oz.; tailings by cyanide, 484 oz.; total, 1,399 oz.

Jumpers Deep.—Tons crushed 15,497; yield 3,718 oz.; tons of sands and concentrates treated by cyanide, 10,425; yield, 2,282 oz.; tons of slimes treated, 5,377; yield 356 oz.; total 6,357 oz.

Koffyfontein Mines.—2,075 carats diamonds.

Lace Diamond.—Loads hauled and washed, yellow ground, 18,572; blue ground, 772; yielding 2,102 carats.

Lancaster Gold.—Crushed 7,939 tons, yielding 1,776 oz.; cyanide 5,574 tons treated, yielding 1,261 oz.

Langlaagte Deep.—Tons crushed 13,130; yield 2,899 oz.; tons of sands and concentrates treated by cyanide 10,062; yield 1,334 oz.; tons of slimes treated 2,592; yield 157 oz.; total yield, 4,391 oz.

Le Roi.—Shipped from mine to Northport, 11,583 tons, containing 5,561 oz. of gold, 5,015 oz. silver, and 232,750 lb. copper; profit, $17,000. Shipped from Dump to Northport, 6,277 tons of ore, containing 1,733 oz. of gold, 1,650 oz. of silver, and 70,942 lb. copper; profit, $5,250.

Lloyd Copper.—Production 124 tons copper.

Meyer and Charlton.—2,439 oz. from 9,266 tons crushed; 1,714 oz. from cyanide; total, 4,153 oz.

Morven (Rhodesia).—Crushed 1,019 tons, yielding 662 oz.

Mount Boppy.—2,345 tons gave 767 oz.; cyanide 1,638 tons for 784 oz.; slimes 596 tons for 463 oz.; total 2,014 oz.

Mount Morgan (Queensland).—Tons chlorinated 20,697; 9,160 oz.

Mount Usher.—Crushed 75 tons and treated 570 tons tailings for a yield of 75 oz.

Mount Zeehan (Tasmania).—Silver lead, 125 tons, containing about 284 tons of lead, and 38,250 oz. of silver.

Mysore.—15,550 tons produced 15,006 oz.; 10,400 tons of tailings (cyanide process), produced 1,753 oz.; total 16,759 oz.

Mysore West and Mysore Wynaad.—Ounces, 1,235 from 2,060 tons of ore crushed.

Natal Navigation Collieries.—15,003 tons.

Natal Steam Coal.—Output 2,600 tons.

New Chillagoe.—Chillagoe Co., 3,056 tons copper ore and 79 tons lead ore; Mungana Co., 764 tons copper ore and 1,035 tons lead ore; purchased 16 tons copper ore and 940 tons lead ore; total, 3,836 tons copper ore and 2,054 tons lead ore; producing 276 tons of copper matte and 407 tons of lead bullion, containing 158 tons copper, 407 tons lead, and 30,177 oz. silver.

New Goch.—2,016 oz. from 7,054 tons crushed; 799 oz. from cyanide, 665 oz. from concentrates, total 3,480 oz.; value £14,782.

New Options.—Victory Mine, 350 tons, 69 oz.; Lady Jane Mine, 250 tons, 35½ oz.; Crescent cyanide plant, 200 tons, 18½ oz.

New Queen Gold.—473 tons crushed, 462 oz. realised; received from public crushing, £150; tributers £110.

Nourse Deep.—Tons crushed 13,290; yield 3,651 oz.; tons of sands and concentrates treated by cyanide, 9,706; yield 1,885 oz.; tons of slimes treated 3,741; yield 295 oz.; total yield 5,833 oz.

North White Feather Gold.—Mill, 720 tons, 439 oz.; cyanide 1,020 tons, 151 oz.

Nundydroog.—5,810 tons of quartz produced 5,563 oz.; 4,995 tons of tailings (cyanide process), produced 473 oz.; total 6,041 oz.

Obenemasi Syndicate.—152 tons of quartz for 132 oz.

Ooregum.—12,096 tons of stone produced 5,883 oz.; 10,518 tons of tailings (cyanide process), produced 1,223 oz.; total 7,106 oz.

Oroya Brownhill.—Crushing 3,834 tons, yielding 6,907 oz.

Peak Hill Goldfield.—Crushed 5,770 tons; yield 2,820 oz., including cyanide plant, slimes, etc.

Rezende.—Crushed 2,875 tons; recovered 643 oz.; tailings by cyanide 130 oz.; total, 773 oz.; in addition seven tons concentrates produced containing 25 oz.

Robinson Deep.—Crushed 23,456 tons for 8,750 oz.; 3,956 oz. from tailings by cyanide, and 536 oz. from slimes, during September.

Roger's Golden Gate.—716 tons, 716 oz.

Roodepoort Central Deep.—Crushed 6,010 tons, yielding 2,151 oz.; cyanide, 4,114 tons were treated, yielding 929 oz.

Roodepoort United Main Reef.—2,981 oz. from 7,811 tons crushed; 1,001 oz. from cyanide; total 3,982 oz.

Rose Deep.—Tons crushed, 20,585; yield 3,829 oz.; tons of sands and concentrates treated by cyanide, 13,200; yield, 2,566 oz.; tons of slimes treated, 6,675; yield 402 oz.; total yield, 6,798 oz.

San Ramon Gold (Chihuahua, Mexico).—6 bars, containing 90 oz. gold, 5,764 oz. silver.

Selukwe Gold.—Crushed 5,200 tons, produced 2,665 oz.; treated by cyanide 6,200 tons, yielding 1,482 oz.; total for September, 4,147 oz.

Simmer and Jack.—Crushed 24,360 tons for 5,997 oz.; 3,188 oz. from tailings by cyanide, and 451 oz. from slimes during September.

Sons of Gwalia.—Ore crushed 7,824 tons for 3,989 oz.; tailings treated by cyanide, 4,650 tons for 1,257 oz.; total 5,246 oz.

St. George's Coal and Estate.—8,466 tons.

St. John Del Rey.—Gold produce, £22,980.

Surprise.—Crushed 3,173 tons, gained 1,073 oz.

Taitapu Gold Estates.—229 oz. from 700 tons crushed.

Talisman Consolidated.—Tons of ore treated, 4,204.

Transvaal Gold.—Crushed 5,120 tons, yielding 1,502 oz.; cyanide treated 3,320 tons, yielding 1,361 oz.; slimes treated 1,790 tons, yielding 389 oz.; total, 3,252 oz.

Transvaal and Delagoa Bay.—Output 35,500 tons.

Treasury Gold.—Crushed 8,073 tons, yielded 3,798 oz.

Tyee Copper.—Smelted Tyee ore, 4,417 tons; Customs ore 440 tons; total 4,857 tons. Matte produced, including 139 tons low-grade matte, 532 tons.

Van Ryn.—Mill return for month: crushed 8,590 tons for 2,816 oz.; cyanide 963 oz., tons treated 5,600.

Victoria and Queen.—757 tons for 1,285 oz.

Village Main Reef.—September crushing: total yield from all sources, 7,626 oz.

Vivien.—786 tons of ore for 409 oz.

Vogelstruis Estates.—4,010 tons for 1,623 oz.; tailings treated 3,230 tons for 383 oz.

Wareleigh (Rhodesia) Development.—Guinea Fowl Mine, 587 tons crushed, yielding over the plates 419 oz.

Waterson Gold (Chihuahua, Mexico).—20 bars containing 355 oz. gold, 19,850 oz. silver.

Wemmer Gold.—Crushed 6,920 tons, 3,354 oz.; 4,500 tons tailings treated cyanide, 819 oz.; 191 tons concentrates caught, with an average assay value of 122 dwts.; total 5,335 oz.

Westralia and East Extension.—Crushed 2,050 tons; yield 1,050 oz.; cyanide, 3,350 tons tailings treated, 431 oz.

Zeehan-Montana.—255 tons, containing about 180 tons of lead and 21,675 oz. silver.

Particulars of the Amsterdam failure indicate that it is not of a formidable character. The unfortunate victim of markets is Mr. J. de Goyen, who has been largely interested in American Railroads, chiefly Southern lines, and in land company paper. The liabilities are placed at upwards of 8,000,000 florins, but fully 5,000,000 florins of this is nearly covered by securities, and another £2,500,000 represent family commitments. What the assets are has not transpired.

The Bank of England announces that the stock required for the current quarter's investment on account of accumulative dividends was purchased on the 5th inst. at the following prices, viz:—Consols 88⅞, per cent.; £2 10s. per cent., 88¾ per cent.; Local Loans Stock, 97½ per cent.; War Stock, 96⅞ per cent.; India £3 10s. per cent. 104⅞ per cent.; India £3 per cent.; 96⅜ per cent.; India £2 10s. per cent., 80¼ per cent.; Metropolitan Consolidated £3 10s. per cent., 104 per cent. The stockholders will be credited with the amounts to which they are entitled on November 2, 1903. There are now 8,897 accounts on which the dividends accumulate automatically, and the amount of capital is £1,801,810. The figures a year ago were 8,514 accounts, and £1,732,627 capital.

NOTICE.

THE PENNSYLVANIA RAILROAD COMPANY.

PHILADELPHIA, PA., September 23rd, 1903.

NOTICE TO STOCKHOLDERS.

At a meeting of the Board of Directors held this date, the following resolution was adopted:—

"RESOLVED, That the privilege be and is hereby given to the stockholders of the Company who have heretofore subscribed for the capital stock allotted them under resolution of the Board of March 25th, 1903, and paid thereon the instalment of fifty per cent., to pay the balance upon said allotment, between October 15th and 26th, 1903, instead of in two payments, as prescribed by the said resolution, upon such terms and under such regulations as may be approved by the Board, and that the proper officers of the Company are hereby authorised to take such measures as may be necessary to carry this resolution into effect."

A Circular in further explanation will be mailed to stockholders who have paid only the first instalment.

Stockholders residing in Great Britain, or on the Continent of Europe, may make payment at the London Joint Stock Bank, Limited, Financial Agent of the Company, Princes Street, London, E.C.

ROBT. W. SMITH,
Treasurer.
